Preface

In the compilation of The Japan Year Book, 1937, care has been taken to preserve the features which characterized the preceding editions, while adding some new ones. All the chapters have been gone over thoroughly and revised so as to bring the material up to date and to insure greater balance as between the various sections. In this attempt some sections and even chapters have had to be entirely or partially re-written.

Both in selection and classification of material the original plan used in the previous editions of the Year Book has been followed as the most convenient one to present this country as it is before the reader.

The reader will notice that the types used in the present edition are smaller but neater than those used in the previous editions. This secures economy in space, which in its turn means more material than before inserted in the 1937 edition.

It is with pleasure that the editor acknowledges with thanks the assistance he has received from many friends, especially from officials of the Government, in supplying material for the publication.

Tokyo, September, 1937 K. Inahara, *Editor*

JAPANESE WEIGHTS AND MEASURES

Weights

Kan (Kwan)=1,000 mommé = { 8.26733 lb. (Avoir.) / 10.04711 lb. (Troy) } =3.75000 kilogrammes

Mommé = { 0.13228 oz. (Avoir.) / 0.12057 oz. (Troy) } =3.75000 grammes

Kin=160 mommé = { 1.32277 lb. (Avoir.) / 1.60754 lb. (Troy) } =0.60000 kilogamme

Koku (fish)=40 kan

Metric system,

Kilogramme= 2.20459 pounds (Avoir.)=0.26667 kan
Gramme =15.43210 grains (Avoir.)=0.26667 mommé
Ton =1,000 kilogrammes=2,204.6 pounds
Gross Ton =1,016.064 kilogrammes=2,240 pounds

Measures of Length

Ri=36 cho=2,160 ken =2.44030 miles=3.92727 kilometres
Ken=6 shaku =5.96516 feet=1.81818 metres
Shaku=10 sun =0.99419 foot=0.30303 metre
Shaku (cloth measure)=1.25 shaku
Tan (a roll of cloth) =about 35 shaku

Metric system,

Kilometre=0.62137 mile=3,280 feet 10 inches=9.16667 cho

Measures of Surface

Square ri=1,296 cho=5.95505 sq. miles=15.42347 sq. kilometres
Cho (chobu)=10 tan=3,000 tsubo=2.45064 acres=99.17355 ares
Tsubo (bu)=3.95369 sq. yards=3.30579 centiares
Ko (Formosa)=2,934 tsubo

Metric system,

Hectare=10,000 m^2=2.471 acres=1.00833 cho
Are=100 m^2=119.6 sq. yards=30.25000 bu
Sq. kilometre=0.386 sq. mile=247.10 acres=0.06484 sq. ri.

Measures of Capacity

Koku=10 to=100 sho=1,000 go = { 4.96005 bushels (U.S.A.) / 5.11902 ,, (U.S.A.) / 47.95389 gallons (U.S.A.) / 39.6804 ,, (British) } =1.80391 hl.

Koku (capacity of vessels)=10th of a ton
Koku (timber) =about 1 cubic foot×10
Shakujimé (timber) =about 1 cubic foot×12
Taba (fagot, etc.) =about 3×6×6 feet

Metric system,

Hectolitre { 2 bush., 3.35 pecks (Dry) / 26.42 gal. (Liquid) } =5.54352 sho

CONTENTS

Preface

MAP OF JAPAN

(In Separate Envelope)

THE IMPERIAL COURT

At the heart of the Japanese nation and at the head of the Japanese State is the Emperor,[1] known to the people as the Tenshi, the Son of Heaven, or Tenno, Heavenly King. Though the ancient title Mikado persists in foreign countries, it has lost currency in Japan itself except in poetry or on very formal occasions.

The Imperial Dynasty of Japan is the oldest reigning family in the world, Japanese history dating its earthly origin from 660 B. C. The present Emperor is the 124th of the line.

H.I.M. THE EMPEROR

His Imperial Majesty HIROHITO, Emperor of Japan, 1st son of the late Emperor Taisho, was born in the Aoyama Palace, Tokyo, on April 29, 1901, and shortly afterwards was entrusted for bringing up to the family of Count Kawamura (Sumiyoshi),[2] a retired Admiral. Upon the Count's death in 1903, the Imperial Prince entered the Imperial Palace, with Marquis Kido (Takamasa) and later Mr. Kinsaku Maruo, chamberlain at the Aoyama Palace, in charge of his affairs. At the age of 7, he entered the elementary department of the Peers' School. In 1912, the year of his father's accession to the Throne, he was appointed Second Lieutenant in the Army and Sublieutenant, 2nd Class in the Navy and decorated with the Grand Cordon of the Chrysanthemum.

On completion of the elementary course in the Peers' School in 1914, he continued the study of various subjects in a special school instituted for the purpose under Admiral Togo. Promotion to the ranks of Lieutenant in the Army and Sub-lieutenant, 1st Class in the Navy came the same year; to Captain and Lieutenant in 1916, and to Major and Lieutenant-Commander in 1920. Ending his special studies in 1921, His Majesty toured Europe, the first Crown Prince to do so.

Because of the Emperor Taisho's illness, he was appointed Regent on November 25, 1921. Two years later, his ranks in the defence services were raised to those of Lieutenant-Colonel and Commander. Marriage to Princess Nagako took place on January 26, 1924. In 1925, he was promoted to the ranks of Colonel in the Army and Captain in the Navy. On the demise of the Emperor Taisho, December 25, 1926, he succeeded to the Throne, and the new era was named Showa, meaning Light and Peace. Formal installation took place in Kyoto on November 10, 1928, and the grand ceremony of making offerings to the Imperial Ancestors was held on November 14 and 15.

H.I.M. THE EMPRESS

Her Imperial Majesty NAGAKO, Empress of Japan, was born on March 6, 1903, 3rd child and 1st daughter of the late Imperial Prince[1] Kuni (Kuniyoshi), in his residence at 1, Roppongi-machi, Azabu-ku, Tokyo. She entered the elementary department of the Peers' School for Girls in April, 1909, and advanced to the higher course in March, 1915. Shortly after becoming Crown Princess-elect on January 17, 1918, she left the Peers' School for Girls and engaged in special study at home. Imperial sanction was given for marriage to the Crown Prince in June of the same year, and their betrothal took place on September 28, 1922. At that time she was decorated with the 1st Order of Merit. She was proclaimed Crown Princess on the day of the marriage,

1 For the powers of the Emperor, see Chapter IV, and Articles I—XVII of the Constitution (Appendix).

2 The personal names of members of the Imperial Family and Peers are parenthesized.

1 Prince (Shinno or O) means Prince of the Blood except when the name is followed by the word Peer in brackets, thus [Peer]. For the difference between Shinno and O see the Imperial House Law, Chapter VII, Art. XXXI (Appendix).

January 26, 1924, and Empress on December 25, 1926.

H.I.M. THE EMPRESS DOWAGER

Her Imperial Majesty SADAKO, the Empress Dowager, was born on June 25, 1884, 4th daughter of the late Prince Kujo (Michitaka) [Peer], a Court noble of the first rank. She entered the Peers' School for Girls in 1890 and advanced to the higher course six years later, leaving in 1899. Her marriage to Crown Prince Yoshihito, later the Emperor Taisho, took place on May 10, 1900. She was proclaimed Crown Princess on that day; Empress on July 30, 1912, and Empress Dowager on December 25, 1926. Her Majesty now resides in the Omiya Palace, Akasaka-ku, Tokyo.

H.I.H. THE CROWN PRINCE

H. I. H. Prince TSUGU-NO-MIYA (Akihito) was born on December 23, 1933, and is Heir-Apparent.

OTHER CHILDREN OF THE EMPEROR

H. I. H. Princess TERU (Shigeko) was born on December 6, 1925, and entered the elementary department of the Peers' School for Girls in 1932,and advanced to the middle school course in 1936.

H. I. H. Princess TAKA (Kazuko) was born on September 30, 1929, and entered the elementary department of the Peers' School for Girls in 1936.

H. I. H. Princess Yori (Atsuko) was born on March 7, 1931.

H. I. H. Prince YOSHI-NO-MIYA (Masahito) was born on November 28, 1935.

BROTHERS OF THE EMPEROR

H. I. H. Prince CHICHIBU (Yasuhito), Major in the Infantry, was born on June 25, 1902, 2nd son of the late Emperor Taisho. The name Atsu was given to him at first. In 1909, he entered the Peers' School and on completion of the second year of the middle course in 1917 was enrolled in the Central Military Preparatory School. This course he finished in 1920, when he joined the 3rd Infantry Regiment, Azabu-ku, Tokyo, as a first private. Later in the same year, he entered the Military Academy, completing the regular course in 1922.

On attaining his majority in 1922, he took the name Chichibu and by Imperial order founded a new house. He was decorated with the Supreme Order of the Chrysanthemum in the same year and promoted to the rank of Second Lieutenant, attached to the 3rd Infantry Regiment. After becoming Lieutenant in May, 1925, he went abroad, studying at Oxford University until the illness of the Emperor Taisho compelled his return to Japan in January, 1927. While in England, he was decorated by the late King George V with the Grand Cross of the Royal Victorian Order.

Marriage to Miss Setsuko Matsudaira, born on September 9, 1909, niece of Viscount Morio Matsudaira and 1st daughter of Mr. Tsuneo Matsudaira (at present Minister of the Imperial Household), took place on September 28, 1928. The Imperial Prince was promoted to the rank of Captain in 1930 and to that of Major in 1935. After a course in the Military Staff College and a term as Company Commander in the 3rd Infantry Regiment, he was attached to the General Staff, then removed to Hirosaki as Battalion Commander in the 31st Infantry Regiment on August 1, 1935. The Prince and Princess left Yokohama on March 18, for London where they represented the Throne at the Coronation of King George VI of Great Britain, which was held on May 12, 1937. His residence is at Omote-cho, Akasaka-ku, Tokyo.

H. I. H. Prince TAKAMATSU (Nobuhito), Lieutenant-Commander in the Navy, 3rd son of the late Emperor Taisho, was born on Jaunary 3, 1905. At first he was named Teru. He entered the Peers' School in 1911 and left in 1920 to enroll in the Naval College. On graduation four years later, he was granted the name of Takamatsu and founded a new house to revive that of the late Imperial Prince Arisugawa, which had become extinct.

In 1925, on appointment as Sublieutenant, 2nd Class in the Navy, he was ordered to take up duties aboard the battleship Fuso. At the same time, he was decorated with the Supreme Order of the Chrysanthemum. Promotion to the rank of Sublieutenant, 1st Class came in 1927.

On February 4, 1930, he married Miss Kikuko Tokugawa, 2nd daughter of the late Prince Tokugawa (Yoshihisa)[Peer], who was born on December 26, 1911. The mother of the Princess was the 1st daughter of the late Imperial Prince Arisugawa, whose house Imperial Prince Takamatsu revived. In April of the same year, the Imperial Prince and his consort started on a tour of the world, partly to return the courtesies shown by the late King George V of England in sending a mission to Japan to present the Order of the Garter to the Emperor. They returned to Japan in June, 1931, and took up residence in a new house at Takanawa, Shiba-ku, Tokyo.

The Imperial Prince, now a Lieutenant-Commander, is attached to the office of the Naval General Staff.

H. I. H. Prince MIKASA (Takahito), 4th son of the late Emperor Taisho, was born on December 2, 1915, and was named Sumi. He entered the Peers' School in 1922 and left in 1932 to enter the Military Academy. On graduation from the Academy in June, 1936, he was attached to the 15th Cavalry Regiment. On attaining his majority in 1935, he was granted the name of Mikasa and founded a new house. A special residence is maintained for him in the park of the Aoyama Palace.

OTHER PRINCES

KAN-IN. The present and 6th head of the House is H. I. H. Prince Kan-in (Kotohito), Field Marshal, who was born on November 10, 1865, the 16th son of the late Imperial Prince Fushimi (Kuniiyé), and adopted in 1867 by the Emperor Komei, the immediate predecessor of the Emperor Meiji. Ordered to France in 1882 for military studies, he remained there until 1891. After participation in the wars with China and Russia, his rise in the Army was rapid, and in 1912 he was appointed General and member of the High Military Council. In 1916, he was ordered to Russia for returning courtesies to the Russian Grand Duke's visit. The Imperial Prince became a Field Marshal in 1919, accompanied the Crown Prince to Europe in 1921 and headed the commission in charge of the Enthronement in 1928. In December, 1931, he was appointed Chief of the General Staff.

His consort, H. I. H. Princess Kan-in (Chiyéko), whom he married in 1891, was born on June 30, 1872, 2nd daughter of the late Prince Sanjo (Sanétomi) [Peer], a Court noble of the first rank.

The heir is H. I. H. Prince Kan-in (Haruhito), Captain in the Cavalry, the 2nd son, who was born on August 3, 1902. He was graduated from the Odawara Middle School in 1921, appointed Lieutenant in 1927, promoted to the rank of Captain in 1932 and in the same year, following a course in the Military Staff College, appointed a member of the Directors of the Research Section of the Cavalry School. On July 14, 1926, he married Princess Ichijo (Naoko), 4th daughter of the late Prince Ichijo (Saneteru) [Peer], a Court noble of the first rank, who was born on November 7, 1908.

The House of Kan-in was founded in 1718 by Prince Naohito, a son of the Emperor Higashiyama. The residence is at Nagata-cho, Kojimachi-ku, Tokyo.

HIGASHI-FUSHIMI. The House is extinct except for H. I. H. Princess Higashi-Fushimi (Kanéko), consort of the late Imperial Prince Higashi-Fushimi (Yorihito), who married her on February 10, 1898 and died in 1922. She was born on August 29, 1876, 1st daughter of the late Prince Iwakura (Tomosada) [Peer]. The residence is at Tokiwamatsu-cho, Shibuya-ku, Tokyo.

FUSHIMI. The 23rd head of the House is H. I. H. Prince Fushimi (Hiroyasu), Admiral of the Fleet, who was born on October 16, 1875, 1st son of the late Imperial Prince Fushimi (Sadanaru). Ordered to Germany in 1889, he studied there for five years. He was appointed Admiral in 1922, a member of the High Military Council in 1925, Chief of the Naval General Staff in February, 1932, and Admiral of the Fleet in April of the same year.

His consort, H. I. H. Princess Fushimi (Tsuneko), was born on September 23, 1882, 9th daughter of the late Prince Tokugawa (Yoshinobu) [Peer]. They were married on January 9, 1897.

The 1st son and heir, H. I. H. Prince Fushimi (Hiroyoshi), Commander in the Navy, was born on December 8, 1897, and graduated from the Naval College in 1917 and is the Commander of the Third Destroyer Flotilla. He married, on December 23, 1919, Tokiko, 3rd daughter of the late Prince Ichijo (Saneteru) [Peer], who was born on June 20, 1902. Their 1st son, H. I. H. Prince Fushimi (Hiroaki), was born on January 26, 1932. Their first daughter, H. I. H. Princess Fushimi (Mitsuko), was born on July 28, 1929.

The second daughter, H. I. H. Princess Fushimi (Yoshiko) was born on February 14, 1933.

The third daughter, H. I. H. Princess Fushimi (Ayako) was born on February 11, 1934.

The House of Fushimi was founded by a great-grandchild of the Emperor Gofushimi. The residence is at Kioi-cho, Kojimachi-ku, Tokyo.

YAMASHINA. The 3rd head of the House, H. I. H. Prince Yamashina (Takehiko), Lieutenant-Commander in the Navy (1st reserve service), was born on February 13, 1898, 1st son of the late Prince Yamashina (Kikumaro). He was appointed Sublieutenant, 2nd Class in the Navy in August, 1919, and on July 19, 1922, married Princess Kaya (Sakiko), who died in the great earthquake the following year. The Prince now leads a retired life in his residence at Fujimi-cho, Kojimachi-ku, Tokyo.

His step-mother, H. I. H. Princess Yamashina (Hisako), was born on Feb-

ruary 7, 1874, 3rd daughter of the late Prince Shimazu (Tadayoshi) [Peer].

The House of Yamashina was founded in 1864 by the late Prince Yamashina (Akira), 1st son of H. I. H. Prince Fushimi (Kuniiyé), who had earlier entered the priesthood and taken the name Kanshuji.

KAYA. The 2nd head of the House, H. I. H. Prince Kaya (Tsunenori), Lieutenant-Colonel in the Cavalry, was born on January 27, 1900, 1st son of the founder, the late Prince Kaya (Kuninori). He was appointed Second Lieutenant in the Cavalry in 1920 and is now Lieutenant-Colonel and Commander of the 10th Cavalry Regiment. On March 9, 1934, he left Tokyo, with his consort, for a tour round the world and returned to Tokyo on September 18 of the same year.

On May 3, 1921, he married Toshiko, who was born on May 16, 1903, 5th daughter of the late Prince Kujo (Michizané) [Peer], a Court noble of the first rank. They have six children: H. I. H. Prince Kaya (Kuninaga), born on April 21, 1922; H. I. H. Prince Kaya (Harunori), born on July 3, 1926; H. I. H. Prince Kaya (Akinori), born on August 17, 1929; H. I. H. Prince Kaya (Fuminori), born on July 12, 1931, H. I. H. Prince Kaya (Munenori), born on November 24, 1935 and H. I. H. Princess Kaya (Michiko), born on July 29, 1923.

H. I. H. Princess Kaya (Yoshiko), consort of the late Imperial Prince Kaya (Kuninori), was born on December 7, 1865, 1st daughter of the late Marquis Daigo (Tadayori).

The House of Kaya was founded in 1892 by the late Prince Kaya (Kuninori), 2nd son of the late Imperial Prince Kuni (Asahiko). The residence is at Sanbancho, Kojimachi-ku, Tokyo.

KUNI. H. I. H. Prince Kuni (Asaakira), Lieutenant-Commander in the Navy, 3rd of the line, was born on February 2, 1901, 1st son of the late Imperial Prince Kuni (Kuniyoshi). His consort, H. I. H. Princess Kuni (Tomoko), whom he married on January 26, 1925, was born on May 18, 1907, 3rd daughter of H. I. H. Prince Fushimi (Hiroyasu). There are four children: H. I. H. Prince Kuni (Kuniaki), born on March 25, 1929; H. I. H. Princess Kuni (Masako), born on December 8, 1926; H. I. H. Princess Kuni (Asako), born on October 23, 1927; and the third daughter, H. I. H. Princess Kuni (Michiko) was born on September 4, 1933.

H. I. H. Princess Kuni (Chikako), consort of the late Imperial Prince Kuni (Kuniyoshi), mother of H. I. M. the Empress, was born on October 19, 1879, 7th daughter of the late Prince Shimazu (Tadayoshi) [Peer].

H. I. H. Prince Kuni (Taka), Chief Priest of the Grand Shrines of Isé, 5th son of the late Imperial Prince Kuni (Asahiko), was born on August 17, 1875. His consort, H. I. H. Princess Kuni (Shizuko), whom he married on March 9, 1907, was born on September 25, 1884, 1st daughter of the late Viscount Minasé (Takasuké). There are three children: H. I. H. Prince Kuni (Iyéhiko), born on March 17, 1920; H. I. H. Prince Kuni (Norihiko), born on November 19, 1922, and H. I. H. Princess Kuni (Kuniko), born on May 18, 1917.

The House of Kuni was founded in 1875 by the late Imperial Prince Kuni (Asahiko), 4th son of the late Imperial Prince Fushimi (Kuniiyé). The residence is at Miyashiro-cho, Shibuya-ku, Tokyo.

NASHIMOTO. H. I. H. Prince Nashimoto (Morimasa), Field Marshal, was born on March 9, 1874, 4th son of the late Imperial Prince Kuni (Asahiko); ordered to inherit the Nashimotos, December 2, 1885; entered Central Military Preparatory School, 1886; graduated from Military Academy, May 27, 1898; Second Lieutenant, January, 1899; Captain, March 1901; sent to Europe for study, 1903; returned home and immediately sent to the front at the Russo-Japanese War, 1904; again in Europe for study, August 1906—July, 1909; Lieutenant-General and Commander of the 16th Division, August, 1917; High Military Councillor, November, 1919; General, August, 1923; Field Marshal, August, 8, 1932.

His consort, H. I. H. Princess Nashimoto (Itsuko), whom he married on November 28, 1900, was born on February 2, 1882, 2nd daughter of the late Marquis Nabéshima (Naohiro). The residence is at Mitaké-cho, Shibuya-ku, Tokyo.

ASAKA. H. I. H. Prince Asaka (Yasuhiko), Lieutenant-General, was born on October 2, 1887, 8th son of the late Imperial Prince Kuni (Asahiko). He founded the House of Asaka in 1906, was appointed Second Lieutenant in the Army in 1908, studied in Europe from 1922 to 1925 and is now a member of the High Military Council.

There are two children: H. I. H. Prince Asaka (Takahiko), Lieutenant in the Infantry, 1st son, born on October 8, 1912; and H. I. H. Princess Asaka (Kiyoko), 2nd daughter, born on August 2, 1919. The residence is at Shirokané Dai-machi, Shiba-ku, Tokyo.

HIGASHI-KUNI. H. I. H. Prince Higashi-Kuni (Naruhiko), Lieutenant-

General, was born on December 3, 1887, 9th son of the late Imperial Prince Kuni (Asahiko). He founded the House of Higashi-Kuni in 1906, was appointed Second Lieutenant in the Infantry in 1908, studied in France from 1920 to 1927, was given command of the 3rd Infantry Regiment of the Imperial Guard Division in 1928, was promoted to command of the Nagoya Brigade in 1930, Commander of the Fourth Division in 1934; High Military Councillor, 1935–.

H. I. H. Princess Higashi-Kuni (Toshiko), his consort, whom he married on May 18, 1915, was born on May 11, 1896, 9th daughter of the Emperor Meiji. There are three sons: H. I. H. Prince Higashi-Kuni (Morihiro), 1st son, born on May 6, 1916; H. I. H. Prince Higashi-Kuni (Akitsuné), 3rd son, born on May 13, 1920, and H. I. H. Prince Higashi-Kuni (Toshihiko), 4th son, born on March 24, 1929. The residence is at Ichibei-cho, Azabu-ku, Tokyo.

KITASHIRAKAWA. H. I. H. Prince Kitashirakawa (Nagahisa), Lieutenant in the Artillery, 4th of the line, was born on February 19, 1910, only son of the late Imperial Prince Kitashirakawa (Naruhisa), who died in Paris in 1923. His consort, H. I. H. Princess Sachiko, whom he married on April 26, 1935, was born on August 26, 1916, second daughter of Baron Yoshikuni Tokugawa.

H. I. H. Princess Kitashirakawa (Fusako), consort of the late Prince Kitashirakawa (Naruhisa), 3rd of the line, was born on January 28, 1890, 7th daughter of the Emperor Meiji. One of her three daughters remains in the House: H. I. H. Princess Kitashirakawa (Tayéko), 3rd daughter, born on April 15, 1920.

The House of Kitashirakawa was founded in 1870 by the late Imperial Prince Kitashirakawa (Tomonari), 8th son of the late Imperial Prince Fushimi (Kuniiyé). The residence is at Takanawa Minami-cho, Shiba-ku, Tokyo.

TAKÉDA. H. I. H. Prince Takéda (Tsuneyoshi), Captain in the Cavalry, 2nd of the line, was born on March 4, 1909, only son of the late Imperial Prince Takéda (Tsunéhisa). He married Miss Mitsuko, second daughter of Prince Sanjo (Kinteru) [Peer], on May 12, 1934.

H. I. H. Princess Takéda (Masako), consort of the late Imperial Prince Takéda (Tsunéhisa), was born on September 30, 1888, 6th daughter of the Emperor Meiji.

The House of Takéda was founded in 1906 by Prince Takéda (Tsunéhisa), 1st son of the late Prince Kitashirakawa (Yoshihisa). The residence is at Takanawa Minami-cho, Shiba-ku, Tokyo.

Korean Royalty

Treatment equal to that accorded members of the Imperial House is given to members of the Royal House of Chosen, and a Civil List of ¥1,800,000 for their maintenance is included in the budget of the Chosen Government-General.

H. H. Prince RI (Gin), Colonel in the Infantry, head of the House of Shotoku-kyu since the death in 1926 of his brother, Prince Ri (Seki), former Emperor, was born on October 20, 1897, 7th son the late Grand Prince Ri (Kei). He studied at the Peers' School in Tokyo and the Military Academy in preparation for a military career. He was promoted to the rank of Colonel on August 1, 1935, and appointed Commander of the 59th Infantry Regiment.

H. H. Princess RI (Masako), whom he married in 1920, was born on November 4, 1901, 1st daughter of H. I. H. Prince Nashimoto (Morimasa). On promotion to the rank of Captain in 1923, the Prince was attached for a time to the Headquarters of the General Staff and in 1927–28 he and Princess Ri made a year's tour of Europe. They have a daughter Ri (Kyu) who was born on December 29, 1931.

H. H. Princess IN, consort of the late Prince Ri (Seki), was born on September 19, 1894, 1st daughter of Marquis In Taku-yei.

In Keijo, the capital of Chosen, the residence of this branch of the Royal House of Chosen is the Garyudo, and in Tokyo its residence is at Kioi-cho, Kojimachi-ku.

H. H. Prince RI (Ken), Captain in the Cavalry, heir of the retired Prince Ri (Ko), was born on October 28, 1909. On graduation from the Military Academy in 1930, he was appointed Lieutenant in the Cavalry, and was promoted to the rank of Captain on August, 1, 1936.

H. H. Princess RI (Yoshiko), whom Prince Ri (Ken) married in 1931, was born on October 6, 1911, 1st daughter of Captain Yutaka Matsudaira, of the Navy. Their first son, Ri (Chu), was born on August 14, 1932, second son Ri (Ki) was born on March 4, 1935.

H. H. Prince RI (Ko), 5th son of the late Grand Prince Ri (Kei), father of Prince Ri (Ken), was born on March 30, 1877. His consort, H. H. Princess Kin, whom he married in 1893, was born on December 22, 1880, 1st daughter of the late Baron Kin Shi-ei.

H. H. Prince RI (Gu) Lieutenant in

the Artillery, 2nd son of Prince Ri (Ko), was born on November 15, 1912, and in 1917 was made successor to the late Prince Ri (Shun), who had died heirless.

H. H. Princess RI (Sanshu), whom Prince Ri (Gu) married on May 3, 1935, was born on November 11, 1914, granddaughter of Marquis Boku-Ei. They have on child Prince Ri (Sei) who was born on April 23, 1936.

H. H. Princess RI, consort of the late Prince RI (Ki), was born on July 10, 1883.

H. H. Princess Kin, consort of the late Prince Ri (Shun), was born on July 8, 1878, 1st daughter of Kin Zai-tei.

Former Princes

In accordance with the Imperial Household Law, Princes of the Imperial Family may be created peers, either by order of the Emperor or at their own wishes, with family names to be granted by the Emperor. The following table shows those living who have renounced membership in the Imperial Family :

Name	Princely Father	Year of Change
Marquis Komatsu (Teruhisa)	Late Kitashirakawa (Yoshihisa)	1910
Marquis Yamashina (Yoshimaro)	„ Yamashina (Kikumaro)	1920
Marquis Kwacho (Hironobu)	Fushimi (Hiroyasu)	1926
Marquis Tsukuba (Fujimaro)	Late Yamashina (Kikumaro)	1928
Count Katsuragi (Shigemaro)	„ „ „	1929
Count Higashi-Fushimi (Kunihidé)	„ Kuni (Kuniyoshi)	1931
Marquis Otowa (Tadahiko)	Asaka (Yasuhiko)	1936
Count Fushimi (Hirohidé)	Fushimi (Hiroyasu)	1936

Former Princesses

The following table shows Princesses of the Imperial Family and the Royal House of Chosen who have married into the families of Peers :

Name	Princely Father	Consort	Year of Marriage
Ayako	Late Kuni (Asahiko)	Late Viscount Takenouchi (Koretada)	1892
Yeiko	„ „ „ „	Viscount Higashizono (Motoharu)	1899
Teiko	„ Fushimi (Sadanaru)	Marquis Yamanouchi (Toyokage)	1901
Sadako	„ Kitashirakawa (Yoshihisa)	Count Arima (Yoriyasu)	1903
Mitsuko	„ „ „	Count Kanroji (Osanaga)	1904
Suzuko	„ Kuni (Asahiko)	Count Mibu (Motoyoshi)	1906
Takeko	„ Kitashirakawa (Yoshihisa)	Viscount Hoshina (Masaaki)	1911
Shigeko	Kan-in (Kotohito)	Kuroda (Nagamichi), heir of Marquis	1914
Yukiko	Late Kaya (Kuninori)	Machijiri (Kazumoto), heir of Viscount	1915
Hiroko	„ Kitashirakawa (Yoshihisa)	Count Futaara (Yoshinori)	1915
Yukiko	Kan-in (Kotohito)	Viscount Ando (Nobuaki)	1915
Yasuko	Late Yamashina (Kikumaro)	Asano (Nagatake), heir of Marquis	1920
Satoko	„ Kuni (Kuniyoshi)	Count Otani (Kocho)	1924
Nobuko	„ „ „	Sanjo-nishi (Kin-osa), heir of Viscount	1924
Noriko	Nashimoto (Morimasa)	Count Hirohashi (Tadamitsu)	1926
Hanako	Kan-in (Kotohito)	Marquis Kwacho (Hironobu)	1926
Tokukei	Late Ri (Kei)	Count So (Takeyuki)	1931
Kikuko	Asaka (Yasuhiko)	Nabeshima (Naoyasu), heir of Marquis	1931
Mineko	Late Kitashirakawa (Naruhisa)	Tachibana (Tanekatsu), heir of Viscount	1933
Ayako	„ Takeda (Tsunehisa)	Sano (Tsunemitsu) heir of Count	1934
Sawako	„ Kitashirakawa (Naruhisa)	Viscount Higashizono (Motobumi)	1935

Palaces, Gardens, etc.

Imperial Palace The residence of the Emperor covers an area of about 531 acres in Kojimachi-ku, Tokyo. Originally built in 1457 by a provincial general, Dokan Ota, who named it Yédo Castle, it became the headquarters of the Tokugawa Shogunate in the 16th century and was greatly extended. With the transfer of the capital from Kyoto to Tokyo in 1869, the second year of the Meiji Restoration, it was selected as the Imperial Residence and renamed Tokyo Castle. Much of it was destroyed in the great fire of 1873. The present palace, built between 1880 and 1888, cost ¥3,968,000. On completion, the name was changed to Kyujo, or Imperial Palace.

Other Palaces (1) Kyoto Palace. Situated in Kamikyo-ku, Kyoto it was the Imperial Residence for 1,075 years, from 794 A. D., when the capital was moved from Nara to Kyoto, until 1869, when the seat of government was transferred to Tokyo. In accordance with the Accession Law, the ceremony of ascension to the Throne is always held here. The grounds cover about 229 acres.

(2) Aoyama Palace. Situated in Akasaka-ku, Tokyo, the palace was formerly the residence of the Lord of Tamba, but in 1873 the late Empress Dowager Yeisho made it her home. Within its large park is the residence of the Imperial Prince Sumi.

(3) Omiya Palace. Also within the park of the Aoyama Palace, it is the residence of the Empress Dowager, mother of the reigning Emperor.

(4) Shinjuku Imperial Garden. At Naito-Shinjuku-machi, Yotsuya-ku, Tokyo, the garden was originally the site of the residence of the Lord of the Takato Clan in Shinano, but in 1879 it came under the control of the Imperial Household Department and in 1906 was given its present name. Here are held the spring and autumn Imperial garden parties.

(5) Akasaka Detached Palace. Also on part of the former property of the Lord of Kii, in Akasaka-ku, Tokyo, it was made a detached palace in 1872 and became a temporary residence of the Imperial Family from 1873 to 1889 during the construction of the present Imperial palace. Royal and princely visitors from abroad are guests here while in Tokyo.

(6) Hama Detached Palace. Situated in Tsukiji, Kyobashi-ku, Tokyo, its grounds were used by the Shoguns in feudal times for falconry and are now the scene of Imperial duck-hunting parties.

(7) Kasumigaseki Detached Palace. Formerly the residence of the late Imperial Prince Arisugawa, it is located behind the Foreign Office in Kojimachi-ku, Tokyo.

(8) Nijo Detached Palace. Originally Nijo Castle, in Nakagyo-ku, Kyoto, it was made a detached palace in 1884.

(9) Katsura Detached Palace. Located at Katsura, Ukyo-ku, Kyoto, it was formerly the residence of Prince Katsura [Katsura-no-miya] and became a detached palace in 1883.

(10) Shugakuin Detached Palace. Widely known for its beautiful garden, it was built by the Tokugawa Shogunate in the reign of the Emperor Gomizunoo at what is now Shugakuin, Sakyo-ku, Kyoto, and was made a detached palace in 1883.

(11) Hakoné Detached Palace. On Lake Ashi in the Hakoné region, it was seriously damaged in the 1923 earthquake and has been left unrepaired.

(12) Muko Detached Palace. At Suma, Kobé, it became a detached palace in 1908.

(13) Hayama Imperial Villa. Because of its proximity to Tokyo, at Hayama-machi, Kanagawa prefecture, it is a favourite retreat, especially in the winter. Here the Emperor Taisho died in 1926.

(14) Taté-ishi Rest-House. It is located at Nishiura-mura, Miuragun, Kanagawa prefecture.

(15) Numazu Imperial Villa. The palace is at Agehara-machi, Numazu, on Suruga Bay, Shizuoka prefecture.

(16) Nikko Imperial Villa. Nikko-machi, Tochigi prefecture, is the location.

(17) Tamozawa Imperial Villa. This also is at Nikko-machi, Tochigi prefecture.

(18) Shiobara Imperial Villa. The palace is at Shiobara-machi, Tochigi prefecture, a district noted for its maples.

(19) Ikao Imperial Estate. This estate or preserve is at Ikao-machi, a mountain resort in Gumma prefecture.

(20) Nasu Imperial Villa. Mountain views are the main attraction of Nasumura, Nasu-gun, Tochigi prefecture, where the palace is situated.

(21) Nagara River Preserve. This preserve for ayu lies in Gujo-gun, Mugigun and Inaba-gun, Gifu prefecture.

(22) Yédo River Preserve. There are two parts, one in Higashi-Katsushika-gun, Chiba prefecture, and the other in Minami-Saitama-gun and Kita-Katsushika-gun, Saitama prefecture. The preserve abounds in water-hens, herons, snipes, quails, white swans, wild geese, ducks, plovers, pheasants, water-rails, etc.

(23) Jintsu River Preserve. This preserve for trout, salmon and other fish is located in Nei-gun and Kami-Niikawa-gun, Toyama prefecture.

In 1930, the Nagoya Detached Palace was donated to Nagoya city; and the Odawara Imperial Villa and Shizuoka Imperial Villa were abolished, part of the latter being granted to Shizuoka city. In 1931, the Atami Imperial Villa and Kamakura Imperial Villa were abolished and the former was sold to Atami-machi.

Miyanoshita Imperial Villa was abolished, December, 1933, and given to H. I. H. Imperial Prince Takamatsu.

Imperial Household Finance

The Civil List is appropriated by the National Treasury and no approval of

the Diet is necessary except when an increase in it is required. At present, it amounts to ¥4,500,000, any deficiency in it being met by an outlay from the Imperial property. The Board of Imperial Auditors is located in the Imperial Household Department and its present Director-General is Mr. Yahachi Kawai. Prince Saionji, Baron Ikki and Count Makino are financial advisers to the Imperial Household.

The total Imperial Household expenditure is estimated at approximately ¥20,000,000 annually and is met by the Civil List, and by receipts from the Imperial forests, Imperial estates and other Imperial property.

The Naidaijin-fu

The Naidaijin, Grand Keeper of the Imperial Seals, who has been so called from olden times, is a dignitary of the Imperial Household with the function of keeping the Imperial and State Seals and of administering matters regarding Imperial decrees and documents of the Imperial Household. He is a State functionary of the Shinnin rank, or one appointed directly by the Emperor, and is assisted by three secretaries in the execution of his duty.

Present Grand Keeper of the Imperial Seals is Mr. Kurahei Yuasa.

The Imperial Household Department

The Imperial Household Department is divided into the office of the Minister of the Imperial Household and ten principal subsidiary offices, namely, the Secretariat of the Minister, the Board of Chamberlains, the Board of Ceremonies, the Imperial Family and Peerage Board, the Imperial Mausolea Bureau, the Imperial Archives Bureau, the Court Physicians Bureau, the Imperial Treasury Bureau, the Maintenance and Works Bureau, and the Imperial Stables Bureau, and is charged with the conduct of affairs pertaining to the Imperial Household. There are, in addition to those above mentioned, such other institutions as follows coming under the supervision of the Minister of the Imperial Household :

The Office of H. I. M. the Empress' Household,
The Office of H. I. M. the Empress Dowager's Household,
The Board of the Imperial Auditors,
The Imperial Forests and Estates Board,
The Imperial Poetry Bureau,
The Imperial Museums (at Tokyo and Nara),
The Peers' School,
The Peers' School for Girls,
The Temporary Board for the Compilation of the History of the Emperor Meiji.

Since 1884, it has been placed outside the pale of the administrative system, so that the Minister is in no way affected by any Cabinet change.

The present and preceding Ministers of the Imperial Household Department are :

Name	Time of Appointment
Late Prince Hirobumi Ito	Dec., 1885
Late Marquis Hisamoto Hijikata	Sept., 1887
Viscount Mitsuaki Tanaka	Feb., 1898
Late Prince Tomosada Iwakura	June, 1909
Viscount Chiaki Watanabé	April, 1910
Baron Takatada Hatano	April, 1914
Late Baron Yujiro Nakamura	June, 1920
Count Nobuaki Makino	Feb., 1921
Baron Kitokuro Ikki	Mar., 1925
Kurahei Yuasa	Mar., 1933
Tsuneo Matsudaira	Mar., 1936

The Peerage

The modern system of the Peerage, with its five grades of Prince, Marquis, Count, Viscount and Baron, dates from 1884, but prior to this there was a well-established aristocracy. Up to the time of the Meiji Restoration, there were two groups, the Court Nobles, called Kugé, most of whom were descendants of younger sons of Emperors, and the Feudal Lords, called Daimyo or Tonosama, most of whom had attained their standing through military prowess. With the Restoration, these were amalgamated under the name of Kwazoku (Peerage), meaning the "Flowers of the Nation". In 1884, an Imperial edict was issued establishing the five grades of the present Peerage, and to the members of the Kwazoku were added subjects who had assisted in the work of the Restoration. In the first list there were 11 Princes, 24 Marquises, 76 Counts, 376 Viscounts and 382 Barons.

When Chosen was annexed in 1910, 67 Koreans of distinction were selected to become Peers, six Marquises, three Counts, 22 Viscounts and 45 Barons.

The families of the Peerage stood as follows on April, 1936 :

Grade	Number of Families	Korean Peers
Prince	19	—
Marquis	41	7
Count	109	3
Viscount	377	17
Baron	410	33
Total	956	60

Decorations

To recognize and reward persons who render distinguished and meritorious service to the State, orders of merit and decorations were created in 1875 and supplemented in later years. The orders of merit, of which there are nine—the Grand Order and numerical orders from 1st to 8th—are only nominal and serve to indicate the class of decoration to which a holder is entitled. The decorations themselves are of seven kinds :

Supreme Order of the Chrysanthemum There are two kinds, the Collar of the Supreme Order of the Chrysanthemum and the Grand Cordon of the Supreme Order of the Chrysanthemum, both reserved for those given the Grand Order of Merit. The first, the highest Japanese decoration, is a gold chain or necklace from which is hung a small medallion representing a chrysanthemum, to which is fastened a large sunburst flanked with chrysanthemum flowers and leaves. The second is marked by the same medallions, but worn at the left hip at the bottom of a cordon or ribbon of red with purple edges hung from the right shoulder.

Rising Sun and Paulownia This is a single decoration, combining the devices of two lesser orders, known as the Grand Cordon of the Imperial Order of the Rising Sun with Paulownia Flowers which is awarded only to holders of the 1st Class Order of Merit. From a cordon of red with two white stripes, worn over the right shoulder and falling to the opposite hip, are suspended a small medallion showing paulownia flowers and leaves and a larger medallion, below it, of a double-rayed rising sun flanked with paulownia flowers.

Rising Sun There are six classes, from the Grand Cordon of the Rising Sun, to which holders of the 1st Class Order of Merit are eligible, to the 6th Class Order of the Rising Sun, which holders of the 6th Class Order of Merit may receive. Foreigners in the employ of the Government are often awarded this decoration, usually the 3rd, 4th, 5th or 6th class, after long and meritorious service. This decoration may, but not necessarily, carry an annuity.

Paulownia Two classes exist, sometimes referred to as the 7th and 8th classes of the Order of the Rising Sun. The Order of the Blue Paulownia is for holders of the 7th Order of Merit, and the Order of the White Paulownia for holders of the 8th Class Order of Merit.

Sacred Treasure Known as the Imperial Order of the Sacred Treasure. Of this order there are eight classes. The medallion represents the Mirror and Gem of the Imperial Regalia, and the cordon is of light blue with two orange stripes.

Precious Crown Its full name is the Imperial Order of the Precious Crown. The eight classes of this order are bestowed on women only, who were barred from receiving any other decoration until 1919, when they were also made eligible for the Order of the Sacred Treasure. The medallion shows the Precious Crown, with cherry blossoms and bamboo, and the cordon is of yellow with two scarlet stripes.

Golden Kite Purely a military order, known as the Imperial Military Order of the Golden Kite, this has seven classes. The cordon is green with two white stripes. It carries a life annuity, fixed in 1916 at ¥1,500 for the 1st Class ; ¥1,000, 2nd Class ; ¥700, 3rd Class ; ¥500, 4th Class ; ¥350, 5th Class ; ¥250, 6th Class, and ¥150, 7th Class. This is granted to the family for one year following the recipient's death, or, if he has died within five years of being decorated, until the end of that period.

Holders of any decorations who are sentenced to death, penal servitude or imprisonment for more than three years are deprived of decorations, accompanying diplomas and, if any, annuities. They may also be ordered to surrender them if guilty of acts of dishonour, depending on the circumstances.

Cultural Decoration Creation of the cultural order to be awarded to those who have made outstanding contributions to science, arts, literature or other fields of culture was announced on February 11, 1937. There are no grades or classes in the decoration. The devise consists of three replicas of the Sacred Jewels, symbolizing philanthropy and virtue, placed in the centre of a white tachibana blossom, (a kind of mandarin orange, Citrus tachibana Tanaka), and the decoration is suspended from a light purple ribbon worn around the collar.

Medals of Honour The Medal with Red Riband is conferred on persons who

risk their lives in rescuing others; the Medal with Green Riband on those who distinguish themselves for filial piety, feminine virtues, devotion to the aged and loyalty to masters; the Medal with Blue Riband on those who aid public and private undertakings by important discoveries or inventions; the Medal with Dark Navy Blue Riband on those who contribute money or property for public welfare; and the Medal with Yellow Riband, divided into two classes, gold and silver, on persons who help undertakings connected with coast defence. Cups of gold or wood or monetary gifts are sometimes granted simultaneously to the recipients.

Court Rank

Court rank is specially conferred on persons who distinguish themselves in service to the State, peers and their heirs, officials and army and navy officers. There are 16 grades, from the senior grade of the first rank to the junior grade of the eighth rank, and all affairs pertaining to them are administered by the Imperial Family and Peerage Board in the Imperial Household Department in accordance with the Court Rank Act, promulgated in 1926.

There were 251,502 holders of Court rank at the end of 1935, divided as follows:

First	Senior	—	Junior	1
Second	,,	31	,,	64
Third	,,	436	,,	803
Fourth	,,	1,910	,,	4,095
Fifth	,,	9,232	,,	12,430
Sixth	,,	14,823	,,	19,078
Seventh	,,	32,853	,,	62,230
Eighth	,,	91,470	,,	2,046

Stick Granted to the Aged

In the 12th century, Toshinari Fujiwara, a Court noble, was granted on the celebration of his 90th birthday a stick for use in Court by the Emperor Gotoba. This honour, known as Kyuchuzuyé or Hatozuyé because the stick has a pigeon top, is today bestowed on Court dignitaries and officials and officers of high rank who have passed the age of 80 in recognition of signal service to the Court and the State, though it is marked by a monetary gift in lieu of an actual stick. Living holders follow:

Prince Saionji (Kimmochi)
Count Kiyoura (Keigo)
Baron Kuratomi (Yuzaburo)
Count Tanaka (Mitsuaki)
Viscount Kaneko (Kentaro)
Viscount Kurino (Shinichiro)
Viscount Ishiguro (Tadanori)
Baron Yamamoto (Tatsuo)
Sakamoto (Kinnosuké)
Baron Uryu (Sotokichi)

Court Artists

For the promotion and encouragement of fine arts, representative artists are chosen by a special committee in the Court and their appointment as Court artists is made by the Minister of the Imperial Household. The artists may produce objects of art for the Court or present opinions upon Imperial enquiries on questions pertaining to arts. Koun Takamura died in October, 1934 and new members were appointed in December, 1934, and the present Court artists are as follows:

Sculptor	Choun Yamazaki
Painters	Seiho Takeuchi
	Gyokudo Kawai
	Taikwan Yokoyama
	Yukihiko Yasuda
	Kansetsu Hashimoto
	Keigetsu Kikuchi
	Eisaku Wada
	Saburosuké Okada
	Takeji Fujishima
Architect	Iwajiro Sasaki
Metal Carver	Kamezo Shimizu
Metal Worker	Shushin Kâtori
Ceramist	Hazan Itaya

State Funerals

There had been no special provision for the State Funeral for honoured personages, although it had been held several times since the 16th year of Meiji, or 1883. The Government, however, issued the State Funeral Ordinance as an Imperial Order in 1926. According to the Ordinance, the State Funeral is held with distinguished rituals, its expenses being borne by the National Treasury. There are two kinds of State Funeral, i.e. the one for Imperial Personages and the other for the subjects. The former is still divided into two, the first one is called the Grand Funeral and is for the Emperor, the Great Empress Dowager, the Empress Dowager and the Empress, while the second one is called the Imperial Funeral and is for the Crown Prince, the Crown Princess, the Emperor's grandson and his consort, the Regent Imperial Prince or Emperor's daughters or children. Both the Grand and Imperial Funerals are held under special ritual according to the

Provisions of the Imperial House Funeral Ordinance.

The State Funeral for the subjects is held in honour of those who contributed distinguished services to the country by the special order of the Emperor and the ritual and order of the Funeral is fixed by the Premier with the Imperial sanction.

State Funerals have been accorded to the following since the beginning of the Meiji Era :

Prince Iwakura (Tomomi) [Peer]	1883
Prince Shimazu (Hisamitsu) [Peer]	1887
Prince Sanjo (Sanetomi) [Peer]	1891
Prince Arisugawa (Taruhito)	1895
Prince Kitashirakawa (Yoshihisa)	1895
Prince Mori (Motonori) [Peer]	1896
Prince Shimazu (Tadayoshi) [Peer]	1897
Prince Komatsu (Akihiko)	1903
Prince Ito (Hirobumi) [Peer]	1909
Prince Arisugawa (Takehito)	1913
Prince Oyama (Iwao) [Peer]	1916
Grand Prince Ri (Kei)	1919
Prince Yamagata (Aritomo) [Peer]	1922
Prince Fushimi (Sadanaru)	1923
Marquis Matsukata (Masayoshi)	1924
Prince Ri (Seki)	1926
Marquis Togo (Heihachiro)	1934

Imperial Interest in Social Work

On various occasions of great importance in the Imperial Household, grants of money are made from the Privy Purse for social welfare, instances of which follow :

Year	Occasion	Purpose or Recipient	Amount in Yen
1897	Empress Dowager Yeisho's Funeral	—Charity	400,000
1912	Emperor Meiji's Funeral	—Charity	1,000,000
1914	Empress Dowager Shoken's Funeral	—Charity	600,000
1915	Emperor Taisho's Enthronement	—Charity	1,000,000
1924	Prince Regent's Wedding	—Promotion of social works	1,000,000
	,,	—Encouragement for the poor to send children to school	1,000,000
1925	Emperor Taisho's Silver Wedding	—Young Men's and Women's Ass'ns	750,000
	,,	—Cultural Bodies in the Colonies	250,000
1927	Emperor Taisho's Funeral	—Charity	1,500,000
1928	Demise of Princess Hisa, the Emperor's daughter	—Protection of the young	50,000
1929	Emperor's Enthronement	—Charity	1,500,000
1934	Birth of the Crown Prince, Akihito	—Protection of mothers and the young	750,000

Since 1879, it has been the custom of the Imperial House to make monetary contributions when there are floods, fires, railway accidents, violent winds, shipwrecks, earthquakes, famines, volcanic eruptions, mine explosions, etc. Immediately after the great earthquake and fire of 1923, a grant of ¥10,000,000 was made for relief.

A fund of ¥1,500,000 in 1911 for extension of medical treatment to the poor was used to found the Saisei-kai, the Imperial Charity Association, which continues active today. Additional money for this work was included in the grant of ¥3,000,000 in 1932 for relief of the poor, and it was extended to the Colonies by a grant of ¥300,000 to the Overseas Ministry.

With the ¥1,000,000 granted on the occasion of the wedding of the present Emperor, Viscount Kiyoura, Premier at the time, established the Keifuku-kai, Beatitude Association, for promotion of social work done by private bodies. On every Kigensetsu, the anniversary of the foundation of the country, which takes place on February 11, Imperial grants are made directly to public and private social welfare organizations. At first limited to such organizations as the Japan Red Cross Society, the Women's Patriotic Association, the Imperial Association for the Support of Soldiers, the Salvation Army, the Fukuden-kai (Charity Association) Orphanage and the Tokyo Asylum, these grants have been greatly increased since 1921 and now go even to superior private bodies in Chosen, Taiwan, Karafuto, the Kwantung Leased Territory and the South Sea Islands.

In 1932, a grant of ¥1,500,000 was made to the Association for the Promotion of Learning through the Education Minister.

Since the days of the Emperor Meiji, it has been customary for the Emperor, while travelling in the provinces to supervise the grand military and naval manoeuvres or on observation tours, to send representatives to various welfare organizations to present money or other gifts.

Also since the beginning of the Meiji Era, the Emperor, the Empress, the Empress Dowager and the Imperial Princes and Princesses have frequently visited

charity hospitals, schools for the blind and dumb and other social welfare institutions. Many such organizations have Princes and Princesses of the Blood as presidents. The present Empress Dowager is particularly interested in the relief of lepers and in 1930 granted funds to all bodies engaged in this work.

Court Rituals

GRAND RITUALS. The Grand Rituals are those conducted by the Emperor personally, with Princes and Princesses of the Blood, Court dignitaries and officials and officers of high rank in attendance. Brief descriptions follow :

Genshisai, the celebration of the auspicious origin of the Imperial Throne at the beginning of the year, is performed on January 3 by the Emperor at the Three Shrines in the grounds of the Imperial Palace, the Kashikodokoro, where the Sacred Mirror is installed, the Koreiden, the shrine of the Imperial Ancestors, and the Shinden, the sanctuary of Shinto deities.

Kigensetsusai, to celebrate the ascension to the Throne of the Emperor Jimmu, is performed by the Emperor at the Three Shrines on February 11. In the evening sacred music and dances are given in a pavilion in front of the Koreiden.

Shunki-Koreisai, for the worship of preceding Emperors and Empresses and Princes and Princesses of Imperial lineage, takes place in the Koreiden on the day of the vernal equinox.

Shunki-Shindensai, performed on the same day in the Shinden, is to offer thanks to the Gods of Heaven and Earth for their blessings and to petition for their continuance.

Jimmu-Tennosai, which takes place in the Koreiden, marks the anniversary of the demise of the founder of the country, the Emperor Jimmu, on April 3. To his mausoleum is dispatched on the same day a Court official representing the Emperor to make offerings. At fixed intervals, the Emperor personally conducts the rite at the mausoleum.

Shuki-Koreisai and Shuki-Shindensai are identical in form and purpose with the vernal equinox rituals but take place on the day of the autumn equinox.

Kannamé-no-Matsuri, the ritual of offering thanks for the harvest and new rice to the soul of the Imperial Ancestress, Amaterasu-Omikami, which takes place in the Grand Shrines of Isé on October 16 and 17, is duplicated in the Kashiko-dokoro at the Imperial Palace on October 17.

Niinamé-no-Matsuri, conducted between November 23 and 24, is marked by the Emperor partaking of new rice after offering it to the Imperial Ancestress, Amaterasu-Omikami, and all the Gods of Heaven and Earth. The same ritual, when performed at the Emperor's enthronement, is called Daijo-sai.

Taisho-Tennosai marks the anniversary of the demise of the Emperor Taisho, the Emperor's father, and is celebrated in the Koreiden on December 25. In the evening, sacred music and dances are performed in a pavilion in front of the shrine. A court official representing the Emperor is sent on the same day to the mausoleum of the Emperor Taisho to make offerings, a rite which the Emperor himself performs at fixed intervals.

ORDINARY RITUALS. These are Court rituals which the Emperor does not conduct personally, but which he attends with the Princes and Princesses of the Blood, Court dignitaries and officials and officers of high rank.

Saitansai, held at dawn on January 1 at the Three Shrines, is for worship of the Imperial Ancestors and the Gods offering thanks to them for the grace of Heaven and supplicating for its continuance.

Komei-Tennosai marks the anniversary of the demise of the Emperor Komei, great-grandfather of the Emperor, and is held in the Koreiden on January 30. The rite of presenting offerings at his mausoleum is performed on the same day.

Kinensai, held on February 17 in the Three Shrines is the ritual of praying for a bountiful harvest and for the continued prosperity and well-being of the Imperial House and the nation. A Court official representing the Emperor is dispatched on the same day to the Grand Shrines of Isé to make offerings and offerings are also presented at various other shrines.

Ninko-Tennosai, marking the anniversary of the demise of the Emperor Ninko, great-great-grandfather of the Emperor, is performed on February 22 in the Koreiden. Offerings are made and a ritual conducted at his mausoleum on the same day.

Tenchosetsusai, held in the Three Shrines on April 29, the birthday of the Emperor, is the ritual of praying for the longevity of His Majesty.

Meiji-Tennosai is observed in the Koreiden on July 30 to mark the anniversary of the demise of the Emperor Meiji, grandfather of the Emperor. Of

ferings are made and a ritual performed at his mausoleum on the same day.

Meijisetsusai is held on November 3 to praise the great achievements of the Emperor Meiji, to remember his high virtues, to invigorate and develop the spirit of the national revival in the Meiji Era and to pray for increased national prosperity.

Kashikodokoro-Mikagura, a sacred dance, is held in the Kashikodokoro in the middle of December. As no definite date is fixed, an auspicious day is named every year by Imperial order.

OTHER RITUALS. The Imperial Court also observes several rituals not specified in the Court Ritual Act :

Shunsai, Tenth-day Ceremony, is held on the 1st, 11th and 21st of every month except January 1, the Emperor observes the ceremony for the Gods more elaborately than on the usual days.

Futsukasai and Mikkasai are performed on January 2 and 3, with the New Year's Day Ceremony. These are observed with specially elaborate rituals.

Joyasai, New Year's Eve Ceremony. At the end of the year the Emperor gives thanks to the Gods for their benevolence throughout the year and prays for blessings in the coming year.

Yo-ori, the rite for purification of the person of the Emperor, is held in the Phoenix Hall of the Imperial Palace on June 30 and December 31.

O-harai, held on the same days as Yo-ori, is a similar rite for the purification of all officials and officers from sins committed unconsciously.

SPECIAL CEREMONIES. Two special ceremonies at the Imperial Court are worthy of note :

Kosho-Hajimé, or the ceremony of delivering lectures in the Court at the beginning of the New Year, takes place in the presence of the Emperor and Empress, Princes and Princesses of the Blood and Court dignitaries in the Phoenix Hall. Usually three lecturers are chosen, with three others held in reserve, from the nation's most erudite scholars of Japanese classics, Chinese classics and Western learning to lecture on subjects related to their specialties.

Utakai-Hajimé, or the Imperial New Year Poetry Party, is usually held in the middle of January in the presence of the Emperor and Empress, Princes and Princesses of the Blood and high Court dignitaries. Though long in existence, it became one of the most important annual ceremonies in 1869. A few months in advance, the Imperial Household Minister announces the theme for the waka, or tanka, poems of 31 syllables, to be submitted. For the honour of having a poem read in the ceremony, anyone may compete. In addition to those by subjects, poems by the Emperor and Empress and other members of the Imperial Family are read.

CHAPTER I

GEOGRAPHY

Position and Extent

The Japanese Empire, wholly within the Asiatic half of the North Pacific, consists of Japan proper and various colonies. At the time of the Meiji Restoration, 1868, there were the four large continental islands of Honshu, or Hondo, usually known as the Mainland, Kyushu, Shikoku and Hokkaido, or Yezo, and 4,068 adjacent islands of smaller size. Russia ceded the long chain of islands called the Chishima, or the Kuriles, in 1875. The Ogasawara-jima, or Bonin Islands, were formally annexed in 1877, and the Ryukyu, or Loochoo Islands, in 1879, though both groups had been earlier under Japanese control. All these areas today constitute Japan proper.

The Colonies The first colony, Taiwan, or Formosa, with the adjacent islands called the Bokoto, or Pescadores, was ceded by China in 1895 following the Sino-Japanese War. The Russo-Japanese War brought Karafuto, or the southern half of the island of Saghalien, and, in Manchuria, the Kwantung Leased Territory and the South Manchuria Railway Zone. Chosen or Korea, was annexed in 1910. The mandated Caroline, Mariana and Marshall Islands, former German possessions in the South Seas, were received by Japan at the Versailles Peace Conference, 1919. With the exception of the Aleutians, the northern half of Saghalien, the Philippines, North Borneo, Hawaii and a few small scattered islands, including Guam, the Empire spreads over all the islands in the Pacific north of the equator.

The most northern part of the Empire, the island of Araito in the Chishima, touches 50° 55′ N. Lat. The southern extreme is in the mandated Caroline Islands, 1° 01′ N. Lat. To the west, the Bokoto extend to 119° 18′ E. Long., and to the east, the mandated Marshall Islands reach 172° 10′ E. Long.

Length and Width If the South Sea Islands, the Kwantung Leased Territory the South Manchuria Railway Zone and the continental peninsula of Chosen are omitted, the Empire is a semi-circle of islands extending in latitude from 21° 45′ N. to 50° 55′ N., approximately 3,330 kilometres, and in longitude from 119° 18′ E. to 156° 30′ E., with a maximum width of about 320 kilometres.

Area

The Home Ministry's investigation puts the total area of the Empire at the end of March, 1935, at 681,280.93 square kilometres, distributed as shown in the following table :

	Area in sq. km.
Grand Total	681,274.75
Japan proper	382,545.42
Honshu	230,532.32
Shikoku	18,772.83
Kyushu	42,078.99
Hokkaido	88,775.04
Ryukyu	2,386.24
Chosen	220,768.65
Taiwan	35,834.35
Bokoto	126.86
Karafuto	36,090.30
Kwantung Leased Territory	3,462.45
South Sea Mandated Islands	2,148.80
S. M. R. Zone	297.92

Japan proper occupies 56.6 per cent of the total area, while Chosen occupies 32.6 per cent., Taiwan 5.3 per cent. and Karafuto 5.3 per cent. each.

The area of each prefecture in Japan proper arranged in the order of size follows :

AREA OF PREFECTURES
(In sq. km.)

			%
1.	Hokkaido	88,775.04	23.2
2.	Iwate	15,235.31	4.0
3.	Fukushima	13,781.61	3.6
4.	Nagano	13,626.13	3.6
5.	Niigata	12,578.05	3.3
6.	Akita	11,663.86	3.0
7.	Gifu	10,494.70	2.7
8.	Aomori	9,630.92	2.5
9,	Yamagata	9,325,76	2.4
10.	Kagoshima	9,103.81	2.4
11.	Hiroshima	8,436.52	2.2
12.	Hyogo	8,322.85	2.2
13.	Shizuoka	7,769.91	2.0
14.	Miyazaki	7,738.85	2.0
15.	Kumamoto	7,437 75	1.9
16.	Miyagi	7,273.75	1.9
17.	Kohchi	7,103.62	1.8

			%
18.	Okayama	7,046.48	1.8
19.	Shimane	6,624.60	1.7
20.	Tochigi	6,436.59	1.7
21.	Gumma	6,335.87	1.7
22.	Oita	6,333.87	1.7
23.	Ibaraki	6,090.99	1.6
24.	Yamaguchi	6,082 11	1.6
25.	Mie	5,765.28	1.5
26.	Ehime	5,667.26	1.5
27.	Aichi	5,081.14	1.3
28.	Chiba	5,062.09	1.3
29.	Fukuoka	4,939.70	1.3
30.	Wakayama	4,723.48	1.2
31.	Kyoto	4,621.20	1.2
32.	Yamanashi	4,465.87	1.2
33.	Fukui	4,264.48	1.1
34.	Toyama	4,257.42	1.1
35.	Ishikawa	4,192.42	1.1
36.	Tokushima	4,143.22	1.1
37.	Nagasaki	4,075.98	1.1
38.	Shiga	4,050.93	1.0
39.	Saitama	3,802.68	1.0
40.	Nara	3,688.60	1.0
41.	Tottori	3,489.48	0.9

43.	Okinawa	2,386.24	0.6
44.	Kanagawa	2,352.81	0.6
45.	Tokyo	2,144.80	0,6
46.	Kagawa	1,858.73	0.5
47.	Osaka	1,813.63	0.5
Total		382,545.42	100.0

Atmospheric Conditions

The average atmospheric pressure of 1935 was highest in Chosen, Manchuria and China, recording 761–763 mm., the highest being 763.3 mm. of Tsinan. The meteorological stations in the Main Island recorded about 761 mm. as in the previous year, and in Hokkaido, Karafuto and the South Sea Islands the pressure was lower in general, the lowest being 756.8 mm. at Truk. It was mostly above 760 mm. in Formosa and Loochoo.

In the same year, the mean temperature rose higher than 20° C. in Nasé of Kyushu, Formosa, Loochoo, Bonin and South Sea Islands, the highest being 26° 9′ at Palau. In Shikoku, Kyushu and the districts which face the Pacific Ocean, ending with the Tokyo Gulf at the northernmost, it was about 16°; in the districts west of Kyoto in the Main Island 15°; in the eastern mountainous districts 10°–13°, in the north-eastern districts 10°; in Hokkaido mostly 5°, except 8° at the southern end; and in Karafuto 3°, the lowest being 0.3′ at Shisuka. In Chosen, it was 10°–14° in the south and 3° at the most northerly border. In Manchoukuo it was about 10°. The highest record was 35° 7′ at Taito in Formosa, 37° 5′ at Saga in Kyushu, and the lowest 28° 0′ below zero at Asahigawa in Hokkaido, 32° 2′ below zero at Shisuka in Karafuto.

In 1935 places where the annual quantity of precipitation was more than 3,000 mm. were Hachijo Island, Odaigahara and Palau. In the Main Island it was 1,000–2,000 mm.; in Hokkaido 900–1,000.; in Karafuto 600–1,000 mm.

The average velocity of the wind does not vary much in the plains, being from one metre to three metres per second; but at Ibuki-yama, the Boko Islands, Shana, Hachijojima, Niigata, and Choshi it was more than 5 metres. Shana, Tsukuba, Hakoné, Ibuki, Uwajima, and Ishigaki experienced a maximum velocity of more than 30 metres per second.

The Kansai Typhoon in 1934. A record typhoon raged throughout the south-western half of Japan on September 21, 1934, velocity of which was reported to have exceeded 60 metres per second. According to the investigations made by the Home Ministry, it affected 35 prefectures. In Osaka prefecture the dead numbered 1,624 and the wounded together with the missing numbered 5,729. Houses totally damaged numbered 9,937. The total casualties numbered 2,499 dead, 8,399 wounded and 568 missing. Houses damaged totalled 376,350, of which 34,576 collapsed entirely. The number of school buildings damaged was 289.

Meantime, the damages wrought on workshops in Osaka prefecture were estimated at ¥30,000,000 covering 1,200 in number. These workshops were confined to those which employ more than five operatives. If, therefore, to the above damages are added damages inflicted upon small-scale workshops the total damages are undoubtedly far greater than described in the above.

Meteorological observations in 1934 are given in the following table.

METEOROLOGICAL OBSERVATIONS

(1935)

Meteorological Stations	Situation of Stations North Latitude Degrees	East Longitude Degrees	Altitude of Barometer m.	Average pressure mm.	Temperature Average Degrees	Difference between Average year Degrees	Maximum Degrees	Minimum Degrees

Geological Formation

The Japanese islands lie at the east end of the Eurasia Continent, spreading more than 3,800 kilometres on the Pacific. They are arranged in the form of a festoon or a breakwater for the Continent against the Pacific waves. The numerous islands may be divided into four groups or bows: the Nippon Bow, the Chishima Bow, the Ryukyu Bow and the Ogasawara or Bonin Bow. The Nippon Bow is composed of the Main Island and the small islands around it. The Main Island itself draws an arc, its convex surface projecting into the Pacific and its concave surface facing the Japan Sea, because the whole

Nippon Bow was pushed out to the ocean by a mountain-making process from the side of the Japan Sea. The Nippon Bow again is composed of two mountain systems, with the Fuji volcanic range as the dividing line : they are the Northern range, or the Karafuto mountain system, and the Southern range, or the Kwenlun mountain system.

It is said that recent excavations show it almost impossible to find the oldest rocks in the formation of the Japanese Islands, but it was formerly assumed that gneiss and crystalline schist, which belong to the oldest geological eras,were found in Japan.

Gneiss Distribution Gneiss is distributed mostly in the Nippon Bow and Chosen and cannot be found in the Ryukyu and the Chishima Bows. It runs through the centre of the southern half of the Nippon Bow, while in the northern half it may be found in the plateau of Abukuma. In Chosen it is spread over a wide area. Crystalline schist runs generally along the outside of the gneiss system. In the southern part of the Nippon Bow, it starts at the Akaishi range and runs through the Kii range to Shikoku, where it develops in a wide area, taking the place of gneiss ; then it crosses the strait to Kyushu and sinks under the Aso volcanic chain to appear again at Nagasaki. In Taiwan it forms the eastern part of the Taiwan mountain range. In the northern half of the Nippon Bow, it appears in the Kanto range and may be found in the Yezo mountain system of Hokkaido and in Karafuto.

Palæozoic Layer The Japanese palæozoic layer is largely aqueous rock, composed mainly of slate, sandstone, silica stone, limestone, grit stone and graywacke, with a compound of such igneous stones as granite and diorite. It is widely distributed and has much to do with the geological formation of Japan. But at the Palæozoic Era the Japanese land lay deep in the waters and did not treasure up coal as did the Palæozoic layer of the Continent. The oldest stratum of the Main Island which has been proved with a fossil is the Carboniferous layer, and any decision on older layers must remain uncertain until similar proof is available. The Palæozoic layer forms the bones of the big mountain ranges developing at the circumference of the Archæan stratum of the southern part of the Nippon Bow and is distributed in the Akaishi, Kii, Shikoku and Kyushu mountain ranges. Traces are also visible in the Hida range, Hida plateau, Tamba plateau, Chugoku range and Tsukushi range. In the northern half, it runs through the Kanto, Ashio Hachimizo, Abukuma and Kitakami ranges to the Yezo range and Karafuto. It can also be seen in Taiwan and Chosen in wide areas.

Mesozoic Stratum The Mesozoic stratum of Japan is composed of stones similar to those of the earlier stratum. Fossils are sufficiently numerous to assure the era in which it was formed. It appears in the Kii range, the southern part of Shikoku, the Kyushu range and the Taiwan range. In Chosen, it is found in the Keisho district. In the Chugoku district, the western part of the Main Island, it comes to the surface, leading to the belief that the plains of this district were formed in this era.

Neozoic Stratum The Neozoic stratum is mainly of aqueous rock and volcanic stones. In this era, the transformation of land and sea was incessant, and volcanic activities were most vigorous, creating most of the present volcanic chains. Through the tertiary and were emitted in great volume. Most of the coalfields, oil-fields and metal mines of Japan were formed in the tertiary period. In th diluvial day of the quaternary period, volcanic exploquaternary periods, andesite and basalt sions followed one after another, and the hills by the rivers and the higher plains of the Kanto took their present form. In the alluvial, or the most recent day of the same era, the lowest and the newest stratum at rivers, lakes and the sea shore, or sand-banks and sand hills, came into existnce. According to the investigation of the Geological Research Office, the areas of rocks of differents geological eras in Japan proper are as follows :

	Sq. km.	%
Archaean stratum	14,189	3.50
Palæozoic ,,	53,149	12.74
Mesozoic ,,	29,844	7,15
Neozoic ,,	196,079	49.87
Tertiary vomitted rocks	44,157	10.58
Quaternary ,, ,,	79,970	19.16
Total	417,388	100.00

Block Movements According to this investigation. two-thirds of the land is of the Neozoic stratum, showing that Japan must have been upheaved upon the surface of the sea in the most recent geological era, and the large volume of vomitted rocks speaks of violent volcanic activities.

In the Palæozoic Era, the islands were all hidden under shallow waters. Even the Hida and Akaishi mountain peaks, which from the ridge of the Mainland,

are composed of the sediment on the sea-bottom in those days. At the end of this era, the highest mountain ranges began to expose their heads above the waters. It was a golden age for the Mollusca and fishes, the Amphibia coming to existence at the end of it. In the vegetable kingdom, Cryptogams grew in great forests which disappeared with the end of the era.

At the Jurassic period of the Mesozoic Era, China and most of Chosen appeared upon the surface of the sea, but the land of Japan was still covered with waters, except for the great mountain ranges, which began to show their complete figures. It was the age in which the cycad, the gingko and the Coniferæ grew in abundance and toward the end of which the latifoliate trees came into existence. In the animal kingdom, the reptiles made great progress, and queer gigantic animals lived everywhere in the sea, in the air and on the land.

When the Neozoic Era dawned, Japan became a stage of great block movements of earth, and it was severed from the continent. taking the form of a chain of countless islands. The present location was assumed, although the northern part was a little later than the southern half. The line which connects the islands runs from south to north because the pressure of the block movement was from west to east. As the movements gradually ceased and the dividing lines of land and sea became stationary, the present animals and vegetables began to grow, and finally primitive men appeared.

Relationship with Continent The close connection of the islands with the Continent is supported by considerable evidence. It is asserted by most scholars that they are continental islands, which are usually located near a continent, from which they were severed in the latest geological era. It is clear that the mountain ranges of Japan have a close connection with the Kwenlun mountain system. The north range of the Chinese mountains, after sinking into the sea, appears again in the northern part of Kyushu and reaches the central part of the Main Island. running through the Chugoku district, and the eastern end of the China mountain system reappears in southern Kyushu, from where it reaches to the Akaishi Range through Shikoku Island and Kii province. It is also known that the sea between the Japanese Islands and the Continent is but 200 metres deep at the maximum from Taiwan to Chosen. That is, if the waters fell by this distance, the East China Sea, the Yellow Sea and the Gulf of Chihli would be dried up, and Kyushu, Shikoku, the Mainland, Hokkaido and Karafuto would be connected by land. In a sharp comparison, the sea to the east and south of the islands suddenly becomes as deep as 4,000 metres and even more in some places. These facts prove that the Japanese Islands were once a part of the Continent of Asia.

Japanese animals belong to those species which are included in the old northern division in the animal distribution of the world, and Japanese plants have very close relations with those on the Continent of Asia and are quite different from those of the American Continent. Finally, paleontology gives us proof in fossil teeth of the elephant. In the layers which belong to the tertiary period or the diluvial day of the quaternary period, these fossils are often found, and some are of the same kind as those excavated in the southern districts of China. We may thus conclude that the Islands of Japan were connected with the Continent of Asia in a prehistoric but comparatively new geological era.

Natural Features

The mountains of Japan are divided into two great systems, one to the north and the other to the south. The Karafuto system, framing Northern Japan, is composed of the Yezo, Kitakami, Abukuma, Kanto and Echigo ranges, arranged from north to south, roughly speaking. Southern Japan is framed by two branches of the Kwenlun system, which has its origin in China. One branch first appears in the northern part of Kyushu as the Tsukushi range and then runs to the east, forming the Chugoku range, the Tamba plateau, the Hida plateau and the Kiso range. The other branch appears in the southern part of Kyushu, forming the Kyushu range, from which it runs east, becoming the Shikoku, Kii, Suzuka and Akaishi ranges.

Japanese mountains have characteristic fine creases, cut by the rainfall, which is specially heavy in this country. The Kyushu, Shikoku and Akaishi ranges were formed by the creasing process; such mountains as Fuji, Nasu, Chokai and Kirishima resulted from volcanic activities, and the Kongo, Kasagi, Suzuka and Mahiru mountain ranges were born in dislocative earthquakes. As for age, the mountains of the Chugoku and Abukuma ranges, with their dull curves, are the oldest; the Shikoku range, the Japan Alps and the Ohu range, or the range in the northeastern

Mainland, are rugged and young, and the plains of the Kanto district and Mino-Owari provinces are very young. The combination of these mountains and plains of diverse ages is peculiar to Japan.

Volcanic chains According to the Geological Research Office, the total number of volcanoes in Japan is 192, of which 58 are active. They may be grouped in 11 chains :

(1) The north Japan inner, or Chokai, volcanic chain, which starts at the southwestern offing of Hokkaido, or O-shima and Ko-jima, and runs through Iwaki-yama, Kampuzan, Moriyoshi-yama Chokai-san, ending with Gatsuzan.

(2) The south Japan inner, or Hakusan, volcanic chain, extending from Hakusan along the Japan Sea to the west through Daisen, Mitsubé-yama, Aono-yama and other smaller volcanoes and then to the Goto Islands of Kyushu.

(3) The Hokkaido volcanic chain, which links such mountains as Hakodaté-yama, Komaga-daké, Tarumayé-daké and some islands in the peninsular part of western Hokkaido.

(4) The north Japan central, or Nasu, volcanic chain, including Osoré-yama, Hakkoda-san, Towada Lake, Iwaté-yama, Komaga-daké, Kurigoma, Numasawa, Arao, Funagata, Za-oh, Bantai, Azuma, Adatara, Nasu, Nantai, Shirané, Akagi, Haruna, Tsuno-otoshi and Arafuna, which are mostly active volcanoes.

(5) The Hida volcanic chain, composed of the seven volcanoes of Heradaké, Taté-yama, Ko-tombi, Washibadaké, Iwo-daké, .Norikura-daké and On-také.

(6) The Mikasa volcanic chain, to the west of the Hida volcanic chain, beginning with Horaiji-san, of Aichi prefecture, and running westward to O-hara-yama, Mikasa-yama, Miminari-yama, Futakami-san and Kabuto-yama of Hyogo prefecture.

(7) The Seto, or Inland Sea, volcanic chain, embracing the old volcanic mountains along the coasts of the Inland Sea and extending to Kyushu, including such mountains as Futako, Kokonoyé, Yufu, Onsen and Tara. The volcanoes are all dormant.

(8) The Ryukyu volcanic chain, starting with the Aso volcano, taking in Kirishima, Sakurajima and Kaimon and extending to the Ryukyu Islands, where it connects Iwojima, Kuchino-Irabé-jima, Kuchinosé Nakano-jima, Suwanosé, Waruiwa-Jima, Tori-shima and Aguni-shima.

(9) The amphibolite andesite volcanic chain, which connects Aono-yama, of Shimané prefecture, and Tokusa, of Yamaguchi ; appears then in Kinpo-zan and Shiguma-daké near Tokuyama, and Himé-jima of Suo ; meets with the Inland Sea chain and runs to Yufu, Kokonoyé and a part of Aso, and extends as far as Luzon Island, sinking to the bottom of the ocean west of the Ryukyu Islands on the way and then running along the eastern coast of Taiwan.

(10) The Fuji volcanic chain, which cuts across the heart of the Main Island from the coast of the Japan Sea to that of the Pacific Ocean, and continues to the Izu, Bonin, Sulphur, Mariana and Caroline Islands, including such mountains as Myoko, Togakushi-yama, Tateshina-yama, Yatsuga-daké, Fuji-san, Hakoné and Amagi on the Main Island.

(11) The Chishima volcanic chain, which comes into Hokkaido from the Chishima, runs along the Yezo mountain system, suddenly turns to the north and seems to disappear in Karafuto.

The Japanese volcanic mountains are composed of four kinds of rocks : pyroxene andesite, amphibolite andesite, bronzite andesite and basalt. Fuji, Iwaki, Chokai, Gatsu-san, Nasu, Hakkoda, Iwaté, Bantai, Akagi and Haruna are of pyroxene andesite. In southern Japan, the Kirishima volcanic range is composed of the same rock, which is, indeed, the most widely distributed in the Japanese volcanoes. Amphibolite andesite is discovered in the mountains which belong to the inner volcanic chains—Hakusan, Dai-sen and Mitsubé-yama. It shows itself in Taté-yama, Norikura and Ontaké also, but is most evident in the Kyushu volcanoes. Bronzite andesite is limited to the district of Kinki, near Osaka, and the volcanic mountains and islands in and along the Inland Sea. Basalt is distributed in Chugoku and the northern Kyushu districts, exposing itself at the Basalt Cave, of Tajima province, Ōné-shima, Hamada, Hagi, the Aburatani Gulf and Fukuyé, of the Goto Islands.

Seas and Coast-line

With the exception of the northern frontiers of Chosen and Karafuto, every part of the Empire is surrounded by water. To the east is the Pacific, washing the Chishima, Hokkaido, Honshu, Shikoku, Kyushu, the Ryukyu, Taiwan and the mandated islands north of the equator. Between the Chishima and Karafuto is the Sea of Okhotsk, and between Karafuto and the continent the Gulf of Tartary, known to the Japanese as the Mamiya Straits. The Sea of Japan lies between Honshu and the eastern shore of Chosen. To the west

of Chosen is the Yellow Sea, or Hwanghai, opening into the Eastern China Sea, or Tunghai, which touches Kyushu, the Ryukyu and Taiwan. Purely Japanese is the famous Inland Sea, enclosed by Honshu, Shikoku and Kyushu.

The Depths The greatest depth yet discovered in these surrounding seas is 9,439 metres, sounded by the warship Manshu in 1926 between Honshu and Ogasawarajima, 30° 49′ N. Lat. and 140° 18′ E. Long. Previously the record was the 8,517 metres of the Tuscarora Deep, named for the American warship which made a survey in 1874, sometimes called the Kurile-Japanese Trench, which lies along the Chishima for about 644 kilometres. The other seas are shallower than the Pacific. The Sea of Okhotsk, which is estimated to have an area of 1,527,007.73 square kilometres, has a mean depth of 838 metres. The Sea of Japan, estimated to extend over 1,007,307.41 square kilometres, has a maximum depth of 3,440 metres and a mean depth of 1,350 metres. The Eastern China Sea, except near the Ryukyu and Taiwan, is less deep. With a length of about 354 kilometres and a maximum width of 77 kilometres, the Inland Sea covers 3,430.43 square kilometres and reaches its greatest depth at 124 metres.

The Currents Two ocean currents with important climatic effects are the Kuroshio, meaning black current, which sailors know as the Japan stream, and the Oyashio, meaning main current, which foreigners often call the Kurile stream. The first is warm and the second cold. Arising from the North Equatorial Current north of the Philippines, the Kuroshio flows along the eastern side of Taiwan and the southern islands of the Ryukyu to about 26° N. Lat., where it splits, the main part moving to the eastern coasts of Kyushu, Shikoku and Honshu and then bearing eastward past the Aleutian Islands to the North American coast, and the offshoot flowing to the west of Kyushu and into the Sea of Japan. Varying in width from 160 to 805 kilometres, depending on the position and the season of the year, it is usually from 5° to 15° C. warmer than the rest of the ocean. The Oyashio originates in the Arctic, washes the eastern shores of the Chishima, Hokkaido and Honshu, meeting the Kuroshio at Kinkazan. From the Sea of Okhotsk, another cold current enters the Sea of Japan through the Gulf of Tartary and flows along the Chosen Coast.

Tides Tides in the Japanese Empire show wide variation. High on the shores of the Yellow Sea and the Eastern China Sea, they reach from 10.4 to 10.7 metres at Jinsen, or Chemulpo, Chosen, and 5.5 metres at Miiké, Omuta, on Tsukushi Bay, Kyushu, but in the Sea of Japan they average little more than 0.6 metre. Along the Sea of Okhotsk, they range from 1.2 to 1.5 metres; along the Pacific coast, from 1.8 to 2.7 metres, and in the Inland Sea, from 1.8 to 4 metres.

Coast-line. The coast-line is exceptionally long, being 52,228.787 kilometres for the whole Empire. For Japan proper, it is 30,602.458 kilometres, which means a kilometre to every 12.43 square kilometres of area, and for Chosen 18,203.726 kilometres, a kilometre to every 12.12 square kilometres. The shores of the Sea of Japan are comparatively regular, but those on the Pacific are indented with a large number of gulfs, bays and inlets, many of which afford excellent anchorages. Japan proper has more than 1,400 harbours, about half of which are utilized for trading. The best harbours of Chosen are on the Yellow Sea and the Chosen Channel. Hokkaido, Karafuto and Taiwan are less fortunate in capacious shelters for ships.

Mountains

In Japan proper, there are 250 mountains with peaks higher than 2,000 metres above sea level, the highest being the celebrated Mount Fuji, which lifts its white cap sublimely 3,773 metres above the beautiful Suruga Gulf. Chosen has 51 and Formosa 130 mountains in the same category, but the latter has five peaks higher than Mount Fuji, Niitaka-yama being the highest mountain in the Japanese Empire with its height of 3,950 metres. The highest mountains in Japan proper are converged in the central part of the Main Island in the prefectures of Nagano, Toyama, Yamanashi, Shizuoka and Gifu, but there are, of course, many other mountains famous geographically and historically in other parts of the country.

Rivers

The Empire is abundantly watered by numerous rivers, usually wide where they empty into the sea, but comparatively short in course and not navigable for many miles inland except by flat-bottomed craft. During the summer rainy season and when the mountain snows melt in the spring, torrents rush down them, often overflowing and causing damage; during the rest of the year, they dwindle to narrow and shallow streams. If of little use for transportation, they serve as reservoirs from which water is drawn for irrigation and increasingly as sources of electric power.

Total available hydro-electric power of rivers in Japan proper is estimated at 14,090,000 h.p., the power actually developed by the end of 1934 was about 4,348,862 h.p.

The major rivers, with navigable length, follow:

Lakes

The Empire contains numerous lakes, especially in Honshu and Hokkaido, remarkable for their beautiful setting rather than extent. The most interesting are those high above sea level, formed in most cases by volcanic eruptions damming the head-waters of rivers.

The major lakes, with their height above sea level and area, follow:

	Above Sea Level (m.)	Area (Sq. km.)	Depth (m.)

Flora

In summer the southern part of Japan experiences tropical weather, while in winter the districts north of the Ohu provinces are subject to arctic cold. But owing to ample rainfall, the growth of plants in Japan is in general very rich, yet agriculture occupies so large a proportion of area as to restrict not only the natural distribution of flora and fauna, but a scientific study of the subject as well.

The flora of Japan is by most botanists divided into four zones :

(a) Tropical forest zone, or the banian (Ficus retusa) zone.
(b) Subtropical forest zone, or the kashi (Quercus acuta) zone.
(c) Temperate forest zone, or the beech-tree (Fagus Sieboldi) zone.
(d) Arctic forest zone, or the dwarf mountain fir (Pinus pumila) zone.

I The Tropical Forest Zone. The tropical forest zone, or the banian zone, covers those portions of the plain of Formosa lower than 450 m. above sea level, as well as the Loochoo, Bonin, Sulphur and the South Sea islands. The aerial roots of the Ficus Retusa are not so large as those of the banian in India, but the species grows in abundance and to a great height, sending down its aerial roots into the ground like the tentacles of an octopus. In some parts of Sulphur Islands, the Loochoo Islands and Formosa it forms impenetrable forests. The cocoanut tree is rare but grows well. In Formosa the pineapple thrives naturally, while the Agave American grows quite tall. The cycad (Cycas revoluta), the tree fern (Cyathea spinulosa), the coffee plant (Coffea Arabia), the gum tree, the orange tree, the sugarcane, the mangifera (Mangifera Indica) and the papaw-tree (Caria papaya) grow luxuriantly.

II The Subtropical Forest Zone The subtropical forest zone, or the oak zone is limited to altitudes of from 450 to 1,800 m. in Formosa, and as low as sea level in the northern half of the Loochoo Islands. The plains of Kyushu, Shikoku, that part of the Main Island south of 35 degrees North Latitude, and the southern half of the Korean peninsula belong to this zone, the temperature here being from 13° to 21°C. (55° to 70°F.), and the altitude below 1,120 m. at Mount Kirishima in Kyushu ; 650 m. in the northern part of the same island ; 760 m. in Shikoku, 600 m. in Chugoku or west of Kobé ; 500 m. in the Tokaido districts ; and 460 m. at Tsukuba-yama in the Kanto district.

Plants peculiar to this zone are those which belong to such species as the camphor-tree, the oak, the camellia, and the Ternstroemia Japonica, evergreen and latifoliate. On sandy shores, where the sea wind is strong, the black pine (Pinus thunbergii) grows, with spreading, contorted branches, an in-

dispensable element of the Japanese landscape, made familiar to the world through the paintings of Hokusai and Hiroshigé. In the southern part of this zone the camphor-tree (Cinnamomum camphora) is abundant. The hemp-palm (Trachycarpus excelsa), the Nagi (Podocarpus nagi) the banana plant (Musa basjoo) and the cycad are planted as ornamental trees, and grow to a good size. Agricultural plants in this zone are rice, barley, soy-bean, red-bean, German millet, the field cabbage (Brassica campestris), colza, cotton (Gossypium herbaceum), indigo-plant, tea-plant, mulberry-tree, mandarin orange, as well as the sugar-cane and the potato. In this zone there is only one rice crop a year while in the first zone it is harvested twice a year.

III **The Temperate Forest Zone** The temperate forest zone, or beech-tree zone, lies north of the 2nd zone in the Main Island, the south-western part of Hokkaido, more than half of its whole area, and in the mountainous portions of Korea ; it begins at 37.5 degrees north latitude at the coast and 35° in the Main Island, and ends at 43.5° in the central part of Hokkaido. The temperature of these areas is from 6° to 13° C. (42°-56° F.). In Formosa, the mountain valleys which are between 1,800 and 4,550 m. above sea level belong to this zone, and there grow the cryptomeria, the Picea jezoensis, the hemlock and the Formosan five-leaf pine (Pinus par viflora). The representative species of this zone in the Main Island is the beech, but it is almost extinct because of commercial exploitation. In Echigo province grow many species of deciduous latifoliate trees, such as the oak (Quercus glandulifera), the Quercus crispula and the horse-chestnut (Aesculus turbinata), while among these, in some places are found varieties of acerose trees such as the Japanese cypress, the Chamaecyparis obfusa, the hatchet leaved arborvitae (Thujopsis dolabrata), the fir (Abies firma), the Tsuga Sieboldii, the Abies homolepis, the Korean pine (Pinus koraiensis), the Larix kaempferi, and the like. The timber line of this zone is 4,550 m. in Formosa,—Kyushu, Chugoku, Kinki or the Kyoto-Osaka districts have no mountain which rises above this line ; 2,060 m. in Shikoku ; 1,700-1,760 m. in Suruga and Totomi provinces ; 1,500 m. in Shinano and Kai provinces ; 1,400-1,060 m. in the northern districts of the Main Island ; 450 m. in the southern part of Hokkaido, and down to sea level in the centre of Hokkaido.

The agricultural plants in this zone are barley, wheat, soy-bean, red-bean, German millet, the Panicum frumentoceum and the peanut. In the north rice is often subject to damage from early frost. The forests in the southern half of this zone are the most beautiful in Japan, especially those sections dominated by trees of Kiso valley, namely, the Japanese cypress, the Thuja standishii, the Thujopsis dolabrata, and the Sciadopitys verticillata. The cryptomeria forms vast natural forests in Akita prefecture.

IV **The Arctic Forest Zone**. The arctic forest zone, or the dwarf mountain fir zone, occupies the mountain elevations above 4,500 m. in Formosa, and does not exist in Kyushu, except in small patches above 900 m. on the mountains. In the central part of Japan, Fuji, Ontaké, the Nikko and many other mountains are in this zone, while in Shikoku the belt lies between 1,800 m. to 2,580 m. The Abies veitchii, the fir-tree (Abies sachaliensis), the hemlock, the Larix kaempferi, the Abies firma, the yew-tree, the Alnus firma, the Sorbaria randaiensis and the Alpine-rose (Rhododendron hyminanthes) grow in this zone, but the principal trees differ according to districts. In Formosa, the Abies sachaliensis is the principal tree, the Abies veitchii on Kiso, Fuji, the Nikko and other high mountains located within 40 degrees north latitude in the Main Island ; the Abies firma and the Larix kaempferi in the districts further north, and the Abies sachaliensis again in Aomori prefecture. In Hokkaido and Karafuto the Abies sachaliensis and the spruce (Picea ajanensis) grow plentifully, but are not found in the Main Island. In addition, in Karafuto, the larch flourishes, as also does the Juniperus chinensis along the seashore.

Marine Flora According to Dr. Okamura, the marine flora of Japan in the Pacific Ocean is divided into two by Oshima Island, to the south of which, including the Bonin Islands, is the Tropical division, while from north of Oshima to Kinkazan lies the Temperate division. The ocean district north of Kinkazan belongs to the Arctic division, although at the southern end of this division can be found, to a certain extent, Temperate-zone seaweeds. On the western side of Japan, that is, along the coast of the Japan Sea, the Tropical and Temperate seaweed zones are divided at Makurasaki or Noma Peninsula at the west end of Kyushu Island, while the arctic zone begins at the Tsugaru Straits.

Korea As may be inferred from the geographical relation existing between the continent and the peninsula on the

one hand and between the latter and Japan on the other, the flora of the northern part (38°-43° N.Lat.) of the peninsula bears a great resemblance to that of the eastern Asiatic continent, while the flora of the southern part has a close connection with that of the western part of the Main Island of Japan.

Dense forests of conifers are frequently seen in the northern districts. Pinus Koraiensis is a species commonly found there. The flora of the northern half has many northern elements and bears a close relation to the flora of Manchuria and Siberia.

Elements characteristic of northern China are also to be found in the flora of the western part of Korea. Endemic genera are comparatively few,—a characteristic of continental floras. Among the endemic genera, Hanabusaya Nakai and Chosenia Nakai may be mentioned as the most interesting. Both genera are monotypic, the former belonging to the family Campanulacæ, and the latter to the family Salicaceæ.

The South Sea Islands Pemphis acidula, Scaevola frutescens and Tournefortia argentea grow on the shore. Coconut palms and screw pines grow among the littoral bushes. Allophylus timorensis and Wedelia biflora are the most common species and form a dense growth in the interior of the islands. Generally speaking, the flora of the islands is extremely poor as far as the number of species is concerned. This suggests that it is of comparatively recent origin.

Classification. There are in Japan, nearly 20,000 species of flora known to botanists. The "Illustrated Book of Botany" published by a Tokyo botanical association contains 2,070 representative species classified as follows :

	No. of Species
I Phaneregamæ	
A Angiospermæ	
(a) Dicotyledoneæ	
1 Sympetalæ	519
2 Archichlamydeæ	1,046
(b) Monocotyledonæ	242
B Gymnospermæ	
(a) Gnetaceæ	1
(b) Coniferæ	
1 Araucariaceæ	23
2 Taxaceæ	7
(c) Cycadaceæ	1
(d) Ginkgoaceæ	1

4 Chlorophyceæ	6
Total	2,070

Fuji, Sakura, Sumiré, Sugé, Susuki, and Kiku

According to Dr. Makino species of the phanerogamae alone number from 8,000 to 10,000 in Japan proper. Among this great number of plants, there are very many which are specially Japanese and unique in the botanical world. Several of the most prominent of these plants are selected here and a brief explanation on each of them is given below :

Fuji. (Kraunhia floribunda) Fuji or wistaria is a plant peculiar to Japan. Chinese wistaria differs from that of Japan, and strangely enough no Chinese wistaria is transplanted in Japan, while it is found in Europe and America. The Chinese wistaria is the so-called murasaki fuji, or purple wistaria, it therefore cannot be classed as belonging to the same species as the Japanese fuji.

The Japanese wistaria is divided into two species, viz. fuji and yama fuji (Kraunhia brachybotrya), or wild wistaria. Both grow in mountains, but are often cultivated in gardens. Yama fuji grows wild in Shikoku, Kyushu, and Chugoku and their vines are sinistal. Its flower is larger in size, but the raceme is short. Some yama fuji found in nurseries have white flowers and are called shira fuji, or white wistaria. Botanists in the West consider it an independent species, but it is only a

variety of yama fuji. The ordinary fuji grows wild all over Japan and its vines are dextral. Wistaria found in Nara Park and that in Kasukabé in Musashi province belong to this species. Its flower-clusters are very long and they sometimes measure as much as several feet.

Sakura. Sakura, or cherry-blossom, is celebrated in Japan from olden times. Yama-zakura (zakura is the euphonic form of sakura in the compound), (Prunus serrulata var. spontanea), or wild cherry blossom, is the most important of all species of cherry blossoms. The famous poem of Norinaga Motoori,

Shikishima no
Yamato gokoro-wo hito towa ba
Asahi ni niwo yamazakura bana.
(Isles of blest Japan !
Should your Yamato Spirit
Strangers seek to scan,
Say—the cherry wild and fair !
Lightened up in morn's sun-lit air !)

refers to this yamazakura. This species grows in the districts stretching from Kyushu in the south to Kinki (near Kyoto) in the Main Island. Many places which are noted for this sakura are found in the belt lying between these two districts. The most famous of them is Yoshino Yama near Nara.

Recently some scientists made an attempt to call it shiro yamazakura, or white wild cherry, because they gave the name of beni yamazakura, or red wild cherry to the other species. But to this red wild cherry the name of oyamazakura (Prunus serrulata var sachalinensis) has already been given.

Ōyamazakura grows in the mountain districts of the Central provinces, Tohoku, Hokkaido and Karafuto and was not probably known to our ancestors in the western half of the Main Island who loved yamazakura.

The ordinary yamazakura grow in mountains and are planted in public and private gardens or along public roads.

The so-called satozakura, or village cherry, does not grow in the mountains. They must have varied from the original yamazakura.

The sakura which is called Yoshinozakura by florists and is widespread to-day all over the country with Tokyo as the centre, is known as somei-yoshino (Prunus yedoensis), in the botanical world. It appeared in Tokyo at the beginning of the Meiji Era. But where florists at Somei got its seedlings is not known. It was about the fifth year of Meiji that they were planted in Ueno Park. The reason that this blossom is called somei-yoshino by scientists is to avoid confusion with the sakura at Yoshino mentioned above. Somei-yoshino appears not to have existed in Yedo, the present Tokyo, during the time of the Tokugawa Shogunate.

This somei-yoshino, strange as it is, existed exclusively in Tokyo, and was rarely transplanted out of the city for long. It is found everywhere in Japan to-day, but it is only since 1902 that it began to spread out from Tokyo.

It has become known that this species of sakura is growing wild in Saishu Island, Korea. However, since it cannot be surmised that its seedlings were brought to Tokyo from this island, the true origin of this sakura in Japan proper is still unknown. Some Western botanists consider somei-yoshino as a species akin to higan-zakura (Prunus subhirtella), which blossoms at the time of the equinoctial week, and oshima-zakura (Prunus serrulata var. albida, a kind of yamazakura which grows on Oshima Island in Izu province). But it is not confirmed yet.

Higan-zakura belongs to a different species. It is divided into two classes in botany. The trunk of one class is large, while that of the other is small. The former is found in Ueno Park, Tokyo, and the latter is rarely seen in the Kanto district.

The small higan-zakura, however, is found everywhere in Kansai (western) district and blossoms much prettier than the other variety. It is also found in Shinano province, although it grows into a comparatively large-sized tree.

The large higan-zakura is not found in such great numbers as the other. Jindai-zakura of Shinano, and ishiwari-zakura of Iwaté belong to this species. Shidare-zakura (the willowy sakura) also comes from this species and is called azuma-higan.

Sumiré (Viola mandsurica) The species of sumiré or violets is called viola in botany and violet is the popular English name, while sumiré is the popular Japanese name for it. This name is said to have originated in the carpenter's "sumitsubo or sumiiré", or Indian inkstand made of wood to which the flower resembles in shape. This "sumiiré" changed into "sumiré," so the story goes.

In botany, sumiré is restricted to a species with flowers of deep purple-colour. Varieties are ko-sumiré, tsubo-sumiré (Viola verecunda), tachitsubo-sumiré (Viola grypoceras) akané-sumiré (Viola phalacrocarpa), ezo-sumiré, ki-sumiré, tsukushi-sumiré (Viola diffusa), etc.

Japan is a kingdom of violets where more than a hundred species are found. No other country in the world compares with Japan in this respect.

Sugé (Carex) Of sugé, carex or sedges, the most prominent is kasa sugé (Carex disparata), or umbrella sedges, and mino sugé, or raincoat sedges. More than 300 species of carex are found in Japan.

Susuki (Miscanthus sinensis) Susuki, or pampass grass is called in some places kaya. The tassel-like bunches of its flowers are called "obana," which is included among Nanakusa, or seven herbs. (See Chap. XXXVII, Calendar of Annual Events).

The graceful form of susuki with Obana on them touches the Oriental heart and has been the subject of many celebrated poems. There are many species such as masuhono-susuki, masuuno-susuki, sugurono-susuki, etc.

Susuki grows abundantly on mountains and in fields, and the tuffs of obana nod before the wind, giving a characteristic Japanese touch to the autumnal landscape.

Kiku (Chrysanthemum sinense) Kiku or chrysanthemum is a celebrated flower in Japan. It is worthy of being the national flower and is used as the Imperial crest.

The Chinese chrysanthemum, from which the Japanese kiku is derived, had been cultivated in China before it was transplanted to Japan.

The scientific name of this flower is Chrysanthemum sinense. The name chrysanthemum is that given to the genus of this family in Europe apart from kiku, before this flower was known in that continent. Sinense is the name of the species and means China. Therefore Chrysanthemum sinense means the Chinese chrysanthemum. When it is called Chrysanthemum japonicum, it becomes the scientific name of the Japanese chrysanthemum or ryuno-giku. Chrysanthemum arcticum, or arctic chrysanthemum, is the scientific name for kohama-giku.

The origin of the chrysanthemum is the wild chrysanthemum grown in China. The Chinese began to cultivate it. The chrysanthemums which were cultivated by Chinese horticulturists were brought into Japan and grew into countless varieties of the chrysanthemum of to-day. In 1884 it was found by Dr. T. Makino, that the original Chrysanthemum sinense, which were thought to have existed only in the old China, grows in Loochoo Islands, Kyushu, Shikoku and the part of the Main Island west of Kobé.

He gave it the name of nojigiku (Chrysanthemum sinense var. japonense). The stems, leaves, flowers, colour and fragrance which nojigiku porsesses are the same as those which the original species of cultivated chrysanthemum in China has.

Fauna

Japan possesses an exceedingly rich and varied fauna closely related to the adjacent continent and classified into two principal groups, the Palæarctic, and the Oriental. Of these the Palæarctic elements are chiefly found in the northern territories, such as the Kuriles, Saghalien, Hokkaido, Japan proper, and Korea, while the Oriental ones range over the islands of Formosa and Loochoo.

Because birds and animals can move their habitat it is more difficult to classify them but, in general, Formosa, the Loochoo, and the Bonin Islands belong to the so-called Oriental zone, according to the world biological division, and include such tropical animals as the buffalo (Bubalus bubalis), the Formosan leopard (Felis dardi brachyurus), the Manis pentadactyla and the big snakes. Tropical insects are found in abundance. In the Loochoos live such rare species as the Trimeresurus flavoviridis, a poisonous snake, and the leaf-butterfly (Kallima inachus formosana). South of Bird Island, Izu, albatross frequent the blue waters; while in the Bonin Islands and southward the Japanese white-eye congregate. On Sulpur Island tropical birds with red tails can often be seen. From Kyushu northward according to the biological theory, extends the Palæarctic Zone with its fauna of the Temperate zone, specially domestic animals; while the wild animals found are the antelope (Capricornis crispus), deer (Sika nippon), wild boar (Sus leucomystax), bear (Ursus torquatus japonicus), fox (Vulpes vulpes japonicus), badger (Nycterentes procyonoides), the Meles anakuma, the Martes melampus, and the squirrel (Sciurus lis). Different species of monkeys are also found. Among birds there are the green pheasant (Phasianus versicolor versicolor), copper pheasant (Graphophasianus soemmerringii scintillans), snowy heron (Egretta garzetta garzetta), hawk (Astus gentilis schvedowi, etc.); the crow (Corvus coronoides japonensis) is the most common. In the northeastern districts of the Main Island, and in the high mountains, are found all the birds of the north, and also such arctic rovers as the hare (Lepus brachyurus brachyurus) and the

ptarmigan (Lagopus mutus japonicus) both of which become white in winter. In Korea, the hedgehog (Erinaceus koreanus), tiger (Felis tigris coreensis), Korean pheasant (Phasianus colchicus karpowi), crane (Megalonis japonensis) and the like are seen.

As there is a wide difference between the kinds of animals in the Main Island and Korea, so also is there quite a difference between those of the Main Island and Hokkaido. In Hokkaido the monkey is no longer seen ; the Hokkaido bear (Ursus arctos yesoensis) takes the place of the bear (Ursus torquatus japonicus) ; while the species of deer, rat. squirrel and ptarmigan are unlike those of the Main Island.

Karafuto again differs from Hokkaido in its species of animals. The rat, squirrel and the Ursus arctos yesoensis are the same, but there are also such species as musk-deer (Moschus moschiferus parvipes) and wild cat (Lynx lynx borealis), while in winter the tiger comes across the frozen sea from the nearby continent.

Coming to the urodele, there are various species of it, the majority of them being considered as peculiar and finding their homes in the southern district. Such species are represented by Hynobius nebulosus, H. stejnegeri, H. vandenburgi, etc. One of the most noteworthy is the giant salamander (Megalobatrachus japonicus), which inhabits the cool mountain streams of provinces in Honshu, south of Mino, and also in Kyushu. Although not common, it is not very rare. It is known to occur also in China, and may be said to represent a good example which marks off the East Asian subregion from the others. As the representative of the northern district may be recorded Hynobius peropus, which is found at high altitudes. Extensively distributed in Japan proper are Diemictylus pyrrhogaster and Onychodactylus japonicus, the former being the commonest of all.

The freshwater fishes are known from an immense number of species, many of which appear to be rather limited in distribution. Some are confined to particular river valleys, others inhabit the lakes of a limited district only, while some are restricted to a comparatively narrow area. Generally speaking, the southern district presents us with the following species : Acheilognathus limbatus, Sarcocheilichthys variegatus, Opsariichthys uncirostris, Zacco temminckii, Brittosus kawamebari, Sicyopterus japonicus, Rhinogobius hadropterus, etc. Ranging over the northern area are found such forms as Oncorhynchus, Pseudoperilampus typus, Chloea senbae, etc. Widely spread over Japan proper occurs Plecoglossus altivelis. The river Nagara, in the province of Mino, is famous for its fishing with the cormorant.

Marine Fauna

On the Pacific side Japan has two principal streams of different temperatures. The warm current is known as the Japan stream, or Kuroshio, which is peculiar for its high salinity. This stream has its origin in the north Pacific current from the east, and passes into the East China Sea, moving northwards by way of Luzon and Formosa.

The cold current is the well-known Kamchatka stream, or Oyashio, which rises from the Behring Sea, and passes down south along the eastern coast of the Kurile group and Hokkaido, extending father southwards off Kinkazan, or beyond, where it meets the aforesaid Kuroshio.

Receiving a paramount influence of the currents just sketched out, Japanese waters command a very rich and varied marine fauna, there being found two types of animal life, the northern and the southern. Neglecting here some southern and northern elements, which have their limits north in the Behring Sea and south off the Loochoo group, respectively, the following three faunal areas may be more or less clearly recognized, though contiguous zones blend one into the other :

(1) Northern zone, extending from the the shore of the Kurile group to that of the northern part of Honshu which lies to the north of Kinkazan.

(2) Middle zone, extending from off Kinkazan to near the Shionomisaki, on the Pacific side, and representing the zone of mingling of the arctic or subarctic and tropical or subtropical forms. The Japan Sea may be dealt with as corresponding as a whole to this zone.

(3) Southern zone, comprising the shores of the parts of Japan proper lying to the south of the Shionomisaki, the Loochoo group, the Bonin group, and Formosa.

Northern Zone This district is frankly subarctic, containing animals characteristic of the Behring Sea on the one hand, and of the Okhotsk Sea on the other. Amongst the carnivorous mammals the sea otter (Enhydra lutris) is circumpolar in range, being confined to the north of Hokkaido, while the Steller sea lion (Eumetopias jubata) and several seals (Phoca vitulina, Ph. fasci-

ata, etc.) frequent the more southern waters, some of them occasionally appearing in the seas off Hokkaido and Amurland. The northern fur seal (Callorhynus ursinus) which is of economic importance particularly abounds in Kaihyo-to (Seal Is.), a small island near Saghalien and also on some islands of the Kuriles.

Turning to cetacea, there are three whalebone whales, such as Balaena glacialis, B. mysticutus, and Rhachianectes glaucus.

Around the Kuriles, Hokkaido, and Saghalien are found in immense quantities many fishes like the cod, salmon, and herring, which are of the same great economic importance as in Norway, Scotland, Newfoundland, and other countries.

Comparatively shallower in the waters are found some ascidians, like Halocynthia roretzi, Chelyosoma siboja, Molgula crystallina, M. redikorzevi, etc. The first two are largely eaten in this country. Much less developed here than in the tropics are a number of echinoderms.

Ranging from the Behring Sea to the Japan Sea occurs Paralithodes camtschatica, which attains a large size and is one of great economic importance. Its famous fishing grounds are the coasts of Kunashir and Saghalien. With this is associated the most edible crab, Chionecetes opilio.

A large number of molluscs are known from this district, of which the most valuable species are Ostrea gigas, Mactra sachalinensis, Pecten yesoensis, Ommastrephes sloani pacificus, etc.

Amongst medusae, such forms as Haliclystus spp., Aurelia limbata, Cyanea spp., Chrysaora spp., Staurophora discoidea, and Sarsia spp. frequent the northern waters.

Middle Zone In this district the arctic or subarctic overlaps the tropical or subtropical fauna, there being distinguished a great variety of animals. Most of the types characteristically Japanese belong here, abounding in rock pools and about the rocky islands. Setting aside some mammals, northern and southern, some whalebone whales may be recorded here, which are of great economic importance. The blue whale (Balaenoptera sibbaldii) which is of wide distribution and of migratory habits, appears off Kinkazan and Hokkaido in summer, and about Shikoku and Kyushu in winter. Swimming in schools in the seas around Japan proper and Hokkaido is found the common finwhale (Bal. physalus) which appears in the north in summer, and in the south in winter. The Sei whale (Bal. borealis) has a range almost similar to the preceding, extending from the southern Kuriles in the north to as far south as the Goto group. Their famous hunting grounds are off the southern Kuriles, Nemuro in Hokkaido, Kinkazan, the Shionomisaki, the Goto group, and Korea.

Here intruded from the southern seas are found a few species of reptiles, like Disteria cyanocincta, Hydrus platulus, Caretta olivacea, and Eretmochelys squamosa which sometimes extend north up to Hokkaido.

The chief species of fishes, the occurrence of which marks this zone off from the others, may be said to be Cynias manazo, Hyporhamphus sajori, Apogon semilineatus, Halichoeres poecilopterus, etc. Some valuable fishes, as the Japanese porgy, bonitos and tunnies are caught here in immense quantities. Of scombroid fishes, Scomber japonicus and Thunnus orientalis are found on both sides, the Pacific and the Japan Sea, extending from Saghalien and Hokkaido in the north to the East China Sea in the south. Besides, this district abounds in sardine (Sardinea melanosticta), which is replaced in the north by the herring and in the south by Etrumeus micropus. Engraulis japonicus also occurs in great abundance, having a range somewhat wider than the sardine. Here it may be noticed that, assuming the Boso peninsula near Tokyo to be a boundary, the species of the northern area gradually drop off, and the species of the southern area become more and more conspicuous. The reverse is true of the southern elements.

Amongst ascidians there are some species like Halocynthia karasboya, Microcosmus hartmeyeri, Styela kroboja, etc.

Echinoderms are plentiful, being comprised of a number of interesting species of Ophiostiba hidekii, Asteroschema japonicum, brittle-stars, sea-urchins, and sea-cucumbers.

Amongst crustaceans, one of the most notable is a giant crab, Macrocheira kaempferi, which appears to be confined to this zone, on the Pacific side. Neptunus trituberculatus is also endemic and ranges all around Japan proper. Having a range nearly similar to the giant crab is an edible spiny lobster, Palinurus japonicus. Besides, there is a good catch of penaeid prawns which are decidedly stragglers from the southern zone.

In the Japan Sea the water is by no

means simple or isolated, but compound and connected with those of other seas. Of fishes the bonitos and Euthynnus are scarcely found in the Sea. Some crabs, like Chionecetes opilio, etc., are of great commercial value and huge quantities are caught. Besides, some shrimps and prawns, belonging to the genera Pandalus and Crangon, are also found in much abundance. Amongst the cephalopods, one of the most notable is an oegopsid, Watasenia scintillans, which emits luminescence. It appears abundantly in Toyama Bay, about May. Ommastrephes sloani pacificus is thickly and extensively distributed in the Sea, its thickest distribution roughly coinciding with the extension of the Tsushima stream.

Southern Zone The fauna about Kyushu and Shikoku is less characteristically Japanese, having much in common with the neighbouring shores of the islands of Bonin, Loochoo, and Formosa, where there are forms which are almost or quite identical with those met with about the South Sea islands of Java, Celebes, Borneo, etc.

Exclusive of the hair seal (Zalophus lobatus), occasionally appearing in this zone, there can be seen a few species of whalebone whales and toothed whales.

Extensively spread over this zone are some species of reptiles, such as Laticauda laticaudata, L. colubrina, Emydocephalus ijimae, Disteira melanocephala, etc., most of them being found not to range over to the middle zone.

Of fishes there is a number of forms which are of great economic importance. Of scombroid fishes, such forms as Rastrelliger chrysozonus, Grammatorcynus bilineatus, and Gymnosarda nuda which inhabit the tropical seas have their range to Loochoo ; Acanthocybium solandri and Euthynnus yaito are spread, on the Pacific side, into the middle zone ; and Katsuwonus pelamis is of very wide distribution, ranging from Formosa to Hokkaido, on the Pacific side, and to middle Honshu, on the Japan Sea side, though very few in number. Cybium chinense and Sarda orientalis are rather abundant about Kyushu, but they are found in northern Honshu, both off the Pacific and the Japan Sea coasts. Of other important fishes, Pagrosomus major, Evynnis cardinalis and Taius tumifrons are distributed from Formosa to middle Honshu. Besides, some forms like Embolichthys mitsukurii, Halichoeres opercularis, Chaetodon setifer, Ch. vagabundus, and others are found to extend to, or about southern Kyushu ; Kuhlia marginata ranges from the southern seas to Idzu, and Safole toeniura to Misaki.

As they proceed southwards, ascidians seek a lower level of the sea for their habitat. Echinoderms are very much in evidence, presenting a number of species which inhabit the southern tropical seas. Some crabs like Scylla serrata, Neptunus pelagicus and Trapezia extend their range northwards to about Loochoo and Kyushu.

Ranging from off the Goto group to the Kumano Sea is a famous coral-bed, where we have such forms as Corallium japonicum, C. elatius, C. konojoi, and C. inutile. The first two corals are also found forming a bed in the waters near the Bonin group, as well as north to Formosa.

The sponges are very rich and varied. The sponge of some commercial value is represented by Euspongia irregularis, which abounds in the southern seas.

Classification Of more than 20,000 species of animals in Japan, 3,725 representative species are contained in the "Illustrated Book of Japanese Animals," by Mr. S. Uchida and others. In addition there are illustrations of 113 species which have been imported into Japan for various purposes. They are classified as follows :

	No. of Species
I Vertebrata	
A Mammalia	91
B Aves	280
C Reptilia	83
D Amphibia	34
E Pisces	448
F Cyclostomata	2
II Prochordatz

Earthquakes

Italy and Japan are the two countries in the world which are famed for earthquakes. In the frequency of earthquakes in recent years Japan beats Italy. In 1923, when the Great Kanto Earthquake occurred, there were 2,786 sensible earthquakes and 3,915 insensible ones. The number of sensible earthquakes in the five years, 1927-1931, was 12,476 in the whole Empire. About 45% of them occurred in the Kanto district, Kyoto and Osaka districts coming next with 22%. But such earthquakes as were accompanied with casualties were very few, numbering only three during the five-year period. The seismic history of the country since 1596 records 21 big earthquakes in which the loss of lives amounted to over 1,000 each.

GREAT EARTHQUAKES IN JAPAN IN THE PAST THREE CENTURIES

Date	A.D.	Japanese Year	Districts	Number of Persons killed
Sept. 3	1596	(Keicho 1)	Oita (Kyushu)	708
Sept. 4	1596	(Keicho 1)	Kobe, Osaka district	1,173
Jan. 31	1605	(Keicho 9)	Pacific coasts from Kyushu to Tokyo Bay	8,800
Sept. 27	1611	(Keicho 16)	Aizu (North-east district)	3,700
Dec. 2	1611	(Keicho 16)	North-east and Hokkaido coasts	4,783
June 16	1662	(Kanbun 2)	Central district	800
Feb. 2	1666	(Kanbun 6)	Takata (Echigo province)	1,500
Dec. 31	1703	(Genroku 16)	Tokyo and Tokaido	5,233
Oct. 28	1707	(Kanyei 4)	Pacific coasts of Central district	4,900
May 20	1751	(Horeki 1)	Takata (Echigo province)	2,000
March 8	1766	(Meiwa 3)	Tsugaru straits	1,335
May 21	1792	(Kansei 4)	Unzen Mt. (Kyushu)	15,200
Dec. 18	1828	(Bunsei 11)	Echigo province	1,443
May 8	1847	(Koka 4)	Shinano and Echigo provinces	12,000
July 9	1854	(Ansei 1)	Yamato to Tokaido	1,057
Dec. 23	1854	(Ansei 1)	Pacific coasts	600
Dec. 24	1854	(Ansei 1)	Kyushu, Shikoku, Ise	3,000
Nov. 11	1855	(Ansei 2)	Tokyo and vicinity	7,000
Nov. 6	1872	(Meiji 5)	Hamada (Iwami province)	600
Oct. 28	1891	(Meiji 24)	Mino and Owari provinces	7,275
Oct. 22	1894	(Meiji 27)	Uzen and Ugo provinces	720
June 15	1896	(Meiji 29)	Miyagi, Iwate and Aomori prefectures	27,122
Sept. 1	1923	(Taisho 12)	Kanto district	44,279

Date	A.D.	Japanese Year	Districts	Number of Persons killed
May 23	1925	(Taisho 14)	Tajima province	394
March 7	1927	(Showa 2)	Tango province	3,017
Nov. 26	1930	(Showa 5)	Izu, Suruga and Sagami provinces	248
March 3	1933	(Showa 8)	Miyagi, Iwate and Aomori prefectures	2,805
April 21	1925	(Showa 10)	Shinchiku, Taichu in Taiwan	3,185

The Kanto Earthquake and Fire which occurred on September 1, 1923, was the severest of all the recorded earthquakes in the country in the number of casualties and amount of damages.

The quake started at 11 : 58′ 31″ A.M. on that day, the epicentre being at the bottom of the sea 28 kilometres below the sea level near the mouth of the Sagami river, 139°17, E. Long., 35° 22′ N. Lat. It was a seismic activity caused by a block movement of the earth, and the shock was felt all over the Empire and recorded by all the seismographs of the world. The largest width of the vibration reached to about 8 inches, and the duration of the quake, as recorded by the seismograph in the laboratory of the Tokyo Imperial University, was over three and a half hours.

As to the casualties and damages caused by the earthquake and fire a variety of reports is published. The statistics here given are made out of those published by the Extraordinary Earthquake Rescue Bureau of the Department of Home Affairs, and those given in the Empire Statistic Year Book published by the Government.

DAMAGES TO BUILDINGS

(Earthquake Rescue Bureau Figures)

Damage	Number	%
Totally burnt	381,090	54.9
Half burnt	517	0.1
Completely damaged	83,819	12.1
Half damaged	91,233	13.1
Carried off by tidal waves	1,390	0.2
Partly broken	136,572	19.6
Total	694,621	100.0

Of the above Tokyo had 354,453 houses damaged (51%), or 73.4% of the total number of houses in the city, while Yokohama had 94,882 houses destroyed (13.7%) or 95.9% of the total number of houses in the city.

CASUALTIES

(Figures from Empire Statistic Year Book and other statistical publications)

	Total	Men	Women	Proportion per 100 population in the district
Killed	44,279	20,953	23,326	0.38
Severely wounded	16,514	9,406	7,108	0.14
Wounded	35,560	20,865	14,695	0.34
Total	96,353	51,224	45,129	0.86

The number of persons killed is usually said to have reached over 100,000, and the Earthquake Rescue Bureau figures give 91,344. But the later statistics given by the Government in the Empire Statistic Year Book seem to be more correct. Of the total number there given as killed, 28,708 were crushed, 15,450 burnt in the ensuing fire, and 121 were drowned by the tidal waves.

No authoritative survey was made in regard to the loss of property and a variety of amounts is given as estimates. Most of them, however, are necessarily exaggerated. But taking the number of destroyed households, the average individual wealth and other factors as guides, the total amount of the loss may be safely said to have reached approximately ¥2,550,000,000.

Earthquake of 1933 The biggest quake of the year occurred in the Sanriku district at 3:31 A. M. March 3. The district, which covers the Pacific coast line of three northeastern prefectures, Miyagi, Iwaté and Aomori, had often been washed by tidal waves due to seismic activities at the sea bottom, the severest loss of life being experienced in 1896. The people were, therefore, fully aware of possible tidal waves when they felt the first shock and immediately hurried to the hills, but the waves overtook them within half an hour or so, drowning 2,805 people and carrying away 15,683 houses, together with over

10,860 fishing boats, loss caused by all damages on houses, boats and farms beeing estimated at ¥18,100,427. The number of casualties was but 10% of those of the 1896 quake, but the area covered and the destruction caused by it was greater.

Formosan Earthquake in 1935 On April 21, 1935 an earthquake struck Shinchiku and Taichu prefectures, Taiwan (Formosa). The shock suddenly began at 6:2′ 17″ A.M. (Taiwan time or 7:2′ 17″ A.M. in Japan proper) and lasted nearly one hour. The epicentre was at a point about 10 kilometres below the surface at the mouth of the Daiankei near the town of Taiko, Taichu. The width of the vibration reached from 8 mm. to 16 mm. and the shock was especially strong in a limited district because it occured at a comparatively shallow spot. Records tell that Formosa experienced big quakes in 1655, 1720, 1722, 1861 and 1867, and this was the 46th quake after 1868 and is said to have been the largest so far as the damages are concerned, the statistics of which follow :

DAMAGES AND CASUALTIES IN THE FORMOSA EARTHQUAKE IN 1935

(April 24, Ministry of Overseas Affairs Report)

Casualties:	
Killed	3,185
Severely wounded	9,215
Wounded	1,415
Missing	6
Total	13,821
Damages:	
Dwellings completely damaged	15,292
,, half damaged	15,457
,, greatly damaged	4,436
,, partly damaged	3,380
Total	38.565
Other buildings completely damaged	574
,, ,, half damaged	128
,, ,, greatly damaged	104
,, ,, partly damaped	184
Total	990

National Parks

On October 8, 1932, a committee of 11 headed by Baron Yoshiro Fujimura, which had been conducting investigations for a year under instructions from the Home Office, submitted a report recommending 12 places in Japan as worthy of preservation and development as national parks. They were (1) Mount Fuji and Hakoné, (2) Nikko, (3) Akan, (4) Daisetsusan, (5) Lake Towada, (6) the Japan Alps, (7) Yoshino and Kumano, (8) the Inland Sea, (9) Daisen, (10) Mount Aso, (11) Unzen and (12) Mount Kirishima.

All of them were officially announced as national parks by the authorities in January, 1936.

Descriptions of the national parks follow :

Mount Fuji and Hakoné In the three prefectures of Yamanashi, Kanagawa and Shizuoka in the centre of the Mainland of Japan, the combination of the world-famous Mount Fuji, the five beautiful lakes at its foot and the hot spring resort of Hakoné is to be known as Fuji Park. Mount Fuji, superb, peerless and highest mountain of Japan proper, is known the world over for its beauty. Its perfect cone rises 3,773 metres above sea level. In July and August, crowds of pilgrims and others climb its sacred slopes to the summit.

Below Mount Fuji are the famous five Fuji lakes, all of which are visited by nature lovers because of their scenic beauty.

Few visitors to Japan fail to visit the Hakoné district, noted for its mountain scenery, invigorating climate, hot springs and places of general interest. The district, popularly known as Mount Hakoné, is the crater of an extinct volcano. Lake Ashinoko is famous for its reflection of Mount Fuji when that elusive peak is visible.

Nikko. In the prefectures of Gunma, Fukushima, Tochigi and Niigata in the centre of the Mainland of Japan, 90 miles north of Tokyo, Nikko is famous the world over for its combination of art and nature. The gorgeous shrines and temples are as striking as its cryptomeria avenue, the mountains, lakes and waterfalls. Lake Chuzenji, the largest lake in the park, is extremely beautiful, and the Kegon waterfalls, which serve as an outlet of the lake, are a most striking sight. Beside the lake stands Mount Nantai, which resembles in shape Mount Fuji. In inner Nikko are smaller lakes and also the hot spring district of Yumoto.

Akan Situated in Kushiro province on the Island of Hokkaido, this park contains a wide area of active volcanic mountains, imposing forests and lakes. Lake Mashu, one of the beautiful lakes below the range of volcanic mountains, lies within 10 kilometres of the Teshikaga hot springs. The lake is nearly 20 square kilometres in area, and in its centre lies a small island.

Lake Kutcharo, the largest of the group in Akan Park, measures 76.22 square kilometres in area, with the beautiful island of Tomoshiri in its centre,

12 kilometres in circumference. At the southern extremity of the lake is a small protruding strip of highland called Wakoto Peninsula, at the foot of which is Wakoto hot springs.

Lake Akan, probably the most beautiful of the Akan group, 11.86 square kilometres, has a zigzag shore and, being rich in changes, presents a very pleasing appearance. On the southwest of the lake rises Mount Oakan, an active volcano.

Akan Park is suitable for sight-seeing trips of two or four days from the city of Kushiro.

Daisetsuzan The Great Snow Mountains district, in the centre of the Island of Hokkaido, presents a range of active volcanoes known as the Daisetsuzan Range. Because of the great height of the mountains, this is often called the Roof of Hokkaido. Surrounding the mountains are virgin woods over an area of 490,000 acres. The mountains form the source of the Ishikari River, the largest river on the island.

The Daisetsu volcanic range rises in more than 10 mountains, including Mount Tokachi and Mount Sangoku. Many lakes are found on the summits of the volcanoes. Mount Asahi, the highest mountain in the group and the highest in Hokkaido, is 2,290 metres above sea level. Its shape, resembling that of Mount Fuji and trailing far to the foot, is very beautiful to look at from a distance. From its summit can be seen on a fine day all Hokkaido.

Lake Towada In the Ohu district in Northern Japan, extending over the two prefectures of Akita and Aomori, the proposed Towada Park is distinguished by Lake Towada on the south and Mount Hakkoda on the north. Lake Towada, the second deepest in Japan, is 378 metres deep at the greatest depth. So clear is the water that one can see into it for 18 metres.

The lake, which is 401 metres above sea level is 78.02 square kilometres in area and 46.2 kilometres in circumference. In origin and scale, the lake resembles Crater Lake in America, but the beauty and variety of scenery here is said to be far superior to that of the American lake.

The Japan Alps (Chubu Sangaku or central mountains) Extending over the prefectures of Nagano, Gifu, Toyama and Niigata in Central Japan, the Hida range of mountains is called the Japan Alps after the European Alps because of its similarity in shape and scenery. Mounts Tsubakuro, Shirouma, Yari, Hodaka and Norikura are some of the high peaks, in the upper valleys of which snow may be found even in midsummer. The region is an excellent place for summer mountain climbing and camping.

Kamikochi, probably the most popular spot in the region, is a flat valley in the shape of an S, 1,500 metres above sea level and surrounded by peaks towering an additional 2,000 metres. Through this valley runs the clear-watered Azusa River. The Kurobé Valley on the north is equally known for its majesty. Steep cliffs of great height stand on both sides, running for almost 80 kilometres from south to north. The region is the source of many beautiful streams and cascades which adorn and add colour to the mountain scenery.

Yoshino and Kumano On the Pacific coast of central Japan and extending over the prefectures of Wakayama, Nara and Mié, Yoshino and Kumano Park has the dual beauties of mountains and sea. The park area includes Ominé and Odaigahara mountain ranges, the Kitayama Valley, Toro Glen, Onigajo and the beach.

Yoshino, noted for its cherry blossoms, and the other mountains in the Yoshino Range are from 1,000 to 2,000 metres above sea level. One of the highest of the 70 mountains is Mount Ominé, which is visited by 200,000 pilgrims annually. Mount Bukkyo, 1,915 metres above sea level, the highest peak in the region, commands on a fine day a striking view over the surrounding country. The sea coast within the area extends 80 kilometres. At the southern extremity of the Shio promontory stands a 63-foot Shionomisaki lighthouse. Within the park are the Nachi waterfalls, the greatest in Japan with a height of 433 feet, and 48 other waterfalls of varying sizes.

The Inland Sea This sea park lies between the Island of Shikoku and the Chugoku district on the Mainland of Japan, extending to the three prefectures of Hiroshima, Okayama and Kagawa and consisting of numerous islands of all shapes and sizes between Shodo-shima in the east and Abuto in the west. The seascape is ever changing as one voyages on its historic waters. Most of the trans-Pacific liners traverse it and occasional glimpses of its beauty can be had from the trains between Kobé and Shimonoseki. The sea is famous for its great variety of fish and their superior flavour.

The area between Kitaki Island and Shimotsui, dotted here and there by numerous islands of varying sizes, presents the best scenic view in the

region.

The Island of Shodo, the largest of the group, is renowned for its scenic beauty, especially its crimson autumnal leaves at Kankakei Valley. Yashima is known in history as the spot where the military clans of Genji and Heiké staged a decisive battle centuries ago, ending in the victory of the former.

Daisen In the prefectures of Tottori and Okayama, in Western Japan, Daisen Park is to be the only national park facing the Japan Sea. It includes, besides Mount Daisen, 1,713 metres above sea level, several peaks of similar height. Mount Daisen is called the Fuji of Hoki, because it resembles Mount Fuji in shape when seen from Shimané prefecture. While its western side is graceful, the northern is very imposing and majestic. Numerous rocks of huge size protrude from the ground. Wide plains around the mountain offer the best skiing ground in the Chugoku district.

Mount Aso. In the centre of Kyushu, Aso Park consists of Mount Aso, which forms five peaks. Aso is an active volcano, with the largest and most celebrated crater in the world. Being double-cratered, it has a huge depression measuring 16 kilometres from east to west and 20 kilometres from south to north, in the centre of which lies the central crater. Within the large crater are 11 villages where 50,000 people live.

The five Aso peaks have characteristics all their own. Naka Peak has a crater which is very active and emits smoke which ascends furiously. Half way up Eboshi Peak are hot-spring districts, such as Toshita and Tochinoki, 800 metres above sea level.

Unzen In Nagasaki prefecture, Kyushu, the renowned sulphide hot springs of Unzen, discovered in 1661, annually attract many foreigners and Japanese. Unzen is famous for the medicinal properties of its waters. It is regarded as the best summer resort in Kyushu and is also visited for its wild cherry blossoms in spring, its splendid azaleas in May, its maple foliage in autumn and its celebrated "Silver Thaw" in winter, when trees and shrubbery are coated with ice.

Unzen, consisting of the lower peaks of Unzen, Nodaké, Takaiwa, Kusenbu, Torikabuto, Azuma, Hachimaki, and Bizan, has a feminine beauty of mountain scenery in contrast with the masculine grandeur of Mount Aso.

Mount Kirishima In the prefectures of Miyazaki and Kagoshima, Kyushu, Kirishima Park consists of 22 gracefully shaped volcanic mountains with characteristic craters, lakes, plains, woods and forests. The view from the mountains extends as far as Sakura Island in Kinko Bay, and that toward Mount Aso and Unzen in the distance is extremely beautiful. Kirishima is also rich in folklore, which gives it a touch of romance.

To have the best view, one must go up Mount Karakuni, the highest peak in the group, 1,700 metres above sea level. The woods turn into slopes and farther on comes a huge plain. The crater lake is soon reached, and hence a steep road leads to the summit. Three hours of walking are needed to reach Mount Takachiho. In the neighbourhood of Shinnen and Nakadaké, wild azaleas bloom in May, turning the locality into a veritable flower garden.

CHAPTER II

POPULATION

General Survey

The outstanding aspects of the population of Japan are that it has virtually trebled in the past 65 years, that the excess of its birth rate over the death rate is one of the highest in the world, and that its density is such that the land within Japan proper leaves scant room for expansion.

The fourth quinquennial national census, taken on October 1, 1935, showed a total population for the Empire of 99,456,818 including Kwantung province, the South Manchuria Railway Zone and the South Sea Mandated Islands. Though lack of statistics makes it impossible to trace the growth with any accuracy from early days, it has been variously estimated that in the 7th and 8th centuries the population ranged between 5,000,000 and 8,000,000 or 9,000,000. Figures compiled at regular intervals between 1721 and 1846, despite their understatement of the actual population because of certain known omissions, indicate comparative stability at about 26,000,000 for more than a century preceding the Meiji Restoration.

The first estimate of population after the Restoration, made in 1872, was roughly 33,000,000. By 1889, the total was 40,000,000, and the 50,000,000 mark was passed in Japan proper about 1909. Each decade showed an accelerated increase :

1870–1880	5%
1880–1890	7.6%
1890–1900	10%
1900–1910	12%
1910–1920	13%
1920–1930	15%

This increase, it is to be noted, started with the opening of the country to world commerce and paralleled Japanese economic expansion. As means of subsistence gained, so did the size of the population. The death rate did not drop appreciably until recent years, but the birth rate, in contrast with that in other leading nations, became higher, jumping from 17 per 1,000 of population in 1872 to 32.36 per 1,000 in 1930, with a peak of 36.2 in 1920.

But the records of the past 5 years show an adverse tendency in the population of Japan proper, the birth rate falling from 33.00 in 1929 to 29.87 in 1934. With a total area of 382,545 square kilometres, Japan proper has a population density of 181 persons to the square kilometre.

In 1935 the average number of the members of a household in Japan proper was 5.1. It differs according to districts. In the eastern districts, from Toyama, Nagano to Hokkaido, it was from 5 to 6, the north-eastern prefectures heading the list with their average of 6. In the western districts, that is to say, Ishikawa, Aichi, Kyoto, Osaka, Chugoku (western prefectures of the Main Island), and Shikoku, it was below 5, the lowest being Yamaguchi and Kochi prefectures with 4.6. Classified in accordance with prefectures, those prefectures which have big cities show a much smaller average, Tokyo being 4.8, Osaka 4.6, Kyoto and Hyogo (Kobé) 4.7. This phenomenon is evidently occasioned by the social and economic conditions in city life which necessitate a small-family system.

FAMILIES BY SIZE 1920 and 1930

Size of Family or No. of Persons	1920 No.	1920 %	1930 No.	1930 %
1	641,860	5.8	694,063	5.5
2	1,392,026	12.5	1,480,773	11.8
3	1,690,534	15.2	1,870,115	14.8
4	1,698,893	15.3	1,905,489	15.1
5	1,620,484	14.6	1,826,367	14.5
6	1,397,347	12.6	1,596,536	12.7
7	1,059,924	9.5	1,243,343	9.9

Size of Family or No. of Persons	1920 No.	1920 %	1930 No.	1930 %
8	702,613	6.3	851,617	6.8
9	418,650	3.8	516,311	4.1
10	240,002	2.1	297,722	2.3
11 and above	259,787	2.3	317,940	2.5
Total	11,122,120	100.0	12,600,276	100.0

POPULATION OF THE EMPIRE

According to the Census of October 1, 1930

	Total Population	Male	Female	Population per sq. km.	Males to 100 Females
Empire	90,396,043	45,675,654	44,720,389	134	102.1
Japan proper	64,450,005	32,390,155	32,059,850	169	101.0
Korea	21,058,305	10,763,679	10,294,626	95	104.6
Formosa	4,592,537	2,353,288	2,239,249	128	105.1
Karafuto	295,196	168,532	126,664	8	133.1
Kwantung Province and South Manchuria Railway Zone	1,328,011	809,044	518,967	355	155.9
South Sea Mandated Islands	69,626	37,929	31,697	32	119.7

According to the Census of October 1, 1935

	Total Population	Male	Female	Population per sq. km.	Males to 100 Females
Empire	97,697,555	49,242,822	48,454,733	145	101.6
Japan proper	69,254,148	34,734,133	34,520,015	181	100.6
Korea	22,899,038	11,662,645	11,236,393	104	103.8
Formosa	5,212,426	2,659,819	2,552,607	145	104.2
Karafuto	331,943	186,225	145,718	9	127.8
Kwantung Province and South Manchuria Railway Zone	1,656,726	995,447	661,279	441	150.5
South Sea Mandated Islands	102,537	57,333	45,204	48	126.8

The average rate of annual increase of population during the five years from 1930 to 1935 in Japan proper was 14.47 per 1,000; 14.06 in male and 14.89 in female. In Chosen it was 16.90, in Taiwan 23.53, in Karafuto 23.75.

The Quinquennial Increase of the Population

	1925–1930	1930–1935
Empire	6,939,114	7,301,468
Japan proper	4,713,183	4,804,143
Korea	1,535,360	1,840,390
Formosa	599,129	620,682
Karafuto	91,442	36,753
Kwantung Province and S.M.R. Zone	273,937	328,752
South Sea Mandated Islands	13,332	32,612

INCREASE OF POPULATION OF JAPAN SINCE THE FIRST NATIONAL CENSUS OF OCTOBER 1, 1920

Year	Population of the Empire: Japan Proper	Population of the Empire: Others	Japan Proper: Births	Japan Proper: Deaths	Japan Proper: Natural Increase
1920	55,963,053	21,025,326	2,025,564	1,422,096	603,468
1925	59,736,822	23,720,107	2,086,091	1,210,706	875,385
1930	64,450,005	28,946,038	2,085,101	1,170,867	914,234
1931	65,366,500	25,354,311	2,102,784	1,240,891	861,893

Year	Population of the Empire		Japan Proper		
	Japan Proper	Others	Births	Deaths	Natural Increase
1932	66,296,000	27,230,234	2,182,742	1,175,344	1,007,398

Races of the Japanese Empire

The Japanese What constitutes the main part of the population of the Empire is the Japanese. Their number, according to the latest national census of 1930, reaches to about 64,400,000 (32,300,000 males and 32,050,000 females), most of whom occupy the main group of the Japanese archipelago, although they are also found scattered in almost every part of the Empire.

Of late, constant emigration and immigration are taking place between Korea and Japan, but the main population of Korea is Korean and numbers about 20,000,000.

The Ainu inhabit Hokkaido, Chishima (the Kuriles) and the Japanese part of Karafuto (Saghalien).

Most of them are found in Hokkaido, especially in the province of Hitaka, their number being 16,000. In Karafuto there were about 1,500 in 1934; formerly they lived scattered along the sea coasts of Karafuto, but the government policy made a point of collecting them in a few prescribed Ainu villages for the purpose of better protection. Those in Chishima are very few in number. In Hokkaido, as a result of daily contact with the Japanese, they are greatly mixed and are fast changing their customs and manners to accord with the fashion of their Japanese neighbours. In 1935 the total number of the Ainu was 16,389.

As to the position of the Ainu in the ethnic system, there is no consensus of opinion. It was, and still is, a conundrum in anthropology. Years ago the view that the Ainu formed a "Race Island" was put forward by Y. Koganei.

The Gilyaks, whose home is in the Amur region of Siberia, are also found along the Poronai River in the southern part of the Japanese possession in Saghalien. They call themselves "Nickbun" and were reported in 1934 to be 115 in all. Their affinity with other races is not clear, and they are simply classed as one of the palae-Asiatics.

The Orokes, who inhabit the same region in Saghalien as the Gilyaks, are also immigrants from the mainland of Asia. They are a branch of the Tungusic group, but are said to show a considerable influence of the Ainu, Gilyaks and also of the Russians. The number of the Orokes was 302 in 1934.

The Inhabitants of Formosa may be roughly divided into two groups, one is chiefly made up of the Chinese immigrants from Kwangtung and Fukien provinces and occupies the lowland districts and the western half of the island their number being estimated at 4,732,000 in 1934; and the other is made up of the wild hill-tribes inhabiting the mountainous eastern half, and is the more aboriginal of the two. These, on the basis of physical anthropology, ethnology and linguistics, are usually subdivided into eight tribes, namely: Taiyal, Seddaka, Saiset, Tsuou, Bunun, Paiwan, Ami and Yami. They are estimated to be about 150,000 in number and belong either to the Malay or to the Indonesian family.

The Natives of Micronesia Micronesia, which is under our mandatory administration, consists of innumerable small islands, some of which are uninhabited; hence, the native population is only about 50,000. The natives of Saipan, Palau, Yap, Truk, Ponape, Kusaie, Jaluit, etc., constitute the main part of the population. They are usually divided into two ethnic groups. One is known as the Chamorros and is chiefly found in Saipan, although some have emigrated to the the islands of Palau and Yap, and comprised 3,870 in all in 1934. The other, commonly known as the Kanakas, and found scattered in almost every island, numbered 46,467 in 1934.

In addition, it may be said that in the Ogasawara group of islands known as the "Bonin" (corruption of "Mujin" or "Bunin"—uninhabited) there are the naturalized descendants of European and American fishermen, Italian, English, Portuguese, etc., numbering about 120 and these form a sort of foreign settlement of their own.

POPULATION OF JAPAN PROPER BY DIFFERENT NATIONALITIES

(1930 Census)

	In 1930	In 1920
Japanese subjects	64,395,685	55,927,484
Japanese	63,972,025	55,884,992
Koreans	419,009	40,755
Formosans	4,611	1,703
Gilyaks and Orokes	22	31
Westerners in the Bonin	18	3
Foreigners	54,320	35,569
Chinese	39,440	22,427

	In 1930	In 1920
Russians	3,587	1,714
Americans	3,640	3,966
British	3,144	4,188
Germans	1,228	630
French	694	674
Others	2,587	1,970
Total	64,450,005	55,963,053

Age Distribution

Figures for 64,450,005 persons residing in Japan proper on October 1, 1930, show that those less than 14 years of age, termed juveniles, constitute 37 per cent of the population; those from 15 to 59 inclusive, termed productives, 56 per cent and those of 60 or more, termed the aged, 7 per cent.

The number of juveniles of elementary school age, i.e. from 6 to 14 years, is 20 out of 1,000 of population. Men of 17 to 40 years of age, who are liable to the Services constitute 36 per cent of the total number of the males; women of 15 to 50, that is, of child bearing age, constitute 48 per cent of the total female population. The number of persons above 14 years of age who come under the judicial law is 66 per cent of the total population.

DISTRIBUTION BY AGE AND MARRIAGE

Marriages and Divorces

In 1935 the number of marriages in Japan proper was 556,730, an increase of 44,076 as compared with the previous year. The number of marriages per 1,000 population was 8.04 or 0.52 higher compared with the previous year, against the general trend of recent years, which had been decidedly on the decline. The number of divorces in the same year was 48,528 or 82 less than in 1934. The number of divorces per 1,000 population was 0.70 or 0.01 lower than the previous year. Before 1920 the number of divorces surpassed the 100,000 mark in a year and the proportion per 1,000 population was from 2.0 at the lowest to 3.0 at the highest, but it has kept a rate lower than 1.0 since 1920.

MARRIAGES AND DIVORCES

Year	Marriages	Divorces	Proportion per 1,000 population: Marriages	Proportion per 1,000 population: Divorces

Births and Deaths

The natural increase of population has become greater with the advance of years. For several years since 1910 the natural increase kept to the 700,000 mark. In 1916 and 1917 it decreased a little, and in 1918 it reached the lowest figure of 300,000, largely due to the prevalence of a severe influenza epidemic. In 1919, however, the increase regained, reaching the 500,000 mark, and it continued to increase till the 940,000 mark was attained in 1926. There have been ups and downs since, but 1932 was a record year, registering an increase of 1,007,000, the million mark being attained for the first time. In 1935 a new record was established with 1,028,768.

Urbanization

As in other countries where industry is of importance, Japan has experienced a shift of population from the countryside to the towns and cities. Concurrently, municipalities have amalgamated to form larger units. The following tables show the trend toward larger urban centres; the first, the increase in the number of municipalities of large population, and the second, the increase in the proportion of the population residing in these larger municipalities. For 1920, 1925, 1930 and 1935, the figures are based on the national censuses of these years, but the earlier figures depend on less comprehensive statistics compiled by local authorities.

CITIES, TOWNS AND VILLAGES CLASSIFIED

According to Population

1. For administrative purposes, all of Japan proper is divided into cities, towns and villages, persons residing in what would be known as rural districts in other countries belonging, as the case may be, to the nearest cities, towns and villages.

In October, 1935, there were 127 cities in Japan proper, which meant an increase of 4 every year since the 1930 census. In May, 1937 there were 145, a much greater increase. According to the census on October 1, 1935, the number of major cities which have more than 100,000 population was 34, including 4 cities which have more than 1,000,000, Tokyo leading others with 5,875,667. The total urban population comprises 22,655,920 or 32.7 per cent of the population of Japan proper. In 1936, there were 131 cities with an aggregate population of 23,620,200 or 33.6 per cent of the total estimated population 70,258,200, on October 1. The rapid growth of cities may be proved from the fact that the rate of increase of population in cities is much higher than that of Japan proper, as is shown below :

	Population		Quinquennial Increase		Rate of Increase	
	Japan proper	Cities	Japan proper	Cities	Japan proper	Cities
1920	55,963,053	13,909,305	—	—	—	—
1925	59,739,822	16,606,809	3,773,769	2,697,504	6.7	19.39
1930	64,450,005	19,439,405	4,713,183	2,832,596	7.9	17.06
1935	69,254,148	22,655,920	4,804,143	3,216,515	7.4	16.54
1936 (estimate)	70,258,200	23,620,200				

NUMBER OF CITIES, TOWNS AND VILLAGES IN JAPAN PROPER

(1889—1936)

	Cities	Towns	Villages
1889	39	715	12,632
1898	52	1,169	13,557
1908	66	1,164	11,233
1913	69	1,246	11,033
1920	83	1,366	10,782
1925	100	1,510	10,451
1930	109	1,702	9,980
1934	124	1,683	9,788
1935	129	1,720	9,662
1936	131	—	—

A village is an administrative unit consisting of several villages.

Foreign Residents

The number of foreign residents in Japan proper, for the past five years has been as follows :

Year	Diplomatic and Consular Corps	Total	Males	Females
1930	361	40,290	28,612	11,678
1931	390	28,317	19,655	8,662
1932	371	26,885	18,615	8,270
1933	374	29,268	19,764	9,504
934	400	32,641	21,895	10,746

Information given with the 1934 figures shows 11,026 foreigners engaged in commerce ; 2,549 in professional work ; 2,673 studying (the largest number in the past ten years) ; 1,372 in mining and manufacturing ; 119 in transportation ; 5 in agriculture and forestry ; 1 in fisheries ; 578 in various other occupations, and 14,318 without occupations.

The following table classifies foreign residents according to countries of origin :

Emigration

History Though there are records of Japanese having gone abroad for trade and residence in the latter years of the 15th century and the first half of the 16th century, the rigid laws against leaving the country during the period of seclusion, from 1636 to 1858, reserved the problem of emigration for modern times. As a result of negotiations between the Japanese Government and the Hawaiian Consul in Yokohama, 153 emigrants went to Hawaii in 1868 to work on sugar plantations. The venture was a failure, however, and not until 1885, after the visit of King Kalakaua of Hawaii to Japan in 1881 and the conclusion of treaties regarding travel, emigration of labourers and navigation, was there further emigration to the islands. In that year, 951 went. Their success encouraged an increase in the ensuing period, and by 1894 approximately 30,000 Japanese entered Hawaii.

Because of the rapid development of emigration, the Government turned the business over to private companies, which soon became numerous. Regulations to safeguard the interests of the emigrants were enacted in 1896. The companies sent 10,000 to Hawaii and about 1,000 each to Australia and Canada in 1897 and 23,000 to Hawaii, 3,000 to the United States, 1,700 to Canada, 790 to Peru and about 2,500 to other countries in the following year. But the annexation of the Hawaiian Islands by the United States in 1898 and the establishment of the Territorial Government in 1900, brought the application of American law against the entry of contract labourers, and dealt a great blow to the companies.

By 1904, the movement of Japanese from Hawaii to the mainland of the United States had assumed sizable proportions, as had emigration to that country directly from Japan. In the so-called Gentlemen's Agreement, arrived at in 1908, Japan agreed to restrict the issue of passports to nationals wishing to enter the United States. The United States Supreme Court decided in 1922 that Japanese are ineligible for citizenship, and two years later the Quota Immigration Act was passed, containing a clause denying the right of entry into the United States for permanent residence of any person not eligible for citizenship. Australia, New Zealand, South Africa and Canada also provided, by various methods, for exclusion of Japanese.

These obstacles to entry into the Anglo-Saxon countries had two results, first, an abrupt decrease for a few years in the number of emigrants and, second, the discovery of new outlets. Several South American lands, notably Brazil, offered inducements. The Government adopted a positive policy of sending emigrants to quarters where they were not unwelcome, and in 1921 a subsidy was given to the Overseas Enterprise Company (Kaigai Kogyo Kaisha) to arouse interest in emigration. Encouraged by this change in policy, emigration associations sprang up one after another in the prefectures, and plans were made to purchase tracts of land in Brazil for colonization. To such land, the Shinano Emigration Association (Nagano prefecture) sent 450 emigrants in 1925.

Enactment of the Emigration Association Law in 1927 resulted in an increase of "independent" emigrants, quite different from the labour-contract emigrants which had constituted the bulk in earlier years. Prefectural emigration associations set up under the provisions of this law organized a federation which co-ordinated the buying of Brazilian land. A home for emigrants was opened in Kobé, the main port of embarkation. Companies specializing in South American colonization came into being. Part of the reason for establishing the Ministry of Overseas Affairs in the Government in 1929 was to provide an agency for the administration and control of matters pertaining to emigration and colonization.

Movement. The following table shows the movement of Japanese travellers and emigrants during the past 10 years :

NUMBER OF PASSPORTS ISSUED

The Kwantung Leased Territory and the South Manchuria Railway Zone, the South Sea Mandated Islands, Manchoukuo, and China are in a special category as regards Japanese colonization, and details of the Japanese residing in these regions will be found in other chapters. The following paragraphs summarize the status of the settlers in the principal lands open to Japanese, other than those above mentioned :

Brazil The Japanese first went to Brazil in 1908, but only in the past decade has the number leaving annually for this destination been of any volume. Of the 173,420 settlers registered on October 1, 1935, over 93 per cent were in the State of Sao Paulo, the majority working on coffee plantations. They are expected eventually to establish themselves as independent farmers. Those who left Japan with adequate capital and superior agricultural skill already own extensive tracts of land. The growing of potatoes around Sao Paulo City by Japanese is particularly notable.

Argentina Though the Japanese first went to Argentina in 1907, only a few have followed. Of the 5,185 residing there in 1935, over 2,000 were in Buenos Aires, the capital, where they are engaged mainly in industry and business. Those on farms cultivate cotton, tea, cocoa and cinchona bark, from which quinine is prepared.

Peru Japanese emigration to Peru dates from 1899. In October, 1935, there were 20,827 residents, of whom more than 17,000 were in Lima and most of the others in or near Callao and other cities. The majority of them are engaged in commerce, but there are about 2,000 farmers, some of whom own their own land. They have mostly specialized in the cultivation of cotton, in which several Japanese corporations are interested. Argentina offers opportunities for the development of sugar cane cultivation, forestry and stock raising by Japanese.

Other South American Countries

Chile, Colombia, Bolivia, Paraguay and Venezuela have no restrictions on the entrance of Japanese. As the soil in these countries is suitable for various agricultural enterprises, the Japanese Government is encouraging emigration thence. On October 1, 1934, there were 638 Japanese in Chile, 761 in Bolivia and 6 in Paraguay.

Mexico After the arrival of the first emigrants in 1897, Mexico gave promise of becoming an important outlet. About 1906, increasing numbers went. Endemic fever and repeated revolutionary outbreaks, however, spelled ruin for most of the Japanese enterprises, and of recent years emigration to this destination has been slight. In 1935, 5,245 Japanese resided there, most of them engaged in agriculture, horticulture and cattle raising.

Philippines More Japanese emigrants now go to the Philippine Islands than to any other country except Brazil. Settlement there began in 1900, and on October 1, 1935, the Japanese residents numbered 21,524 of whom 6,238 were in Manila, and 13,528 in Cotabato and Davao. In Mindanao island, the large number of Japanese is accounted for by the large-scale cultivation of hemp, an enterprise originated by them. Many other Japanese in the Philippines are engaged in the fishing and building industries.

Other South Sea Countries Most of the Japanese residing in the Straits Settlements, the Malay States, British Borneo, the Dutch East Indies, India, Siam and French Indo-China are representatives of companies and clerks in banks, though many are small merchants and domestic servants. In the Dutch East Indies and the Malay States, Japanese have extensive rubber and cocoa plantations, and in Java they cultivate hemp, sugar cane and tea. As native and Chinese labour is so cheap, the number of Japanese contract labourers in this region is negligible.

CHAPTER III

OUTLINE OF HISTORY

Ethnologic Beginnings

According to modern scientific research it seems almost certain that Japanese tribes lived on these islands at least as early as 2,000 B.C., in the latter part of the New Stone Age. It seems probable that yellow folk from the mainland of Asia, the natives of some southern islands, and possibly some kind of white-skinned race from the northwest, drifted to the Japanese islands, where they found a milder climate and more fertile soil than in their homelands, and formed a mixed race which we may call the Yamato Tribe and their blood became so well blended in the course of time that many think the Japanese people, their descendants, to be homogeneous.

They lived mostly on seashores or riversides. Their shell-mounds are rich in relics of those early days. They dug caves in the hillsides and pits in the flat ground for their dwellings, used stone tools and lived on natural food such as game, fish and shell-fish.

In the 3rd century B.C. the Indo-Chinese brought rice to the islands and the natives learned to cultivate and eat it. By this time a primitive agricultural life must have begun, and according to one of the oldest Chinese records on Japan the islanders already had a knowledge of silk-making even in such a remote period. Four different styles of clothing seem to have been prevalent, that of the Ainu, Tunguse, Indo-Chinese and Huns, although there were some tribes who went naked. Judging by the clay images or idols they left behind them, the Ainu clothes consisted of an upper and a lower garment, the upper garment of the women being open in front, while that of the men was not. The dress of the Tunguse much resembled the Korean in style and they were fond of using jewels or stone ornaments.

They lived in groups, forming villages which consisted in some cases of several hundred households. They seem to have had a primitive communal life, each tribe or group being firmly united by ties of blood and belief. But there had appeared as yet no political organization or system and there was a continual stream of immigrants from the continent. Clan and tribal fighting and alliances gave opportunity for mixing blood. By the beginning of the Christian Era the Ainu and the ancestors of the Japanese, mainly Tunguse by descent, gradually settled down on the islands, the former living in the northeastern half and the latter spreading over the south-western half.

Age of Traditions
(660 B.C.–531 A.D.)

The period of 1,000 years from the Emperor Jimmu, who founded the Japanese Government in 660 B.C., to the Emperor Keitai, who reigned from 507 to 531 A.D., may be called the Age of Traditions of Japan. The first book of history "Nihonshoki" (Japanese Annals) which was first compiled in the 28th year of the Empress Suiko, and the second oldest record "Kojiki" (Antiquities) which appeared about one hundred years later, tell of some still older manuscripts which furnished them with materials. But of these no trace remains. These two books which are commonly called "Ki-Ki" collectively contain traditions long cherished by the islanders, although there are many fictions mixed or intermingled in them. Careful study of these records reveals the ancient life of the Japanese after the New Stone Age and at the beginning of the agricultural period.

Beginning of Shintoism People in this age formed large families and the clan system prevailed. In many families the succession followed the maternal side, clan councils were called and patriarchs were elected. The number of clans was about one hundred. Shintoism, though in the most undeveloped state, was already a creed; people revered their forefathers and worshipped their own family gods, and the members of each clan were united in the worship of their own particular god, gaining thereby a more vivid feeling of belonging to one and the same blood. In the Imperial House, the Emperor Jimmu instituted religious ceremonies for his Divine Ancestors, who became the objects of worship of the National Shintoism in later ages, and his successors

followed his example and prayed to the gods for the welfare of their beloved nation. Before Chinese models were adopted the ancient government of Japan was a very simple theocracy, and ritual observances and public affairs were one, as the Japanese "Matsurigoto" may mean either the administration of state affairs or religious ceremony.

Political Affairs In 87 B.C. the Emperor Sujin sent armies to the remoter central and western districts and subdued all the opposing tribes. In the first century A.D. the Emperor Keiko sent Yamato-Takeru or some generals to the farthest west and east, and succeeded in bringing the whole land under his sway, sending his sons to be the rulers over those subdued districts. Later the Emperor Seimu divided the whole land into territories and prefectures for the convenience of governing them. Sushin and Suinin encouraged industry and commerce, the nation became rich and national power was so augmented that the small kingdoms in the Korean peninsula came one by one to be its tributaries. It was through these small Korean kingdoms that a knowledge of the religion and culture of the greater Oriental nations first reached Japan. In 285 A. D. Confucianism with its important moral precepts concerning righteousness, loyalty, filial piety, and love, was officially introduced into the country. In 552, during the reign of the Emperor Kimmei, the public introduction of Buddhism with its teachings on cause and effect opened up new vistas in religious and philosophic thought.

Civilization Introduced From the remains of this period it can be inferred that the Japanese people whose settlements extended from Kyushu to districts near the present-day Kyoto had risen above a barbarous life long before the first century of the Christian Era. Their shell-mounds contain many bronze utensils which correspond to the Chinese productions of the Han Dynasty (206 B.C.–221 A.D.). Do-taku which seem to have been used as musical instruments or kept as a kind of treasure have been found in the districts extending from the western end of the Main Island to Totomi and Kaga provinces near Nagoya and in Shikoku Island. They were found with relics of the so-called Yayoi style which characterizes the works of the original Japanese as distinguished from the Ainu, and tell of early Japanese intercourse with the continental countries. Do-ken or bronze swords of different shapes have been found in the provinces of Kyushu, districts around the Inland Sea, the provinces of Aki, Izumo, Owari and Shinano and in Shikoku Island.

Japan had tributaries in Korea at this period, but, at the same time, heads of large families in Kyushu and Loochoo had some relations with the Han Dynasty as local tributary lords. Considerable numbers of continental people came to the islands either individually or in large bodies, and the civilizations of China, India and Korea were constantly introduced to the islanders or brought in by the immigrants themselves so that there had really been several centuries of preparation before the formal or official reception of Chinese books and culture in the 3rd century at the Central Court in Yamato province.

Japanese Traits In those days Japanese characteristics and tribal traits were already established. The mild climate and beautiful natural features of the islands and the surrounding seas exerted ineradicable influences on the nature of the inhabitants. From such an early period the islanders, economically self-supplying and self-sufficient, enjoyed comparatively peaceful lives without much danger of being invaded by outside political powers. Consequently they became admirers of the realistic world, highly optimistic with pragmatic ideals; they had deep appreciation of natural life and a religious belief full of light. Their mode of action was sprightly, innocent and active. Loyalty to one's lord and filial piety were their two main principles of morality fostered from the remotest past; next in importance came valour in the highest sense of the term. There was no distinction in the position of the sexes and able women assumed high places in public affairs.

Primitive Literature There were written numerous local histories and genealogies of the Imperial Court and clans, and stories of heroes of victorious battles were earnestly listened to at their gatherings. They had ballads and a crude form of poetry which later came to be called waka, the metrical arrangement being 5-7 or 5-7-7, instead of the later 5-7-5-7-7. The ideas expressed were simple, pure, and mostly concrete, immediate feelings being put into metre. The subject matter, in common with that of primitive peoples in other parts of the world, being that of women, war, and saké. Songs in praise of the natural beauty of the scenery were rarely sung.

No Pastoral Life The islands, severed as they were from the continent, were unsuited for raising cattle, and the ancient Japanese people had no experience of a pastoral life. Excavation of mounds gives no indication of it, while the undeveloped legs of the Japanese seem to suggest something of their ancestral habits.

With the progress of agricultural life the oldest clan system, which had no class differences, began to undergo changes because of the increase of population and consequent need of new land. Clans began to separate into branches, the latter leaving the parent stock and going out to get new lands. In many cases land was obtained by violence and there arose the connection of master and subject between the conqueror and the conquered. Blood relation among the people widened to local relation and there appeared ruling clan heads to control and represent the districts or provinces. Soon these ruling families transformed their temporary power into a hereditary one. The primitive or natural system of common property was transformed to that of private property. Powerful clans had serfs as property and subordinate clans or subjects paid tribute.

Age of Foundation
(532–709 A.D.)

By the 6th century A.D. Japanese social and economic conditions were well suited for the introduction and appreciation of the Chinese civilization of the brilliant ages of the Sui and Tang Dynasties.

Political Events With religion, other things such as painting, sculpture and architecture were gradually introduced and in the sixth century Prince Shotoku-Taishi, striving for the promotion of learning, religion and art, tried his best to make a radical improvement in the state administration and in the social life of the people. His work was a forerunner of the Taika Reformation.

In the meantime, there arose troubles among the clans which had power in the Government, their conflict becoming greater with the advancement of civilization. Two of the most important of these clans, Soga and Mononobé, came into violent collision over the question of adopting Buddhism as the national religion. The former finally got the upper hand, but so abused its power that it stirred up the opposition of Kamatari Fujiwara, a loyal subject, and Prince Naka-Ohyé, who later became the Emperor Tenchi. The Soga power was suppressed in the year 645; this was the first step toward the Taika Reformation.

Emperor's Power Reduced As a natural development land became divided among the Imperial house, the clans and the temples. The Imperial estates were obtained in various ways, and consisted of, first, land owned ever since the time of the Emperor Jimmu; secondly, land newly cultivated by the farmers who served the august family; thirdly, estates presented by local nobles; and fourthly, memorial lands for the dead members of the Imperial family.

Clans owned their estates, either by natural right, conquest or as prizes for merit. Shinto shrines and Buddhist temples also possessed their own glebes, given them by nobles as offerings The patriarchs or clan heads in the country districts began to possess a great number of people and large estates and enrich themselves by the labour of their serfs. Their wealth gave them influence and power and they became local lords. The clan system allowed high officials of the Court and the powerful families in the provinces to exercise almost absolute power over their own territories. The emperors ruled the people indirectly, all the official positions being hereditary. This system gave birth to several political vices or abuses, and the Imperial authority became much reduced. The excesses of the Soga clan showed clearly the injurious effect of this system, and the necessity of ending it.

Social classes The aristocrats of this period were the clan heads, an idea of whose life may be formed from the luxurious relics found in their large tombs or mounds in the district around Nara and Kyoto. Next came the direct subjects of the Imperial House whose occupation was mainly agriculture. The third class, which was the largest and constituted the main productive element of the nation, consisted of the subjects of the local clan heads. They worked for their respective clans at clothes making, ceramics, brewing, the manufacture of lacquer goods, furniture making, etc., besides being farmers, fishermen and hunters. The lowest class of people was that of the "yakko" or serfs who served in the lowest kind of occupation for the aristocrats. They were often presented to shrines and temples as slaves. The slaves in Japan originated in captives taken from Ezo and Korea, and to them were later added those who had sold themselves for monetary rea-

sons. Once enslaved, their social status remained unchanged unless emancipation came through the benevolence of their lords or paid for by themselves or some other people. The number of slaves, however, was rather insignificant.

The Taika (Taikwa) Reformation When the Soga family were destroyed, the Emperor Kotoku started a plan for a reformation, appointing the Crown Prince Naka-Ohyé to the head of the council which was composed of Kamatari Fujiwara, Kurahashimaro Abé and other great scholars of the time. The Crown Prince, with Kamatari as his right hand man, studied the Chinese system of government and made plans for a revolutionary change of politics for the welfare of the people. In the summer of 1305 from Jimmu (645 A.D.), he introduced from China the system of "nengo" or year-names, and called the period Taika or "Great Reformation." This was indeed only seven days after the death of Soga. This was the first of the three great changes that Japan has experienced in politics since the founding of the nation. The second was the establishment of the Shogunate at Kamakura, 1192, and the third was the Meiji Restoration, 1868. In the second year of Taika the Imperial Edict of the Reformation was proclaimed. Some of its provisions were as follows :

(1) To bring all the private lands into public possession ; (2) to divide the confiscated lands among the people, taking a census and fixing reasonable taxes; (3) to fix divisions of Kuni, Gun and Ri for the convenience of administration, putting officials in each division.

These changes were practically carried out, and the clan system was entirely broken, thus bringing about a centralization of political power according to the Chinese pattern. The following is but a summary of the vast Reformation :

(A) Public land and people (citizens). (1) The people had, hitherto, belonged to the powerful gens and families and had been kept in a condition not far removed from serfdom. The land had been the private estates of the gens, and wealth had been almost entirely accumulated by them alone. In this reformation the land was all confiscated by the Central Government, and the people became direct subjects or citizens of the Emperor ; so was the clan system destroyed. (2) The public land was distributed to citizens evenly. A census was taken first and all the names of the people were registered and every male over the age of five was given two "tan", or a little less than half an acre of land, while a woman was given two-thirds of this. This land was returned to the Government when the holder died. The registration was renewed every sixth year. (3) Three taxes were newly imposed : one was on the land, being two bundles of rice on each "tan", the second was a requisition of labour, or else twelve feet of cloth or about two-and-a-half bushels of rice instead, from each house, and the third was a certain proportion of the special products of the locality.

(B) Centralization of government. The reformation of Taika was specially concerned with the centralization of government and the abolishing of local divisions of the clan system. To accomplish this aim, a central government had to be established on a very strong basis. In 649, the Emperor ordered the establishment of a central government consisting of eight departments, modelled on the Tang government. In the country districts the old officials were replaced by new state and country governors, horse stations were established for the convenience of travel and traffic, barrier-gates were set up in important places, and defensive preparations were made in the remotest districts.

(C) Appointment of men of ability. The third merit of the Reformation was in the appointment of able men from among the people to important positions. Under the old clan system even the officials were hereditary and this gave birth to various political abuses. This hereditary officialdom was entirely done away with by the Taika Reformation, and any one who had real talent might become a high official, no matter to which or to what kind of clan or house he belonged.

Prince Naka-Ohyé, who headed the council of this great revolutionary improvement, declared "As there are not two suns in the sky so there cannot be two kings over one nation, and the Emperor must be the only one who governs over and controls his people under heaven," and he set the first example to the people by handing over his own estates and subjects to the Mikado, thereby speeding the Reformation.

A Premature Trial The Taika Reformation, however, could hardly be considered as reformation of a government which had already been well organized, but rather as an attempt at the formation of a real central government. Corruption within the old clan system had made a purging of the social and

political system of the country urgent. Chinese cultural and political influence which stimulated the longing in the hearts of the authorities for the construction of a shapely government was a second cause of the reform. Unity and centralization of administration was completely exemplified by their big neighbour, and the young minds of the Japanese officials and nobles, entirely caught by its brilliancy, were rather too impatient to make fuller investigations on the adaptability of Chinese institutions to Japan and the Japanese of the day. The Taika Reformation, therefore, was hardly a success so far as its economic system was concerned and the formal institutions mentioned in (A) soon began to collapse.

Its Lasting Merit But the fundamental and imperishable meaning of the Taika Reformation is that it was the first systematic organization of the Central Government and the establishment of the spirit of national unity.

It was in this age that the whole of Japan was united into one. The Ezo tribes in Hokkaido Island and the inhabitants of the southern islands came to pay homage to the Central Government, and Buddhism was propagated among the northern islanders and the Kyushu tribes in the south as a cultural enterprise of the Government.

Taiho Law After half a century, or in 701, the Taiho Law, which completed the work of the Taika Reformation, especially in the organization of the Government, was promulgated. The construction of the Daijokan (the Great Government), which was regulated in the Taiho Law, was the form of central government which continued till the Meiji Restoration, when it was revived in power and called the Dajokan. The Government consisted of the Daijo Daijin, the Sa (left) Daijin, the U (right) Daijin, four Dai Nagon, three Sho Nagon, four secretaries, ten scribes, three Sa-benkan, and three U-benkan.

The Daijo Daijin was the tutor and personal counsellor to the Emperor, and had no fixed office. In view of the importance of the position it was not filled when no suitable man was to be found. The Sa Daijin was the prime minister and controlled all the administrative offices and might over-rule the decisions of the Danjodai (a kind of court of administrative litigation).

The U Daijin took the work of the Sa Daijin in his absence and his responsibility was the same as that of the Sa Daijin. The Dai Nagon acted as counsellors in national affairs with the three Daijin just mentioned and assisted them, directly reported all political affairs of importance to the Emperor, handed Imperial orders to the departments, and performed the offices of Imperial attendants. The Sho Nagon administered affairs of minor importance, the secretaries and scribes administered the business concerning public documents and Imperial edicts, etc. The Sa (left) Benkan administered the following four departments : the central, the ritual, the administrative, and the civil. The U (right) Benkan administered the other four departments : the military, the judicial, the treasury, and the Imperial House. That is to say, the practical administration of the eight departments was executed by the Left and Right Benkan in accordance with the decisions and directions of the three Daijin and four Dai Nagon.

Learning and Religion A century around the Taika Reformation was the period when the Government was busy also in the study of Chinese literature, importation of continental cuture, and compilation and promulgation of new laws. It was an age of laying foundations for the future progress of Japanese civilization. This study of continental cultures did not stop with that of China, but ancient nations west of China became tutors of the Japanese. Among the treasures which were accumulated by the Emperor Shomu (724–749 A.D.) and kept in the Shoso-in Museum at Nara, there are many art products of Rome and Persia. The area represented by the treasures practically covers all the civilized countries of the Orient and a large portion of the Western world.

Systematic education of the young began with the building of Horyuji temple (see Chapter XXVIII). With the compilation of the Nihonshoki and Kojiki, Shintoism was formulated as the national religion. As to the nature of Shintoism and its philosophical analysis as a dogma opinions are divided, it nevertheless developed in this age from mere nature-worship to ancestor-worship, cosmogony and anthropomorphism, including a germ of the idea of a central diety of the cosmos in the belief in Amé-no-minaka-nushi-no-kami. On the other hand Buddhism was eagerly taken into the lives of the upper class people who had power to assimilate it.

Nara Age
(710–793 A.D.)

Golden Age of Buddhism After the Taika Reformation in 646, the Govern-

ment rather avoided the trouble of intercourse with the Korean Peninsula and concentrated their power on the better administration of home affairs, encouraging intercourse with China in order to bring Chinese civilization more into Japanese life, and 60 years later founded the city of Nara as the capital, in Chinese style. For 70 years following its founding, it was an age of imitating Chinese things. Buddhism won the faith of all classes of the people and developed and expanded among them with great rapidity. This was the golden age for Buddhist fine arts, existing specimens of which make today the international treasures of old Buddhism. The nation was prosperous and the people enjoyed a happy life such as they had never known before.

Throughout most of the 8th century Nara was the Imperial capital and towards the end of it Japanese civilization, favoured by peaceful social conditions, began to assume its own form and characteristics. The Japanese poetry, waka, took a definite style and the range of subjects handled in the poems came to include all phases of life and nature as we see in the Mannyoshu collection of waka of this period (See Chapter XXXV).

The use of abbreviated forms of Chinese characters was begun in this period for the convenience of copying books, in an age without much printing, although block-printing was introduced from China by 770 A.D., and prepared a way to the invention of Kana characters in the following Heian Age.

Division of the Rich and the Poor As mentioned above, the economic plan of the Taika Reformation soon began to collapse. It was not, however, a return to the old patriarchal system but an advance to feudalism.

The even distribution of land under the Taika Reformation proved in practice insufficient and many farmers were compelled to obtain more land by cultivation of waste areas or to fall heavily into debt. On the other hand, the nobles or former patriarchs of larger clans, the Court officials and priests began to accumulate special prize lands, gift lands and subject tenants, and people of the upper class became landed proprietors with wide estates which were called "Soen".

For the cultivation of new arable land, labour and the digging of water courses were required, so such land naturally came into the hands of the wealthy people. Besides the addition of newly cultivated land they enlarged their estates by purchasing the land of the poorer people, confiscating mortgaged land and conquering weaker landowners by force. This tendency in the rural districts went its course unchecked, while the Central Government was occupied with political and diplomatic affairs mostly concerning matters in the capital cities of Nara and Heian (Kyoto), and Court nobles gave themselves up to luxurious living.

Korea, China and Japan (660 B.C.–1019 A.D.) From the time when these islands were first populated the inhabitants of the Korean Peninsula had intimate relations with the islanders. Especially, according to traditions, was this the case with the south-eastern part and the Izumo district. At the time of Sujin the southern part of Korea became a Japanese protectorate, but its eastern neighbour, Silla, scorned Japan until it was subdued by the Empress Jingo in 200 A.D. The western half and lands in the north also came under the influence of Japan until finally the whole peninsula became tributary to her. These small kingdoms mostly acknowledged the Japanese authority, but sometimes they rose in rebellion and Japan frequently had to send armies to the peninsula, till finally the Governor's office was destroyed by Silla in 562. Silla soon became the master of the whole peninsula, conquered the other small states, and entered into good terms with the Chinese Government. The ruling power of Silla was usurped by another dynasty in the 9th century. Japan interfered in these affairs when suitable chances offered, but all her attempts were in vain and she had lost her last trace of influence by the year 936.

The northern part of Korea had once been a territory of China in the second century B.C. Intercourse between the Japanese and Chinese people had already started in those days, and during the years in which the Korean peninsula was tributary to Japan the trade and travel between the two nations became greater and more frequent; many Chinese scholars and artists became naturalized in Japan and worked for the Government in the fields of literature, art and general technique. Some Emperors sent delegates to south-eastern China to get teachers of weaving and sewing.

In 607, when Shotoku Taishi was regent, an ambassador was sent to the Sui Dynasty and friendly official intercourse was opened. Later, when the Tang Dynasty replaced the Sui, diploma-

tic relations were still unbroken between the two nations and many a young man and monk went to China for study. The culture and civilization of the continent flowed into Japan and greatly influenced her politics and social life. In the Era of the Emperor Tenchi, this intercourse was once checked by difficulties with Korea, but the Tang Emperor sent his delegates again to Japan to re-establish friendly relations, and they were accordingly restored. During the Nara Age, especially, travel was most frequent between the two countries, and science, religion, the fine arts, architecture and forms of living were all taken from China, such imitation continuing till the beginning of the Heian Age. Chinese civil wars proved a hindrance to these friendly relations and the Emperor Uda stopped the sending of delegates in 894.

In Manchuria a strong nation appeared in 713 and invaded northern Korea, and started some trade with Japan. Another arose later and came down even to the central part of the peninsula. Still another dynasty then gained control over much of eastern Asia and tried to invade these islands, but was defeated by the Japanese army in 1019.

Heian Age
(794–1192 A.D.)

Fujiwara Despotism The Emperor Kammu changed the capital from Nara to the new city of Heian, the present Kyoto, in 794, and instituted a new era. For several decades after that the Imperial sceptre retained its power. But from the middle of the 9th century, the house of Fujiwara became closely related to the Imperial House, and began to assume regentship of the country. Taking all political power from the Imperial House, the Fujiwaras gradually concentrated it in their own hands and planned only for the benefit of their family and relatives. Their despotism reached its climax with Michinaga Fujiwara in the 10th century.

In those days the Fujiwara family gave themselves over to luxury, and greatly influenced the city life of Kyoto, making it indolent and vicious. But on the other hand literature and the fine arts made special progress. As the result of the cessation of sending delegates to China Japanese habits and inherited ideas regained favour and developed a style which was most graceful. Buddhism now assumed a strong and influential position not only among the people at large but also in the Court. The Enryakuji Temple of Kyoto and the Kofukuji Temple of Nara especially played a great part in this new tendency.. It was noticeable that by this time the imported religion was largely transformed and Japanized in character.

Rise of Samurai Class Another remarkable phenomenon of this age was the rise of the samurai, the warrior class. The direct rule of the Emperor, in consequence of the weakening centralization of administrative power, was declining. In the local districts, the private lands owned by the aristocratic families were increasing year by year, and the orders issued by the Central Government were disregarded in those private territories. Local affairs fell into confusion, and robbers stalked abroad in the towns and villages. Wealthy landowners in the villages hired and fed soldiers for self-defence, and these farmer-soldiers finally became samurai, men whose profession was fighting. Sons of aristocratic families who could not get official positions also became soldiers, striving after power. Soon they became really powerful, being specially rampant in the farther districts, where they rebelled against local orders. The bodyguard of the Court, hopelessly impotent, was useless for real battle, and the samurai rebellions were suppressed only by other samurai bodies. The princes and nobles also hired samurai to guard them and to further their political feuds. Warriors were encouraged to become ever more skilful in the practice of arms, and it was quite natural that in such a course of affairs important positions in governmental offices should go to members of the samurai class. Among them the most famous ones to receive such positions were members of the Minamoto (Genji) and Taira (Heishi or Heiké) families.

In the middle of the 11th century, the Emperors gathered patriots to restore the Imperial power to the old status and suppress the Fujiwara despotism. Finally in 1156 the Fujiwara power was completely broken and overthrown by the Genji and Heishi warriors, who were much honoured in consequence by the Imperial House. Before long, however, these two samurai houses became rivals and in 1159 Kiyomori Taira (Heishi) won the day against Yoshitomo Minamoto (Genji). Kiyomori had rare ability and great ambition, and forgetting that he was but a samurai followed the examples of Fujiwara and became himself another despot. For his wilful behaviour he was hated by all classes of the people, and Yoritomo Minamoto, son of the defeated Yoshitomo, rose on the tide of general bad feeling against

the Tairas, and the whole Taira family was defeated and drowned at the battle of Dan-no-ura in the Inland Sea in 1185. It was Yoritomo Minamoto who first established government by the Samurai class.

Literature At the end the Nara Age an abbreviated form of Chinese characters began to be used among scribes. In this Heian Age the Kata-kana, a Japanese syllabary of simple 'square' characters was derived from the Chinese ideograms, and lastly Hira-kana, a smoother and more fanciful style of Kana was invented and came to be used first among educated ladies and then by gentlemen also. Chinese sentences had monopolized the literature of former ages, but from the first quarter of this period pure Japanese sentences in the new Japanese alphabet appeared and gave an impetus to the rapid spread of Waka composition and beautiful Japanese stories like the Taketori-monogatari and Isé-monogatari.

The culture of this age had not yet reached the rural districts and common people, but existed only in the larger cities and a number of towns and among the aristocratic class. The kulturträger, the bearers of civilization and culture of the age, were court nobles, government officials, priests and monks, and their families. It may be going too far to say that Heian was the only city of the Empire in those days, for there are evidences of the existence of some local market towns and trade ports. It is nevertheless true that there was a great difference in grade of civilization between the capital and the rural districts. The intelligentsia in the capital kept political power and literary heritage to themselves and their successors, their living being supported by the contributions and tenant fees from their country estates. They lived a luxurious and easy monotonous life as is shown in the Genji-monogatari by Murasaki-shikibu, a woman novelist (See Chapter XXXV). But at the same time Japanese literature made wonderful progress in this age.

Education School education was undertaken by the Government along definite lines in the city and local districts. In the city of Heian there was a Dai-gaku, (school of higher learning), which took in 400 boys of higher officials. There were 143 higher officials and 850 lower officials in the city. In the districts there were established Koku-gaku, provincial schools, open mainly for the boys of local officials. At Dazai-fu in Kyushu the Gakugyo-in, or institute of learning, was established for the provinces of the northern half of the island. The main course of study in these schools was related to national politics based on the teachings of Confucius. But literature, music, physical science, pharmacology, astronomy, mathematics and penmanship were not neglected. Some of the local schools were of a high educational standing and sent out able scholars. Children of the princes and court nobles were taught by private tutors. School education especially flourished in the Enryaku, Konin and Showa eras, under the Emperors Kammu, Saga and Nimmyo respectively. The building of the new capital of Heian gave rise to a new spirit of enterprise among the people and broader humanistic ideals began to show themselves, with sincere aspirations for the advancement of civilization. Many a young student went abroad. Prince Shinnyo, a young monk of the Shochoji temple in Izumi province, went to the Tang capital, and started from Rusha to Raetsu, near Singapore, for the study of Buddhism, but died on the way. The needs of the time gave rise to many private schools. Some representative ones were the Bunsho-in of Seiko Sugawara, the Kangaku-in of Fuyutsugu Fujiwara, the Gakkan-in of Tachibana, the Shogaku-in of Yukihira Arihara, and the Kobun-in of Kiyomaro Waké. The Sugawara family especially produced a succession of first class scholars, and many able young men in to the Bunsho-in. This study of foreign learning continued from the previous ages to the middle of the era when the Emperor Uda stopped the sending of delegates to China.

With the slackening interest in Chinese cultural studies early in the 10th century the Government schools were gradually reduced in numbers and influence, especially, also, as the power of the Imperial Government was dwindling and the Fujiwara connections were beginning to monopolize all official positions, leaving outsiders without hope of preferment. The Daigaku-in in Heian was closed after the buildings (five blocks of classrooms and one storehouse) were burnt down in the fire of 1177. Learning became a hereditary privilege with the growth of reactionary reverence for established lineage. Buddhism also became much Japanized by the appearance of such monks as Saicho of the Tendai and Kobo Daishi of the Shingon Sect.

Economic Condition The cleavage between the common people and ruling classes became more marked and the

clan or family ties weakened as the connection between demand and supply became more complicated. From this arose the necessity for exchanges and markets. Waka of the Mannyoshu suggest the existence of markets in Japan at such an early date. As a matter of fact there had been several markets opened in bygone times such as those of Tsubaki, Atokuwa and Eka. On the beach of Takahama in Hitachi (present Ibaraki) and by the straits of Asakumi in Izumo province (present Shimané) there were primitive markets opened for the people. These markets were first started in connection with Shinto festivals. In the Nara Age, there were the East and West Markets in the city of Nara, where trees were planted for giving shade, and from there pedlars travelled around as far as Echizen province (present Fukui).

In the 7th century silver and copper money was already in considerable circulation. In the 8th century copper money was cast by the Imperial Government, although it is not clear whether all the money in circulation before that was of Chinese origin or not. In the first year of the Wado Era, 708 A.D., silver and copper coins named Wadokaiho were cast at the Imperial mint, and this coining of metals continued, ushering in the period of money instead of barter.

In the Heian Age public markets were opened in the east and the west of Heian city. The East Market consisted of 51 shops and the West Market of 33, and they continued till the time of the Gen-pei (Genji and Heishi) wars in the 12th century. The largest among the local markets were at Tsubaki, Tatsu, Asuka and Ausa in Yamato province, Shikama in Harima (near Himeji), Naniwa (Osaka) in Settsu and Kowaki in Shiga. There were many trading ports, and of these Hakata, Muko and Naniwa were the most thriving in foreign trade, Hakata coming first, located as it was at the northern end of Kyushu, nearest to Korea and China. Foreign commerce at this time was mostly governmental, private trading not being allowed.

Social Classes (the 7th–12th centuries) The highest class of this age consisted of the descendants of the nobles of the preceding age; new dignitaries promoted for meritorious services; descendants of the Imperial House; and high priests of Buddhist temples. These people monopolized the highest positions in the government and administration. Wealth was naturally accumulated by them and civilized life attained by the assimilation of continental culture was theirs. The high official positions and ranks were accompanied with material estates and income, and nobility and wealth were synonymous. Living in the capital or vicinity and holding a close connection with the Imperial House this class enjoyed its aristocratic life until power was taken from it by the Fujiwaras in the 11th century.

Next came the class of provincial lords, or officials, scholars, warriors and certain naturalized Koreans or Chinese who were well educated. This class can be compared with the middle class of to-day. The power of the members of this class in politics was secondary, but the standard of their culture was as high as the first, if not higher, especially in the case of scholars such as doctors, astronomers, and mathematicians. They were the military and civil administrators in the local districts and the carriers of a higher civilization.

The third class of this age consisted of the descendants of the second and third classes of the preceding age, they were mostly engaged in agricultural work, although there were among them some artisans and merchants but the number was comparatively small. In fact handicraft and merchandizing was, in later days, mostly carried out by farmers as a kind of side line. They were compelled to work so hard in order to support the upper classes that some scholars of the economic history of Japan have called this 'an age of slave economy.' The people of this class were rarely given positions in the government, although they had access to the priestly positions in temples. Able youths emancipated themselves from serfdom by becoming outlaws and, as mentioned above, finally gave origin to the rise of the samurai class in the latter half of the Heian Age. In the 8th century this class constituted over 70 per cent of the entire population of Japan.

The lowest class of people, practically a slave class, consisted of two kinds of people. The first were the workers for the Court, the clothes, paper and furniture makers, musicians, stable-men, etc. They were mostly naturalized Koreans, and because of their tribal origin were despised by the other classes. Part of them seem to have been the forefathers of the "Eta" class of the Yedo Age. But they must have already belonged to the lower class in their native land, Korea, or may have been captives there, because there were many naturalized Koreans who occupied

honourable positions in the Imperial Court and in the second class mentioned above. According to a record of this age there were but 4,216 households almost all of which were in the Kyoto, Nara and Osaka districts. So far as the national law is concerned these slaves were freed several times, in 722, 744, and 759 A.D., but as a social class they remained the same.

The descendants of the "Yakko" of the preceding periods formed the second division of this slave class. Their social standard as such was legalized by the laws issued at the time of the Taika Reformation. The Taiho laws prohibited intermarriage between members of this "disgraceful" class and members of the "good" classes. Slaves who belonged to offices mainly worked as tomb keepers, farm workers and miscellaneous jobbers, while those owned by private houses did the dirtiest work. The number of these slaves comprised 10 per cent of the entire population. The average value of a slave in the Nara Age was 1,000 bundles of rice for a man and 800 bundles for a woman which meant the amount of rice which would feed a person for 2,500 days. This was rather a prohibitive price for the purchase of slaves, probably due to the small supply of slaves against the demand, the treatment of them by their masters was, therefore, very humane. In the Heian Age, the slave system underwent a gradual change, there was laxity in the imposition of the old laws pertaining to the system, and intermarriage with the "good" people often occurred. On the other hand, many of the third class people or oppressed farmers had become reduced to serfdom, and their intermingling with this class made the two classes indistinguishable at the latter half of the Heian Age.

Kamakura Age
(1192–1337 A.D.)

Samurai Government Samurai government continued for 685 years, from the time of Yoritomo Minamoto to the end of the Tokugawa Shogunate. During the feudal age the Minamoto, Ashikaga and Tokugawa families appeared successively as the heads of this Samurai government, holding all power, both political and military, in their hands. At the Imperial Court were the august officials, but its rulership was only nominal, and the real sovereign power was kept by the Shogunate.

In the middle of the Heian Age, the Fujiwaras grasped despotic authority in politics, and the rule of the Imperial Court sank into formalism. Imperial officials and nobles indulged in an effeminate life, discarding militarism. Vicious customs prevailed, misunderstandings arose between the Central Government and district offices and the gap between the rich and the poor became greater, gangs of robbers terrorized the people, civil wars great and small constantly occurred, and the people could not live in peace. This state of things gave opportunity for the rise of the warrior class, and the military government under the leadership of Yoritomo Minamoto was welcomed by the people as suitable for the troublous times, and the Shogunate came into being on its own merits.

The Kamakura Shogunate Yoritomo adopted Oyé's counsel, and asking the permission of Goshirakawa, the ex-Emperor who had the real power at the Court, stationed his warriors in different parts of the country as governors and deputies. He gave these governors military and police authority and to the deputies he assigned the administration of land and tax affairs, in 1185. All the political power fell into Yoritomo's hands as a natural consequence, and the military and political offices which were established at Kamakura became Shogunate head offices; in 1192, he was asked by the Kyoto Government to become Seiitai-Shogun, or Generalissimo, and this meant the public recognition of the Shogunate authority.

After becoming Shogun by Imperial Order, Yoritomo Minamoto took great care to control the warrior-lords. He himself lived a very simple life and issued orders to the lords and warriors to do the same, thereby setting good examples to the people. His teachings did not primarily stress skill in fighting or the use of weapons but rather the moral precepts which must underlie the true warrior's way. The hitherto neglected and disorderly rural districts were taken care of and became closely united with the Kamakura Government their agricultural and commercial life was improved, and the heavy taxation formerly levied by extravagant nobles was reduced to make the peasants' lives easier.

Foundation of Bushido Yoritomo was a pious man, revered both Shintoism and Buddhism, and was loyal to the Emperor. Bushido was indeed established by his teachings and practical examples. He encouraged the propagation of the Zen teachings which emphasized an ascetic life, and those of the Jodo Sect which taught man to realize his sinfulness. The principles of Bushido, however, had mainly to do with the

lord-and-subject relation among the samurai, and had defects as a common morality for the masses. But it is noticeable here that polygamy among the nobles of former days was gradually discarded and monogamy began to gain ground in this age, probably in consequence of the recognition of personality and the unusual emphasis on the fidelity of a lady to her lord in the Bushido code. Ideas of honour became strong; loyalty to the Emperor, patriotism, and belief in Japan as being the country specially favoured of the Gods became established national ideals; Buddhism was completely Japanized; and the general moral standard was considerably raised.

Yoritomo's lineal descendants did not continue to hold power beyond the third generation, but the nearlyrelated Hojo family took their place and ruled the people with ability till Takatoki Hojo was overthrown by the faithful adherents of the Emperor Godaigo in 1333. The Kamakura Shogunate was the real Central Government of Japan for over 140 years.

Education Education progressed also in the sense that it spread to local districts and especially among the samurai class. The Terakoya (see Chapter XXVIII) schools were started in the Buddhist temples of this age. Text books suitable for the education of samurai boys were compiled. At the time of the Ashikagas famous centres of learning were established at Ashikaga and Kanazawa (see Chapter XXVIII) near the present Tokyo. The Ashikaga Gakko (Ashikaga School) was first established by Yoshikané Ashikaga, a cousin of Yoritomo Minamoto, and has been continued for seven hundred years up to the present day. The Kanazawa Bunko (Kanazawa Library) was first established in 1275 by Sanetoki Hojo, great-grandson of Tokimasa Hojo the Shogun. Women's education was not neglected and sewing, housekeeping, penmanship and reading and composition of prose and poetry were taught to the daughters of well-to-do people.

Art and Literature The rise of individualism gave a new turn to the cultural life of the people. The break of tradition was discernible in fine art and literature. This was the age of Sung and Yuan in China and their literature and arts, flooding Japan, laid the foundations of modern literature and fine arts which developed after the Muromachi period. Picture rolls of famous battles and illustrated histories of shrines and temples were produced, reflecting the taste of the day. That portrait-painting first began during this age may be taken as a recognition of the individual value of men. (See Chapter XXXV.)

Commerce and Industry Before the Kamakura Age, agriculture was almost the sole industry of the people, although pottery, clothing, etc. were produced in government factories on a limited scale. The spread of culture among the local population in this age, however, quickened the progress of commerce and industry in country places and local centres. Hand-work and carpentry were emancipated from the protection of the nobles and temples, primitive guilds were created and classes of artisans of armaments, porcelain, and lacquer-work, etc. came into existence. Seven guilds were established, of silk workers, charcoal burners, rice merchants, furniture makers, miscellaneous industrials, paper manufacturers and makers of ornamental things and cattle dealers.

Joyei Judicial Code In the first year of Joyei, 1232, a judicial code was issued. It was called Joyei Shikimoku (Joyei Judicial Code) compiled by Yasutori Hojo and his colleagues. This was a compilation founded on the judicial customs of olden days and had no incongruities with the Japanese common life as was often the case with the laws issued by the Central Government at Heian, largely imitations as they were of Chinese laws. It proved, as a matter of fact, to be more practical and effective, and survived many other laws, as an authoritative code for the samurai class, to the time of the Meiji Restoration.

Muromachi Age
(1338–1602 A.D.)

The Muromachi Shogunate Shortly after the downfall of the Kamakura Government, Takauji Ashikaga established a Shogunate in Kyoto, wholly on his own accord, in 1338, and in the time of his grandson Yoshimitsu his work was completed. It was called the Muromachi Shogunate, after the name of the street in Kyoto in which the government had its headquarters. Its system and institutions were almost the same as those of the former Kamakura Government. A relative of Ashikaga governed eastern Japan, staying at Kamakura. This Kamakura governor was first a simple representative of the Muromachi Shogunate, but by and by he began to stand in rivalry against it. Governors were sent to other places and generals were placed at the head of

different military bodies. The governors in local districts were real lords, and acted freely on their own caprices.

Korea, China and Japan The official exchange of delegates with foreign countries was, as already mentioned, abolished, but nevertheless private trade continued. The Sung Dynasty united China in 979, and called forth a thriving international commerce. Merchants and Buddhist monks made visits to China much oftener than before. Kiyomori Taira opened a port at Hyogo and interviewed Chinese merchants at his palace. In the Kamakura Age, the Buddhist Zen sect was introduced from China, and the Hojo built huge temples for its monks.

The Yuan Invasion In 1206 the Yuan Dynasty gained sovereignty over the greater part of China and extended its territory even to a part of Europe. The great Emperor Kublai Khan took Korea, and destroyed the Sung Dynasty, winning possession of all China in 1279. He sent a messenger with advice to Japan to become his tributary, under threat of war. But Tokimuné Hojo, then in power at the Kamakura Shogunate, uniting forces with the Kyoto Court, firmly rejected the proposal. The result was a crisis for Japan in 1274 and again in 1281. The Yuan ruler in alliance with the government of Korea sent a great army to invade Japan. The Japanese were hard pressed, but they fought bravely with their small forces, and by the help of a typhoon which destroyed the enemy fleet they won the day in the summer of the year 1281.

The trade between the two nations, however, did not cease with the war. Takauji Ashikaga wished to build the Tenryuji temple and to get funds for the purpose he constructed trade boats which were called Tenryuji boats.

Trade with the Mings From the beginning of the Kamakura Age, Japanese pirates had plundered the coasts of China and Korea. In the Muromachi Age, the Shogun Yoshimitsu Ashikaga concluded a friendly treaty with the Emperor of Ming in 1401. At the time of Yoshinori delegates of the Shogunate went to Ningpo with passports given by Ming authorities and traded there with the Chinese merchants. Not only Government delegates, but also the governors of local districts, monks and priests of temples or shrines, and some merchants of Hyogo and other ports sailed in and out with a similar purpose. The trade with Ming brought a great profit to Japan, and the Shogunate was relieved of its economic hardships, the western ports throve and the people became wealthy. The Shogunate did its best to prohibit the ravages of pirates,to prove its friendliness to the Ming Dynasty, but at the end of the Muromachi Age when the Shogunate lost its power and the local lords did as they liked, Japanese pirates again pillaged Chinese coasts, which were for a long time troubled with them.

Relations with Korea At the time of the rise of the Mongolian nation, Korea turned against Japan under pressure of the Mongols. But the Japanese pirates ravaged her coasts, and she asked the help of China to send a strong protest to the Japanese Government. A general of Korea, Li-Seikei, was successful in protecting the nation from the attacks of the Japanese pirates, and he finally established a new dynasty of his own and called the new country Chosen in 1392.

Among the provincial lords there were many who had intercourse with Korea. Tsushima Island, especially, had close relations with her because of the nearness of its location. Its lord, So, opened trade with Korea in 1368. When Korea became known as Chosen these relations became even more intimate. There were many Tsushima islanders who became residents of Korea. (As to Japan's relations with the Western nations since 1543 when the Portuguese first came to Japan, see pp. 77–87 of the Japan Year Book, 1933, and Chapter VI of this volume.)

Feudalism It was during this age that feudalism was established as a definite system, and many of the provinces were ruled over by war-lords. Warriors fought each other, farmers were awakened to the need of uniting to protect their interests, and temples quarrelled with one another over the delimitation of their spheres of influence. It was a "dark age" in one sense, but important as an age of social change and progress. The advance of foreign trade was remarkable, and Japanese emigrants settled down in the South Sea Islands.

The war-lords began to disregard the orders of the Shogunate, becoming selfish and money-loving. Yoshimitsu Ashikaga, the third of the line, reorganized the Shogunate and restored its power for a while, but after his death it began to decay and the local lords usurped its authority. Both in the capital of Heian and in the districts civil wars raged year after year. The luxurious living initiated by Yoshimitsu and Yoshimasa, the 8th Shogun, spread like an epidemic among the local lords and warriors, and the ones who suffered

most were the common people, the farmers and merchants, because the expenses of the luxury of the upper classes came always from their pockets.

The latter half of the Muromachi Shogunate was an age of civil strife among the feudal lords. All tradition and authority disappeared, and any talented man, favoured by fate, had the chance to make himself a lord.

Military and General Education. Progress in military arts and the use of weapons was a feature of the age. Various styles of Kendo (fencing) were founded and schools to teach the art flourished in the four corners of the islands. Nor was general education neglected. Both the Ashikaga Gakko and Kanazawa Bunko fulfilled their functions as educational centres, Terakoya were established in more districts and education began to reach the farmers and merchants. In 1561 St. Francis Xavier landed at Kagoshima, at the southern end of Kyushu, and the Catholic faith was first preached among the Japanese. Otomo and other lords in Kyushu were baptized and within less than 30 years there were 200 churches built and over 1,500,000 people converted. Nobunaga Oda was in favour of Christianity from his policy of suppressing the unruly power of the Buddhist monks. Catholics were also eager to establish schools. Within the feud of Otomo there was established a seminary (Casa Professa) for training preachers. Colleges for young laymen were established at Arima in Higo province, Kyushu, Funai in Bungo province, Kyushu, and Azuchi in Omi province near Kyoto. The last one was opened in 1581, and 25 boys from good families were instructed in the catechism, Latin, Portuguese, Japanese reading and composition.

Woman's Position Here it must be mentioned that the status of women was greatly lowered in this age of warlords and samurai. Men vaunted their physical prowess in battle, while women were compelled to live secluded lives, sheltering at home from the dangers of the times. Chinese dicta concerning the "three obediences and seven reasons for divorce" making of woman little better than a slave or chattel, suited the selfish convenience of man, and the Buddhist idea of woman as an impure being detrimental to man's ascent to Buddhahood, all worked together to pull woman's social position down to a ridiculously low level, contrasting with the high status she had enjoyed in more ancient days.

Commerce Ravaged by frequent warfare, the city of Heian or Kyoto had become deserted, the population thronging to the villages which nestled around the castles of the feudal lords. These in time became thriving cities or towns. Among sea ports Hakata, Hyogo, Muro, and Sakai were representative ones. To Sakai, for instance, came foreign ships direct, and there arose many wealthy merchants who had financial power over the Muromachi Shogunate. It was a free city, governed by its own city assembly and protected by its own city guard. Yukinaga Konishi who was first a pharmacist and became a lord on his own account, Sen-no-Rikyu, the famous specialist in the tea ceremony, and Sukémon Noya, a millionaire merchant in foreign trade with the South Sea Islands, were representative men of Sakai.

Industry The taste of the age was rather simple and purely Japanese. The war-lords found recreation in the tea ceremony or garden-making. The preservation of natural simplicity was the dominant note in these gardens, rocks and pebbles being used in their construction. The national leader in this direction was Yoshimasa Ashikaga, the Shogun, famous exponent of the tea ceremony. This ceremony was never a mere drinking of tea but a formalized social meeting, at which guests were invited by the host to a simple and tasteful dinner which was called Kaiseki. Choice porcelain wares and other utensils were used in it and the guests were entertained not only by the repast but also by the exhibition of rare articles and scroll pictures. It became a fashion of the time and greatly stimulated and improved the art of making porcelain, lacquer and cast-iron wares and Kakémono paintings. These were exported to the continent for the first time in the history of Japan.

The last quarter of this age, called the Momoyama Period in art history, was represented by the gorgeous taste of Hideyoshi Toyotomi who built the Momoyama Palace of silver and gold. The influence of the Western world definitely reached Japan with the coming of Catholic priests in this period. It affected not only the spiritual and mental life of the Japanese but also the field of architecture. When Nobunaga Oda built the Azuchi Castle, the first of its kind, in 1576, Catholic priests gave advice or directed the construction. The central building of the Japanese castle is called Tenshu-kaku. The word Tenshu means the Heavenly Lord or God of the Catholic Church, and the Tenshu-kaku signifies the Tower of the Heavenly Lord. It is said that in the Tower

of the Heavenly Lord Catholic images were enshrined when it was first built. According to an art investigation, there are in Italy remnants of old buildings which resemble the Japanese castles and the influence of Roman architecture through the Portuguese and Spaniards must have been felt in Japanese castle building.

Economic Conditions There were economic reasons underlying the civil wars among the feudal lords in the latter half of the Muromachi Age. Enlarged volume of production, progress of communications and transportation, advancement of commerce and industry and changes in military strategy following the introduction of guns led to the wars of territorial invasion and expansion among the lords who had to provide for an increasing number of soldiers and officials. Both commerce and industry had from the time of Yoritomo Minamoto, progressed slowly but steadily with the spread of civilization to local centres, and merchants and artisans were gaining standing as a class. Up to the middle of the Muromachi Age the guilds called "Za" monopolized the supply of goods to the lords; this system, however, came to an end with the progress of free trading, and public markets were permanently established. The appearance of large towns and cities necessitated the accumulation of commodities and provisions from adjacent country places and other parts of the land and hastened the growth of wholesale dealers. The wholesale dealers of the age were called "Mommaru" and combined the businesses of innkeeping, wholesale trading, transportation and money exchanging. Banking business also made considerable progress. There were no banks in the modern sense, but the pawnshops were the banks of the day when as yet there was no regular credit system. Buddhist temples and the brewers of saké acted also as money lenders and they together with the pawnshops were usurers and capitalists. Tanomoshi-ko (small associations for mutual financial aid) were already in vogue. Accumulation of wealth became a dire necessity for the lords, but they had to rely wholly upon the farmers and merchants for financial support while the Central Government was too weak to aid them or protect their interests in accordance with the change of social and economic conditions. Some fell so heavily into debt that finally they had to surrender their territory to their creditors. The Shogunate prohibited the purchase or mortgage of land owned by the samurai to merchants and landed proprietors, but this regulation was not observed. By the end of the Kamakura Shogunate it had become too late to attempt the financial rescue of the samurai. The lords levied heavy taxes on their people and farmed out their collection to appointed merchants. The final outcome of this system, however, was to let the land fall into the hands of those agents, so that the lords were driven in desperation to get new land by force. At times the farmers and smaller merchants resorted to violence to protect their rights and demand more merciful governance from their respective lords or the Shogunate. They often attacked the wealthy merchants, temples and pawnshops to get back goods they had pawned.

The latter half of the Muromachi Age witnessed Buddhist mob rioting and fighting. The Shin Sect (or Ikko Shu) founded by Shinran gained great numbers of followers from among the common people, and some uprisings of these religionists were in reality directed against the ruling class. For instance, the Ikko mob which started rioting in the districts of Kaga, Noto and Echigo provinces, fought against Masachika Togashi the lord of Kaga and killed him, while another in the district near the present-day Kobé and Osaka defeated the armies of Hosokawa their lord, the fight extending over several provinces from Sakai to Ishiyama in Omi province. Iyéyasu Tokugawa, then lord of Mikawa, fought with them in 1563, and to Nobunaga Oda also they were a constant source of trouble.

The social changes caused by the progress of trade and commerce during the Kamakura and Muromachi Ages and the consequent disorder among the ruling classes were not allowed to take their own course very long, for foreign relations, especially with Western countries, presented many international problems and the necessity of national unity became keenly felt. The introduction of fire-arms brought about a fundamental change in methods of fighting. Arrows were no match for bullets. Preparations for war had to be made on a much larger scale and the warriors or soldiers reorganized in a more systematic way, and consequently the smaller lords were forced to unite under the leadership of greater ones who possessed real power and means to organize new armies. In this manner the unity of all Japan was realized in three stages through three great war-lords, Nobunaga Oda, Hideyoshi Toyotomi and Iyéyasu Tokugawa.

Nobunaga Oda The first, Nobunaga

Oda, was an official under the lord Shiba, but soon becoming independent he subdued one after another many lesser lords with his soldiers armed with guns, and, in July, 1573, dethroned Yoshiaki Ashikaga the Shogun and demanded direct access to the Emperor Ogimachi. Nobunaga who had had long and bitter experience of the Buddhist mobs waged war against them and set fire to the Enryakuji temple on Mount Hiei, one of the most powerful temples of the time, thus putting an end to Buddhist meddling in political affairs. He found another means of lessening the power of Buddhist temples by favouring the spread of the Christian faith. He gave all encouragement to its propagation and welcomed the inflow of Western learning and civilization. Nobunaga destroyed the barrier gates in districts which hindered free commercial intercourse and transportation and put an end to the monopolizing guilds and gave merchants opportunity for unrestricted trading. But in 1582 he was assassinated with his work yet incomplete, and it was left to Hideyoshi to continue the task of uniting the nation.

Hideyoshi Toyotomi Hideyoshi Toyotomi, a farmer's son, and one of the trusted generals of Oda, succeeded in subduing even such great lords as Mori and Shimazu in the west and Daté and Hojo in the north and practically united the whole nation by force. In 1583 the whole land of Japan was surveyed to divide it into new rural districts. In 1586 Hideyoshi fixed the costumes of the samurai according to their rank. In 1588 the common people were ordered to surrender their swords for casting a Daibutsu (great image of Buddha), the purpose of this order being to prevent the wearing of swords by any except the samurai. The law of 1591 strictly prohibited the shifting of hereditary business, and the four classes of samurai, farmers, artisans and merchants were firmly fixed.

To force obedience to the law Goningumi (Five Men's Bands) were compulsorily organized. All the people (samurai inclusive) were grouped by 5 or 10 families and each group not only took joint responsibility for the doings of all of its members but helped its members in civil life. This originated before Toyotomi's time, but the law issued in 1600 made it an established institution and played an important part in the following Tokugawa Age both politically and socially. Hideyoshi planned an invasion of the Continent, Formosa, and the Philippines, but died in 1598 before realizing his dreams.

Before the absolute unity of Japan could be accomplished another great statesman was to take the work in hand.

Social Classes (12th–16th centuries) The Ōnin war (1467–1475) which was fought between the Muromachi (the Fujiwaras) Shogunate families in the city of Kyoto not only destroyed the Shogunate itself but also reduced the Capital to ashes. The Court and the Shogunate lost power at once and the whole country was thrown into commotion for a century by the wars of the military lords.

The wars entirely did away with old social customs and laws and gave opportunity for the rise of petty warriors and landed-farmers who, to this time, had been subjected to the aristocrats and war-lords. This was a time of great changes in the social order of Japan. After the Ōnin war members of the labouring classes were able to become lords through their own ability; farmers organized to oppose their lords; commercial cities like Sakai, Yamaguchi, and Osaka, appeared and became rich with the development of foreign trade; and villages, in many districts, began to govern themselves.

In consequence of the rise of new war-lords the aristocratic class of this age was of two kinds, the old nobles in the Court and the new war-lords. The Court nobles had become poor through the confiscation of parts of their estates in country districts by the Kamakura Shogunate. They were, nevertheless, still highly honoured because of their culture and attainments, all lines of study being handed down by them in hereditary succession, and high positions in the Court were held by them though they had no practical power in the administration of national affairs. The only sphere of influence left to the Court nobles was in religious circles, except in the Zen sect which had most of its adherents among the samurai classes. The Fujiwaras, who succeeded the Minamotos in the Shogunate government, again confiscated more than one-half of the lands of Court nobles and finally stretched their wanton hands over the estates of the Imperial House and temples and shrines in the name of military taxes. In the Ōnin war, fought in the city of Kyoto, the mansions of the Court nobles were all destroyed or set on fire and the nobles themselves were compelled to desert the capital and seek protection among the wealthy families in the country districts or temples and shrines.

The war-lords in this age were sons of local governors in older ages, new

governors placed in districts by the Kamakura and Fujiwara Shogunates, and big land-lords who ascended to war-lordship by hiring warriors for the protection of their estates in the political confusion of the time. The name 'Daimyo' which represented the war-lords in later ages, especially in the Yedo Age, originated in the land-lords, and meant one who owned a large estate or villages. The war-lords, new and old, took advantage of the downfall of the Shogunate after the Ōnin war to consolidate their field of activity all over Japan. They fought each other to obtain supremacy.

The second class of people consisted of farmers, artisans and merchants. The war-lords and Daimyo in the provinces built castles around which artisans and merchants settled, the artisans and merchants increased in number and the castles gradually grew into towns and cities, while progress in foreign trade during the latter half of this age gave rise to such port cities as Sakai, Hakata and Yamaguchi. Artisans and merchants formed guilds as mentioned elsewhere and protected their rights and profits. Farmers who had been trodden under the foot of the ruling classes began to make demands upon their lords who could no longer control them by threats but had to handle them in a more honourable manner. The first record of a farmers' mob movement against their lords was that of the farmers in Kinki (Kyoto and Nara) districts which started in September, 1428. The mob demanded the so-called "Toku Sei", cancellation of debt or a permanent moratorium. Mobs which were united in the faith of Buddhism such as the Jodo or Hokké sects were well organized and had some permanency so that at one time they formed their own government. In the province of Yamashiro the farmers succeeded in organizing their own government and elected members by vote at the Byodoin temple at Uji, Kyoto, in February, 1486. This and other examples of a similar nature were not allowed to continue because of later changes in political affairs, but they laid foundations for the future development of towns and villages and the "Gonin Gumi" as mentioned above.

The lowest class in this period consisted of sons of the same class in the preceding age. The difference was that the slaves of Court nobles or government offices became more despised than the slaves at private houses. The latter were handled by their lords in a much more humane way than in the preceding age. The former, on the contrary, became more disliked by the other people because of their Korean origin and their special work of butchers and skinners, for such work was extremely despised by Buddhism, which taught people not to kill any living thing, even lice, and taboo all flesh. They were called the "Eta," the meaning of which changed from the "butcher" to the "polluted", and lived in groups secluded from others.

Yedo Age
(1602–1867 A.D.)

In 1600 Iyéyasu Tokugawa gained a decisive victory at Sekigahara, near Nagoya, and became the practical ruler of Japan. Except for a small portion allotted to the Imperial House and various religious bodies, over 90 per cent of the entire land was divided among the Tokugawas, their relatives, and favourite generals and lords. Thus the complete unity of the nation was realized by the dual master-and-subject relation between the lords and their people and the Shogun and his lords. This feudal system lasted over 260 years, being quite unparalleled in the history of the world. This was a success primarily for the Tokugawa Shogunate rather than the nation. It was due for one thing to the financial and military strength of the Tokugawa family, secondly to the clever method of administration, best suited to keep wayward war-lords in order, and thirdly to the halting of alien influences from overseas.

Iyéyasu located the seat of the Central Government at Yedo (Tokyo) and governed from there his 200 lords and generals. The financial basis of this Shogunate was superior to that of its predecessors. About 7,000,000 koku ("koku" in this case means the area of land which can produce one koku of rice) or nearly one-fourth of the national area of 30,560,000 koku, was owned by the Shogunate directly or indirectly. Besides, all the ports and places important for political and military purposes, the largest cities and the centres of industrial and commercial activities, and all the mines of any value were under the Shogunate's direct control. It also retained the right of casting coins.

Buké Hatto (Samurai Law) After giving the final blow to the Toyotomis in May, 1615, Iyéyasu Tokugawa ordered the drafting of the law concerning the daimyo (feudal lords) and samurai. In July of the same year the Samurai Law was pronounced before the gathering of the daimyo called for the purpose by the second Tokugawa Shogun, Hidetada. It consisted of 13 articles the gist

of them being as follows : (1) Samurai must be well educated in general learning and versed in the arts of war ; (2) Unbridled drinking and luxuriousness are strictly prohibited ; (3) Criminals must not be aided or concealed ; (4) All treasonous bodies and murderers should be banished ; (5) No person other than the subjects of the daimyo should be allowed to live in his territory ; (6) All repairs to castles need permission of the Shogunate and the building of a new castle is strictly prohibited ; (7) If anyone detects a new castle building or a secret political organization in a neighbouring province he must report it to the Shogunate ; (8) Marriages must not be celebrated privately ; (9) All the lords are required to observe "sankinkotai". (According to this article the lords were divided into two groups, and each group was to come up to Yedo, the seat of the Shogunate, in April every other year, to stay there for one year and the Shogunate prepared their Yedo residences where their families were kept as hostages. These rules were somewhat loosened in later years.) (10) Styles of costume should be regulated according to rank and social position ; (11) Servants ought not freely to use the palanquin (the only vehicle in those days) in travel ; (12) Samurai should be instructed to live frugally ; and (13) the lords should use discretion in appointment of officials. The purpose of this law was to restrict the armament of the lords, to suppress political organization and treason, to effectively inspect the local government of the lords, and to force them to keep order by strict rules on their behaviour. The number of daimyo was 157 according to the Shogunate statistics of 1614.

Kugé Hatto (Court Nobles Law) This law for the court nobles was promulgated in July, 1615, at the assembly of 150 court nobles at the Nijo Castle, Kyoto. It consisted of 17 articles, and included regulations regarding the positions of the Emperor, Imperial Princes and Princesses, the appointment of a Regency and chief councillor, adoption, court ranks, institution of the year name, costumes, the order of promotion, orders issued by magistrates, sentences of the court, and the position, ranks, costumes and honorary titles of the head priests of Buddhist temples. (See p. 100, the Japan Year Book 1936, for the main points of the law.)

System of Control Iyéyasu took scrupulous care not to give any chance to the Imperial House and the greater lords to gather forces against the Shogunate. His first policy was to restrict their powers by the promulgation of the Kugé Hatto and Buké Hatto above mentioned. His second was to allot their districts to the respective lords by an administrative plan deliberately schemed out. The Kanto district in which the seat of the Shogunate was located was put under the direct rule of the Shogun and ruled by his personal generals to protect the General Government from attack. In the districts around Kyoto, the city of the Imperial House, none of the Tozama Daimyo, the conquered lords, were placed, but only the relatives of the Tokugawa and the Fudai Daimyo, lords who had been on the Tokugawa's side from of old ; and in Kyoto itself a representative office of the Shogunate had the responsibility of watching any political move in that city. Along the two main roads, the Tokaido and Nakasendo (or Koshukaido) which connected Kyoto and Yedo, the Fudai Daimyo only were appointed to rule. The Tozama Daimyo were all given lands in the remoter parts and between each two of them a Fudai Daimyo was placed to play the part of a barrier. Such important places as Osaka, Sakai, Fushimi, Nagasaki and Uji-Yamada were administered by governors directly sent from Yedo. The children of Iyéyasu were given large feuds and established the Houses of Mito, Owari, Echizen and Kishu, forming a defensive semicircular line. As a whole. Iyéyasu cleverly divided the land among the lords so as to keep the balance between the east and the west, a policy which proved successful till the balance was broken in the first half of the 19th century when the western lords rose in rebellion. The Shogunate paid scrupulous attention to all travellers along the Tokaido. It put a barrier at Hakoné, and nobody was allowed to pass through the gate without a passport issued from the lords or the Shogunate. After the enforcement of the articles of the Buké Hatto requiring the family of a lord to stay at Yedo, women were almost entirely prohibited from leaving the city for they must get Hakoné passports directly from the Shogunate.

The purpose of the seclusion policy adopted by the Tokugawa Shogunate was to shut out any possible outside political influence and to prevent the local lords from getting large profits out of foreign trade, and rising thereby to financial and political power. The Shogunate did everything to safeguard its supremacy and make the lords obedient, no matter how national progress was hindered or into what miserable condition the people might be thrown.

Organization of the Tokugawa Shogunate The Shogunate was a government of one despotic ruler : the Shogun. No one man, however, can perform all the duties of a government unassisted. Although there were many changes in the organization and the names of offices in the 268 years of its rule the Yedo Government, in the main, had a Cabinet which consisted of one Tairo (the great elder), five Roju (the middle elders), and five Wakadoshiyori (the younger elders). The Tairo was the premier but, though the Shogun at times placed his most reliable and able statesman in the position, the years in which a Tairo held office were but few, the Shogun himself generally undertaking the office. The Roju were the ministers of the administration. They signed the public ordinances and documents of the highest import. Their administration was based on former customs and newly issued laws, while their secretaries had the responsibility of examining old customs and precedents to help their decisions. These five saw to matters concerning the Imperial House, the court nobles and prince monks, and controlled all the lords and high officials, local governors and inspectors, and in wartime commanded the armies of the lords.

The Wakadoshiyori consisted of four or five members who were at once councillors and vice-ministers and controlled the Hatamoto (the generals who directly belonged to the Shogunate), and the lower officials, and in any emergency commanded the armies of the Hatamoto.

Both the Roju and the Wakadoshiyori were appointed from among the Fudai-Daimyo only.

Under the cabinet there were three Bugyo, the Jisha Bugyo (Temple and Shrine Department), the Machi Bugyo (City Department), and the Kanjo Bugyo (Counting Department). The Jisha Bugyo controlled all the temples and shrines in the country and administered justice in the remoter districts. The Machi Bugyo administered the city (Yedo) affairs from administrative business to justice, police and prisons. The Kanjo Bugyo took charge of the treasury of the Shogunate, gathering taxes from the estates directly belonging to the Shogun.

The Roju, the Wakadoshiyori and the three Bugyo formed the Central Shogunate Government, all other officials belonging to or coming under the control of one or other of these. Among the local officials the most important were the Shoshi-dai who represented the Shogunate at Kyoto, the Osakajo-dai who represented the Shogunate at Osaka, the Fushimi Bugyo, overseers of the barriers at Kyoto, the Kobusho Bugyo or military department, and the Nagasaki Bugyo who controlled the lords in Kyushu.

Cultural Life Culture and civilization made greatest progress in the western part of Japan and it was in Osaka and Kyoto that literature and a more refined life developed in the earlier years of the Yédo period. Iyéyasu was anxious to spread knowledge and encouraged the study of the Japanese and Chinese literatures of former days ; scholars of great learning appeared who opened schools and published commentaries or interpretations either of their own accord or by the backing or order of the lords. The progress of the art of printing greatly helped the spread of education by books. But in the early days of the age most of the energy of the ruling class and the common people was spent in readjusting their political and social life to the new state of affairs created by the united and centralized government of the Tokugawa Shogunate, and time was needed for the psychological atmosphere of the people to settle down toward a peaceful enjoyment of life in this better organized society.

It was not until after half a century that a characteristic taste and way of life began to show themselves, discarding the old garbs of tradition. Here it must be noted that the fundamental feature of the literature of the age was that it was the creation of the common people, people who were denied all opportunity of rising to higher social positions or assuming official posts in the government. The so-called Genroku period commenced with the luxurious life of the fifth Shogun, Tsunayoshi, who was a man of enthusiasm, fond of learning, and encouraged lectures and schools. Even before his time the general trend of the period had been toward extravagance and amusement following a century of peace. The Shogun's example, however, quickened and intensified this tendency, and such amusements as "no" drama, joruri (or gidayu), and kabuki (see Chapter XXXVII) were enjoyed by the general masses, while pure literature such as haiku, waka, novels, and stories began also to be written and read among the lower classes. Skill in the fine arts, characteristic Japanese hand-work and special weaving arts reached the highest pitch.

In the Genroku period literary men were able to publish their writings freely and the joruri of Chikamatsu, the novels of Saikaku, and the short poems

of Basho had a great circulation, most of their works becoming literary treasures of Japan for ages to come.

The leadership in civilization was still with Osaka and Kyoto up to the end of this period. But the Sankin-kotai and the power of Yédo, the seat of the Shogunate, did not long allow the centre of culture and fashion to remain in these old western cities, and Yédo had finally assumed the first position in all matters of political and social life by the last quarter of the 18th century. The following 80 years, especially the first 50 years of it, was the golden age of the cultural life before the Meiji Restoration.

The policy of the Tokugawa Shogunate in handling the people from the lowest to the highest, was very severe, and the class most oppressed being the common populace. Social tragedies amply reflect themselves in the literature of joruri writers, Chikamatsu and his contemporaries, and in spite of the apparently good intentions of the Shogunate rulers and advisers to improve the political, economic and social conditions, in many cases the people in general were either trodden down by lawless samurai or entangled and rendered helpless in the network of prohibitive laws.

But the characteristic optimism of the Japanese kept them from falling into hopeless discouragement and their surplus time and money were spent in amusements of all kinds. This repressed energy found its outlet in creative industry and literature, or their enjoyment. Besides the standard works of literature there are preserved smaller illustrated pamphlets, short novels and poems which reflect the life of the common people in those days. They expose the looseness of the social life in many respects, but it is wonderful how they show the innate heart of the Japanese people, optimistic, realistic and humane. If it were not for its partial suppression by the Government this common literature might have attained remarkable progress. All Japanese amusements either originated or took definite form in this age. In the upper classes of society a similar course of development ran through all phases of life. Characteristic Japanese philosophy on human life or Shintoism was created by the combination of Chinese philosophies and Buddhism.

Gradual Economic Decline At the beginning of the Tokugawa Shogunate foreign trade was carried on to a considerable extent but afterwards it was almost entirely prohibited except to a small extent through one trade port, and all hope of increasing the national wealth and economic progress of Japan was lost for the time being. Even with its income from the large territory above mentioned the Shogunate could hardly manage to keep pace with the ever increasing expenditure. Financial unsoundness appeared at the time of the fourth Shogun, and from the fifth Shogun on they were forced to rely upon the profits gained by the recasting of coin. Various improvements and revisions of economic policy wrought no material change of situation for the better. In the Tempo Era (1830–1844), the Government stood on the brink of bankruptcy and during the last years of the Shogunate the financial situation went from bad to worse.

The local lords had territories of 10,000 koku to 1,020,000 koku each, but their income from these was too small to feed all their dependent samurai and soldiers, and to finance the Sankin-kotai travelling expenses. They fell into heavy debt, their creditors being the wealthy merchants and money lenders at Yédo and Osaka, the two business centres of the time. From the middle of the Yédo Age few of the lords could manage without the help of the rich merchants. Seventy per cent of the national wealth was said to have got into the hands of wealthy business men by the end of the age. In 1843 the lords sent about 4,000,000 koku of rice to Osaka, 3,000,000 koku of which went to Osaka merchants as interest on their debt of 60,000,000 ryo (gold coin). All means to which they resorted to increase their incomes proved in vain.

The samurai were also compelled by the Sankin-kotai system to have two houses, one at their rural town and the other in Yédo. They were not allowed to do any productive work but received a kind of salary from their own lords, and mostly lived a leisurely life, although some were given offices in the local governments. The long peace did not necessarily bring happiness to the samurai, but rather drew them into different means of pastime and their fighting spirit was dulled with the increasing tendency to luxury. Their incomes were limited from the beginning and were still more shortened by compulsory loans to their feudal lord out of their 'fuchi' or salaries, or even complete suspension of payment. They had no way of extorting from the farmers, as the lords had, and after losing all their means they could not help but break the law and work secretly for their living as artisans or small mer-

chants. In the end the samurai began to sell their weapons and armour which had become useless in the long years of peace.

In the Yédo Age the country folk still lived on the natural products of their farms, helped out by some small income from their handwork, and each village constituted an economic unit, self-supplying and self-supporting. The political peace benefited farmers especially and increase of production resulted from the improvement of farming instruments and institutions. The kinds of vegetables grown became more numerous, sericulture advanced remarkably, and new areas of arable land were brought under cultivation. At the time of Toyotomi's land survey (1573) the rice production of the whole country had been estimated at 18,000,000 koku. In the Genroku Era (1688–1704) it increased to 25,780,000 koku, and, in 1842, to 30,550,000 koku. But 50% of the farmers' income had to be paid to the lords, they were forbidden to move from one place to another, or to change their occupation, purchase of land was restricted, the Goningumi and other feudal institutions fettered them hand and foot. So this class of people was also thrown into miserable depression, and farmers resorted to such desperate measures as infanticide, fleeing to cities and mob riots to escape from their difficulties or fight for their living.

The number of recorded farmer-mob riots reached 568, including 68 in the early period of the age, 236 in the middle, and 264 in the last. The usual motive for rising in mobs was anger at the unreasonable extortion by the lords, tenant disputes being as yet rare.

It was estimated that the proportion of farmers to the whole population was 80%, and the total population in the Yédo Age showed a slow increase in the first half and a standstill in the latter. This was brought about by such natural causes as famines, prevalence of epidemics and insanitary dwellings; but the dreadful habit of infanticide which originated from the direst difficulty of living among the farming class, must have been the greatest factor in checking the increase of population, for it was usual among farmers to restrict the number of their children to less than three in a family. Another negative measure was to flee from the territory of the despotic lord to large cities. Cities had insufficient capacity to receive the inflow of these country people because as yet there were no industrial factories, but there were many openings for house-workers, day labourers and apprentices in the business houses or artisans' shops.

Commerce and Industry The advance of commerce was helped by the increase of population in the towns and cities where central and rural governmental seats were located and the regular journeys to and from Yédo of the lords and their soldiers in Sankin-kotai. But as all foreign trade was banned, business could not take on any natural or international development. The main commodity of the day was rice, that produced in the Kansai, Chugoku (the Main Island west of Kobé), Shikoku, Kyushu and Hokuriku (districts facing the Japan Sea in the central part of the Main Island) being transported to Osaka ricedealers, while that of Kanto and Ohu or the north-eastern provinces was sold in Yédo. Exchange business in rice had already commenced among Osaka merchants and speculations began to draw common interest. Coins of gold, silver, bronze or copper were in good circulation by this time, although these suffered changes of value at times, and the west of Osaka adopted the silver standard while the east took the gold standard. Paper money was issued by the rural governments so that money economy prevailed all over Japan. Bank business or Ryo-gaé and the credit system made considerable progress.

Yédo had over a million population and Osaka came next with several hundred thousand. There were many other cities of over ten thousand. Seclusion had put a stop to sea transportation to foreign lands, but land transportation within the country made wonderful progress. The five highways, To-kaido, Nakasen-do, Koshu-kaido, Nikko-kaido and Oshu-kaido (Do or Kaido means road) converged at Yédo and men and goods came to the Shogunate capital along them and their byroads from the remotest corners of the land. Coasting sea transportation had the following four main lines: the South Sea line between Yédo and Osaka, the West Sea line between Osaka and Nagasaki, the North Sea line from Shimonoseki to Matsumaé, and the East Sea line between Oshu and Yédo; the most important of these being the South Sea line which connected Yédo the greatest consuming city and Osaka the greatest commercial centre.

On the other hand factories were still undeveloped and most articles were made by hand in individual houses. Industry with large capital and in factories was limited to brewing at Nada, weaving at Ashikaga, Kiriu near Yédo and Hakata in Kyushu, metal foundries in

Chugoku and shipbuilding.

The seclusion policy quenched the enthusiasm of the Japanese for foreign trade which had been greatly stimulated at the time of Nobunaga Oda and at the beginning of the Yédo Age by the activities of the Goshuin-sen or registered vessels and small boats of the pirates. The Islanders were compelled to fall back on the old economic system of self-supply and self-sufficiency, and unwillingly relinquishing the international spirit that had aspired to things Western on a far larger scale than that of China centuries ago.

At the same time, however, it resulted in the creation of many industries and fine arts purely Japanese, and in the course of time, the work of the artisans became minutely specialized numbering over 150 kinds. The artisans were united in guilds according to their kinds, which protected their rights and profits, master, artisans and apprentices comprising each house. There were government purveyors who were protected by the Shogunate and accumulated wealth. The number of merchants greatly increased and the classes of the wholesale merchants, middle men and retailers were definitely established. The wholesale dealers organized associations and gradually, in their financial ascendancy, acquired real power over the samurai and lords.

Social Classes (16th–18th century) The policy of the Tokugawa Shogunate, which followed the national unity of Hideyoshi Toyotomi, clearly marked the class divisions into five, the samurai or buké, farmers, businessmen, educationists and outcasts.

First, taking the place of the former Court nobles came the samurai class. This consisted of the war-lords or daimyo and their warriors and occupied governmental positions and was responsible for all the national political and military affairs, both central and provincial. The samurai lived on the revenue from taxes levied on the farmers and businessmen. In times of emergency unreasonable levies were imposed upon these working classes, and extremely despotic lords often robbed them of their wealth in the name of loans never repaid. This latter injustice was specially repeated by the lords at the end of the Yédo Age when the samurai class was thrown into an economic depression by reasons mentioned elsewhere. According to statistics taken by the Meiji Government in 1872 the number of samurai households was 395,825, with an aggregate membership of 1,911,239, or 7 per cent of the total population at the end of the Yédo Age. There were in 1752, the Shogunate House, its three relative lords, and 258 lords or daimyo. Among the 258 daimyo those who owned an estate above 600,000 koku numbered 3, above 200,000 koku 15, above 100,000 koku 27, above 60,000 koku 20, above 30,000 koku 62, and above 10,000 koku 23. All of these lords were made peers after 1884 when the old daimyo system was done away with by the Meiji Government.

Farmers were divided into three classes, village officials, landowners and tenants. The first of these were the largest landowners in villages who were asked by the daimyo or samurai dignitaries to levy taxes on the villagers. They represented their village and had power over the villagers in both public and private matters as tax-gatherers, police and leaders of the community. Other landed farmers who had no official responsibility owned their own land and farm and were the tax-bearers of the community. The tenants were subjects of the other landed farmers and were the most pitiable of the working classes of the time. Of their production 50 per cent went to the samurai as public taxes and 30 per cent to their master or landed farmers as rent, and they themselves were compelled to live on but 20 per cent of what they had produced. The percentage of these classes of farmer seems to have been 2.5 per cent, 37.5 per cent, and 60 per cent, respectively. Farmers were often stricken by natural calamities in addition to this squeeze by the ruling classes.

The class of businessmen was also divided into two, wealthier merchants or artisans who owned houses and lots, and tenants. In social standing businessmen were regarded lower than farmers, but as a matter of fact their economic condition was much better. Their prosperity depended on the luxury and consequent demands of the samurai class so the samurai and businessmen were economically interdependent, but the businessmen gradually obtained the more powerful position and wealthier "chonin" or merchants became to be much honoured because of their economic power. Toward the latter half of the Yédo Age they actually became freer than the samurai. At times their wealth and lives were forfeit to the Shogunate or local warlords, yet they laid an unshakable foundation for the business classes in new Japan after the Meiji Restoration in 1868.

The educational class consisted of the

Court nobles, monks, priests and physicians. The social standing of the Court nobles was still high. The Emperor was duly respected by the Shogunate and daimyo, but he had no political power. The Court nobles who lived in Kyoto with the Imperial House had but a meagre means of living. They were satisfied to be tutors in one art or another, such as waka, Japanese football, penmanship, astrology, medical science, etc. Yet their hereditary position as the nobility was well established and they formed so strong a class of their own that the Shogunate or the war-lords could hardly disregard their existence, in fact it was by the combined power of the Court nobles and the "ronin" or masterless samurai that the Shogunate was finally overthrown in the middle of the 19th century.

The lowest class in the Yédo Age, as in the preceding period, were the "Eta" and "hinin." The number of "Eta" or "polluted" remarkably increased in this age because war-lords in the previous war age called the butchers and skinners to their castle-towns to manufacture articles for war, and the birth-rate of these "Eta" was great. They lived all over the country instead of only in the Kyoto and Nara districts as in the previous age, forming their own communities. They were despised by other people to the extent that they were not allowed to eat or sit with them. Intermarriage and mixed residence with other classes was strictly prohibited by law. This "Eta" class has been most unreasonably treated to the present, although the Meiji Government declared in 1871 that no legal distinction should exist between the "Eta" and others. The "hinin," outcasts, beggars, and the like were put in the same class with the "Eta". According to statistics taken by the Meiji Government in 1871 the number of the "Eta" was 280,311, beggars 23,480 and others 79,097.

Ronin A characteristic phenomenon of the Yédo Age was the appearance of the Ronin or masterless samurai. Such samurai had existed in previous years, but at the time of the despot Toyotomi their number was insignificant. The samurai who had followed lords defeated and ruined in battles became ronin, their number was added to by the extinction of noble houses in punishment for rebellion and the unemployment of the sons of samurai, other than the first born, who had no share in the inheritance of their father's property or position. Some samurai voluntarily chose the life of a ronin. All these lawless ronin lived from hand to mouth and were either at odds with the ruling class or gave constant trouble to the common people. The event mainly responsible for the creation of this class of people was the battle at Sekigahara (1600 A.D.) which decided the supremacy of the Tokugawas over the Toyotomi. In the 13 years between that battle and the Osaka battle which ended in the final destruction of the Toyotomi family, the number of the lords entirely ruined or partly deprived of territory reached over 100 and the confiscated area to approximately 9,000,000 koku. Some found second masters but the larger number of the samurai were thrown out of work. The Osaka battle was caused by these samurai in a last attempt to preserve the power of the Toyotomis, although it ended in their complete failure. Again, in the 23 years between the Osaka battle and the Shimabara Rebellion in 1637 another 70 lords lost the whole or a part of their territory by the relentless application of the Buké Hatto, and indeed the Shimabara Rebellion was nothing but an outburst of complaints by the Catholics and the ronin against the oppression of the Shogunate. But the power of the Shogunate was unshakable. The number of the ronin, however, was still more increased, and in the 4th year of the Keian Era, 1651, Yui-no-Shosetsu and his colleagues attempted a change of the Shogunate government for the benefit of the ronin, although it was suppressed by the wholesale arrest of the ambitious leaders and the harakiri of Yui-no-Shosetsu himself on July 25 of that year. There were minor events caused by outbreaks of the ronin here and there and at last the Shogunate was awakened by these uprisings to the graveness of the situation and after the Keian Era measures were taken to prevent further increase in the number of these masterless samurai. As a rule, in obedience to Bushido ethics, the samurai did not like to take a second master, and only a small portion found positions, while the rest either remained unemployed or chose some other occupation. Some became merchants or farmers. Others became scholars and opened Terakoya and educated the young in Confucianism and Japanese literature and morals. Still others became specialists in military arts and gave lectures to the samurai and the lords, while there were quite a number of experts in fencing and archery who opened drill-halls or schools in the larger cities. The better element of the ronin played an important part in the social development of the country

standing in a freer position than the regular samurai. And the last and most praiseworthy task they accomplished was to take a prominent part in the movement for aiding the Imperial House which finally led to the Meiji Restoration.

Exclusion Policy

Policy of Toyotomi The Catholic faith spread over Japan very quickly and many churches were built in various places. But the dogmas and institutions of the Church were in many ways unfitting to Japanese ideals and customs. Besides, the friars or missionaries were charged to have behaved without discretion, disregarding the laws of the nation. Hideyoshi Toyotomi therefore destroyed the Catholic Church in Kyoto in 1585, and issued a Prohibition Law in 1587, forbidding the residence of missionaries at Nagasaki and other places. But he still allowed foreigners who did not mean to spread the religion to come.

A little later, when trade with Luzon was opened, Spanish missionaries came to Japan. These missionaries were antagonistic to the Jesuits and tried to preach another form of doctrine among the Japanese people in the face of the Prohibition Law, and quarrelled with the Portuguese missionaries. Hideyoshi issued a more drastic prohibition law and severely punished the breakers; but he died without accomplishing his aim, and both Portuguese and Spanish missionaries came in greater numbers and preached the Gospel more earnestly so that the believers in it increased with remarkable rapidity.

Policy of Iyéyasu Iyéyasu followed in Hideyoshi's steps and encouraged foreign trade. But being anxious lest the people should be misled by the Catholic priests he prohibited their preaching in 1612, expelled them from the country, and strictly ordered the Japanese believers to turn from their faith, and those who did not obey his order were condemned to death. They called this turning from or casting away the Christian faith "Korobi" or rolling over.

Going Abroad Prohibited But missionaries came in considerable numbers, and secretly continued to spread Christianity. The Shogunate saw the difficulty of complete prohibition, and began to take stricter steps. Iyémitsu, the third Shogun, prohibited the importation of foreign books in 1630, forbade any one to go out of the country without permission of the Government in 1633, and prohibited the going abroad of any Japanese in 1636. Finally, no Japanese was allowed to return from other countries. And thus the ambition of the Japanese for foreign expansion was quenched.

Seclusion of the Nation The Shogunate kept a strict watch against the coming in of the Catholic faith and tried to exterminate the believers in the country. Its measures were so severe that the Christian believers rose in rebellion at Shimabara in 1637. The uprising was subdued in a short time, but because of it the Shogunate determined to go a step farther in carrying out the law, and prohibited the coming of foreign people entirely in 1639, with the only exception of the Hollanders who helped the Shogun's armies in the fight against the religious mob at Shimabara and cherished no idea of spreading the Catholic faith among the Japanese. Hollanders were allowed to trade at Nagasaki, but only under supervision of the officials.

With this strict seclusion policy the Shogunate was able to root out Catholicism and remove from the minds of the people the influence of foreign thought and belief, and so gain peace in home affairs. But during those years, foreign affairs became known to only a few of the Shogunate upper officials, and this merely through meagre reports presented by the Dutch Consul. The people were kept in entire ignorance. The result of this isolation from the nations of the world was that the country dropped behind in world civilization.

But general movements among the nations of the world did not allow Japan to stay forever in a secluded condition. In the 18th century, foreign ships began to visit Japan, and the Islanders could no longer leave these intruders at their shores unheeded. The end of the Yedo Age was evidently drawing near.

Foreign Studies Renewed Seventy years after the enforcement of seclusion, books on foreign trade and the state of affairs in the Western world were published and the people were much instructed by such literature. The Shogun Yoshimuné took an interest in Western studies and followed a liberal policy for importing Western books in 1720, this brought about a Renaissance which awakened the Japanese from their long sleep.

Seclusion Law Reinforced The Seclusion Law required the provincial lords to drive foreigners away from the shores of the Empire, but its observance grew lax with the lapse of time. At the end of the 18th century the Shogunate made it milder and allowed foreign ships to come, on condition that

they had no enmity to the nation. Unfortunately, however, the repeated rough conduct of foreign sailors irritated the official mind and caused the reinforcement of the old law, the coastguards being given orders to bombard any foreign boat which came near the shore, to arrest any of the crew who landed, and kill them if necessary. At the same time, strict orders were given to Japanese boats not to have any intercourse with foreign vessels (1825).

National Doors Opened

An American ship, the "Morrison", coming to bring members of a Japanese shipwrecked crew back to their country, met with the bombardment, and went back to China in 1837.

In 1844, William II, King of Holland, sent a confidential letter with a special delegate to Japan, to warn that country to be careful not to follow the miserable example of China. Merchant vessels and warships of England and France many times came to the Loochoo Islands and the French made a forcible landing at Naha, the best port of the Loochoos, put missionaries ashore there and asked for the opening of friendly intercourse in 1844. The Shogunate complied with their request for trade, but drove the missionaries away in 1848.

Treaty of Amity with America In the sixth year of Kaei, 1853 Commodore Perry came to Uraga with a fleet of four warships. A friendly treaty was finally concluded between Japan and America in 1855.

Treaty with Russia Russia also sent Vice-Admiral Poutiatine to Nagasaki in 1853, and a treaty of commerce with Russia was concluded by which Shimoda, Hakodaté and Nagasaki were opened to her vessels, and agreements were made respecting the boundaries of Russia and Japan in the north.

At that time England and Russia were at war, and in 1854 an English warship came to Nagasaki for a supply of provisions. The Shogunate consented to open Nagasaki and Hakodaté for English vessels, and an agreement was reached between the two nations. Hakodaté and Shimoda were opened to Holland also and a treaty was concluded in 1855.

Conclusion of Commercial Treaties In 1856 the United States sent to Shimoda her Consul-General, Townsend Harris, who finally succeeded in coming up to Yédo and got an interview with the Shogun Iyésada in 1857. He earnestly requested the Government's consent to open trade relations, and asked that an American minister might be stationed in Yédo, assuring his hearers of American sincerity. The foreign trade allowed hitherto by the Shogunate was only through the mediation of the officials, and Harris insisted upon free and direct commerce between the merchants of the nations.

The Shogunate officials themselves, already aware of the inconveniences of the old system, complied with his requests, regularly concluded a friendly commercial treaty with the United States, and agreed to open New Kanagawa (the present Yokohama), Nagasaki, Niigata, and Hyogo (Kobé) in addition to Shimoda and Hakodaté. They allowed Americans to settle in those ports for trade, gave them freedom to come in to Yédo and Osaka, recognized their freedom of religious belief and extraterritorial jurisdiction, and regulated the rate of tariff in 1858. This was the so-called Ansei modus vivendi.

In the same year the treaty was sanctioned by the Shogunate, without the Imperial sanction. The Shogunate concluded similar treaties with Holland, Russia, England, and France in the same year; and with Prussia, Switzerland and Belgium a little later.

Opening of the Country The Government appointed a commissioner to administer foreign affairs in 1858, and the Shogun earnestly requested the Imperial sanction for the provisional treaties, and finally got it in 1865. The carrying into practice of all these treaties was realized with the opening of Hyogo (Kobé) port in 1867, the year of the accession of the Emperor Meiji. In the meantime, several international troubles occurred. Russia tried to invade Tsushima in 1861, Satsuma warriors fought against an English fleet off Kagoshima in 1863, and the Nagato clan had an engagement with the combined fleets of France, England, Holland, and America at Shimonoséki in 1864.

Downfall of the Shogunate

Court and Shogunate The Yédo Government adopted the policy of keeping the Imperial Court at a respectful distance, paying apparent homage to it, but actually presenting it only with 120,000 koku of rice, the pension of a middle-class lord.

Uprising of the Loyalists On the other hand, the smouldering fire of loyalty to the Imperial House was gradually fanned into a blaze by the increasing attention paid to the study of Confucianism and old Japanese literature. Confucian scholars taught that the first duty of the people was to be loyal to the King (Emperor) and not to the Conqueror (Shogun), while the students of old

Japanese literature explained the irrationality of the Shogunate régime in the country of which the sovereingty belonged solely to the Imperial House. Down to the middle of the Yédo Age, however, these teachings did no harm to the Shogunate for both the ruling class and the people took them as mere matters of academic interest without practical application. Mitsukuni Tokugawa, the lord of Mito was among the foremost in advocating the virtue of loyalty to the Imperial House, himself beginning the work of compiling a Japanese history to make this characteristic Japanese virtue clearly understood, and erecting a monument to the loyalist Masashigé Kusunoki at Minatogawa, Kobé. Such other scholars as Ansai Yamazaki, Keisai Asami, and Soko Yamaka, mostly praised the virtue of loyalty, though not necessarily to incite any anti-Shogunate sentiment. Their teachings, nevertheless, acted to stimulate Imperial loyalty in the hearts of the samurai and the people till the time came when it should burst into flame. The first instance of these sentiments being transformed into practical action was the movement of Takénouchi Shikibu who came from Niigata to Kyoto and went about among the Court nobles insisting upon the need of a loyalists' uprising. He was banished by the Shogunate in 1759. Daini Yamagata and Umon Fujii followed him, but both were soon put to death. However, the corruption and weakening of the Shogunate régime quickened the anti-Shogunate feeling in general towards the end of the 18th century. Especially the renaissance of Japanese literature and national character brought about by the teachings of the Japanese scholars, Norinaga Motoori and Atsutané Hirata greatly helped the cause of the loyalist movement. Hikokuro Takayama went around the provinces propagating the principle; Kumpei Gamo visited the tombs of the deceased Emperors and publicly bewailed their neglected state. Sanyo Rai wrote a Japanese history in which he praised the Imperial House and chastised the Shogunate with a keen and powerful pen.

The knocking at Japan's doors by foreign countries presented ample chances for the loyalists to take advantage of the confusion and misdoings of the Shogunate Government, and public opinion finally endorsed their movement at the beginning of the 19th century.

The Ansei Coup d'État When Komei, father of Meiji the Great, came to the Throne, he did not hesitate to give Imperial suggestions and command to the Shogunate, and the Imperial power was greatly strengthened. The party which was defeated in its hopes for choosing another man for the 14th Shogun schemed a reformation of the Shogunate from within. They united with other forces and asked for an Imperial edict to accomplished their plans. The Emperor issued an edict and reprimanded the Shogunate for their rudeness in concluding treaties without the Imperial permission. Whereupon the Shogunate sent a delegate to apologize for the steps they had taken, but at the same time the Tairo (premier) Naosuké Ii declared the coup d'état of Ansei, 1858, and punished and put into prison all who worked for the issuance of the Imperial edict. His purpose was to re-establish the governmental authority of the Shogunate. But Ii was assassinated at the Sakurada gate of the Shogun's palace in 1860.

The assassination of the Tairo gave what was to prove a final blow to the Shogunate though the Roju, Nobumasa Ando, schemed a combination or amalgamation of the Imperial Court and the Shogunate to save the latter from ruin. Some of the powerful lords in the west responded to the idea for a time, but public opinion was overwhelmingly against this amalgamation movement on the part of the pro-Shogun party, and the anti-Yédo movement increased still more in power. Most of the loyalists gathered in Kyoto and hotly discussed the matter. The ronin or unemployed samurai flocked to the cause in such great numbers that it was necessary for the armies of the lords of Satsuma, Tosa and Choshu to keep them in bounds in order to preserve the peace of the city.

On the other hand, the Emperor Komei sent a messenger to Yédo to urge the reformation of the Shogunate Government. The Shogun Iyeshigé tried to make improvements in the system of Sankin-kotai, etc., but it was too late to regain the support of the people. The Namamugi incident, in which three Englishmen were killed or injured by the lord of Shimazu's samurai and England demanding compensation, stirred the extreme anti-foreign party to fury and the Kyoto Court sent this time Sanétomi Sanjo to Yédo and ordered the Shogunate to wage war against all foreigners. In 1863 an Anti-Foreign Edict was issued by the Shogunate, and the armies of the Choshu and Satsuma lords attacked foreign merchant ships and warships. The fanatical Kyoto loyalists demanded that a nation-wide anti-foreign movement should be launch-

ed, and the Emperor was inclined to take command of the movement himself, but the more sagacious and saner-minded princes and lords advised him to realize the unwisdom of anti-foreign action, and the leaders of the radical element lost influence and fled to the west. For a while the schism among the loyalists persisted, but the object lesson of the bombardment of Shimonoseki by a combined foreign fleet weakened the anti-foreign movement to a great extent. By 1867, when the Emperor Meiji ascended the Throne, the anti-foreign movement had died away and the loyalists were solely concerned with the destruction of the Shogunate régime, recognizing the inability of the Shogunate to sustain the national honour in the crisis.

Prince Sanetomi Sanjo, one of the seven Count nobles who had fled to the west, joined Prince Tomomi Iwakura in leading the anti-Shogunate movement. The hostility between the two greatest of the western lords, Shimazu, lord of Satsuma province and Mori of Choshu or Nagato, was pacified by the arbitration of Prince Sanjo and they became strongly united in the common cause. Prince Iwakura, succeeding in making a definite plan for the destruction of the Shogunate, gathered many young and gifted samurai under these two lords, such as Takamori Saigo, Toshimichi Okubo of Satsuma and Takayoshi Kido of Nagato, and asked the Imperial sanction for the movement.

On October 14, 1867, the Emperor Meiji gave orders to the Satsuma and Choshu lords to open hostilities against the Yédo Government. On the side of the Shogunate, Toyonobu Yamanouchi, former lord of Tosa in Shikoku, was informed of this secret plan of the Imperial army, and being anxious to avert the impending civil war sent Shojiro Goto to present a memorial to the Shogun Yoshinobu (Keiki) Tokugawa, advising his surrender of the sovereign authority. Whereupon Yoshinobu, who was staying at Kyoto, immediately called an assembly of the representative samurai of the lords then staying in the city to the Nijo Castle on October 13, 1867, and asked their opinion on his determination to surrender. The assembly gladly agreed to his decision on the advice of Shojiro Goto and Tateaki Komatsu, a subject of the Satsuma lord. On October 14, Yoshinobu presented a written request for the Imperial permission, and on October 24 the resignation of the Shogun was formally tendered to the Throne. Thus the Yédo Shogunate ended with the 15th Shogun, after having continued for 265 years, and after a total period of 675 years the sovereign authority was restored to the Throne.

THE NEW JAPAN

Meiji Era
(1868–1912 A.D.)

The Meiji Restoration

In December of the same year, the Emperor Meiji issued an important order abolishing the old officialdom and forming a new Dajokan which should consist of the president, councillors and and vice-councillors, and proclaiming the direct rule of the Throne in every line of national government. The Imperial Prince Arisugawa was appointed President of the Dajokan, and those court nobles and feudal lords who had faithfully worked for the restoration were given the position of councillors, while some other men of ability from among the nobles and common samurai were made vice-councillors. The people were allowed to live in complete equality, discarding the old castes of nobles and common people. This change was called "Ishin" or the renovation of all things. In the following year, 1868, or the first year of Meiji, the Emperor by the advice of Takayoshi (Koin) Kido, a vice-councillor, called together the princes and high officials to the Shishinden or central palace and took the famous oath of five articles before the ancestral gods. These five articles of the Imperial oath provided the foundation to the new régime. They were as follows: "(1) We will call councils and rule the nation according to public opinion; (2) Men of upper and lower classes without distinction shall be united in all enterprises; (3) Civil officials and military officers shall be in one accord and all the common people shall be so treated that they can attain their aims and feel no discontent; (4) Old unworthy ways and customs shall be destroyed and the people shall walk along the highway of heaven and earth; and (5) Knowledge shall be sought among the nations of the world and the Empire shall be led up to the zenith of prosperity. To accomplish this unprecedented reformation, We go before the people, and proclaim the fundamental national principles, even in the pres-

ence of the gods of heaven and earth, to establish the way for the public welfare. Ye, Our subjects, shall be united all together, according to these principles." In August of the same year, the formal celebration of the Emperor's ascension to the Throne was held at the central palace, and in September the year-name Meiji was given.

Removal of the Capital The Emperor Meiji paid his first visit to Tokyo in the first year and made the castle of Yédo his permanent palace in the second year of the new era. The Government was subsequently removed to Tokyo.

The Organization In the first year of Meiji, 1868, a new Central Government was established in accordance with the five principles above mentioned. It was called Dajokan, or Great Government, and there were seven departments in it. The council played the part of the future parliament; the five departments of general political, religious, financial, military and foreign affairs were administrative; and the last, the penal department took charge of justice, and the mutual independence of the legislature, the executive and the judicature was for the first time established. In a few years several adjustments were made, but by the fourth year all the official machinery of the central government was systematically arranged.

Surrender of Fiefs The Imperial Court had confiscated all the territory belonging to the old Shogunate, and set up prefectural offices and appointed governors, but the feudal lords still owned their lands and their feudal subjects. In the first year of Meiji, Takayoshi (Koin) Kido submitted an opinion on the surrender of all feudal possessions to the Emperor to complete the purpose of the Restoration, through Sanétomi Sanjo and Tomomi Iwakura; and at the same time he advised Lord Mori, Daimyo of Nagato, to return his territory to the Court. The latter was quite willing to do so, thereupon Takayoshi Kido worked with Toshimitsu Okubo and succeeded in getting the consent of Lord (Daimyo) Shimazu of Satsuma, Lord Nabeshima of Hizen and Lord Yamanouchi of Tosa. These four lords tendered their petition for the territorial surrender in joint signature. Other lords followed them, and their petition was accepted in the second year. The lords gave up all their land and people, asking for nothing in return in a most admirable spirit of patriotism and loyalty. For the time being they were requested to continue as governors of their districts, and the feudal system was completely destroyed.

The country was divided into 8 urban prefectures, 26 prefectures and 262 clan districts. But the governors of clan districts, the former feudal lords, governed their people mostly in the old style, preserving the "chief-and-subject" relationship. The orders and ways of administration were greatly distorted and the authority of the Central Government was ineffective. Fortunately, however, Yoshii of Gumma and Sayama of Osaka soon resigned their governorships, realizing the defects of the system, and many others followed their lead. Kido again was quick enough to grasp the situation, and taking advantage of the general trend he endeavoured with his powerful friends Toshimichi Okubo and Takamori Saigo to do away with the clan governors and unify the whole nation under the same form of prefectural government. The Emperor called all the clan district governors to Tokyo in 1871, and kindly explained to them about the abolition of their office. They were given conveniences to live in Tokyo, and were replaced by the prefectural governors. Through many changes, the country was finally divided as at present into one "Do" or district, three urban prefectures and forty-three prefectures in 1889. (Foreign relations are dealt with in Chapter VI.)

Social Reforms

After the cessation of samurai government the social system could not remain unaltered. In 1869, when the resignation of the lords was accepted, the names "Kugé" (court noble) and "Daimyo" (feudal lord) were abolished and the nobles and lords were all made "Kazoku" (flowers of the nation) or peers. Clan samurai were given the class-name of Shizoku, and in the following year the common people were allowed to take their own family names, which they had not previously borne. In 1871, intermarriage was permitted between the peers and Heimin or common people, while the peers and "Shizoku" were allowed to engage in the ordinary business of agriculture, industry and commerce. Thus the social castes of the feudal age were entirely broken to pieces. Social institutions and customs changed also. With the official recognition of friendly intercourse with foreign people, international traffic and relations became busier and more intimate. Many a Japanese who went abroad brought back Western customs and introduced new institutions, and the people were quick to adopt them in their daily social

life. In the second year of Meiji telegraphic communication was opened between Tokyo and Yokohama; in the fourth year, the regular mail service between Tokyo, Kyoto and Osaka was begun; and in the fifth year, the first train ran between Tokyo and Yokohama. In the fourth year, men were ordered to cut off their topknots and walk on the streets without wearing swords. In the same year, laws regarding European costumes and uniforms of officials were issued, the old lunar calendar was discarded and the solar calendar was adopted in its place, and national holidays were newly appointed. In 1871, the Department of Education was added to the Government and, in 1872, the national educational system was established and it became compulsory for all children to be sent to public elementary schools. Buildings in European styles began to appear in the cities and people gradually acquired a taste for foreign food.

New Military System

After the appearance of the Samurai class in the middle age they held all the military power in their hands, and the people at large had nothing to do with it. But with the reforms following the Restoration, the military system was also revised and in the fifth year of Meiji the provisional Department of Military Affairs was changed into the two departments of Army and Marine, and in the following year the law of conscription was issued and, in accordance with the old-time ideas of the Japanese and on the pattern of most of the European powers the people were all ordered to share in universal military service for the protection of the country. The military system made singular progress through the many national crises of the Meiji Era.

Cultivation of Hokkaido

At the beginning of the Meiji Era the cultivation of the waste land of the north was proposed, and in the second year the Colonization Bureau was opened. The name Hokkaido, or north-sea-district, was given to the land, formerly known as Yezo. In the third year, Kiyotaka Kuroda was appointed vice-president of the Bureau and he made untiring efforts to civilize the natives, to construct roads, to promote industry and to encourage immigrants from the other islands. In 1875, he invited the Samurai class of the three northeastern prefectures of the Main Island to form a colonial militia to guard and cultivate the land at the same time. The farming and other population of Hokkaido has rapidly increased since. A troublesome question in the north was the boundary between Japan and Russia. The Shogunate had several diplomatic negotiations with the Russian admirals, and at the beginning of the Meiji Era this question again arose with the opening of the Colonization Bureau. Japan's wish was to divide the Island of Saghalien into two with the border line at 50° north latitude. Kuroda wished to abandon Saghalien and concentrate all efforts on the colonization of Hokkaido, and the Government sent Vice-Admiral Buyo Enomoto to Russia and tried to settle the question. In 1875 a compromise was reached and the whole of Saghalien was adjudged to belong to Russia and all the Kurile Islands were given to Japan. This so-called exchange of Saghalien and the Kuriles finally settled the long dispute over Japan's northern boundaries.

Civil Wars

The Cause The political and social reforms of the Meiji Restoration were so vast in scale and so rapid in progress that the mass of the people could hardly understand their need and meaning, being still prone to the old ways and systems. There were some who were offended by various policies of the Government. These people became a constant cause of political and social unrest, there were repeatedly assassinations of high officials; while in the country districts disturbances broke out one after another. Shimpei Yeto, caused some trouble in Saga prefecture; but he was soon subdued by the Imperial army. In Kumamoto, an adjacent prefecture to Saga, Otaguro and others formed a party called the Jimpuren or Divine-wind-party, and made an attack on the Kumamoto garrison in 1876, only to be defeated by the soldiers of the garrison. At Hagi, the north-western end of the Main Island, Maehara rose in accord with the Jimpuren party, but he was killed and his men dispersed.

The Saigo Rebellion Takamori Saigo could not realize his ideas about the Korean problem, and was deeply grieved at the failure. After his resignation he went back to his native place, Kagoshima, at the southern end of Kyushu Island. Over a hundred officers and soldiers who had been under him in the Tokyo Imperial Guard followed him to the city thus causing a great commotion in the country. His followers, such as ex-major-generals Kirino and Shinowara, elected Saigo to the leadership of their party and the head of their

private school. In 1877 Saigo, Kirino and Shinowara gathered an army of over 15,000 soldiers, proclaiming their intention of impeaching the Government for its social and political failures, and came up to Kumamoto and besieged the Kumamoto castle of the Imperial garrison. But the commander of the garrison, Major-General Tateki Tani, bravely fought against Saigo's army and did not surrender. The Emperor Meiji was then travelling in the districts near Kyoto and Osaka, and stopped in Kyoto to take command of the Imperial army. He appointed the Imperial Prince Arisugawa to be Commander-in-Chief, and Lieutenant-General Aritomo Yamagata and Vice-Admiral Sumiyoshi Kawamura to be the heads of the army and navy respectively. Saigo's troops were compelled to raise the siege under the pressure of the big Imperial armies, and they retreated in disorder back to Kagoshima, and made Shiroyama their final stronghold. Shiroyama was a promontory in the outskirts of the town and there the great Saigo killed himself with his colleagues in the face of the assailing Imperial soldiers. This rebellion was really the last of the civil wars accompanying the Restoration. After this South-Western Civil War, the wounded soldiers, loyalist and rebel alike, were cared for impartially at the Imperial army hospitals, and the Emperor Meiji, the Empress and the Empress-Dowager showed them special kindness. It may be mentioned that the Japan Red Cross Society was founded on this occasion.

Dawn of Constitutional Government

The Constitution In the first year of Meiji, government institutions were reformed in many ways, and representatives of prefectures were made members of the lower council. In the following year the public assembly was opened, and the prefectural representatives became its members. But this assembly consisted of members who were all chosen by the Government, and it gave rise to a demand for the establishment of an assembly of represetatives really elected by the people. In 1873 Kido, who had come back from his European tour of investigation, proposed the establishment of the national constitution; while in 1874, Soyejima, Goto, Itagaki and Yeto presented a petition for the establishment of parliament by popular election. The Government did not adopt either proposal as the time was not yet ripe, but in 1875 they established the Genro-in, a kind of Senate, as the chief seat of legislation, and the Supreme Court of Judicature for the administration of justice, and summoned district governors to Tokyo to learn of the requirements of the people. In 1876, the Emperor ordered the Genro-in to make plans for the formation of the Imperial Constitution and in 1879 prefectural assemblies were opened for deciding on district finances and representative government was first tried in the local districts.

Prefectural Elections The South-Western Civil War was ended and the foundation of the Central Government became unshakable. But in a few years Japan lost most of her able statesmen one after another. Saigo died in the battle just mentioned, Kido passed away from illness, and Okubo was assassinated in 1878. These were the three pillars of the Reformation, and Shigénobu Okuma, Hirobumi Ito and the like had to carry on their strenuous task. Public faith in these new statesmen was not yet assured, but they were young and progressive and endeavoured to absorb Western ways and civilization for the benefit of the rising generation. In April, 1878, the second local governors' conference was held and Ito was its chairman. The items for discussion were rules on prefectural assemblies, local taxes, and the organization of towns and villages. In July of the same year the rules on prefectural assemblies were issued, and according to the articles public election of representatives and local self-government were for the first time to be put into practice in the following year. This was a further step toward constitutional government. As a matter of fact, it might be considered a rehearsal of the formation of a national diet. The election was most sincerely carried out, because the people honoured the candidates as those who must in truth represent them not only in wisdom and political ideas but also in personality and social standing. The result was that the prefectural assemblies were composed of the best class of men in the districts. For instance, the chairman of the Tokyo prefectural assembly was Genichiro Fukuchi and the vice-president was Yukichi Fukuzawa, founder of Keio-Gijuku University, while the members were all men of honour. The famous members of the Imperial Diet and great statesmen of later days mostly came out of these primitive local assemblies.

Political Dissensions Political dissensions, which had appeared even under the turmoil of military struggles, came

to the fore, and hot discussions on both sides were carried on both in debates and through printed pamphlets. The one who attracted most public attention with his progressive opinions was Taisuké Itagaki of Tosa. In September, 1878, a meeting was held at Osaka under the leadership of Itagaki's society to pass a resolution calling for the realization of the national assembly. It was a meeting of Samurai-class people as yet. But their second meeting, in March, 1879, gathered together 80 members who represented 21 societies in 19 prefectures, and the third meeting in November made resolutions to send a petition to the Emperor, and drafted a letter with a long heading, "Letter of Appeal to the Public for demanding the establishment of the National Assembly," which was printed and distributed among the people.

Petition for Opening Diet In the city of Okayama, a little west of Kobé, hot-blooded young politicians composed a manifesto and distributed it, this moved their youthful contemporaries more strongly than the first had done. When the fourth meeting of the Patriots' Society was held at Osaka in April, 1880, 114 delegates from the 87,000 members of different societies met together, formed the "Volunteers' Association for Demanding the Opening of the National Assembly," and drafted a petition. It is said that over 50 such petitions were presented to the Government during the one year of 1880. In the midst of such movements a new scholar of French politics, Kimmochi Saionji, the last Genro or Elder Statesman came back from Paris and published the "Toyo Jiyu Shimbun" (Eastern Liberal News), and to the great surprise of the authorities, instructed the people in the principles of liberal politics. The acute state of affairs seemed to presage the early appearance of an Imperial Diet when the political events of 1881 occurred.

Imperial Edict Issued In that year the Government was going to sell to the Kansai Trade Society the land, buildings, ships, dock and hunting fields which belonged to the Colonization Bureau. The actual price was estimated at a little over ¥300,000, while the Government had invested and spent as much as ¥14,096-800 on them. There was a strong suspicion of favouritism for the Kagoshima merchants, for many of the high officials came from that district, and criticisms arose against the abuse. This public criticism was caught up by those who demanded liberty and they bitterly censured the official autocracy. The very evening of his return from a tour of the north-eastern districts on the 11th of October, the Emperor Meiji gathered together the members of the Cabinet and the councillors and a meeting was held in his presence at which it was resolved that the government sale should be stopped at once and that the Imperial Diet should be summoned in the twenty-third year of Meiji, (1890). These resolutions were published in the Imperial edict issued on the following day, October 12th, 1881. With the issuing of this edict the boisterous outbursts of discussion and debate among the people gradually died down and political parties began to be organized for carrying out their political principles in readiness for the opening of parliament ten years later. The principal ones were the Jiyu-to, Liberal party of Taisuké Itagaki and the Kaishin-to, or Progressive Party of Shigenobu Okuma.

Preparation of Constitution In 1882 the Government sent Hirobumi Ito to make thorough investigations regarding Western institutions, to find good models and suggestions for the Japanese parliament. Ito and his attendants mostly stayed in Germany and there studied Western politics and constitutions, and came back in the following year. In 1884 the Government established an Investigation Bureau in a part of the Imperial Palace and appointing Ito the president of the Bureau, ordered him to make a draft of the Constitution and plans for the new institutions. It was in this year that a law for the peers was enacted and the five ranks of nobility—prince, marquis, count, viscount and baron—were first defined. In 1885, at the instance of Prince Sanjo and to lay the foundation for true constitutional government, the officialism of the Central Government was reformed and a real cabinet of a modern nature was formed for the first time, the old positions of councillor and minister being abolished. It consisted of the Premier and Ministers for Home Affairs, Foreign Affairs, Finance, Army, Marine, Justice, Education, Agriculture and Commerce, and Communications. The function of these ministers was to take joint responsibility on national politics in place of the Emperor and help him in good government over his faithful subjects. In the Court there were the Naidaijin or Keeper of the Privy Seal and the Minister of the Imperial Household. The first Premier was Ito himself, who held the additional post of the Ministership of the Imperial Household. In 1888 the Privy Council was established, the most excellent and patriotic statesmen were ap-

pointed to its membership, and it was made the highest body for Imperial consultation on important political affairs. Ito also was the first President of the Privy Council. The draft of the Constitution was completed by this year and the Emperor put it before the Privy Council as the first item of discussion. The Emperor Meiji was present at all sessions on the Constitution, earnestly listening to the opinions of the different members, and playing a great part in framing and discussing the resolutions.

Promulgation of the Constitution On the 11th February, the 2,549th anniversary of the accession of Jimmu Tenno, 1889 in Western reckoning, the Emperor Meiji reverently reported the promulgation of the Constitution to the ancestral gods and appeared in person with the Empress before the Imperial Princes, Cabinet ministers, high officials, representative people, and foreign ministers, and solemnly issued the Imperial Constitution. (See Appendix.) He issued an accompanying law relating to the Imperial family which regulated future accessions, and relative positions of the Imperial Princes, that no trouble might ensue on the question of the successor to the Throne. Other laws which were to accompany the Constitution were on the election of the members of the lower house of parliament and the institution of it. They were issued in the same year, and in November, 1890, the first Imperial Diet was convened in Tokyo and the opening ceremony was held in the presence of the Emperor. Local self-government had been established and improvements made in the institutions of cities and towns for the past two years, and in this year another improvement in the prefectural and county institutions was made, confirming their self-government, although county government was abolished later.

Laws Since the downfall of feudalism and return of fiefs to the Emperor, enacted uniform laws for the proper control of the people became an acute necessity and the Government first took in hand the criminal laws and issued revised ones in the sixth year of Meiji. Other laws were revised or newly compiled according to the need of progressive society and with due regard to foreign relations. The code of civil procedure, the commercial law and the civil law were enforced by 1899. The criminal law was revised in 1908 and the code of civil procedure in 1924 according to the advanced ideals and needs of the times.

Revision of Treaties
(See Chapter VI)

Sino-Japanese War

In August, 1894 Japan declared war against China, the Emperor setting-up his headquarters at Hiroshima. Lieutenant-General Notsu routed the Chinese soldiers and drove them back from the boundaries of Korea in that month, and Vice-Admiral Yukyo Ito, Commander-in-Chief of the combined fleet, defeated the Chinese North-Sea fleet on the Yellow Sea. In October, Commander Aritomo Yamagata led his First Army through Chosen to Southern Manchuria and advanced victoriously to the west, while Commander Iwao Oyama, head of the Second Army, crossed the Yellow Sea and entered China direct, to act in conjunction with the Imperial fleet on the sea. Port Arthur was captured in November and Weihaiwei in February, 1895, and the Chinese naval power was annihilated. In March, the peninsula of Liaotung was seized by the Japanese armies and Peking was threatened by attack, while Southern China lay at the mercy of the Japanese fleet. The Emperor Meiji appointed Imperial Prince Akihito Arisugawa generalissimo over the whole army and navy to reduce China to submission. China yielded and asked for peace, appointing Li Hung-chang ambassador. Japanese ambassadors Premier Ito and Foreign Minister Mutsu met him at a peace conference at Shimonoseki. According to the peace treaty concluded in April, 1895, China recognized Korean independence, gave Japan the Liaotung Peninsula, Formosa and Boko Islands, paid about ¥300,000,000 to her, and opened four new ports for trade.

Return of Liaotung In alliance with Germany and France, Russia intervened and advised Japan to give back the territory to China, and the Peninsula was returned to China at the end of 1895 for an indemnity of about ¥45,000,000.

The newly acquired territory of Formosa was first governed by Governor-General Kabayama. In 1896, the whole island of Formosa was pacified and the new people began to understand the Japanese rule. In 1898 Gentaro Kodama became the Governor-General and encouraged industry and improved traffic so much that the island was really transformed into a valuable part of the Empire. After the Sino-Japanese War, the Japanese Government and people united their efforts in many enterprises. Military preparations were strengthen-

ed, schools improved in number and quality, industry and commerce throve, communications were also greatly improved, and the national power remarkably augmented. In 1897 Japan adopted the gold standard, on the foundation of the gold coin received from China as indemnity.

The Boxer Rebellion In the meanwhile, anti-foreign feeling began to spread among the Chinese people, and, in 1899, the so-called "Boxer Rebellion" suddenly broke out in Shantung. The rebels hoisted the banners of "protect China, exterminate foreigners", murdered many Christian missionaries, destroyed churches, and, in the following year, advanced to Tientsin and attacked the residences of Europeans there. Later they united with the Government soldiers controlled by the Empress-Dowager and coming up to Peking attacked the foreign legations, some Japanese and German delegates being killed. Japan headed the combined forces of the Powers which marched on the capital for the relief of the legations. The Chinese yielded, asked for peace, punished the leaders of the anti-foreign movement, and agreed to pay a 450,000,000 tael indemnity, and to send delegates to Japan and Germany to make apology.

Anglo-Japanese Alliance After the experience of the North China incident, England abandoned her historical policy of "splendid isolation" and allied with Japan in 1902 for mutual help in Far Eastern problems. According to the terms of alliance, Japan and England were to be united in maintaining Chinese and Korean territorial integrity and to help each other if any two other nations united to attack either one of the allies in the Far East.

Russo-Japanese War

Russia Reluctant to Go Under pressure of the Anglo-Japanese Alliance and the American Government, Russia promised China to return Manchuria, but was by no means ready to keep her promise and on the contrary, in 1903, she sent larger armies to Manchuria and was busy constructing permanent strongholds at Port Arthur, dispatched warships to the port, appointed Alexeiev Governor-General with his headquarters at Port Arthur, acted as the sovereign power in diplomatic, civil and military affairs in the Far East, and in August of the same year invaded the northern part of Korea. This unrestrained Russian advance menaced the territorial integrity of Korea, the existence of Japan, and the peace of the Far East, and Japan was compelled to take a firm stand against these designs, proposing a mutual understanding about the limitations of rights of both nations to avoid the impending danger of collision. But during the course of the negotiations, Russia continued to menace Japan, treating her with contempt and preserving her own aggressive attitude. The Japanese final proposal on the problems in Manchuria, of the 12th January, 1904, was left unanswered by Russia for two weeks, and the Imperial declaration of war against Russia was issued on Feb. 10th, 1904.

War on Sea The combined fleet of Admiral Togo immediately attacked the Russian warships off Port Arthur and Chinnampo and constantly pressed the Russian navy in Port Arthur. The warships in Vladivostok often came out into Japanese waters, harassed the communications of the Japanese army on the continent and hindered the transport of soldiers, but they were also destroyed in August by the second squadron under Rear-Admiral Kamimura.

War on Land On land, General Kuroki headed the First Army and marched into Manchuria through Korea in May; the Second Army, with General Oku in Command was landed on the Liaotung peninsula and devising a united stratagem with the Fourth Army, General Notsu, defeated the enemy in every place, and the three armies simultaneously advanced to Liaoyang. In June the Emperor ordered Generalissimo Oyama, Commander-in-Chief of all the armies, and General Kodama, Chief of the General Staff, to go to the front, and they spurred the whole army to victory over the Russian soldiers in the town. In October the Russian reinforced armies came down to retake the town, but the Japanese armies encountered them at Sha-ho and defeated them.

In the meantime the Third Army under General Nogi turned from Liaotung to the attack of Port Arthur. Nogi began the famous but awful siege warfare, and captured the so-called "203-metre hill" in December. In January, 1905, General Stoessel, head of the Russian garrison, surrendered to General Nogi and sued for peace.

After the unsuccessful Battle of Sha-ho the Commander-in-Chief of the Russian army, General Kuropatkin, gathered over 600,000 soldiers at Mukden and awaited his chance. In February, 1905, the Japanese Manchurian armies were reinforced by the Third Army from Port Arthur, and General Kawamura's Yalu River army, and rallying 400,000 soldiers they advanced towards Mukden

from three directions. After a fierce battle of 14 days the Japanese armies defeated the immense armies of the enemy, who returned to the north in a complete rout. This momentous event took place on the tenth of March, 1905.

The Baltic Fleet Before the downfall of Port Arthur and the defeat at Mukden, Russia had seen that the weakness of her naval power in Japanese waters delayed any possible victory over Japan. She therefore formed the Second and Third Pacific Squadrons out of her Baltic fleet and sent them to the Pacific under the leadership of Vice-Admiral Rozdhestvensky. The Russian squadron made a long voyage to the Far East and Togo was able to make full plans to meet them in the most convenient place for the Japanese fleet. Had the Russian warships safely entered the port of Vladivostok the defenceless shores of Japan would have been exposed to their bombardment while the Japanese Manchurian armies might have been starved to death, unable to get supplies from the home islands. Togo was right when he hoisted high on the main-mast of his flagship the signal, "The fate of Japan will be decided with this battle; every sailor is requested to exert his best for the country," at the moment the outlines of the Russian fleet came into sight. The 38 boats of the two Russian squadrons sailed straight in majestic lines for their destination across the East China Sea. Togo kept the utmost secrecy as to his hidding place and chose the narrow Tsushima Straits to encounter the Russian fleet. It took only a few hours from the evening of the 27th May to the following morning to sink most of the Russian warships or blow them to pieces, and Rozdhestvensky and his staff were taken captive. In July of the same year a part of the Japanese army was landed in Saghalien and subduing the Russian resistance quickly captured the whole island.

The Peace Mr. Roosevelt, President of the United States seeing the disastrous conditions, financial and otherwise, which threatened both countries after the battles at Mukden and the Japan Sea initiated peace-proposals between Japan and Russia, and was successful in pursuading the rival parties to open a peace conference in America. Japan sent Jutaro Komura and Kogoro Takahira as her ambassadors extraordinary and plenipotentiary to Portsmouth to meet with the Russian ambassadors Witte and Rosen. The peace treaty was concluded in September, 1905. Russia recognized the supreme rights of Japan over Korea, surrendered the southern half of Saghalien to Japan, and handed over the special rights of lease which she possessed in Kwantung, the railroad south of Changchun and the mining of coal along it.

After the Russo-Japanese War

Post-war Readjustment The Russo-Japanese war raised Japan's position in world politics, putting her almost on the same level as the European Powers, especially in regard to Oriental affairs. The international relations of Japan with the Western Powers became so intimate and important that all of them exchanged ambassadors with Japan in place of the former ministers. In home affairs Japan made special efforts in the education of the people to keep abreast with the times. Industry in all lines leaped forward under the leadership of able business men. The state-ownership of railroads was realized to improve the traffic of the islands. The patriotic contributions of the business men and merchants after the war must not be overlooked. In 1906 Port Arthur was made a naval station for the defence of the Kwantung littoral, and the South Manchuria Railway Company was established to manage the railroad and mining business which had been handed over by Russia. Dairen and a part of Port Arthur were opened for international trade. In 1907 the Saghalien national boundary was fixed at 50° north latitude, and the Government opened an office there and encouraged the emigration of Japanese to the island.

Relation with Korea
(See Chapter VI.)

Treaties with Powers
(See Chapter VI.)

Demise of the Emperor Meiji In July, 1912, the Emperor Meiji passed away after only a few weeks of illness in his Tokyo Palace. His demise caused such profound grief among the people that an English correspondent was said to have telegraphed home "Japan is going into a decline!" with the death of the great Emperor. He died beloved of all, a love which was attested by the splendid Meiji Shrine which was built in his honour, and which draws more worshippers than any other shrine. The Emperor Yoshihito (the late Emperor Taisho) came to the Throne immediately after his father's death, according to the provisions in the Imperial code on the succession.

Blending of East and West Immediately after the Restoration the Government had been eager to invite and introduce all things Western, and the

people had responded to the policy with alacrity. There followed, as a matter of fact, an age of Europeanization. It was during those days that so many Japanese treasures of Buddhism and fine arts went out of the country for very meagre amounts of money, and many beautiful old customs and precedents were carelessly dropped. But then came the victories over China and Russia to give confidence and conviction to the Japanese and turn them from a mere imitation of the West to the recognition of their own special abilities and valuable inheritances. Cries for the preservation of national characteristics were raised and the blending of the Occidental and Oriental civilizations, the creation of a new Meiji civilization, was started and the nation began to make a steady and healthy advance in all phases of national life.

Taisho Era
(1912–1926)

The World War

Japan's Contribution In August, 1914, the World War broke out and Japan was compelled according to the terms of the Anglo-Japanese Alliance to take necessary steps to combat German activities in the Orient. She requested Germany to withdraw her war vessels from Japanese and Chinese waters, and to return Shantung by a fixed date to China. Needless to say, Germany did not comply, and Japan declared war in the same month.

Tsingtao Falls Japan lost no time in dispatching her army and navy to Tsingtao. The Second Squadron commanded by Vice-Admiral Sadakichi Kato blockaded the gulf while the First Squadron of Vice-Admiral Tomosaburo Kato kept watch over the Yellow Sea and other China north-eastern seas. The 18th Divisional Commander Kanwo attacked the fortress from behind, in conjunction with the navy. Some British troops also took part and they all besieged the fortress in October, 1914. The attack was so aggressive that in but ten days all the batteries were captured and in November the German Governor Waldeck and his staff surrendered the port and fortress. In deeper waters, the Japanese Third Squadron commanded by Rear-Admiral Tsuchiya kept watch over not only the China seas but also went as far as Philippine waters. A detachment of the First Squadron was sent to the South Seas and acting in concert with the British navy tried to destroy the German Asiatic fleet. The Marshall Islands were occupied in September, and the Mariana and Caroline Islands in October, and possession was taken of all German naval stations in the South Seas. British vessels met the German fleet in the Indian Ocean, and off the coast of South Africa, and destroyed it in December, 1914. Germany's strength in the Orient was thus completely wiped out.

Japan helped Russia also, chiefly by enabling her to attend to the War without any anxiety about Eastern affairs, and by supplying her with as much ammunition as she could. Russia was grateful for this friendly attitude of Japan and the relations between the two nations becoming more intimate a new treaty was concluded in 1916 to cooperate for the maintenace of perpetual peace in the Far East, and to negotiate freely with each other for the protection and defence of the special rights and territorial domination already recognized, instead of competing. With the progress of the World War, Japan dispatched a special-service fleet as far as the Mediterranean. The special-service fleet tried its best to protect trade and communications in that part by bravely and effectively attacking German submarines in co-operation with the Allied fleets and in harmony with the orders of the British Mediterranean Fleet Commander. In 1917 the Russian Revolution broke out in the midst of the War. The Romanoff dynasty was overthrown and the radical revolutionaries came into power and concluded a separate peace with Germany. This resulted in the permeation of the military influence of Germany and Austria into Russia and even to the Far East. A large body of Czechoslovak troops who had escaped into Russia, and were trying to make their way home to Europe by way of Siberia, suffered greatly in consequence. Japan kept a keen watch on these Russian disorders. In 1918 she sent ships to Vladivostok for the protection of the Japanese residents and to maintain order in that district for international benefit, in co-operation with the warships of other nations. And later, in agreement with America, Japan dispatched an army under General Otani to Vladivostok and helped the Czechoslovak army, in conjunction with the soldiers of other nations.

Japanese Massacred In March 1920 the Japanese garrison and citizens, about 700 in all, were massacred by Russian communists at Nikolaievsk. This caused intense indignation in Japan. She sent armies to Siberia immediately and occupied a part of the coast district and the remainder of Saghalien. Ne-

gotiations were opened again between the two nations and in 1925 a new Russo-Japanese treaty was concluded. According to its terms Japan withdrew her soldiers from North Saghalien while Russia gave Japan the mining rights and freedom of cultivating under licence the oil-fields in that district (See Chapter VI on Foreign Relations.)

The Kanto Earthquake On Sept. 1st, 1923, Japan underwent the sad experience of the Kanto earthquake, in which tens of thousands of houses were destroyed or damaged in Tokyo, Kanagawa, Shizuoka, Saitama and Chiba prefectures, and a hundred thousand people were killed or injured, with an estimated loss of several thousand million yen. (See Chapter I.) The great fires caused by the earthquake in Tokyo and Yokohama caused far more deaths than those which were directly attributable to the shocks. But, undaunted by the terrible disaster, the people not only of the metropolis but of all Japan stood up in a splendid spirit of determination to reconstruct all her damaged cities and towns by the help of the sympathetic nations of America and Europe. The wonderful improvement in the streets and buildings of the new cities materially exhibited the strength of Japan's national power, so that the great earthquake rather quickened than retarded the splendid advance of Japan as a whole.

Demise of the Emperor Taisho In December, 1926, the Emperor Taisho passed away at the Hayama Winter Palace and the Regent, Crown Prince Hirohito, succeeded him as Ruler, the year-name of Showa, or Enlightened Peace, being given to his era. Under his rule Japan is continuing her painstaking efforts to keep pace with world progress and cope with complicated international relations.

The birth of Manchoukuo in 1932 and the trade and industrial expansion in recent years have greatly strengthened Japan's position in the Orient.

Chronicle of Important Events

Age of Traditions
(660 B.C.–531 A.D.)

1. Beginning of the Empire
   - 660 B.C.—The Emperor Jimmu ascended the Throne at the Kashiwara Palace, Unebiyama, Yamato province, near the present Nara.
2. Subjugation of Clans and Tribes.
   - 88 B.C. Neighbouring clans subdued by the armies of the Imperial Princes.
   - 11 A.D. The Great Shrine of Isé built by the Emperor Suinin in honour of Amaterasu-Omikami.
   - 97-110 Clans and tribes in Kyushu and the eastern half of the Main Island subdued by the armies of the Emperor Keiko and Prince Yamatotakeru his son.
   - 135 The Emperor Seimu divided his dominion into administrative districts.
3. Intercourse with Korea
   - 200 The Empress Jingo conquered Silla.
   - 285 Confucianism introduced.
   - 313 The Emperor Nintoku established the capital at Naniwa (Osaka) for the convenience of intercourse with Korea.
   - 463-512 Troubles with Korea.

Age of Foundation
(532-709)

4. Introduction of Continental civilization.
   - 552 Buddhism introduced.
   - 562 Japanese Office in Mimana is destroyed by Silla.
   - 593 Imperial Prince Shotoku became Regent, and propagated Buddhism, building Horyuji and other temples.
   - 604 The Regent Shotoku proclaimed the Constitution.
   - 607 An Embassy sent to Sui.
   - 630 An Embassy sent to Tang.
   - 645 The Sogas punished and extirpated.
   - 592-645 The Asuka or Empress Suiko's Period of Art history.
5. The Taika (Taikwa) Reformation and After.
   - 645 The custom of 'year-names' introduced, the first one being called Taika (great reformation).
   - 646 The Taika Reformation.
   - 660 Yezo (Hokkaido) subjugated by the army of Hirafu Abé.
   - 663 Control over the Korean Peninsula abandoned.
   - 701 The Taiho Law promulgated and the organization of the Imperial Government is fixed.

646-707 The Hakuho Period of Art history.

Nara Age
(710-793)

6. Establishment of the Capital at Nara and Compilation of a History of Japan.
   - 710 The Empress Gemmyo founded Nara as her capital.
   - 620-720 The first books of Japanese history, Nihon Shoki (Japanese Annals) and Kojiki (Antiquities) compiled.
7. Spread of Buddhism and Progress of Religious Fine Art.
   - 747 Building of Todaiji temple and other provincial temples.
   - 756 The Empress Komyo donated the treasures of the late Emperor Shomu to Todaiji temple. They are kept in the Shosoin Museum, built a little later.
   - 769 Dictatorship of Dokyo, Buddhist pope, opposed by the great loyalist Kiyomaro Waké.
   - 710-781 The Tempyo Period of Art history.

Heian Age
(794-1191)

8. Founding of Heian (Kyoto) the Capital, and troubles in the north.
   - 794 The Emperor Kammu founded the new capital Heian and the Government removed there from Nara.
   - 801 Revolts broke out in Yezo, finally subdued by the expedition of Tamuramaro Sakanoue.
   - 794-800 Establishment of governmental and private schools.
   - 794-887 The Konin period of Art history.
9. Rising of the Fujiwaras.
   - 858 Yoshifusa Fujiwara assumed the Regency.
   - 887 Mototsune Fujiwara the Daijo Daijin and Regent became Kampaku (Chief Councillor) at the same time.
   - 901 Michizane Sugawara, candidate for Kampaku reduced to the position of governor of Kyushu by the Fujiwara scandal.
10. Foreign Relations.
   - 894 Official intercourse with Tang broken off by the advice of Michizane Sugawara.
   - 727-900 Bokkai, a maritime monarchy in Manchuria, traded with Japan.
11. Disorder in Rural Districts and Rise of the Samurai.
   - 939 Masakado Taira rebelled and proclaimed himself Emperor.
   - 941 Sumitomo Fujiwara disturbed the coasts of the Inland Sea but is suppressed.
   - 950 The Samurai families of Minamoto (Genji) and Taira (Heishi or Heike) gradually rose to power.
12. Fujiwara Despotism.
   - 1016 Michizane Fujiwara assumed the Regency for the next 20 years and his son Yorimichi for 50 years. Climax of the Fujiwara despotism and prosperity.
13. Incessant Wars.
   - 1019 Toi tribe in the north-eastern part of Korea invaded the islands of Iki and Tsushima.
   - 1028 Tadatsune Taira's treason in Shimoosa province.
   - 1039 Armies of Buddhist monks rose in revolt.
   - 1054-1062 The Abes in the Ohu district declared independence.
   - 1086 The ex-Emperor Shirakawa took part in politics for nearly 40 years and set a precedent for government by ex-Emperors.
   - 1085-1087 The Ohu district again disturbed by the Kiyowaras.
   - 1087 For about a century the family of Kiyohira Fujiwara who subdued the Kiyowaras ruled over the Ohu district.
   - 1156 Strife between the armies of the Emperor and the ex-Emperor (Hogen war).
   - 1159 The Fujiwaras and Minamotos waged war against another branch of the Fujiwaras and the Tairas (Heiji war).
14. The Gen-pei (Minamoto and Taira) Period.
   - 1167 Kiyomori Taira promoted to Daijo Daijin.
   - 1167-1180 Autocracy of Kiyomori and his family.
   - 1180 Rise of the Minamotos in rivalry to the Tairas. Yoritomo Minamoto established headquarters at Kamakura.
   - 1185 The Tairas destroyed by the armies of Yoshitsune, brother of Yoritomo.
   - 1185 Yoritomo appointed local military police and tax-gatherers for rural districts.

889-1185 The Fujiwara Period of Art history.

Kamakura Age
(1192-1337)

15. Beginning of the Kamakura Shogunate Regime.
    - 1192 Yoritomo Minamoto promoted to Seii-Tai-Shogun (Generalissimo) and the Shogun Government formally sanctioned. For the next 675 years Japan ruled by the 'samurai statesmen'.
    - 1204 Tokimasa Hojo became chief executive of the Shogunate regime.
    - 1219 Minamoto Shogunate ended with the third Shogun, Sanetomo. But Masako, widow of Yoritomo, (called the 'Ama' or Nun Shogun) officiated as Shogun for several years.
    - 1221 Trouble between the Kyoto Court and the Hojos (Shokyu affair).
16. Hojo Rule.
    - 1224 Yasutoki Hojo became chief executive of the Kamakura Shogunate.
      The Hojos continued to exercise the Shogun's duties for over a century.
    - 1232 The Joyei Code promulgated for the discipline of the samurai.
    - 1274 Yuan invasion.
    - 1281 Second Yuan invasion and defeat by the armies of Tokimune Hojo, the chief executive.
    - 1324 An attempt for the restoration of the Imperial Rule.
    - 1331 War between the Imperial and the Hojo armies.
    - 1333 The Hojos destroyed.
17. The Emperor Godaigo and Takauji Ashikaga.
    - 1333 Temporary restoration of the Imperial direct rule by the Emperor Godaigo.
    - 1335 Takauji Ashikaga rebelled against the Emperor.
    - 1336 Masashige Kusunoki, famous loyalist, died in the battle of Minatogawa (Kobe).
    - 1336 The Emperor Godaigo moved to Yoshino mountain.
    - 1336 The Imperial House divided into two, the South and the North (Yoshino and Kyoto) for 57 years.
    - 1192-1337 The Kamakura period of Art history.

Muromachi Age
(1338-1602)

18. Beginning of the Muromachi Shogunate and the luxurious age of Yoshimitsu.
    - 1338 Takauji Ashikaga proclaimed himself Shogun and established the Muromachi Shogunate in Kyoto.
    - 1342 Takauji sent the Tenryuji-buné (trade boats) to China.
    - 1368 Yoshimitsu Ashikaga publicly appointed Shogun and the Muromachi Shogunate officially sanctioned.
    - 1399 The Oei Rebellion.
    - 1401 Yoshimitsu traded with Ming: indulged in luxurious living.
19. Corruption of the Muromachi Shogunate and Political Commotion.
    - 1438 The Yeikyo Rebellion. Rising of military lords in Kanto district.
    - 1441 The Kaki Rebellion.
    - 1467-1475 The Ohnin war: Kyoto reduced to ashes in the street fighting. The Court and the Shogunate both lost power and the whole country became a scene of warfare among the military lords.
20. A Century of Civil Wars Among the Feudal Lords.
    - 1491 Soun Hojo captured Odawara Castle and ruled over the Kanto district.
    - 1476-1573 Feudal lords struggled for supremacy, the greater lords being as follows: Kanto district; Hojo, Uesugi. Ohu district; Date, Ashina, Mogami, Tamba, Akita. Central district; Uesugi, Takeda, Imagawa. Kinki (Kyoto-Osaka) district; Saito, Asai, Asakura, Oda, Matsudaira. Chugoku (Western Main Island) district; Ukida, Amako, Ohuchi, Mori. Shikoku Island; Miyoshi, Kono, Chosokabe. Kyushu Island; Otomo, Ryuzoji, Shimazu.
    - 1543 Coming of the Portuguese.
    - 1543 Introduction of fire-arms.
    - 1549 Christianity introduced.
    - 1337-1573 The Muromachi Period of Art history.
21. The Oda and Toyotomi Period.
    - 1568 Nobunaga Oda came up to Kyoto by Imperial order and repaired the Palace.
    - 1571 Nobunaga destroyed Enryakuji

temple to suppress the power of the monks.
1573 Downfall of the Muromachi Shogunate.
1576 Building of the Azuchi castle.
1582 Nobunaga assassinated.
1582 Hideyoshi Toyotomi's supremacy.
1588 Hideyoshi promoted to be Kampaku and Daijo Daijin.
1590 Unity of the Empire realized by Hideyoshi, all the lords completely subdued.
1592 Invasion of Korea by armies of Toyotomi.
1597 Second invasion of Korea.
1598 Hideyoshi Toyotomi died at Fushimi castle (Momoyama Palace).
1574-1598 The Momoyama period of Art history.

Yedo Age
(1602-1867)

22. Beginning of the Tokugawa Shogunate.
1600 Battle of Sekigahara assured the supremacy of Iyeyasu Tokugawa (1542-1616).
1603 Iyeyasu appointed Shogun and founded the Yedo Shogunate.
1609 Began trade with Hollanders.
1609 The Loochoo Islands subjugated by Lord Shimazu.
1610 Sending of official letters to Nova-Hispania and Spain.
1612 Iyeyasu prohibited the preaching of the Catholic Faith.
1613 The lord Masamune Daté sent Hasekura to Rome.
1613 Opened trade with the English.
1615 The Toyotomis destroyed at the Battle of Osaka.
23. Stabilization of the Yedo Shogunate.
1615 Proclamation of the Kuge Hatto (Court Nobles Law) and the Buke Hatto (Samurai Law).
1616 Death of Iyeyasu.
1623 Iyemitsu (1604-1651) became the third Tokugawa Shogun. Under his enlightened rule the position of the Yedo Shogunate became unshakable.
1630 Introduction of Western literature prohibited.
1636 Japanese forbidden to go abroad.
1637-1638 The Shimabara Rebellion.
1651 Death of Iyemitsu and attempted rebellion by Yuino Shosetsu and his colleagues.
24. The Golden Age of the Yedo Shogunate.
1657 Mitsukuni Tokugawa, lord of Mito began the compilation of the Dai Nippon Shi (Great Nippon History).
1687 The Shogun Tsunayoshi's Edicts for the protection of animals caused much loss of human life.
1688-1708 The Genroku Era of luxurious living.
1702 Revenge of the '47 Akao Ronin'
1709 Hakuseki (Kunmi) Arai's Reformation.
1716 The 8th Shogun Yoshimune regulated officialdom and improved the administration, reigned for 30 years.
1720 Yoshimune loosened the Prohibition Law against Western books.
1759 Punishment of Takenouchi Shikibu, a loyalist.
1764 Norinaga Motoori commenced his commentary on the Kojiki (Antiquities).
1772-1784 Misrule of the Roju Okitsugu Tanuma.
Succession of natural calamities.
1787 Adjustment of the administration by the Roju Sadanobu Matsudaira (Rakuo).
25. Waning of the Shogun Regime.
1792 Punishment of Shihei Rin (Hayashi) who warned the Government of possible invasion by foreign Powers.
1792 Coming of Laxsman to Hokkaido.
1804 Coming of Lesanov to Nagasaki.
1808 Coming of an English boat to Nagasaki.
1825 Shogunate order to shut out all foreign ships by force.
1830 Great famine of the Tempo Era.
1837 Rebellion of Heihachiro Oshio to relieve the starving masses.
1837 Coming of the American ship Morrison.
1841 The Roju Tadakuni Mizuno's attempt at reformation.
1842 The 1825 order removed. A step towards the 'open door' policy.
1842 Controversies between the anti-foreign party and the liberalists became hotter.
1844 King of Holland gave advice to the Shogunate.
1846 First request of America for the 'open door.'
1853 Arrival of the American fleet under Commodore Perry.
1853 Coming of the Russian delegate

Poutiatine to Nagasaki.

1854 Institution of the Sun Flag to symbolize Japan. (Sanctioned by the Meiji Government in 1870.)

1854 Conclusion of Amity Treaties with America, England and Russia.

1855 Conclusion of Amity Treaty with Holland.

1856 Arrival of the American envoy Townsend Harris.

1858 Conclusion of Commercial Treaties with Foreign nations by the Shogunate.

1858 The Ansei coup d'état by the Tairo Naosuke Ii.

1860 The Japanese envoy Masaoki Niimi sent to America.

1860 The Tairo Ii assassinated at the Sakurada gate of the Shogun Palace.

26. Downfall of the Yedo Shogunate.

1862 Rise of the Anti-Shogunate movement.

1862 The Namamugi Affair.

1863 The Anti-Foreign Law, and attack on foreign ships at Shimonoseki and Kagoshima.

1863 Defeat of the Anti-Foreign party ; the seven Court nobles flee to Nagato.

1864 The Anti-Foreign party demanded the release of the seven Court nobles by force ; battle at the Hamaguri gate of the Kyoto Imperial Palace.

1864 A combined fleet of America, England, France and the Netherlands bombarded Shimonoseki.

1865 Imperial Sanction given to the treaties of 1858.

1865-1867 Hostilities between the Shogunate forces and the army of the Choshu (Nagato) Lord who represented the Anti-Shogunate and Anti-Foreign Party.

1866 Demise of the Emperor Komei.

1867 Ascension of the Meiji Tenno (1852-1912), the 122nd Emperor.

1867 The Emperor ordered armies opposed to the Nagato Lord to withdraw.

1867 Rapid progress of Anti-Shogunate movement and a definite scheme promoted by Sanjo, Iwakura, Saigo, Okubo and Kido.

1867 The Emperor gave orders to the lords of Nagato and Satsuma to move their armies against the Yedo Shogunate in compliance with the request of Sanjo, Iwakura and their colleagues, October 14.

1867 On the same day (October 14) the Shogun Yoshinobu Tokugawa asked Imperial sanction for the return of all authority of the Government to the Throne. On October 24 the Emperor complied with his request and accepted Yoshinobu's resignation.

1867 Proclamation of the Restoration, December 9.

1868 The rise of the lords and warriors loyal to the Shogunate. Battle of Toba-Fushimi. March of the Imperial armies to Yedo. Surrender of the Yedo Castle without bloodshed. Batties at Ueno, Utsunomiya and Aizu.

1869 Battle at Hakodate, May, after which all disturbances in the wake of the political change completely subdued.

1602-1867 The Yedo period of Art history.

The New Japan

(1868–)

27. The Meiji Era.

1868 Enthronement of the Emperor Meiji.

1868 The first year of Meiji, beginning with September.
Proclamation of the Five Imperial Pledges.
Establishment of the Dajokan.

1869 Removal of the Capital to Tokyo.
Surrender of fiefs by the lords.
New organization of the Government.
Telegraphic communications opened.

1870 Ministers sent to foreign countries.
Social castes done away with.

1871 Japan is divided into 1 "Do," 3 urban prefectures and 72 prefectures for administrative purposes. (The number being reduced in 1889 to the present 1 Do, 3 urban prefectures and 43 prefectures.)
The people allowed to cut off their cues and the samurai forbidden to wear swords.

1872 Institution fo the national school system.
The Loochoo Islands definitely

included within Japanese territory.
Opening of railway line between Tokyo and Yokohama.

1873 Adoption of the solar calendar.
Institution of the Conscription system of military service.
Controversy over Korean affairs.

1874 Expedition to Formosa.
Request for opening the House of Representatives.
The Saga Affair.

1875 Karafuto exchanged for the Kuriles.
First Convention of the local governors.

1876 Kumamoto incident, a reactionary movement by the Jimpuren band of Kumamoto Samurai.
Similar events occured at Akitsuki and Hagi.

1877 The South-Western Civil War, the rebellion of Takamori Saigo and his colleagues.

1879–1890 Rapid influx of things and ideas from Europe, called Rokumei-kan period.

1879 First opening of local assemblies.

1880 Promulgation of new penal code.

1881 Imperial Edict promising the opening of the national assembly.

1882 Hirobumi Ito sent to Europe for the study of Western constitutional governments.

1884 Drafting of the constitution started.

1885 Institution of the cabinet.
The Tientsin Treaty.

1886 Japan became a member of the International Red Cross Association.

1888 Institution of city, town and village divisions.

1889 Proclamation of the Dai Nippon Teikoku Kempo (The Constitution of the Great Empire of Japan), Feb. 11.

1890 The First Imperial Diet convened in November.
Issuance of the Imperial Rescript on Education.
Institution of the system of courts of justice and promulgation of court procedures.

1894 New Anglo-Japanese Treaty.

1894–1895 Sino-Japanese War.

1895 Shimonoseki Peace Treaty, April.
The Three Powers' Intervention and return of the Liaotung Peninsula to China.
Formosa ceded to Japan.

1898 Promulgation of the Civil Law.

1899 Promulgation of the Commercial Law.
Boxer Uprising in China.

1902 Anglo-Japanese Alliance.

1904–1905 Russo-Japanese War.

1905 Capture of Port Arthur, January 1.
Battle of Mukden, March 10.
Battle of the Japan Sea, May 27.
Portsmouth Peace Treaty, September.
Korea became Japan's protectorate, November.

1906 Establishment of the Kwantung Government-General.

1907 Opening of the Karafuto Office.
Promulgation of the Revised Penal Code.

1910 Annexation of Korea, August.

1911 Revision of the Anglo-Japanese Alliance.
Revision of Treaties with Western countries on equal footing.

1912 Demise of the Emperor Meiji, July 30.

28. The Taisho Era.

1912 Ascension of the Emperor Taisho, July 30.

1914–1918 The World War.

1914 Capture of Tsingtao, November.

1915 New Treaty with China. So-called '21 Demands'.

1917 Gold embargo.

1918 End of the World War, November.

1919 Conclusion of the Versailles Treaty.
The South Sea Islands mandated to Japan.
Japan became a member of the League of Nations.

1921 Crown Prince's tour to Europe.
Crown Prince became Regent.

1921–1922 The Washington Conference.
Termination of the Anglo-Japanese Alliance.

1923 Great Earthquake of Kanto district, September 1.

1925 Conclusion of Treaty with the U. S. S. R.
Promulgation of the new Election Law (Universal Suffrage).

1926 Demise of the Emperor Taisho, December 25.

29. The Showa Era.

1926 Ascension of the present Emperor, December 25.

1927 Financial Panic.

1930 Removal of gold embargo.
The London Disarmament Conference.

1931 Outbreak of the 'Manchurian Incident,' September 18.
Replacement of gold embargo.

1932 The Shanghai Affair.
Independence of Manchoukuo, March 1.
The 'May 15 Affair' (assassination of Premier Inukai).

1933 Withdrawal from the League of Nations, March.
The World Economic Conference at London.

1934 Manchoukuo became an Empire with Kangte (Mr. Pu Yi) as first Emperor, March 1.
Japanese Government notified the U. S. Government their intention to terminate the Washington Naval Treaty, December 29.

1936 Japan withdrew from the London Naval Conference, January 15.
The 'February 26 Affair' (assassination of three political dignitaries, M. Saito, K. Takahashi, and General J. Watanabe).

CHAPTER IV

GOVERNMENT

The Constitution

The fundamental source of all laws and ordinances, and of the administrative system is the Constitution of the Japanese Empire. This document, however, contains simply an outline of the principles involved, and there are many constitutional laws, written and unwritten, which condition the functioning of state organs. There are four fundamental sources of the laws of Japan; (1) the Constitution, (2) the Imperial House Law, (3) certain laws containing constitutional provisions, and (4) the unwritten constitution.

The Constitution of the Japanese Empire was promulgated on Feb. 11, 1889, and is composed of 7 chapters and 76 articles (given in full in Appendix). It was accompanied by an Imperial Declaration, the essence of which has the same legal force as the articles of the Constitution. In the declaration, the Emperor Meiji made four points clear: that the purpose of the establishment of the Constitution is to promote the welfare of his subjects and sustain the progress of the nation; secondly, that the monarchy of Japan is unchanged in form and identical with what it has always been, in the principles of the harmonious rule of sovereign and subjects and of constitutional and responsible government; thirdly, the proper means for revision of the Constitution, and that it limits not only the lawful actions of the subjects, but also the powers of the sovereign; and fourthly, the date of its coming into effect, that of the opening of the first session of the Imperial Diet or November 25, 1890.

The Highest Expression of State Will The Constitution was given by order of the Emperor and is the highest expression of the will of the State. All laws must conform to it, while the functions of the highest political organs of the nation are stated in it. But there is no means specified for prevention or correction of a breach of the Constitution by those organs, whether they be constitutionally established or not, except in so far as the interpretative power of the Privy Council, (See section on Privy Council), can be said to constitute such a check. Otherwise, this can only be provided for by the reciprocal restraint exercised by the Executive and the Legislature, the power of public opinion, or other means which are not specified by law. It must be remembered that not all the parts of the Constitution are new creations. Most of them are rather the expression of old laws in a new written form; many of the important political customs had already been incorporated in legal enactments before the Constitution came into being.

The Constitution does not include the whole of the law of the Constitution nor all the constitutional laws. It is one of the simplest constitutions in the world. For instance, such laws as the Imperial House Law or the laws concerning the composition of the Imperial Diet are not included in the Constitution, the reason being that, whereas the revision of these laws in accordance with changes in public thought may be necessary, it is undesirable that the Constitution itself should be revised easily and often. Revision of the Constitution must be initiated by the Tenno (Emperor), and the Imperial Diet has the power of deciding only on such revisions as are indicated by the Throne. No revisions have been made or constitutionally suggested since its establishment.

Other Constitutional Provisions The Imperial Household Law (See Appendix) mainly regulates matters concerning the Imperial Household and Family, but there are many constitutional provisions contained in it. Of special importance are the articles concerning the succession to the Throne and Regency, which determine the form of the highest organ of the State and are therefore clearly of equal importance to the Constitution itself.

Other legal enactments containing constitutional provisions are the following: The Law of the Houses, the Imperial Ordinance concerning the House of Peers, the Imperial Ordinance concerning the Election of Members of the House of Peers, the Imperial Ordinance concerning the Cabinet, the Penal Law concerning the infringement of Ordinances, the Judicial Court Formation

Law, the Court of Administrative Litigation Law, and the Board of Audit Law, which were enacted simultaneously with the Constitution; the Imperial Ordinances concerning the Privy Council and the Military Establishments, which were enacted before the promulgation of the Constitution; the Electoral Law and the common law for the formation of departments of the central government, which were promulgated after the Constitution. In addition there are many examples of post-Constitution laws with minor constitutional provisions.

Unwritten Provisions The Constitution of Japan is a written one in principle, but it does not exclude all unwritten provisions. There are still some spheres of government action which are not regulated by any document. Moreover, there are many cases in which the written laws have to be interpreted by unwritten laws or by national political custom or reason. For instance, the relation of the Japanese nation to the Shinto Shrines, the relation of State and religion, the site of the capital, the nature of the National Flag, the Calendar, and the customary procedure of the Imperial Diet are not defined in written laws, but are nevertheless constitutional observances. Other political customary observances of importance are that the Cabinet is formed, as a rule, by the members of the majority party in the House of Representatives, and that the Genro, Elder Statesmen, (at present only one, Prince Saionji) are consulted by the Emperor on the choice of a new Prime Minister.

The Form of Government

The form of the Japanese Government is that of a constitutional monarchy. The Empire is ruled by the Emperor (Tenno) according to the first article of the Constitution, "the Empire of Japan shall be reigned over and governed by a line of Emperors unbroken for ages eternal." The representatives of the people in the Imperial Diet participate in the rule of the State, but have no sovereign power. Sovereignty belongs entirely to the Emperor and all power is exercised in his name only. The Japanese Reigning House is the oldest dynasty in the world and, in stability and historical continuity, the Japanese monarchy is unique in history. The actual power of the Emperor at the present time is much greater than that of other constitutional monarchs.

The actions of all governmental organs are regulated by the Constitution and the collateral laws and usages above mentioned, and all the organs are coordinated by the central government. The supreme power is concentrated in the State, and the exercise of sovereignty is all in the hands of the central government which gives orders to all other administrative organs.

The People

All Japanese subjects are registered with the census authorities according to the Law of Nationality, and are recognized as the constituency of the State and protected by the State laws. They are required to submit completely to the control and orders of the State. By the terms of the Constitution they may, subject to qualifications determined by law or ordinance, be appointed to civil or military offices equally and may fill any other public positions. They are liable to service in the army and navy and to the duty of paying taxes according to the provisions of law. The duties they owe to the State are numerous, but these two are specially mentioned in the Constitution.

Japanese subjects are guaranteed liberty of abode and of changing the same. Within the limits of law, they shall not be arrested, detained, tried or punished unless according to law, shall not be deprived of their right of being tried by the judges determined by law, except in cases provided for by the law, their houses shall not be entered or searched without their consent, the secrecy of their letters shall remain inviolate, and their right of property shall remain inviolate. They enjoy freedom of religious belief, speech, writing, publication, public meeting and association; and they may present petitions to the authorities in the forms provided by law.

The feudal social castes were abolished at the Meiji Restoration, and the class names of Kazoku (Peers), Shizoku (Samurai class), and Heimin (Common people) were given according to family standing and lineage. The two last are purely social and represent no political distinction. Peerage carries with it the privilege of membership of the Upper House of the Legislature (Kizokuin, House of Peers), subject to certain conditions. In 1884 the peerage was divided into the following five ranks: Prince, Marquis, Count, Viscount, and Baron. The class name of "Common people" has fallen into complete disuse, while that of "Samurai class" is being rapidly forgotten.

Tenno, The Emperor

The Japanese Throne is hereditary. The custom was established with the

foundation of the State 2,596 years ago, and had been a constitutional unwritten law till it was clearly stated in the Imperial House Law by order of the Emperor Meiji. According to this law, the Japanese Throne "shall be succeeded to by male descendants in the male line of Imperial Ancestors" (Art. 1). In the history of Japan there were some Empresses in their own right, but their cases were always regarded as exceptional. The succession to the Throne as defined by the Imperial House Law is as follows :

(1) Imperial eldest son. (Kotaishi)
(2) Imperial eldest grandson. (Kotaison)
(3) Other male descendants of eldest son.
(4) Imperial son next in age.
(5) Male descendants of same in the same order as above.
(6) Other Imperial sons in order of age.
(7) Male descendants of same in the same order as above.
(8) Imperial brothers in order of age and their male descendants in the same order as shown above.
(9) Imperial uncles and their male descendants in the same order as above.
(10) Next nearest relative of the Emperor.

In all cases precedence is given to descendants of full blood over those of half blood.

The Three Sacred Treasures The Imperial heir ascends the Throne and is invested with the three Sacred Treasures, the Mirror, the Jewel, and the Sword, of the Imperial Ancestors upon the demise of the Emperor, and in no other circumstances. In ancient days, the Throne was succeeded to only for this natural reason, but the good custom was broken in the middle ages. The Imperial House Law aims at the re-establishment of the oldest custom and absolutely prohibits the abdication of the Throne in the Emperor's life time. The Imperial heir ascends to the Throne immediately upon the demise of the Emperor, although the ceremonial ascension comes later. For instance, the present Emperor came to the Throne in a room of the Hayama Winter Palace, where his father died, immediately after the demise was announced by the doctor on December 25, 1926, while the formal ceremony of ascension was held about two years later in accordance with Art. 11 of the Imperial House Law which states that the ceremonies of Enthronement shall be performed and a Grand Enthronement Banquet (Daijosai) in honour of the Ancestral Gods held at Kyoto. Upon the ascension, a new era is inaugurated and the name of the era remains unchanged during the whole reign of the Emperor.

The Regency As abdication of the Throne is impossible, Art. 19 of the Law provides for a regency to be instituted when the Emperor is a minor (the Tenno, Kotaishi and Kotaison attain majority at 18 years of age), or when he is prevented by some permanent cause from personally governing. In the second case the advice of the Imperial Family Council and of the Privy Council is required. The Regency shall be assumed by major members of the Imperial Family in the following order :

Family Status	Majority Age
(1) The Imperial Eldest Son	18
(2) Imperial Eldest Grandson	,,
(3) Imperial Prince	20
(4) Prince	,,
(5) The Empress	,,
(6) The Empress Dowager	,,
(7) The Grand Empress Dowager	,,
(8) Imperial Princess or Princess	,,

Imperial Prerogative

According to the provisions of the Constitution, the Japanese Emperor is the head of the Empire, combining in himself all the rights of sovereignty. According to the provisions of the Imperial House Law, he is the head of the Imperial Family, and he carries out his function as such by the advice of the Minister of the Imperial Household without reference to the Diet. By hereditary custom he assumes the position of the Highest Priest of the national cult of Shinto and conducts august ceremonies in honour of the gods of heaven and earth and of the ancestral gods directly and in person. He is in supreme command of the Imperial Army and Navy and exercises this power with the help of special organs established to that end and independently of the advice of State ministers. Lastly, he has power to confer all titles of nobility, rank, orders and other marks of honour.

The Emperor uses these sovereign powers with the assistance of various organs. In exercising legislative power he gets the consent of the Imperial Diet as a rule, although Imperial ordinances are often issued independent of the Diet, (under Article 9 of the Constitution), and for the colonies the exercise of ordinance power is unlimited

by the Constitution. In the administration of State affairs he is advised by the Ministers of State, and in certain special cases by the Genro, the Grand Keeper of the Imperial Seals, and the Privy Council. In Military administration he is advised by the chiefs of the Naval and Military General Staffs, while in the exercise of judicial power, he is represented by the Courts of Law.

"The Emperor is sacred and inviolable" (Constitution, Art. 3). He cannot be removed from the Throne for any reason; and he is not to be held responsible for over-stepping the limitations of law in the exercise of his sovereignty. All responsibility for the exercise of his sovereignty must be assumed by the Ministers of State and other organs. Thus, no criticism can be directed against the Emperor, but only against the instruments of his sovereignty. Laws are not to be applied to the Emperor as a principle, especially criminal laws, for no court of law can try the Emperor himself and he is not subject to any law.

The Cabinet

The Ministry is composed of 13 State ministers headed by the Prime Minister. The twelve ministers are (1) the Minister of Foreign Affairs, (2) the Minister of Home Affairs, (3) the Minister of Finance, (4) the Minister of War, (5) the Minister of Marine, (6) the Minister of Justice, (7) the Minister of Education, (8) the Minister of Agriculture and Forestry, (9) the Minister of Commerce and Industry, (10) the Minister of Communications, (11) the Minister of Railways, and (12) the Minister of Overseas Affairs.

Though all the ministers are separately responsible to the Emperor for all the administrative work under their respective jurisdiction, they are united by the Prime Minister (Naikaku Sori Daijin), one of whose functions is to preserve unity among the State ministers. Through this specific function of the Premier (which, though not mentioned in the Constitution, is prescribed in the Cabinet Organization Ordinance), and the rapid growth of party government, his controlling power over the other State ministers has, of late, been greatly augmented, and as all matters of national importance are decided upon in cabinet meetings, State ministers are now, as a matter of fact, held jointly responsible to the Emperor.

Thus, each departmental minister has a twofold function, first as a State minister and secondly as a departmental executive head. As a State minister he is an adviser to the Emperor in the exercise of his sovereign power over national administration, and for the advice given assumes a joint responsibility with his colleagues. As the head of a department his function is to direct, control and supervise all the administrative affairs within his departmental jurisdiction, for which his responsibility is individual.

As it is imformed in the chapter on parties and politics the Hirota Cabinet resigned early in February, 1937, and was succeeded by the Hayashi Cabinet which assumed position for but four months and the present Konoyé Cabinet was formed on June 4, 1937. The names and careers, therefore, of members of both cabinets are given below:

The Hayashi Cabinet Prime Minister, General Senjuro Hayashi: born 1876; second lieutenant, 1897; Major-General, 1921; Army representative to the League of Nations, 1923; Commander of the 2nd Infantry Brigade, 1925; Lieutenant-General, 1926; Commander of the Tokyo Bay Fortress, 1926; President of the Staff College, 1927; Director of the General Affairs Bureau of the Department of Military Training, 1928; Commander of the Imperial Guard Division, 1929; Commander of the Chosen Army, 1930; Head of the Department of Military Training, 1932-34; Minister of War, 1934-35; retired from active service, 1936.

Minister of Education, portfolio held concurrently by the Prime Minister, General Senjuro Hayashi.

Minister for Foreign Affairs, Naotaké Sato: born October, 1882; graduated from Tokyo Higher Commercial School, 1904; entered service in the Ministry of Foreign Affairs, 1905; stayed in Mexico, Russia, 1905–14; Consul-General, 1917; First Secretary at the Japanese Embassy, Paris, 1921; Minister to Poland, 1923–27; Chief of the Japanese Office of the League of Nations, Geneva, 1927; Ambassador to Belgium, 1930–33; appointed concurrently Minister to Luxenburg, 1931–33; Ambassador to Paris, 1933–37.

Minister for Home Affairs, Kakichi Kawarada; born January, 1886; graduated from the Law Department, Tokyo Imperial University, 1909; successively assumed sectional directorship of several prefectural governments and in the Home Ministry; sent to Geneva as the Government representative to the International Labour Conference, 1919, 1924 and 1928; Vice-Governor-General of Taiwan, 1928-29; Vice-Minister of Home Affairs, 1931-32; a trustee of the Kyochokai (a semi-Governmental association for labour

arbitration), 1932-37.

Minister of Finance, Toyotaro Yuki; born May, 1877; graduated from the Law Department, Tokyo Imperial University, 1903; entered the Bank of Japan, 1903; Head of the Osaka Branch, 1918; a trustee of the Bank, 1919; Chief of Directors of the Yasuda interests, 1931; President of the Industrial Bank of Japan, 1930-37.

Minister for Overseas Affairs, portfolio concurrently held by Minister of Finance, Toyotaro Yuki.

Minister of War, General Gen Sugiyama; born January, 1880; graduated from Military College 1900; second lieutenant, 1901; graduated from Staff College, 1909; Major-General, 1925; Director of the Supplies Section, Aeronautical Department, 1925; Director of the Board of Military Affairs, 1928; Lieutenant-General, 1930; Vice-Minister of War, 1930; Commander of the 12th Division, 1932; Head of the Aeronautical Department, 1933; Vice-Chief of the General Staff and President of the Staff College. 1934; Head of the Department of Military Training, 1936; General, 1936.

Minister of Marine, Admiral Mitsumasa Yonai; born February, 1880; graduated from Naval College and entered service, 1901; graduated from Naval War College, 1914; Rear-Admiral, 1925; Commander of the First Overseas Fleet, 1928; Vice-Admiral, 1930; Commander of Chinkai Minor Naval Station, 1930; Commander-in-Chief of the Third Fleet, 1932; Commander-in-Chief, Sasebo Naval Station, 1933; Commander-in-Chief of the Second Fleet, 1934; Commander-in-Chief, Yokosuka Naval Station, 1935; Commander-in-Chief of the Combined Fleet and the First Fleet, 1936-37; Admiral, 1937.

Minister of Justice, Suéhiko Shiono: born January, 1880; graduated from the Law Department, Tokyo Imperial University, 1906; public procurator at District Courts, Local Courts and Tokyo Court of Appeal, 1908-1930; Director of the Prison Bureau, Ministry of Justice, 1930-35, Chief Public Procurator at Nagoya Court of Appeal, 1935-36; Vice-Director of the Public Procurator's Bureau, Supreme Court, 1936-37.

Minister of Agriculture and Forestry, Tatsunosuké Yamazaki: born June, 1880; graduated from the Law Department, Kyoto Imperial University; an official of the Taiwan Government-General, 1906; successively chief of the Budget Section of the Education Ministry, chief of the Bureau of Technical Education, and chief of the Bureau of Common Education; Parliamentry Vice-Minister of Education, 1927; Minister of Agriculture and Forestry, 1934-1936; has been elected 5 times member of the House of Representatives.

Minister of Commerce and Industry, Vice-Admiral, Dr. Takuo Godo: born September, 1877; graduated from the Technical Department, Tokyo Imperial University, 1901; entered service at the Kuré Naval Dockyard and after assuming several sectional directorships became Chief of the Naval Dockyard, 1923-28; Constructor Rear-Admiral, 1923; Constructor Vice-Admiral, 1926; Doctor of Technology, 1928; a trustee, South Manchuria Railway Company, 1930-34; President of Showa Iron Foundry, 1929-37.

Minister of Railways, portfolio held concurrently by Minister of Commerce and Industry, Vice-Admiral, Dr. Takuo Godo.

Minister of Communications, Count Hideo Kodama: born 1876; graduated from the Law Department, Tokyo Imperial University, 1900; Head of the General Bureau, Chosen Government-General, 1912, Chief Secretary of the Cabinet, 1916; President of the Merit Bureau, 1918-21; Governor-General of Kwantung, 1924-27; Vice-Governor-General of Chosen, 1929-31; Minister for Overseas Affairs, 1934-36; has been member of the House of Peers since 1918.

The Present Cabinet Prime Minister, Prince Fumimaro Konoé, M.H.P., born October, 1891; graduated from the Law Department, Kyoto Imperial University, 1917; member of the House of Peers by virtue of being a prince, 1916; sent to Europe for study, 1917-19; an attaché to the Japanese delegate at the Paris Peace Conference, 1919; Vice-President of the House of Peers, 1931-33; President of the House of Peers, 1933-37.

Minister for Foreign Affairs, Koki Hirota, M.H.P.; born February, 1878; entered the Foreign Office service, 1906; Minister to Holland, 1926; Ambassador to the Union of Soviet Socialist Republics, 1930-32; Minister for Foreign Affairs, 1932-36; Prime Minister, 1936-37; member of the House of Peers by Imperial Order, 1937.

Minister for Home Affairs, Dr. Eiichi Baba, M.H.P.; born October, 1879; entered service in the Revenue Inspection Office, 1903; Doctor of Law, 1920; Chief of the Legislation Bureau, 1921-23; member of the House of Peers by Imperial Order, 1922; President of the Hypothec Bank of Japan, 1927-36; Minister of Finance, 1936-37.

Minister of Finance, Okinori Kaya; born January, 1889; graduated from the Law Department, Tokyo Imperial University, 1917; entered service in the Finance Ministry, 1917; sent to the U. S. A. and Europe for many years and to Geneva and London as an attaché to the Japanese delegates at disarmament conferences; Director of the Accounts Bureau, Finance Ministry, 1933–36; Director of the Bureau of Fund Employment, 1936–37; Vice-Minister of Finance, February, 1937.

Minister for Overseas Affairs, Sonyu Otani, M.H.P.; born 1886; made visits to European countries as a Buddhist monk, 1910; Acting head of the Hompa Hongwanji group of the Shin sect, 1921–30; member of the House of Peers by Imperial Order, 1928.

The Prime Minister

The Prime Minister presents reports on administrative matters of importance to the Emperor as the head of the Cabinet. When necessary he can order the suspension of an administrative operation or of the application of an administrative order (Meirei) by any executive organ, pending the final decision of the Emperor. The Premier issues Cabinet Orders (Kakurei) in virtue of this official function or by special commission. He is empowered within his functional jurisdiction to direct the Metropolitan Chief of Police and the Prefectural Governors. Matters that should be presented to the Cabinet Council are prescribed as follows:

(1) All legislative and budget bills.
(2) Treaties and other international matters of importance.
(3) Ordinances to be issued.
(4) Disputes among the various Departments regarding jurisdiction.
(5) Pettitions from the people received from the Emperor or from the Diet.
(6) Outlays not prescribed in the budget.
(7) Appointments and removals of officials of "chokunin" rank and also of prefectural governors.

Cabinet Bureaux

Important offices of the Cabinet are the Secretariat, Pension Bureau, Statistics Bureau, and Printing Bureau. There are three other bureaux which are affiliated to the Cabinet and which are under the Premier's direct control, namely the Legislation Bureau, Merit Bureau and Resources Bureau. All bills to be submitted to the legislature by the Government and all ordinances to be promulgated are drafted at the Legislation Bureau in accordance with the order of the Premier. Proposals of amendment or repeal of laws or ordinances are also submitted to this bureau. In the discharge of his duties the Chief of the Legislation Bureau is at liberty to present his opinion to the Cabinet.

The Merit Bureau handles all business pertaining to the Orders of Merit, decorations and the pensions affiliated to them, national and international. The Resources Bureau supervises all matters concerning the planning, utilization, and administration of the national resources, human and material.

On December 26, 1934, the Bureau for Manchurian Affairs was established. The bureau is under the Premier's direct control as are the other three bureaux. Its function is to supervise all matters concerning Kwantung Leased Territory and the South Manchuria Railway Zone through the Kwanto Bureau in the Japanese Embassy in Hsinking.

There are many committees under the direct control of the Premier, important ones being as follows :—(a) The Higher Civil Service Examination Committee which is in charge of the higher civil service examinations, and of recommendations to certain higher posts. It consists of 8 members who are chosen from among high officials of the Government and its chairman is the Premier, (b) the Pensions Arbitration Committee, (c) The Resource Investigation Committee, (d) The Merit Examination Committee, (e) The Welfare Promotion Committee for the North-Eastern Districts, (f) The Committee for the Celebration of the 26th Centenary of the founding of the Empire, (g) The Election System Investigation Committee organized in July, 1936, and (h) the Diet Organization Investigation Committee instituted in July, 1936.

(The Naikaku Shingikai or Cabinet Advisory Board was abolished on May 5, 1936.)

On May 10, 1935 (Imperial Ordinance, No. 119) the Cabinet Investigation Bureau was established to make investigations on important national policies and to handle matters in connection with the working of the Cabinet Advisory Board. The bureau is under the direct control of the Prime Minister and consists of 37 officials besides the director.

Kikakucho (Planning Bureau) was established in May, 1937, for drawing most important Governmental policies and study of administrative measures proposed by individual ministries.

The Executive Departments

Department of Foreign Affairs. The Minister of Foreign Affairs administers all the diplomatic affairs of the Empire ; organizes the protection of the Empire's commercial interests and Japanese subjects resident in foreign countries ; and directs and supervises Japanese diplomats and consuls. The Department of Foreign Affairs is subdivided into five bureaux, namely, (1) East Asiatic, (2) European and Asiatic, (3) American, (4) Commercial, and (5) Treaties.

The East Asiatic Bureau is divided

into three sections : the First Section handles diplomatic matters related to China, Hong-Kong and Macao ; the Second Section those concerning Siam and protection and control of Japanese residents in those countries ; and the Third Section those concerning Manchoukuo.

The European and Asiatic Bureau is divided into two sections : the First Section handles diplomatic matters related to the U.S.S.R., Finland, Estonia, Latvia, Lithuania, Turkey, Poland, Persia and Afghanistan ; the Second Section those of all the European and other countries not coming under the control of any other bureau or section.

The American Bureau is divided into three sections : the First Section handles diplomatic matters concerning Canada, the United States of America and her territories ; the Second Section, the Central and South American countries ; the Third Section handles matters concerning emigrants and passports.

The Commercial Bureau is divided into three sections : the First Section handles matters concerning institutions and policies of trade and navigation ; the Second Section control, promotion and protection of trade and navigation ; the Third Section commercial affairs and reports.

The Bureau of Treaties is divided into three sections : the First Section handles matters concerning drafting, interpretation, sanction, publication and revision of treaties with foreign countries ; the Second Section international judicial matters ; the Third Section the League of Nations.

There are three other offices of importance. The Information Bureau is divided into three sections. The First Section handles matters concerning news in daily papers and broadcasting ; the Second Section books, magazines, publication, foreign news agencies, propaganda, international meetings ; the Third Section distribution of diplomatic knowledge.

The Investigation Bureau is divided into five sections and their duties are as follows : the First Section general business and study of diplomatic facts ; the Second Section keeping of records and materials ; the Third Section investigations on diplomatic and commercial situations in Asia and the Near East ; the Fourth Section investigations on Europe and Oceania ; the Fifth Section political and diplomatic investigations on North and South American countries.

The Cultural Works Bureau handles matters concerning the cultural works for China which mainly consist of promotion and assistance of cultural investigations and enterprises on China.

Japanese Embassies, etc. (See Chapter VI, List of Envoys.)

Department of Home Affairs The Minister of Home Affairs is in charge of national shrines, prefectural administration, national and local political elections, police, public undertakings, public health, town planning, publication and copyrights, etc. It is also his function to supervise the Chief of the Metropolitan Police Board and the prefectural governors. The Ministry of Home Affairs has in recent years become the most important Government office politically, inasmuch as it supervises elections and administers local public works. The Minister is assisted by a parliamentary vice-minister, a vice-minister and a counsellor. The department has five bureaux, respectively in charge of the following affairs :—(1) Shrines, (2) Local Affairs, (3) Public Order, (4) Public Works, and (5) Public Hygiene. The Bureau of Social Affairs is affiliated to the Ministry and responsible to the Minister.

The Bureau of Local Affairs has a vast field to supervise. It has to be in close touch with (1) all matters affecting elections, (2) all the work concerning local public associations and other general administration, (3) financial and economic matters of various local public associations, (4) all matters concerning conscription and requisition to be executed by the prefectural governments, (5) all matters concerning forests, reclamation and settlement in Hokkaido and other matters in Hokkaido which do not come within the scope of any other bureaux.

The Bureau of Public Order is invested with the highest authority over ordinary as well as political police matters, and the publication of books and other printed matter.

The Bureau of Public Works is in charge of all public undertakings, not only those under the direct control of the Home Department but also those of all the prefectural governments. All matters regarding expenditure for public works of all sorts directly undertaken by the Department of Home Affairs and the subsidies to be granted for prefectural public works are handled by this Bureau.

The Bureau of Public Hygiene is in charge of measures for the prevention of the spread of epidemics. The Bureau is also in charge of quarantine work, and supervises the medical, pharmaceutical and dental professions, including the issue of licences to practice, and

the sale of medical goods. All matters concerning hygienic associations and local hospitals come also under the supervision of this Bureau.

The Bureau of Social Affairs handles all matters concerning :— (1) labour, (2) enforcement of the factory law, (3) miners, as prescribed in the mining law, (4) application of the minimum-age-for-factory-employment law, (5) arbitration of labour disputes, (6) social insurance, (7) the prevention of unemployment and relief of the unemployed, (8) international labour arrangements, (9) protection of children, (10) military relief work, (11) the Japanese section of the International Labour Office at Geneva, and (12) other social works.

The following institutions also come under the control of the Minister of Home Affairs :— the Asylum for Disabled Soldiers, the National Shrines Building Office, the Police Educational Institute, the National House of Correction for the Improvement of Juvenile Criminals, the Hygiene Laboratories, the Food Investigation Laboratory and the National Leper-Houses. Ten special committees advise the Minister on the following matters :— (1) Investigation of a Proper System of Shinto Shrines, (2) Examination of Medical Practitioners, (3) Examination of Dentists, (4) Examination of Pharmacists, (5) Central Hygiene, (6) Sanitary Investigation, (7) Town Planning, (8) Labour Insurance, (9) Labour Exchanges, and (10) Opium.

The Department of Finance The Minister of Finance is in charge of accounting, payments and receipts of public money, taxation, government bonds, coins, money in deposit and custody, negotiable instruments owned by or in custody of the Government and all matters concerning banking, trust business, "ko" (an oriental mutual loan association), and sale of negotiable instruments. He also supervises the finances of the prefectural governments and other local public bodies.

The Finance Department has the following four bureaux :— (1) The Accounts Bureau, which handles all matters concerning the national budget and settlement of accounts, special accounts, co-ordination of treasury business, control of accounting officials, etc. (2) The Bureau of Taxation, which handles matters pertaining to the levying of national taxes, supervision of taxation affairs, the land register, and customs and excise tariffs. (3) The Bureau of Fund Employment, which is in charge of matters concerning the employment of national funds, the administration of national treasury money, the coinage, general circulation of money, national loans, accident and relief funds, deposits and negotiable securities, annuities, and public loans floated by public associations. (4) The Banking Bureau, which takes charge of matters concerning special, ordinary and savings banks, other matters pertaining to banks, the central chest of the industrial unions and credit unions in the cities.

The following other bureaux and institutions are attached to the Department of Finance and are under the direct jurisdiction of the Minister :— (1) The Deposits Bureau, which handles a huge amount of deposits from the middle and lower classes of the people, special importance being always attached to the question of how to utilize this money, (2) The Foreign Exchange Control Bureau, (3) The National Property Bureau, which is in charge of all national properties, and makes arrangements for their disposal or acquirement. (4) The Mint Bureau, located in Osaka, which is in charge of the minting and melting down of all coins, the casting of national medals or decorations, and laboratory work on metals. (5) The Customs Bureaux, which not only handle matters concerning the collection of import duties but also take charge of the control of ships going in and out of the trade ports, medical and health examination of passengers and crews, plants and animals, and registration of epidemics in accordance with the epidemics or tuberculosis prevention laws for men and animals. Customs Houses under these Bureaux are located at the six trade ports, namely, Yokohama, Kobé Osaka, Nagasaki, Moji and Hakodaté. (6) The Revenue Superintending Bureaux, which handle matters concerning tax collection. (7) The Monopoly Bureau, which administers the three government monopolies, salt, camphor and tobacco.

One laboratory and several committees are under the direct control of the Minister of Finance, namely, the Brewing Laboratory and the Committees on Tariff Petitions Examination, the National Property Survey, Building Central Offices of the Government, Tariff Investigation, etc.

The Department of War The function of the Minister of War, who is appointed from among Generals or Lieutenant-Generals in active service, is to direct the military administration. He controls all the men enlisted in the Army and supervises all branches of the Army. Though the War Minister is assisted by a parliamentary vice-minister and a counsellor they have nothing

to do officially with military secrets and military orders (for the organization of the Department and its detailed functions, see Chapter VII).

The Department of Marine The Minister of Marine is appointed from among Admirals or Vice-Admirals in active service and is responsible for all naval administration. He controls all the men enlisted in the Navy and supervises all branches of the Navy. The parliamentary vice-minister and counsellor have nothing to do with naval secrets and naval commands (for the organization of the Department and its detailed functions, see Chapter VII).

The Department of Justice. The Minister of Justice supervises courts and procurators' offices; and controls all judicial proceedings. The Department contains three bureaux, dealing respectively with civil affairs, criminal affairs, and prisons.

Judicial procedure is divided into three instances. The courts of first instance are the District and Local Courts. In the District Court are tried civil cases of minor importance and those involving sums not exceeding one thousand yen. The Court also deals with criminal cases which are not felonies and those which do not require preliminary examination. The District Court handles cases of bankruptcy and those concerning personal status and arbitration. In rent and commercial disagreements, an arbitration committee, composed of one judge and two laymen experienced in the matters involved in the dispute, may be appointed. The jurisdiction of a District Court covers an average area of 2,587 square miles and a population of about 219,000.

The Local Court conducts trials of first instance of cases beyond the jurisdiction of the District Court and preliminary examinations of criminal cases of a complicated character.

The Local and Appeal Courts are the courts of second instance. The former handles cases on appeal from the District Courts, and the latter appeals against the first instance decisions of the Local Courts.

The court of third instance is the Supreme Court, which tries all civil and criminal cases which are brought before it, and conducts preliminary trials for (1) serious offences against the Imperial House, (2) high treason, and (3) offences committed by members of the Imperial Family.

There is one Supreme Court, seven Courts of Appeal, 51 Local Courts and 282 District Courts.

Attached to each of these courts is a procurators' office, its functions being to conduct investigations, institute prosecutions, supervise the execution of sentences in criminal cases, and act as representative of the public interest in civil cases (For further details, see Chapter XXVII).

The Department of Education All matters relating to education, art, science, literature, and religion are under the direction and supervision of the Minister of Education. There are seven bureaux and one division in the Department, i. e. (1) Bureau of Semmon (College) Education, (2) Bureau of Common Education, (3) Bureau of Technical Education, (4) Bureau of Social Education,(5) Bureau of Books, (6) Bureau of Religion, and (7) Bureau of "Thoughts".

Six imperial universities, 2 commercial universities, 7 medical universities, 1 technical university, 2 normal universities, 4 higher normal schools, and 79 colleges and special educational institutions come under the direct administration of the Department (see Chapter XXVIII).

The following institutions are also established and controlled by this Department:—the Imperial Library; the Central Meteorological Observatory; the Marine Meteorological Observatory; the Aerological Observatory; the Latitude Observatory; the Tokyo Science Museum; the Physical Education Laboratory; the Navigation Institute; the Geodesy Committee; the Government Research Institute of National Culture; the Examining Committee for Teachers' Licences; the Physical Sciences Literature Committee, for preparing a national list of books on physical sciences, as a branch of the International Committee for the same purpose; the Imperial Academy, which is composed of one hundred scholars appointed by the Emperor and is established for the promotion of science and culture; the Imperial Academy of Arts, which is composed of 30 members under a president, its main work being organization of the annual exhibition for the promotion of fine arts; the Text Book Committee; the Science Council; the National Language Committee; the Aeronautics Council; the School Hygiene Committee; the Earthquake Disaster Prevention Committee; the Religious System Investigation Committee; and the National Treasure Preservation Committee.

The Department of Commerce and Industry The Minister of Commerce and Industry is assisted in administration of the Department by a parliamentary vice-minister, vice-minister and counsellor.

There are six bureaux in this Department, dealing respectively with commerce, industry, mining, foreign trade, insurance, and patents. Examination and control of weights and measures is under the Central Weights and Measures Office. Other affiliated offices of importance are the Mine Supervision Bureau and the Temporary Rationalization of Industry Bureau.

In May, 1932, an ordinance was issued empowering the Minister of Commerce and Industry to establish two industrial laboratories, in Tokyo and Osaka respectively. These laboratories are opened for the examination, analysis, and appraising of industrial commodities for the benefit of interested parties. Other institutions under the Department are as follows : the Fancy Mat conditioning Houses, the Silk Experimental Stations, the Earthenware and Porcelain Experimental House, the Silk Goods Export Conditioning House, the Industrial Advice and Information Office, the Fuel Laboratory, the Industrial Art Examination Committee, the Unreasonable Low Price Investigation Committee, the Gas Business Committee, the National Products Promotion Committee and the Motor-car Manufacturing Business Committee.

The Department of Agriculture and Forestry The Minister of Agriculture and Forestry controls all matters concerning agriculture, forestry, marine industry, stock-breeding and the enforcement of the Rice and Cereals Law. The Department is divided into the following seven bureaux :—(1) The Agriculture Bureau, which takes charge of matters concerning agriculture, tea production, subsidiary industries among farmers, industrial unions, the central chest of the co-operative associations, and the enforcement of Cereals Law. (2) The Forestry Bureau, which deals with all matters concerning forests and meadows. (3) The Fisheries Bureau. (4) The Stock Breeding Bureau, which deals with the improvement and breeding of domestic animals, their hygiene, insurance and hunting. (5) The Silk Bureau handles matters concerning sericulture and the silk industry. (6) The Horse Bureau, which was established in July, 1936, deals with improvement, breeding and other matters concerning horses and their pastures ; and (7) The Rice Bureau for control of price of rice and its supply.

The following institutions are under the direct control of the Minister :—the Agricultural, Horticultural, and Forestry Experimental Stations, the Fisheries Institute and Fisheries Experimental Stations, the National Stock-sheep Pastures, the Animal Disease Examination Institute, the National Bull Pastures, National Poultry Station, the Sericultural Laboratory, the Raw Silk Conditioning Houses, the Tea Experimental Houses, the Rice and Cereals Committee, the Silk Price Committee.

The Department of Communications The Minister of Communications administers the State post, telegraph, telephone, broadcasting and beacon services, and is in charge of all matters relating to electricity, hydraulic power and aviation. All business enterprises of electricity, ship-building, and water transportation together with navigation routes, ships and seamen are under his supervision. He also directs the operations of the Nippon Wireless Telegraph Company.

The Minister is assisted by a parliamentary vice-minister, and a counsellor, The Secretariat, beside the ordinary secretarial work, supervises the training of clerks who are expected to enter the communications service and all matters concerning communications exhibitions. There are seven main bureaux in the Department :—Postal Service Bureau ; Telegraph and Telephone Service Bureau ; Bureau of Engineering ; Bureau of Electricity ; Bureau of Mercantile Ships ; Aviation Bureau ; and Bureau of Accounts and Supplies.

There are in addition the following affiliated offices :—Bureau of Savings, Bureau of Post Office Life Insurance, Lighthouse Bureau, and Communications Bureau. The Savings Bureau handles matters concerning the Post Office savings, and their transfer to the national deposit. The Post Office Insurance Bureau handles matters pertaining to insurance and pensions for the working classes.

The following institutions are under the direct supervision of the Minister : —the Electro-Technical Laboratory, the Marine Court of Inquiry, the Marine Labour Exchange Committee, the Post-Office Life Insurance Investigation Committee, the Post-Office Life Insurance Reserve Fund Utilization Committee, the Electricity Committee and the Aviation Control Committee.

The Department of Railways The Minister of Railways administers all the affairs relating to the railways operated by the Government and supervises the operations on land of all private railway companies. The Department is divided into seven bureaux, namely, Bureau of Local Railway Administration, Bureau of Traffic and Operation, Bureau of Construction, Bureau of Mechanical

Engineering, Bureau of Maintenance and Improvement, Bureau of Electricity, and Bureau of Finance and Purchasing. During the last few years there has been operated a special Tourist Industry Bureau for attracting foreign tourists, which is subdivided into the Controlling and Investigating Section and the Promoting Section. The administrative work of the state railways is apportioned to six local regions : Tokyo, Nagoya, Osaka, Moji, Sendai and Sapporo. Each region is in charge of a director who has full powers to conduct all but the most important affairs within his jurisdiction.

There are three committees affiliated to the ministry, the Railway Council, the Tourists Committee and the Railway Fare Investigation Committee. (See Chapter XXV, State Railways.)

The Department of Overseas Affairs

The Minister of Overseas Affairs supervises the administrative work of the Chosen Government-General, the Taiwan Government-General, the Kwantung Government, the Karafuto Government, and the Government of the South Sea Islands. He also supervises the business operations of the South Manchuria Railway Company and the Oriental Development Company. He directs all matters concerning emigration excepting those of a diplomatic nature. For the performance of these duties,the Minister is empowered to direct and supervise consuls stationed in foreign countries in consultation with the Foreign Minister. There are, besides the Secretariat, the following four offices in the Department ; the Chosen Office, (having a special status and being always under the direction of the vice-minister), Industry Development Bureau, the Supervision Bureau, and the Exploitation Bureau.

The Privy Council

The Privy Council is a consultative body to advise the Emperor on questions of grave importance. The Council is composed of one President, one Vice-President (non-voting) and 24 Councillors. All the Councillors are officials of shinnin (highest) rank. All these members are appointed by the Emperor on the advice of the Prime Minister. Cabinet Ministers are entitled by virtue of their office to sit in the Privy Council as councillors and have the right to vote. Princes of the Blood who have attained their majority and are resident in Tokyo can sit in the Council under the same conditions.

The questions that are to be submitted to the Privy Council for deliberation cover :

(1) All matters that fall within its jurisdiction according to the provisions of the Imperial House Law.

(2) All matters concerning interpretation of the provisions of the Constitution and laws and ordinances supplementary thereto.

(3) Proclamation of Martial Law under Article 14 of the Constitution, Imperial ordinances under Article 8 and Article 70, and any other Imperial ordinance which has a disciplinary clause.

(4) Treaties and all other international pledges.

(5) All matters involving an amendment in the organization and procedure regulations of the Privy Council.

(6) Other matters submitted to the Council by the Emperor.

Though the Privy Council is thus the highest consultative organ of the Emperor in important matters of State, it has nothing to do with the actual government administration.

Ministers Outside the Cabinet

There are two important offices of a quasi-administrative character of which the holders are styled "Daijin" (Minister). These "Ministers" are not members of the Cabinet and do not change with the Government.

The Office of the Grand Keeper of the Imperial Seals is generally regarded as the senior of these offices. Its holder has the duty of keeping the Imperial Seal and the Seal of State, and of supervising secretarial work in connection with Imperial Edicts and Rescripts and other documents of the Imperial Court. The other office is that of Minister of the Imperial Household Department. The Minister is in charge of all business concerning the Imperial Household. (Consult the chapter on Imperial Court for fuller information as to their duties.)

The Board of Audit

The Board of Audit is provided for by Article 72 of the Constitution and is on an equal footing with the Ministers of State. It is composed of a president, three divisional chiefs and 12 inspectors, who are appointed by the Emperor on the advice of the Prime Minister, but cannot be dismissed, transferred or placed on the retired list except by effect of either a criminal or a disciplinary trial.

The function of the Board is to audit accounts of the central government and other corporate bodies, public or private, receiving government subsidies or guarantees.

The Court of Administrative Litigation

The law of 1890 which established this Court is envisaged in Article 61 of the Constitution. The Court is entirely distinct from ordinary judicial courts and its function is to decide on the validity of administrative acts. The Court is not interfered with by the Government. According to the law the Court of Administrative Litigation is to be located in Tokyo and no local court established. It is composed of a President and 11 Counsellors. Its members are appointed by the Emperor on the advice of the Prime Minister and are not to be removed, suspended from office or deprived of position, without their consent. This is exactly the same as with ordinary judges (see Chapter XXVII), but the differences are that the former's position is not for life, while the latter's is and that there is no institution of the retiring age for the former. The present head of the Court is Dr. Hyoji Futakami.

The Court passes on cases relating to (1) the levying of taxes and fees except the customs tariff ; (2) dispositions for the recovery of taxes in arrears, (3) the prohibition or suspension of business, (4) water-ways and public works, and (5) fixing the boundary between the Government and private owned lands.

An appeal is immediately taken by the Court and the decision on it is given by a majority vote of the council of more than 5. The decision is the first, and at the same time, final.

Government Officials

Civil officials are divided into four ranks according to their grade of merits, education and ability, and their salaries differ accordingly, The four ranks are : (1) Shinnin rank, appointed by His Majesty directly, (2) Chokunin rank, appointed by His Majesty's order indirectly, (3) Sonin rank, appointed by His Majesty's approval, and (4) Hannin rank of minor officials appointed by the heads of different offices.

At the end of 1935, civil officials who received salaries from the State Treasury numbered 142,543 in total, their salaries amounting to ¥170,419,940, of which officials of shinnin and chokunin rank numbered 1,615 with an aggregate salary of ¥8,433,826 a year, officials of sonin rank 14,781 with ¥38,708,427, and officials of hannin rank 126,147 with ¥123,277,687. The average salary of officials of chokunin rank was ¥5,220 a year, that of officials of sonin rank ¥2,618 and that of officials of hannin rank ¥977.

As to the number of officials of chokunin, sonin, and hannin ranks classified according to departments, the Department of Railways had the largest with 31,884, which was followed by 30,014 of the Department of Communications, 13,871 of the Government-General of Chosen and 12,453 of the Department of Finance. Departments other than those given above had less than 10,000 each, viz. the Department of Justice had 8,684, the Department of Education 7,922, the Government-General of Formosa 6,336, the Department of Agriculture and Forestry 4,058, the Home Department 2,641, Department of War 2,422, Government of Kwantung Province 2,078, the Department of Commerce and Industry 1,249, the Department of Marine 1,791, the Government of Saghalien Island 1,226 and the Department of Foreign Affairs 1,178. Other Departments had less than 1,000 each. Among prefectural offices, Hokkaido Office had 2,262, Tokyo Metropolitan Police Office had 1,441 and all other prefectures together 9,735. Each prefectural government office had 200 on the average.

Number and total amount of salaries paid to civil officials of the Government in the past 10 years follow :

Year	Number	Salary
1926	148,014	¥161,150,445
1927	124,116	147,096,570
1928	128,792	156,572,037
1929	134,831	163,745,391
1930	126,995	160,265,485
1931	134,537	160,644,249
1932	130,988	157,688,618
1933	132,987	159,579,259
1934	135,692	163,333,026
1935	142,543	170,419,940

The Imperial Diet

The Parliamentary system could not develop in Japan before the Meiji Restoration because politics was controlled by the Samurai class for hundreds of years. Thus, the Imperial Diet was established solely according to the pattern of Western countries. In accordance with the promise contained in the Charter Oath of the Emperor Meiji, councils or assemblies of various kinds were established at the beginning of the Meiji Era, but their members were not elected by the people and consequently they were of a different nature from the parliaments of the West. In 1881 it was promised to convoke a National Assembly within 10 years, and the Imperial

Diet on Western lines was first opened in 1890.

The Diet is much limited in its power and the duration of its sessions, but in its fundamental nature it has much in common with the national assemblies of Western countries. According to Art. 5 of the Constitution, the legislative power belongs to the Emperor and the Diet's function is only to give (or presumably withhold) consent to legislation proposed by the Throne. But this is a formality, and the Diet has almost the same power of legislation, including that of initiative as the parliaments of other civilized nations. At the same time, the Diet, in virtue of its being an assembly of representatives, has been invested with the power of supervising the administrative organs, as represented by the State ministers. It is a bicameral legislature, consisting of the House of Peers and the House of Representatives, and the decisions which are harmoniously made by both Houses are the decisions of the Imperial Diet.

The House of Peers The House of Peers is composed of the Imperial Princes, Peers, and the Imperial nominees, according to the provisions of the House of Peers Ordinance. This Ordinance was promulgated at the same time as the Constitution and has been revised several times since. In 1925, important revisions were made, the number of the peerage members being lessened while that of the representatives of the wealthy people was increased, also there was an addition of representatives of the Imperial Academy. Thus the former majority of peerage members was brought to an end and their number became equal to that of members chosen by Imperial order.

According to the present House of Peers Ordinance, the House is composed of the following members :

(a) . all the Imperial Princes above 20 years of age, and the Kotaishi and Kotaison, if above 18.

(b) all Princes and Marquises above 30 years of age, with the term of office for life.

(c) 18 Counts, 66 Viscounts and 66 Barons elected by the Peers of their respective ranks. They must be above 30 years of age and their term of office is 7 years.

(d) Imperial nominees from among statesmen and scholars who have made valuable contributions to politics or science. They must be above 30 years of age their term of office is for life. Their number must not exceed 125.

(e) 4 members of the Imperial Academy, elected by the members thereof and nominated by the Emperor. Their term of office is 7 years.

(f) Members elected by and from among the highest tax-payers, in any prefecture, in direct national taxation on land, income and business profits. Each member represents 100 such high taxpayers, his age must be above 30, and his term of service is 7 years. The number of this class of members must not exceed 66.

The House of Peers, therefore, consists of 150 Counts, Viscounts, and Barons, 195 representatives of statesmen, scholars and wealthy business men, and a certain number of Imperial Princes, Princes and Marquises, the number of the last named not being fixed for obvious reasons. The present (January, 1937) total of the members of the House of Peers was 408.

The House of Representatives The House of Representatives is composed of members elected by the people in accordance with the provisions of the Electoral Law. This Law was first promulgated simultaneously with the enactment of the Constitution in 1886, and has undergone many minor revisions since. Important revisions were made in 1900, 1919 and 1925. The Law of 1889 required yearly payment of direct national tax of ¥15 as a qualification for both candidates and voters, and prescribed the system of small constituencies and the open ballot. In 1900, the requirement of tax payment was removed in the case of candidates and lowered to 10 yen voters. Constituencies were divided into two classes municipal and rural, making each city an independent district and each prefecture one district; and the secret ballot was adopted. In 1919, the tax requirement was again lowered to 3 yen and the old small constituency system revived. In 1925, the male universal suffrage system was finally adopted, the division of municipal and rural districts was abolished, and a system of constituencies electing from 3 to 5 representatives each was established.

The universal suffrage of Japan is restricted as yet in comparison with that of Western countries, as to sex, age, residence and the conditions of eligibility. Women are totally ineligible and the age qualification for male voters is 25. The Electoral Law itself says nothing of the restriction on residence, but the list of voters must be made by Sept. 15 of the year previous to that of the general election and only persons who have lived a minimum period of one year in the same city, town or commune are eligible for inclusion. The Law also contains provisions for withholding the

right to vote from criminals, legally disabled persons, such as bankrupts, etc., actual holders of a peerage, persons engaged in the active combative services.

Candidates must be 30 years of age; otherwise their qualifications are the same as those for voters, except that of residence. The number of the members of the House of Representatives was 464, vacancies 2, at the end of March, 1937.

According to the relevant articles of the Constitution, the Diet has power over all affairs of state which belong to the responsibility of the State Ministers. There is, however, a working but not complete separation of the legislative and executive powers between the Diet and the Ministers. There are certain statutory limitations of the Diet's power to control the executive. The Imperial Diet must not interfere with matters pertaining to the Imperial House. Except in regard to matters within the Diet itself, it can neither use the power of administration directly upon the people nor represent the State vis-à-vis foreign nations.

Fixed Number of Lower House Representatives and Number of Votes at Recent General Elections

Date of Election	Representatives	Voters
March, 1904	379	757,788
May, 1908	379	1,582,676
May, 1912	381	1,503,650
March, 1915	381	1,546,341
April, 1917	381	1,422,118
May, 1920	464	3,069,787
May, 1924	464	3,288,368
Feb., 1928	466	12,409,078
Feb., 1930	466	12,813,192
Feb., 1932	466	13,095,621
Feb., 1936	466	14,479,553
April, 1937	466	13,938,456

Eunction of the Diet The Diet has five functions, namely, constituent, legislative, financial, general supervision of the administration, and executive on matters in the Diet itself.

(1) The constituent power of the Diet is confined to deliberation on constitutional amendment initiated by the Throne. Action can only be taken by a two-thirds majority of a quorum of two-thirds of the membership of both Houses, as provided for in Article 73 of the Constitution.

(2) The Emperor exercises the legislative power with the consent of the Imperial Diet, all laws and legislative ordinances must obtain that consent. Bills may be presented by the Diet itself as well as by the Government. The right of consent of course contains the rights of amendment and rejection. This right is subject only to the condition that the Diet's action does not contravene the Constitution, the Imperial House Law, and international law. Thus the power of legislative "consent" contains within it that of initiative. Legislative ordinances promulgated by the Emperor must be submitted to the Diet at the next session for approval or rejection but not amendment.

The legislative authority of the two Houses is equal in theory, and projects of law may be initiated in either. Naturally, therefore, no legislative enactment is complete without the consent of both Houses to all its provisions.

(3) The national budget must get the consent of the Diet. The budget is presented by the Government first to the Houses of Representatives, but consent to it must be accorded by both Houses. Article 70 of the Constitution, however, empowers the Government to take all necessary financial measures by Imperial Ordinance, and Article 71 empowers it, if the Diet has not voted on the budget or if the budget "has not been brought into actual existence" to carry out the budget of the previous year. National loans must obtain the consent of the Diet. All contracts outside the budget which involve state financial liability must also be approved by the Diet. Any disbursement of public money by the Government made without the Diet's consent between sessions must be submitted for approval at the earliest opportunity. The restrictions of the Diet's financial power, other than those mentioned above, are clearly stipulated in Article 67 of the Constitution. It is to be noted that the Budget as a project of administrative action is confined to expenditure. Revenue is determined by law, so that the Diet's control thereof comes within its general legislative competence.

(4) The responsibility of Ministers, collective or individual, to the Diet is not clearly established either in law or custom, but so far as the responsibilities of Ministers are concerned, the Diet clearly has a certain supervisory power. The Government can do what it wishes without the consent of the Diet in its administrative function, but the Houses can express independently of each other their judgement on what the Government has done. They may present written appeals to the Emperor against the actions of State Ministers. They can make proposals by resolution to the Government concerning administration.

They may receive petitions from the people (the only function of the Diet to keep a direct contact with the people), and if these concern administrative matters, they are handed to the Government with the opinion thereon of the Houses to which they were addressed. The Houses may also pass resolutions on important state matters which are not addressed to the Government directly, but which, being made public as they are, naturally have an effect on the Government's popularity if they contain adverse criticisms. In these ways the Diet subjects the Government to a limited measure of control.

The Diet has the right of investigating the conduct of the administration, although this is very narrowly limited and rarely used. The Diet has the right of making inquiries on the responsibilities of the Ministers, the right of receiving reports from the Government on the income and disbursements of the National Treasury, on the handling of petitions sent in by the people through the Houses, and on serious diplomatic questions, unless they are such as require absolute secrecy.

(5) The Houses of the Diet have the right of self-government as to the regulations of their own Houses, on the procedures of session, on the police system in the Houses. The House of Peers has also the right to be consulted by the Emperor as to the privileges of peers.

The Diet is convoked annually by the Emperor (under Article 41 of the Constitution) for a period of ordinary session of 90 days. This period may be prolonged if necessary by Imperial Order. Extraordinary sessions can be convened in the same way. The annual session is usually called at the end of the year, although there is no regulation to this effect in the Constitution, and continued to the end of the following March, so that the budget can be voted before the new fiscal year begins. The Emperor may give orders to open or close the Diet; or suspend the session for a certain number of days for negotiations between the Diet and the Government or the two Houses; or dissolve the House of Representatives. All these actions are taken on the advice of the Prime Minister.

Officials of the Houses Each House has a President and Vice-President. The President not only presides and keeps order during the sessions but also directs the business of the House between sessions. The manner of appointment of the officers differs in the two Houses. In the House of Peers, they are appointed by the Emperor from among its members for a term of 7 years, the House itself having nothing to do with the appointment. In the House of Representatives, the House chooses three candidates for each of these positions and the Emperor makes the appointments from among the candidates. Their term of office is that of the life of the House.

There is an Official Bureau attached to each of the Houses, and officials such as the Chief Secretary, secretaries, stenographers, and the chief sergeant are appointed by the Government, although they act under the orders of the respective House Presidents. Several things in the Japanese parliamentary system have been copied from the British and this official bureau is one of them.

The House of Peers has five and the House of Representatives four standing committees, and special committees are appointed when the need arises. Each House may sit as a committee of the whole for which chairmen are elected at the beginning of the session. The procedure of discussions and resolutions is similar to that customary in the English-speaking countries.

Local Government

The units of local government are four: the prefecture, the city, the town, and the commune.

The Prefecture Japan proper, except Hokkaido, is administratively divided into 3 urban prefectures and 43 prefectures which are administered by governors. The function of the governor is to be the highest local administrative organ of state, and, at the same time, the head of the prefecture as a unit of local self-government. He is directly controlled by the Ministers of State and takes charge of the general national administration within his prefecture. In a prefecture all administrative business is unified under the control of the governor who supervises every kind of administrative work in the district according to the orders of the Premier and Ministers of the Central Government. Thus, the scope of his function is quite large and complicated. The appointment and dismissal of governors is made by the Minister of Home Affairs.

The system of prefectural government has undergone several changes and the nature of the work done is not necessarily the same in all the prefectures, but it is common, at present, to divide the duties into three divisions, namely, the Home Affairs Division, the Educational Division and the Police Division.

Some prefectures have an Engineering Division.

As a unit of local self-government the prefecture stands between the state and the municipalities. It has a prefectural assembly and a prefectural council as organs for decision, but the right of decision of these organs is much narrower than that of the city assembly and council, while the chief executive is the governor who is officially appointed by the Central Government.

The prefectural Assembly is elected by universal suffrage, and the number of members is fixed by the law. Membership of the assembly is honorary and the term of service is four years.

The Prefectural Council is composed of 10 members elected by and from among the assemblymen. The Governor is ex-officio chairman of the council, which is in fact a standing committee of the assembly, although entrusted with certain functions of arbitration which are not specifically devolved from the larger body.

Hokkaido is not divided into prefectural districts, but is itself an administrative unit as a whole, under a governor, although it covers an area of 88,775,04 square kilometres and is thus many times as large as most of the perfectures. The Governor is controlled by the Minister of Home Affairs directly and his function and duties are mostly the same as those of a prefectural governor. The special features of his function are that he undertakes colonization work, that as there is no national forestry law applied to the district the administration of forestry is left altogether in his power, and that he has to take care of the native Ainu according to the Protection Law for the Hokkaido Natives. The Hokkaido office is divided into five divisions, namely, Home Affairs, Education, Civil Engineering, Colonization and Police. The organization and rights of the Hokkaido Assembly and Council are almost the same as those of similar bodies in the prefectures. (On the governmental system of the Colonies see Chapters XL-XLIII.)

The Municipality (City, Town, Village) In 1935 there were 127 cities, 1,680 towns and 9,788 villages in Japan proper. (A village here means an administrative unit composed of a village or villages.)

There was some measure of local self-government in old Japan. The heads of villages were chosen from among the villagers and were asked to rule over them. For some time after the Meiji Restoration, these customs were continued, although the official names of the heads of villages were changed. Moreover, towns and villages were allowed to exercise the right of managing public affairs with their own money as financial units. But it was with the formation of prefectural assemblies according to the new laws issued in July, 1878, that the local self-government of Japan began to assume a modern form. The self-government system of cities, towns and communes has been several times revised, the last revision being that of 1929.

There were formerly several restrictions on citizenship of the local communities, but according to the laws now in force every man is entitled to it in virtue of the male universal suffrage principle. The requirements of citizenship are about the same as those for the right to vote in parliamentary elections. Every male inhabitant of and over 25 years of age who has resided for a minimum period of two years in the same municipality is a citizen of the same and has the right to vote or to be elected and, at the same time, has the duty of accepting any honorary post of service to which he may be elected.

The organs of local self-government are the assemblies of the representatives and the chiefs of the municipalities. The fixed minimum number of representatives in these assemblies is 30 in the cities and 12 in the towns and communes. The cities have also councils of ten members elected by and from among the assemblymen.

The Mayor of a city is a salaried official while the corresponding posts in a town or commune are honorary in principle. Mayors are elected by their respective assemblies for a term of four years. Their function and responsibilities are diverse, for they not only administer the affairs of the municipalities but also handle matters delegated to them by the central and prefectural governments and are entrusted with the supervision of some public bodies. As servants of the central government they take charge of the census register and all the business related to it, the election of the members of the Lower House, several kinds of national investigation, public engineering, public hygiene, relief work, educational supervision and encouragement, and certain work under the Conscription Law. This work is done without consulting the local assemblies, but simply as entrusted by the respective national officials.

CHAPTER V

PARTIES AND POLITICS

Pre-party Cabinet Period

Japan's modern political life fairly started with the promulgation of the Constitution on February 11, 1889, and the opening of the Diet on November 25, 1890. The Imperial Edict for opening the national assembly within ten years was issued (see Chapter III) on October 12, 1881.

Party Formation Upon the issuance of the Imperial Edict parties began to be formed with a view to be prepared for the opening of the Diet. On October 18, 1881, the colleagues and comrades of Taisuké Itagaki drafted the rules of the new Jiyu-to Party and elected Itagaki President and N. Nakajima Vice-President at a preparatory meeting which was held at Asakusa, Tokyo. The governing principle of this party was that of Rousseau's social contract.

The next great party to be organized was the Kaishin-to. It came into being in March, 1882, with Shigenobu Okuma as President. The leading thought of this party was English liberalism, and it aimed at a healthy, mild policy with the educated class of people as its central constituency. It was, therefore, natural that the Kaishin-to won the sympathy of the intelligentsia of the cities, while the Jiyu-to got a hold on the people in the country districts, where the inhabitants were peasants who sympathized with more radical political thought because of their long sufferings under the feudal governments. Many parties were born contemporaneously. Besides the Kaishin-to and the Jiyu-to, 40 other parties, mostly local, were said to have been formed.

The first Ito Cabinet, which was organized in 1885 was not, of course, connected with any political party.[1]

The First Election The Jiyu-to was once dissolved into smaller groups, and the first general election was carried out on July 1, 1890, amid a general confusion of political parties. Its result was as follows so far as the political parties were concerned :

Daido Club 55, Kaishin-to 46, Patriotic Public Party 35, Conservative Party 22, Kyushu Association 21, Jiyu-to 17, Jichi-to 17, Officials 18, neutrals 69, independents 2.

This result presented a grave problem to the political parties, for none had a clear majority in the House of Representatives, so various amalgamations were effected before the opening of the first session of the Imperial Diet, and when it opened on November 25, 1890, the classification of the 300 members became as follows :

The Rikken-Jiyu-to (or Constitutional Liberal Party) 130, the Rikken-Kaishin-to (or Constitutional Progressive Party) 41, Taisei-kai 79, National Liberal Party 5, and outsiders 45. The first two were anti-government parties, while the second two were pro-government. The remaining 45 were neutral.

The House of Peers consisted of 252 members, classification being as follows :

10 Imperial Princes, 10 Princes, 21 Marquises, 15 Counts, 70 Viscounts, 20 Barons, 45 High-Tax-Payers, and 61 "Chokusen," i. e. those nominated by Imperial order.

According to the report of K. Suyematsu, Director of the Prefectural Bureau, Home Ministry, on the first election on July 1, 1890, the number of voters was 450,365 in all Japan of which abstention was but 6.1 per cent.

Franchise was given only to those who paid national tax of more than ¥15 a year and the prefecture which had the greatest percentage of voters as against the number of population was Shiga prefecture with 2 in every 100 of poulation, while Osaka and 25 prefectures had more than 1, and all other prefectures had less than 1, Tokyo standing lowest with 0.38. At that time Shiga was the richest prefecture, and Tokyo had but a small number of landowners who comprised most of the voters in the election in the previous century when Japan's industrialization was in its infancy and the accumulation of wealth in cities was just beginning.

Of the 300 members elected, 109, or one-third, was of the samurai class. As to the rate of representation Shizoku or

1 For the political movement before the issuance of the Imperial Edict see the Japan Year Book, 1933.

the samurai class sent 1 person in every 18,132 to the House of Representatives while Heimin or the common people sent 1 person in every 207,438. The number of people of the samurai class was 1,976,480, while that of the common people was 37,630,754 out of Japan's total population of 39,607,234 in 1890.

The average age of members was 42.3 classified as follows :

Age	No. of members
31	7
32-37	85
38-43	99
44-47	40
48-61	59
Above 62	10

The average age was more than 10 years younger than that of the members of the House in the 17th election in 1930, which was 52.6. Several reasons may account for this change, but probably the strongest was that, political questions rather than business enterprises held by far the greater attraction for the ambitious men in their thirties and forties, for politics was almost the sole topic of national interest at the time of the first election. Another reason is in the natural increase of the age of old members who have been elected many times.

The first platform of the Constitutional Liberal Party was : (1) To maintain the sacredness of the Imperial House and to extend the rights of the people, (2) To oppose such policies as might interfere with the individual freedom of the people in home affairs, and to conclude treaties on equal terms in foreign affairs, (3) To realize parliamentary government and organize a party cabinet. And with these ideals the party men waged a fight for the establishment of a real parliamentary government. The number of anti-government members in the Lower House far exceeded that of the pro-government, and the bureaucratic Yamagata Cabinet feared for its very existence. Hostilities between the two started with the choice of the President of the House of Representatives and continued over the first budget subjected to the discussion of the House. The budget amounting to ¥83,075,000 was cut down to ¥75,194,300, or about 9% reduction. But the first session of the Imperial Diet was closed in March, 1891, without dissolution.

Itagaki's Party Suffers The party which suffered most from the poison of secret governmental control was the Constitutional Liberal Party, and they held a general meeting at Osaka immediately after the first session of the Diet. At the meeting, Itagaki, who had retired when the party had been once dissolved, was again chosen President, its name was made simpler by cutting away the first word "Constitutional," and the unity of its members was strengthened. The Matsukata Cabinet was formed in May of the same year ; its head was as strong a foe to political parties as Yamagata, if not more so. Then there occurred, on May 11, 1891, the attack of a murderous fanatic on the Crown Prince of Russia at Otsu near Lake Biwa and a great earthquake wrought fearful destruction in Gifu and Aichi prefectures ; the Government was unable to cope with these emergencies while it was discredited in its policy against the parties.

Matsukata Cabinet Falls The second session of the Imperial Diet was convoked on Nov. 21, 1891, in a menacing atmosphere from the outset, and was finally dissolved on Dec. 25. The general election of Feb. 15, 1892, was carried out under extreme interference of the Government. Shinagawa, Minister of Home Affairs, ruled the local governors with an iron hand and used every measure for obtaining as many pro-governmental members as possible, the freedom of the vote being completely trodden underfoot. It was reported that 25 persons were killed and 388 were injured in this savage struggle. The result was, however, the victory of the anti-governmental party men, who numbered 163 against 137 of the pro-governmental. The unconstitutional policy of the Home Minister provoked the indignation of the people and Ito, President of the Privy Council, and compelled the Cabinet to change the Home Minister, and caused a discord among Cabinet members. The House of Representatives passed a vote of non-confidence in the third session, although the stubborn Matsukata Cabinet clung to its position in defiance of it.

But the Cabinet fell to pieces from within, right after the third session of the Diet, and the second Ito Cabinet was formed in August, 1892. It was Ito who drafted the Constitution and stood aloof from the political parties, although he later became the President of the Jiyu-to or the Liberal Party himself. And the Ito Cabinet cleverly managed the fourth session of the Diet which threatened a collision between the Cabinet and the Diet over the question of the Budget. But the Cabinet was taken to task by the Diet over the misbehaviour of some Ministers and the fifth

session was dissolved without any reason given on Jan. 30, 1894. At the third general election which occurred on March 1, 1894, the Ito Cabinet took a very fair attitude because Ito was always anxious to be or at least to seem constitutional. Its outcome was again disadvantageous to the Government, and the sixth session, which was convoked on May 12, 1894 was dissolved on June 2 because of the non-confidence resolution on the last dissolution and the diplomatic inability of the Government. It may be remarked here that Tsuyoshi Inukai, the late Premier, appeared on the surface of the political world for the first time at this session. He was a member of the Lower House from the beginning and had organized a progressive party of his own a little before this, but his motion of wholesale non-confidence was the first occasion that his earnestness and sincerity for the maintenance of parliamentary authority began to show itself.

The Sino-Japanese War The interval between the sixth and seventh sessions was but half a year, yet it was marked by many important political and diplomatic affairs. The Sino-Japanese War, 1894–1895, broke out in July, 1894. The general election was carried out on September 1 of the same year. The seventh session had been expected to witness a repeated collision of the Diet and the Government, but the first international war drew all the attention of the people and the session closed peacefully after lasting but four days instead of a week as fixed, on the 22nd of October, 1894, at Hiroshima, where the Emperor was staying during the war to command the Imperial Army and Navy. All parties were united for the national cause and supported the Government with one accord, and the military emergency budget amounting to ¥150,000,000 was immediately passed without any reduction. All the political conflicts at home were stilled in the face of the international war and the eighth session convoked on Dec. 22, 1894, was quietly carried out. The peace treaty with China was sanctioned on March 20, 1895. But the interference of the Three Powers on the lease of the Liaotung Peninsula aroused indignation throughout Japan, and this feeling soon centred in an attack on the Government.

A Political Bloc The Kaishin-to, Kakushin-to, People's Association, Chugoku Progressive Party, Financial Kakushin-to and Ohté Club were united in criticizing the Government's weak diplomacy, and formed a union called the Central Representative Club. The Liberal Party did not join the Club, because it had come to some understanding with the Government, and had a special connection with Ito, who gradually had drawn nearer to this political party. Just before the 9th session the Liberal Party took off its mask and openly declared its coalition with the Ito Cabinet. This was the first instance of a political party being publicly united with the Government.

The Progressive Party Ito's policy was a success and the 9th session ended in the victory of the Government by the faithful support of the Liberal Party. The defeated parties recognized the need of a stronger union and on March 1, 1896, the Kaishin-to, Kakushin-to and three other bodies dissolved themselves and organized the Shimpo-to or Progressive Party under Okuma. The platform of the new party was to exalt the sacredness of the Imperial House and to advance the rights and welfare of the people, (1) by establishing a responsible cabinet with the removal of political evils, (2) by enlarging the national power with the renovation of diplomacy, and (3) by developing private enterprises with the readjustment of the financial policy.

Since then the Liberal Party and the Progressive Party, as the two greatest political parties in the country, became rivals. The members of the Lower House, by party grouping, were as follows at the end of March : the Liberal Party 110, the Progressive Party 100, People's Association 32, Yamaguchi Group 5, Kishu Group 4, unaffiliated 49.

Itagaki Joins Ito After the 9th session, Itagaki of the Liberal Party entered the Ito Cabinet and took the post of Home Minister. The Ito Cabinet was in power three full years and managed numerous political matters of importance but it collapsed in August, 1896, mainly because of the difficulty of making the Budget meet the post-war financial need. The Matsukata Cabinet which came next was a coalition of Matsukata's Satsuma clan and Okuma's Progressive Party, for these two characters were most fitted to manage the financial difficulty of the country. This cabinet took a very progressive policy in removing long existing political evils and financial defects and its activity was welcomed with much expectation. But the Liberal Party, now in opposition, was ready to make attacks against the Cabinet which contained Okuma, their political enemy. The tenth session which was convoked on Dec. 25, 1896, passed off with little trouble for

the Government, although the Liberal Party attacked it on the score of its foreign diplomacy. It is to the credit of the Matsukata Cabinet that it established the gold standard of national currency.

Exit Okuma Okuma, Foreign Minister, resigned in November, 1897, and the relation between the Cabinet and his party was severed. Matsukata now endeavoured to get the support of the Liberal Party but in vain, and the Cabinet faced the 11th session of the Diet without any assistance from political parties. A non-confidence resolution was proposed by 38 members in the session and seconded by 150. On Dec. 25, 1897, the Lower House was suddenly dissolved, but the Cabinet itself resigned in miserable defeat. Itō was ordered to form a cabinet for the third time, and it was again a transcendental one. The 12th session was begun on May 14, 1898. The Government proposed an increase of taxes on land, saké, and incomes, but was defeated by an absolute majority of 247, and the House was dissolved in revenge. This action of the Government, however, greatly stimulated the development of anti-governmental parties and brought about an extraordinary political phenomenon. It was but a faint herald of the dawn of party government, but it gave a real shock for the first time to the foundations of the clan and bureaucratic forces in Japanese politics. Both the Liberals and the Progressives had had a very hard time in the past to wage war against clan statesmen and bureaucracy, but in most cases they had been treated by the latter like mere instruments for accomplishing their own purposes. Now they came to their senses and saw that their real foes were these same clansmen and bureaucrats who monopolized the government, and that their first aim must be the destruction of them. On June 21, 1898, both parties held final meetings simultaneously and dissolved themselves, and on the 22nd they all met at the Shintomi Theatre, Tsukiji, Tokyo, and amalgamated themselves into a new party, the Kenseikai, or Constitutional Party, to put an end to bureaucratic government and to establish a party government.

The Kenseikai and Itō All the elder statesmen, clan and bureaucratic bodies were alarmed in the extreme by this organization of the Constitutional Party. A meeting was called before the Emperor on the 24th and a hot discussion on counter measures against the power of the party was continued for several hours. Itō asserted that there were but three ways for him to meet the situation: either to form a governmental party himself to carry on the government, or to resign first and form a party to support the Government from outside, or lastly to surrender altogether before the Constitutional Party and let them organize a cabinet with Okuma and Itagaki at their head. Yamagata of the Nagato or Choshu clan was firmly opposed to this proposal and declared, "It is against the Japanese Constitution to establish a cabinet upon a party foundation; let us quit the Constitution for the time being if necessary to meet the critical moment!" On June 27, 1898, however, Okuma and Itagaki were finally called to the Imperial Court and ordered to form a cabinet. A coalition cabinet was thus formed on the 30th of that month, all the posts except those of Navy and War Ministers being filled by party men. Its composition was as follows:

Premier and Minister of Foreign Affairs, Okuma (Progressive); Home Minister, Itagaki (Liberal); Minister of Finance, Matsuda (Liberal); Minister of Justice, Daito (Progressive); Minister of Education, Ozaki (Progressive); Minister of Communications, Hayashi (Liberal); Minister of Agriculture and Commerce, Oishi (Progressive); Minister of War, Katsura (Choshu clan); and Minister of the Navy, Saigo (Satsuma clan).

It was, however, a combination of antagonistic forces for convenience' sake, and the partisans soon began to quarrel among themselves, so that the Constitutional Party, which tried to advance too quickly, soon split up again into the former Liberal and Progressive Parties, largely by the tactics of Toru Hoshi, who played an influential part in politics as a member of the Liberal Party, and was assassinated later in a room of the Tokyo City Hall. So the first party cabinet was compelled to dissolve without meeting a session of the Diet on Oct. 31, 1898, within four months of its formation.

Yamagata Returns Now came the turn of bureaucracy again, under Yamagata of the Nagato or Choshu clan (these two Japanese words indicate the same Nagato province at the south-western end of the Main Island), in November, 1898. Yamagata had had bitter experience with political parties and this time he succeeded in getting the support of the Liberal Party (which called itself Kenseitō as yet) and handled the 13th session of the Diet as he wished, many important revisions of the national laws being made,

and the military preparations being enlarged by raising the taxes on many important items.

It was during the life of this cabinet that the new treaties which had been concluded with foreign nations at the time of the former Ito Cabinet were put into force, and Japan came to stand on an equal footing with the other civilized countries of the world politically and diplomatically. This was on July 17, 1899. The Yamagata Cabinet accomplished great feats in the administration of complicated and extensive political affairs after the Sino-Japanese War, and laid the foundations for the future development of Japan. But as a representative of the old bureaucracy, a survivor of the discarded clan officials, he left many bureaucratic traces in the law and the governmental system by establishing the rule that the posts of War and Navy Ministers can be held only by officers on the active list, and by enlarging the power of the Privy Council, which hindered the healthy development of political parties in later days.

Satisfied with his own performance in the enlargement of military preparations, completion of laws and institutions in general, revision of the election law, improvement of local governments, and advancement in the educational system and institutions, Yamagata tendered his resignation to the Throne in September, 1900.

Ito Forms the Seiyukai A little before that, Ito returned from his tour of China and wanted to organize a powerful political party himself, and the Liberal Party was anxious to get him to revive its power after its separation from the Yamagata Cabinet. The party wished to put Ito at its head, while Ito wanted to organize a party purely of his own without the help of any existing party. But the general trend of political affairs at this time finally compelled these two to become united into one, and the Liberal Party was renewed by Ito, assuming a new name, Rikken Seiyukai, or Constitutional Party, on Sept. 15, 1900. On Oct. 9, 1900, Ito formed a cabinet for the fourth time, and it was welcomed by the party men and the people at large, but the reactionary movement of the House of Peers shortened its life, and Ito never again had an opportunity for organizing a cabinet, although he had much to do yet for national politics, especially in the field of Korean affairs.

The Katsura Cabinet On June 2, 1901, General Katsura formed his cabinet upon the basis of bureaucracy again. Katsura and the members of his Cabinet were rather young compared with those of the preceding cabinets, and the Elder Statesmen were anxious about their ability, but Katsura was quick to see the unrest in the Seiyukai and immediately took steps to control it for the convenience of the Government. In this he succeeded fairly well, and the 16th session of the Diet passed off in peace, at the beginning of the year 1902, winning, at the same time, the general applause of the people on the conclusion of the Anglo-Japanese Alliance on Feb. 12, 1902. The 7th general election was held on Aug. 10, 1902, in which the number of the Lower House members was enlarged from 300 to 376, and as the result the Seiyukai gained 189 seats, the Kensei-honto (Progressive Party) 104, the Empire Party 18, the San-shi Club 7, and independents 58. As is always the case with a bureaucratic cabinet, even this clever and skilled tactician met with strong opposition from the Elder Statesmen and the two great parties over the problem of raising funds for naval expansion by increasing the land tax, and the 17th session was dissolved because of a direct collision between the Lower House and the Katsura Cabinet. It did not end in the victory of the Government, but Katsura again made a painstaking effort to utilize parties, and found a way out in the 18th session by changing his policy from raising the land tax to floating a public loan to obtain the necessary means for the proposed naval extension.

Saionji Succeeds Ito The Katsura Cabinet had been in power over two years already and the general atmosphere suggested a change when the threatening state of affairs in Manchuria was further complicated by the aggressive policy of the Russian Government. Katsura was ordered to stay at his post although he tendered his resignation, largely because of the pressure of Ito, who was a Genro (see Chapter IV, Government, for the meaning of "Genro") and the head of the Seiyukai at the same time. According to the advice of Yamagata and Matsukata, who were also Genro, Ito and Saionji exchanged positions and President Ito of the Seiyukai was appointed President of the Privy Council; while Saionji, President of the Council, succeeded Ito as that of the Seiyukai.

Saionji is the only remaining Genro at present. He was a progressive statesman, and it was his earnest desire to see a pure party cabinet come into existence. He had been many times suggested as Premier but had always re-

fused, as he considered it unreasonable and bureaucratic to form a cabinet with no backing in the House of Representatives, so he gladly accepted this proposal of the Seiyukai and made great efforts for the revival of the party, which had shrunk to 120 from its absolute majority of 193 at the beginning of the 18th session largely because of long inner disturbances.

At the same time, the rival party Kensei-honto was also experiencing the same kind of internal troubles because of Katsura's despotic policy for reducing the power of all parties, and it was natural that the two parties should unite to impeach the Katsura Cabinet. The 19th session was convoked at the end of 1903, with Kono as President of the House of Representatives and Iyesato Tokugawa, that of the House of Peers. But this session was dissolved immediately after its opening meeting because of the resolution impeaching the Government.

War with Russia War was declared against Russia on Feb. 10, 1904. The emergency session of the Diet was convoked on March 18 and the regular one on Dec. 28 of the same year, and in the latter the Diet unanimously passed a budget of ordinary expenses ¥110,000,000 and war disbursement ¥780,000,000. The famous victories at Port Arthur, Mukden and the Japan Sea finally brought peace, and by the mediation of President Roosevelt the peace treaty was concluded between Japan and Russia on Sept. 5, 1905. On the same day riots broke out in Tokyo and other big cities because of the general dissatisfaction with the terms of the peace treaty, and Tokyo was put under martial law. Ito, President of the Privy Council, went to Korea by Imperial Order in November and that country was made a protectorate of Japan, Ito becoming the first Resident-General, while Komura, who returned from Portsmouth, immediately went to Peking and concluded treaties with China on Japanese rights and privileges to settle the problems arising from the peace treaty.

The Saionji Cabinet The Katsura Cabinet remained in power as long as 4 years and 7 months and accomplished several important enterprises, but taking the responsibility for the riots and for a disturbance in the Tokyo Imperial University, which also occurred in connection with the conclusion of the Peace Treaty, resigned in January, 1906, and Saionji was ordered to form a cabinet; but failed to organize one of pure party-government because of the great power of bureaucracy behind the national politics. The most important measure in the 22nd session of the Diet was that for the State ownership of all railways. With great difficulty it was passed with an amendment by the House of Peers. The peace-loving Saionji strove for the civilization of Manchuria, transforming the military rule into civil administration. It was an expression of this policy that the South Manchuria Railway Company was established in this year.

While the Seiyukai became prosperous as the government party, the Kensei-honto had a hard time and Okuma finally left it on Jan. 20, 1907.

The Saionji Cabinet continued for two-and-half years fighting against the forces of bureaucracy, and the Seiyukai obtained an absolute majority of 190 at the 10th election, May, 1908. But Saionji left his position a little after the election partly because of his illness and partly owing to the stubborn pressure of the bureaucrats, who were specially critical of his liberal policy toward the socialists, who had gradually increased in number since the Sino-Japanese War.

The Second Katsura Cabinet The second Katsura Cabinet which was formed on July 14, 1908, was of course bureaucratic. One notable event of the 10th election was the appearance of representatives of business men in the Lower House, prophetic of the rise of the business class who now rode on the universal tide of capitalism. Katsura saw the change of the times and allied himself with business men to realize his policy for a readjustment of the taxation system and consolidation of the public loan. But the Seiyukai having so large a number of seats as 193 in the Lower House at the 25th session, Katsura could do nothing without their agreement. With his usual tactics he came to a full understanding with them and the 25th and 26th sessions passed off very quietly.

The Kensei-honto kept only 65 seats in the Lower House and internal discord caused it to dwindle further. But stimulated by the increase of the Seiyukai, it united with other forces on March 13, 1910, and merged itself into a new party named the Rikken Kokuminto or Constitutional Nationalist Party. This new party had 92 members in the Lower House and was led by Inukai and Oishi.

During the three years' régime of the second Katsura Cabinet the outstanding events were the first general arrest of socialists and the annexation of Korea. The latter was hastened by the assassination of Ito by a Korean at Harbin

station on Oct. 26, 1909. Terauchi, Minister of War, was appointed to the additional post of Resident-General of Korea in May, 1910, and on Aug. 29 of the same year Korea was at last annexed to Japan.

Army Division Increase Question Saionji became Premier for the second time on Aug. 30 1911. His Cabinet was supported by 214 Seiyukai members in the House of Representatives and this time he could form it without much regard for bureaucracy, although he could not yet wholly get rid of its interference, both public and secret. While he was in power, the Emperor Meiji passed away amid the sorrow and lamentation of the people on July 30, 1912, and the Emperor Taisho came to the Throne. After this national event, bureaucratic forces began to work again and caused General Uyehara, Minister of War, to propose an increase of two Army divisions. Uyehara resigned his position independently because of the rejection of his proposal by he Cabinet. Saionji asked Yamagata to recommend his successor, but this Elder Statesman, who had himself established the military minister system for military and naval departments, and was the leader of the bureaucratic and military forces, rejected Saionji's request, and the Cabinet collapsed at once.

But this plot of the dark forces stirred up the party men to the extreme, and loud cries arose for the destruction of bureaucracy and protection of constitutional government, when Katsura appeared for the third time to form his bureaucratic government. Katsura tried every means to still the general antagonism, but in vain. Inukai, Ohoka and other influential party men led the national movement with the backing of public opinion for putting an end to bureaucracy, and the situation became so critical that to push Katsura's policy further meant something like the outbreak of a civil war, consequently he was compelled to resign after but 53 days. This was an epoch-making event in the political history of Japan and real party-government was now at hand although Katsura was succeeded by Yamamoto, who was one of the foremost navy men at that time.

Yamamoto to Okuma The defeated Katsura sadly realized the power of parties and organized the Rikken Doshikai or Constitutional Comrades Party after his resignation, and the 31st session of the Diet was held at the beginning of 1914, with the classification of members of the Lower House as follows :

Seiyukai	203	Chuseikai	37
Doshikai	93	Independents	7
Kokuminto	40		

The Yamamoto Cabinet was supported by the Seiyukai and had no doubt about passing the Navy Increase Bill. But the unexpected exposure of bribery in high naval circles, the so-called "Commission Scandal", caused the overthrow of the Government at the end of March, 1914. The council of Genro had difficulty in choosing the person to be recommended for the Premiership and after considering several candidates Okuma was finally ordered to form a cabinet.

About 15 years had passed since Okuma left his party the Kenseito, and when he once more took the position of Premier the public welcomed him with sympathy and he answered to the public goodwill by reducing the power of navy men in politics with the support of the Doshikai which contained many former members of the old Kenseito. It was during his premiership that Japan entered the World War on Aug. 23, 1914.

It was the Seiyukai's turn to tread the thorny path of opposition. President Saionji had left it in 1913, and Hara had been its practical leader since then, and the number of members was declining when the question of election of the President arose. Opinions were divided and many a member wanted to call Saionji back, but he was too unselfish to accept the proposal and earnestly recommended Hara to be the new President of the Seiyukai.

The new President Hara was a plain untitled man, but a man of rare ability, and the Seiyukai renewed its strength under his leadership.

Okuma's Sweep The 35th session was dissolved because of the rejection of the Army Division Increase Bill by the Seiyukai and the Nationalist Party. The general election of March, 1914, ended in victory for the pro-government parties, largely because of the aggressive interference of Oura, the Home Minister, the backing of a business clan and the sympathetic campaign conducted by the faculty and students of Waseda University, which had been founded by Okuma. The Doshikai gained 150 seats in the House of Representatives against 104 of the Seiyukai, which was reduced to half its former number. But the latter stubbornly attacked the Government on Oura's interference with the election and other matters, and compelled Oura to leave the Cabinet by bringing a public suit against him. O-

kuma once tendered his resignation to the Throne in relation to this matter, but was asked to stay at his post and reorganize the Cabinet on July 30, 1915, thereby prolonging its existence for three months.

The Rice Riots At this time the Kenseikai was organized under Takaaki (Komei) Kato by the combination of the Doshikai Party, the Koyu Club, and the Chuseikai on Oct. 10, 1915, in the expectation of organizing the next cabinet. But Masataké (Seiki) Terauchi was recommended instead, and he again formed a transcendental government, a sort of off-shoot of the old Choshu clan; he soon met with a vote of non-confidence by the Lower House, and the 38th session was instantly dissolved. After the general election the Terauchi Cabinet got the support of the Seiyukai and the Nationalist Party and managed to get through the 39th and 40th sessions without damage to the Government. But the general cost of living shot up to unreasonable heights owing to the vast increase of capitalistic business during the World War, and the artificial rise in the price of rice caused nationwide rice riots in August, 1918, which shook the foundation of the Cabinet, so that Terauchi was forced to resign on Sept. 21.

Formation of Party Government

Among the five Genro, Inouyé and Oyama, who had been the commander of armies at the time of the Russo-Japanese War, had died, and Yamagata, Matsukata and Saionji were the only ones now left, and they chose Saionji, the youngest, to be the next Premier. The Emperor requested Saionji to form a cabinet, but he was clever enough to see the progress of democracy among the people and courteously declined the Imperial appointment and recommended Hara instead. Yamagata finally yielded and gave his consent to this decision, but asked Hara to form a coalition cabinet of the Seiyukai and the bureaucrats.

The First Party Cabinet Hara rejected his suggestion and for the first time in Japanese party history a cabinet was organized by party men only, except for two or three ministers who were mostly pro-Seiyukai.

As was mentioned above, the political parties of Japan were originated by the statesmen of the samurai class and had much of the bureaucratic element in themselves, and the clan statesmen had the confidence of the Imperial Court and wielded real power in general politics as a matter of fact, regardless of the public opinion represented and expressed by the political parties or through the press. Up to the first half of the Taisho Era the political parties could not make much progress as independent bodies, and were almost always made use of by the clan statesmen or military leaders, not having enough power of their own to form a party cabinet, but allowing themselves to become tools of bureaucracy even when the head of the party himself organized a cabinet. But the remarkable development of capitalism and the rapid progress of democratic thought among the people at the time of the World War and afterwards caused a decline in the power of the bureaucrats. The coming of Hara, President of the Seiyukai, who was a commoner, into power gave almost the last blow to the old bureaucracy, which gradually faded away by the beginning of the Showa Era.

Hara's Policy The policy of the Hara Cabinet was, in outline, the completion of national defence, the improvement of the educational system, the promotion of all business and the adjustment of traffic organs. The establishment of the jury system, the improvement and enlargement of the higher educational organs, and the revision of the Election Law must be counted to the credit of this Cabinet. Hara showed his democratic spirit in revising the military governmental system of Taiwan and Chosen so that a civil official might become the Governor-General of a colony. The 41st session passed without much disturbance. But the Seiyukai had not yet an absolute majority and when the anti-cabinet parties proposed the bill of universal suffrage at the following session, Hara took advantage of it and dissolved the Lower House to get his much-wanted majority. The result of the general election held on May 10, 1920, was as follows:

Seiyukai	279	Kokuminto	29
Kenseikai	108	Neutrals	48

Hara was able to do as he pleased, for he again had the support of the great Seiyukai, and pushing aside all opposition from his political foes he was advancing brilliantly toward the completion of the said policies when he fell a victim to the dagger of a young assassin at Tokyo Station on Nov. 4, 1921. He was succeeded as President of the Seiyukai by Korekiyo Takahashi, who organized his Cabinet after the incident, but it was short-lived and was compelled to resign within 6 months. The Seiyukai had troubles among them-

selves, while the other great party, the Kenseikai, was rather weak so that bureaucratic cabinets were organized one after another for about three years. When Count Kiyoura formed his bureaucratic Cabinet in Jan., 1924, the Seiyukai was divided into two on the question of supporting or not supporting the new cabinet, and the majority of its member who were pro-cabinet seceded from the Seiyukai and organized the Seiyuhonto under the leadership of Yamamoto, Motoda, Nakahashi and Tokonami.

The General Election of 1924 The Kiyoura Cabinet dissolved the 48th session of the Imperial Diet and at the general election which was held in May, 1924, the opposition parties, namely, the Kenseikai and the Kakushin Club stood up against the Government rallying their forces in defence of parliamentarism, and under Premier Kato who was the head of the then largest party, the Kenseikai, a coalition cabinet of the three parties was realized. This was the death-blow to the bureaucracy of Japan; the clan chieftains and bureaucrats entirely lost their power as a political class and the bourgeois parties completely took their place, the final blow being the passing of the Universal Suffrage Law at the 50th session of the Diet.

Universal Suffrage

The 50th session of the Diet was convoked on Dec. 25, 1924, and it became a memorable one by passing the Universal Suffrage Bill. The demand for universal suffrage had a long history, but it seemed impossible to realize it as long as bureaucracy had its iron grip on all such questions. But the time had come for the mass of the people to voice their convictions on politics with freedom. This time the Government itself drafted the bill and it was first subjected to the examination of the Privy Council. The conservative Council advised revisions and the Government sent to the House of Representatives which passed the original bill of the Government and sent it to the House of Peers. The latter House could not directly oppose it, but passed it with amendments on weighty points pretty nearly to the same degree as those of the Privy Council. The consultations between the two Houses were repeated, and the Universal Suffrage Bill was at last passed, to come into force on May 5, 1925. The antagonistic attitude of the House of Peers toward universal suffrage resulted in a revision of the House of Peers Law to the effect that the number of Kazoku or noblemen among its members was decreased.

Side by side with the accession of the bourgeois parties to power, there broke out many political movements of radicals and proletarians in the form of political parties (see the following articles on these parties). Radicals among the existing parties organized their own party, the Kakushin Club, memtioned above, in Nov., 1922, by the combination of the group of Ozaki, Shimada and their comrades who had left the Kenseikai, with the Nationalist Party which was led by Inukai, and one other group. But in May, 1925, it broke up, and Inukai and his colleagues joined the Seiyukai. Later the Kakushin Club dwindled into a very small party, although it played an important part in the doings of the Imperial Diet.

There was another movement organized by business men under the leadership of Sanji Muto in April, 1923, but this party was unable to get much sympathy from the general public.

Tanaka to Hamaguchi Viscount Takahashi resigned the Presidency of the Seiyukai and General Baron Tanaka was called to succeed him in April, 1925. This change broke up the unity of the Coalition Cabinet of the three parties mentioned above, and it was forced to give up office. It was followed by a Kenseikai Cabinet under Premier Kato in August of the same year. The Premier fell ill and died, and Wakatsuki, the new President of the Kenseikai was ordered to form a cabinet in January, 1926. Tokonami, who led the Seiyu-honto, took a very ambiguous attitude toward the other parties, but finally joined Wakatsuki and the two parties became one on June 1, 1927, assuming the new name of Minseito. Of this new party Hamaguchi became President while Wakatsuki and Tokonami were made advisers.

On the other hand, the Seiyukai began to rally its power gradually under the leadrship of Tanaka, inviting Inukai and his comrades and a part of the Seiyu-honto to join them and after the collapse of the Wakatsuki Cabinet in April, 1927, the Tanaka Cabinet came into being. But unsatisfied with the result of the first general election by universal suffrage in 1928, they tried to collect as many members as possible from among the neutrals and the Minseito. At the same time, Tokonami, who had lost hope of becoming the head of the new Minseito Party, seceded from it in August of the same year, and afterward, when the Hamaguchi Cabinet was formed in July, 1929, he went back to his old home, the Seiyukai.

In July, 1929, Hamaguchi organized the Minseito Cabinet and his party won an absolute majority in the House of Representatives as the result of the second universal suffrage election in the following year. But on Nov. 14, 1930, Hamaguchi was shot at Tokyo Station, and although he lived another year his wound finally proved fatal and hard times again visited the Minseito. Wakatsuki became its President again and formed a Cabinet in April, 1931.

With retrenchment as its warcry, the Wakatsuki Cabinet carried out a general reduction of the salaries of officials and tried to make readjustments in the administrative, financial and tax systems, but without success. The Manchurian Incident of Sept. 18, 1931, occurred near Mukden. The Manchurian problem and the relations between Japan and China had been becoming more acute year by year and the Manchurian railway affair called the attention of the world to the impending collision of the two nations. The incident proved a turning-point in the drift of national politics which now headed in a very different direction not only in diplomacy, but also in many home affairs. The Army and Navy took the lead over the Manchurian problem, no doubt, but they could do so only because the people at large sympathized with and supported them. The budget for the fiscal year 1931–1932 could not be made out without floating a national loan or increasing the taxes, which would of course be most unwelcome to the people. Rowdiness and riotous struggles in the House of Representatives at the 59th session which was held at the beginning of 1931, greatly lowered the standing of the House in the eyes of the people and the inability of the Imperial Diet to take any decided course of action after the Manchurian Incident brought parliamentary government into discredit with the nation, and this state of affairs much affected the stability of the Wakatsuki Cabinet. In October, 1931, Wakatsuki expressed his wish to resign, and there arose discussions on the wisdom of forming a new cabinet which might combine the forces of the Minseito and Seiyukai. But opinion was divided, and in the end the Wakatsuki Cabinet was forced to resign on December 11.

Inukai and the Embargo Inukai, who became President of the Seiyukai in 1929 after the death of Tanaka, publicly announced his idea of reimposing the gold embargo at the general meeting of his party on November 10, and the resignation of the Wakatsuki Cabinet, which came immediately after it, therefore, suggested the possibility of something serious taking place with the choice of the succeeding government. Saionji, the Genro, laid the nomination of Inukai to the Premiership before the Throne, and on December 13, 1931, the single Seiyukai Cabinet came into power.

The Inukai Cabinet proclaimed the reimposition of the gold ban on the day following its installation, as had been expected. This Cabinet had a minority in the Lower House, so they intended to dissolve the Diet at the coming session when suitable occasion arose, to seek for an expression of national confidence at the general election, and hastened to make preparations for it. Hardly had a week passed before it changed most of the local governors to those who were favourable to the Seiyukai, because these officials had direct influence over the general election. The new Cabinet assumed the post but two weeks before the 60th session of the Diet and had no time for planning a budget of its own, it had, therefore, to borrow that of the Wakatsuki Cabinet. It was, nevertheless, presented to the Diet with some changes or revisions, but it failed to be passed because of the dissolution on January 21, 1932.

Previous to this, an unexpected event endangered the life of the Cabinet. It was nothing less than a bomb thrown at the Emperor's procession near the Sakurada Gate of the Palace Grounds and before the headquarters of the Metropolitan Police. The Emperor and an Imperial Prince narrowly escaped injury. This act of "lèse majesté" compelled the cabinet to resign, but the Emperor did not ask them to assume responsibility, and encouraged them to continue in office, and Inukai and other members of the Cabinet pledged their patriotism and loyalty to the Throne, in spite of public opinion which was rather against their holding on to the reins of power.

The Seiyukai's Victory The general election of Feb. 20th was carried out amidst the apparent apathy of the people because their attention was absorbed by the Manchurian problem and the events in Shanghai which seemed to be impelling the nation towards international discord, with war as a final outcome. But the result was that the Seiyukai, the government party, piled up the grand majority of 304 while the Minseito dwindled to 146.

The Seiyukai Cabinet, which had gained the absolute majority in the House of Representatives, was to call an extraordinary session of the Diet in March to decide upon the emergency

military expenses.

The May 15 Affair In the meantime, the new State of Manchoukuo was born, and the activities of international diplomacy helped to solve the complications in Shanghai, warfare there being terminated by mutual agreement. But Japan's international relations became strained and the world's attitude toward Japan became increasingly unfavourable, which reacted badly on the Inukai Government. The financial condition held out little hope for the business world, and the Government was unable to make any positive plans for the present and future of the public welfare. On the other hand, the general social and political unrest, and the discredit brought on parliamentary government helped the rapid growth of national socialistic thought in the minds of the people, and the organization of various Fascist associations among the hot-heads, both young and old. The repeated assassinations disturbed the public mind to the last extreme, and alarming rumours spread from the metropolis to the remotest parts of the Empire. The veteran statesman Inukai, the Premier, was eager to protect parliamentarism by making a thorough improvement of the political parties and realizing an even distribution of political benefits among the people in general instead of a partial accumulation of it in the hands of privileged classes. But the younger elements of the nation were too hasty-tempered to place reliance in his words and idealism, and on the evening of May 15, 1932, a dozen young cadets and officers of the Imperial Army and Navy armed with pistols broke into his official residence at Nagata-cho, Tokyo, and finding him in his Japanese sitting room pointed their weapons at him. "Wait a moment," said Inukai quietly. "Let us talk things over and you will understand my ideas." But without answering a word they fired, and the Premier fell. At the same time another band of young farmers attacked the transformer stations in the suburbs with intent to throw the city into darkness, but they were caught before they could carry it out.

The Saito Cabinet Consequently the Cabinet, having lost its head, immediately tendered its resignation to the Throne. Saionji recommended Viscount Saito to the Throne after a thorough consultation with such experienced statesmen as might well be called vice-Genro. The Saito Cabinet was composed of five bureaucrats, three representatives of the House of Peers, three Seiyukai members, and two Minseito members, so that it was called a "National Cabinet."

At its second extraordinary session in 1932, the Imperial Diet passed the most important resolutions on the relief of the financial hardship of farmers and the recognition of the new state Manchoukuo. The latter was carried out in spite of obstacles, visible or otherwise, and to carry out the former decision a vast amount of money was needed in order to give substantial aid to the hard-stricken farmers, with their debt of ¥4,000,000,000.

The 64th Session of the Diet The 64th session of the Imperial Diet was convened on Dec. 24, 1932, with the following line-up in the Houses:

House of Peers:	
(Number of members, 402, vacancies 4)	
Imperial Princes	18
Kenkyukai	148
Koseikai	69
Dowakai	41
Kōyū Club	40
Kayokai	34
Doseikai	15
Independents	37
House of Representatives:	
(Number of members, 456, vacancies 7)	
Seiyukai	298
Minseito	116
Kokumin-Domei	32
Proletarian Parties, etc.	13

This session closed on March 25, 1933. It was a peaceful or rather monotonous one, and passed the budget of over ¥2,300,000,000 without a single cut, and 51 of the 53 bills proposed by the Government and 7 of the 97 bills proposed by the members of the Diet. Among those passed, there were such important laws as the Farm-Village Debt Readjustment Law, a law for the relief of the people of Tohoku district who had suffered from earthquake and tidal waves, the Child Ill-treatment Prevention Law, the Juvenile Protection Law, and the revision of the Iron-manufacture Promotion Law which meant the union of all the largest iron-manufacturing works.

Political Movement of the Proletariat

There were frequent outbreaks of rice riots in the days of the Tokugawa Shogunate. But the samurai class was above the farmers and artisans, who had neither political power nor military force.

Labour Movement Takes Shape When modern commerce and industry were

introduced to Japan in the Meiji Era and capitalism began to have sway over the working people, labour movements became active as a matter of course.

On the 1st of December, 1897, the Iron Workers' Union was organized in Tokyo with over one thousand members, and this was the first trade union in Japan.

Public Peace Police Law In 1900 the Imperial Diet passed a bill and enacted it into a law. The law was entitled the Public Peace Police Law. It proved to be the death knell to all phases of the labour movement, preventing the working classes from organizing themselves into unions. The law practically prohibited the industrial working classes as well as the tenant farmers from agitating in their own interests and against the employers and land-owners: And later the law was interpreted to mean that all labour movements were a crime.

In 1901, a socialist party was organized which was called the Social Democratic Party, the original members being S. Kotoku, I. Abé, N. Kinoshita, K. Kawakami, K. Nishikawa, and S. Katayama. It was soon suppressed by the authorities and transformed into a non-political organization, namely, the Socialist Association.

Marxism Introduced It was in 1903 that the socialist theory of Marxism was first introduced to the Japanese radicals, and the theory soon attracted large numbers of students. In 1906, the Socialist Party was organized for the second time, and on Feb. 17, 1907, the first anniversary meeting of the party was held in Tokyo. The resolution at the meeting announced the aims of the party as follows : a radical and fundamental change of the existing society, universal suffrage, anti-militarism and anti-religion. Later the socialists began conflicts and were divided over the question of socialist tactics into two groups, i. e. Marxists and direct actionists. Secret activities of radical socialists and stern suppression of the same by the Government developed more and more desperate tactics on both sides, and the Government finally came by a chance to destroy the entire socialist movement in the bud. They instituted the famous anarchist trial in 1911, in which Kotoku and twenty-three others were condemned as traitors, and he with eleven others suffered the death penalty.

Marxist propaganda and leadership of strikes and even anarchists' movement did not cease with the trial and execution of Kotoku and his comrades. One of the most conspicuous events in the annals of their movement was the death of S. Osugi and his colleagues at the hands of the reactionaries in the midst of the Great Earthquake commotion in Tokyo in 1923.

But it must be said that Japanese social movement entered upon a new phase by the stimulus from the Russian Revolution in 1917 and its later development.

The Labour-Farmer Party The suppression of the Nippon Socialist Party in 1907 and the stern policy of the Government against socialist movements made the Japanese proletariat suffer and grope in the dark for the next decade.

In June, 1924, a society was established for the study of politics to prepare for the organization of a proletarian party. And by the proposal of the Japan Farmers' Union the first national proletarian party was organized on Oct. 1, 1925, and it was called the Farmer-Labour Party. But this party met the Government's order of suppression on the very day of its organization because of its communistic elements. Thereupon, the left-wing elements were expelled and the right-wing elements, namely the Japan Federation of Labour, were added, and in March, 1926, the Labour-Farmer Party was formed, with Mr. Motojiro Sugiyama as its president.

Schism in Proletarian Parties The Labour-Farmer Party soon became a nest of quarrelling cliques, and the question of opening the door to communistic elements gave a motive for the secession of the Japan Federation of Labour and the right leaders Iso-o Abé, Toyohiko Kagawa, etc., who established the Social Democratic Party with the Federation as its main element and Abé as its President on December 5, 1926. The new party rejected communism and insisted upon parliamentarism as a pure social-democratic party.

Contemporaneous with the formation of the Social Democrats, the left-wing elements of the Japan Federation of Labour and the right-wing elements of the Japan Farmers' Union organized the Japan Labour-Farmer Party under the leadership of Hisashi Aso on December, 9, 1926, insisting upon the establishment of a right road for the proletarian movement.

The Labour-Farmer Party, which was stripped of half its force by the continuous secession of the right-wing elements, made Ikuo Ohyama its head and opened its doors to the communistic societies. The result was that it was practically led by the Japan Communists and played the part of a legitimate communistic party ; and it was compelled to dissolve on the 10th of

April, 1928, being suppressed by the Tanaka Cabinet after the wholesale arrest of the Japan Communists on the 15th of March of the same year.

The old leaders of the dissolved Labour-Farmer Party organized a preparatory society for the establishment of a new party and endeavoured to realize their plan, but always met with the pressure of the authorities, and finally organized the Proletarian People's Party under the theoretical leadership of Hitoshi Yamakawa.

Their Union In the meantime, the right-wing elements of the Japan Union of Farmers organized the Japan Farmer Party with the idea of establishing a representative Japanese party of farmers under the slogan, "Farmers come to the Party of Farmers," on October 17, 1926, and there arose many small local proletarian societies or parties in different districts.

Such rivalry and disunion among proletarian parties naturally called forth a demand for the unification of fighting lines, and the parties, which kept to the middle way, like the Japan Labour-Farmer Party, the Japan Famer-Labour Party and the General Proletarian Party, which were the three national proletarian parties, and the Proletarian Constitutional Party, the People's Party in the central district and two other local parties were all united into one and organized the Japan Mass Party.

The General Proletarian Party organized an anti-separation union and protested against the leaders of the Japan Mass Party, but they themselves were soon dissolved into the Tokyo Proletarian Party for the Masses and other local proletarian parties.

The leaders of the former Labour-Farmer Party, who had formed a preparatory society for the establishment of a new party just after the dissolution of their party, continued their movement for its reconstruction, but their project was prohibited half-way, and the preparatory society itself was ordered to close. They were thus compelled to organize a labour-farmer union, an illegitimate body, for obtaining political freedom and did not cease to follow a communistic policy. But they were involved in the wholesale raids on the Japan Communists on March 15, 1928, and April 16, 1929, in which the ablest radical leaders were accused of being members of the Communistic Party and were mostly arrested so that their movement came to an end. The leaders who escaped the raid such as Ikuo Ohyama and Hajimé Kawakami organized a Labour-Farmer Party on November 1, 1929. The purpose of their new movement was to proclaim the need of obtaining the right of public activity as a lawful left-wing party by establishing a standing political organization.

While the left and midway parties had been continually combining and re-dissolving, the right-wing party of the proletariat or Social Democratic Party alone developed without a hitch for some time, but in Sept., 1929, the Osaka Union of the Japan Federation of Labour, the main element of the party, separated from the federation and consequently withdrew from the party and established the National Democratic Party on January 15, 1930. But this party was united with the Japan Mass Party on the 20th of July of the same year and formed the National Mass Party.

The N. L. F. Mass Party The movement for the greater union of the proletarian parties was continued and the Society for the Realization of Unity of Proletarian Parties, which was a bloc of those who insisted on the unconditional union among the members of the National Mass Party, the Labour-Farmer Party, organized the National Labour-Farmer Mass Party on the 5th of July, 1931. In this new party there was no head of the central executive committee, but Hisashi Aso, President of the former National Mass Party, was appointed to the chair of the chief secretary, who also served as Acting President. Ikuo Ohyama, President of the former Labour-Farmer Party, retired from all official positions and went abroad. This National Labour-Farmer Mass Party stood between the extreme left and right, but the inner control gradually became loose and Hajimé Kawakami and Kanemitsu Hososeko were expelled along with some other members. These two were arrested as strong sympathizers with the Japan Communists.

Social Mass Party In 1931, the National-Socialist movement suddenly appeared on the surface of the sea of social unrest, and the tide of Fascism began to permeate the proletarian fighting lines; the right-wing of the legitimate proletarian parties turned toward National Socialism. On the other hand, the left-wing was influenced by the Japan Communists, who never ceased their clandestine movements in spite of the constant interference of the authorities, and the power of the proletarian parties was greatly reduced. This state of affairs induced another union, and on the 24th of July, 1931, the Social Mass Party was organized by the union of the Social Democratic Party and the National La-

bour-Farmer Mass Party. This new party elected Iso-o Abé, Chairman of the Central Executive Committee; and Hisashi Aso, Chief Secretary. The platform of the party was as follows:

(1) We will fight for the protection of the lives of the labour, farmer, and general working masses.

(2) We aim at the destruction of capitalism and the emancipation of the proletariat.

And this new party is acting as a social democratic party, rejecting both Communism and Fascism.

Universal Suffrage and Proletariats Since the birth of proletarian political parties with the purpose of sending representatives to the Diet, there had been three general elections. At the third general election, since the institution of universal suffrage, which was held on February 20, 1932, under the Inukai Cabinet in consequence of the dissolution of the Diet at the 60th session in the previous month the proletarian parties made plans for fighting against capitalistic parties, from their past experiences and on the basis of their characteristic principles and policies, and sending out 36 candidates, fought bravely with public speeches as their only weapon. The result was 5 members elected, with the gain of 290,979 votes. To make a comparison with the former elections, the number of successful candidates on the first occasion was 8 or 3 more, and on the second one it was 5 or the same number as at the last, while in the number of votes they lost at the third election 201,242, compared with the first one, and 207,242, compared with the second one. But the number of the candidates was much smaller than in previous elections, so that the number of votes per capita increased to 8,083 from 5,593 of the first and 5,475 of the second election, or every proletarian candidate at the latest election gained about 3,000 more votes than at the previous two general elections.

The National Socialists

Orientation to National Socialism In 1931 the Labour Union established the Japan Labour Club with the purpose of realizing a great union of the right wing. Stimulated by the supremacy of Fascism in Italy and the Fascisti movement of the Nazis in Germany, there appeared a movement for National Socialism among the members of the Social Democratic Party. Besides, after the Manchurian Incident the atmosphere among the Japanese people was very suitable for the growth of nationalism and patriotism, and the national socialistic section of the Party increased their power under the leadership of K. Akamatsu, chief secretary, and R. Hirano.

Their Platform At the same time, National Socialism began to make its mark among the members of the National Labour-Farmer Mass Party, which kept to the middle way, and especially it gained power among the members who belonged to the National Labour Union, the strongest supporter of the party. Some powerful leaders of the National Labour Union moved for the establishment of a National Socialistic Party, but their motion was rejected by the party and they seceded from it in one body. The seceders met with those from the Social Democrats, and, on the 29th of May, they established the Japan National Socialist Party with K. Akamatsu at its head.

The rise of the nationalistic tide, which coaxed the proletariat partisans away, correlatively gave inspiration to the activities of the old nationalists, and their leading principles began to take national socialistic colour in compliance with the change of the social state of affairs.

The Production Party The Great Nippon Production Party, an extreme right-wing party, which had hailed Japanese nationalism but vaguely, showed a sudden activity and absorbed the Nippon Nationalists, the Radical Patriots and other parties of similar nature at the end of 1931. Their aim was the reconstruction of anti-nationalistic institutions, according to the fundamental national spirit of Japan.

The Jimmu-kai On February 11, 1932, the anniversary of the Foundation of the Empire, the Jimmu-kai, a strong nationalists' society, was organized. The central element of the society was the Ko-chi Sha of Dr. Shumei Ohkawa, who had intimate connections with military men, and the new party was also helped by Hiroichiro Ishihara, a business man, Daisaku Komoto, a colonel, and the like. At the general election of 1932, rallying the young members of the Ko-chi Sha, the Great Nippon Production Party and other Nationalistic bodies, they sent out bands on a canvassing tour over the whole country for the propaganda of Nipponism. It is said that they gained over 50,000 new members in a month or so of the campaign. (The Jimmu-kai was dissolved in 1935.)

Super-legal Movements of the Rights In addition to the national commotion arising from the Manchurian Incident, the failure of the crops in the north-eastern districts dealt a heavy blow to the poor villagers groaning under fi-

nancial depression, and the problem of finding some means of relieving the people in the emergency became so acute that no time was to be lost. This nation-wide suffering and anxiety urged the right-wing movement to proceed to extremities, and they passed far beyond the limits of lawful action. In the midst of the election campaign, on February 9, 1932, Junnosuké Inouyé, ex-Minister of Finance, was shot to death by a young man, Konuma, of the Blood Brotherhood League headed by Nissho Inouyé, a priest of the Nichiren sect. On March 5, Takuma Dan, Chairman of the Board of Trustees of the Mitsui Company and one of the ablest contemporary business men, was assassinated by Hishinuma, a member of the same secret association. At 5:30 on the afternoon of the 15th of May, Premier Inukai was killed. This was the so-called "5:15 Affair" as it occurred on the fifteenth of the fifth month, 1932. The after-claps of the event appeared in the secret plots of Dr. Imamaki, adviser to the Jimmu-kai, in the middle of August, and of the Tenko-kai and the Independent Young Men's Association in November, finally at the arrest of Dr. Shumei Ohkawa, head of the Jimmu-kai and the Far Eastern Economic Research Bureau.

Later investigations showed that those directly connected with the affair were 10 young Navy officers, 11 students of the Military College and 21 farmers and scholars. After the arrest of members of the Blood Brotherhood League formed by Nissho Inouyé, who entertained a plan to kill representative men one by one, his comrades undertook the continuation of the work. Lieutenant Hitoshi Fujii, a leader, had died in the battle at Shanghai on February 5, 1932, but had left a strong influence among his friends. Second lieutenants Kiyoshi Koga and Yoshio Nakamura, who belonged to the Kasumigaura airship corps, began to form bands with a view to bringing about a new government with the military as the central force, in plunging Tokyo into a state of siege by their sudden attack upon the capital. In the plot they were soon united by Kozaburo Tachibana, head of the Aikyo Juku (Village Loving School) of Ibaraki prefecture and a leader of the agricultural movement. Dr. Shumei Ohkawa, Hidezo Toyama, head of the Tenko-kai, and Kenichiro Homma also came to their help and, moreover, supplied them with necessary funds and arms. At 5:30 p. m. May 15, 1932, four bands composed of military officers and cadets armed with pistols, attacked several points of the capital and killed Inukai and others as mentioned above, while another band of farmers attempted to break into the transformer stations to throw the capital into darkness. Most of them were arrested on the day and the sentences for all of them (except one farmer who died in the meantime) were passed by February, 1934, the heaviest penalty given being imprisonment for life for Kozaburo Tachibana, but none of them were sentenced to death.

The Farmer-Central Movement As a result of the May 15 Affair the Saito Cabinet was organized. The new Government called the second Emergency Session of the Diet in June and the third session was held in August, and the Diet passed the "Resolution for the Relief of the Economic Depression," for the purpose of relieving the impoverished villages of the farmers. The motive power of this action of the Imperial Diet was the Farmer-Central Movement of the Self-governing Farmers' Council and its sympathizers which became an incentive to the petition movement for rescue of the peasant villages from the ruin which threatened them.

The Self-governing Farmers' Council was led by the farmer-central idea of Mr. N. Gondo, and rejecting both the strikes of farmers and national socialism, it endeavoured to realize a farmer-central government with the harmonious co-operation of the ruling class and the people, and unifying the landowners, the landed farmers and the tenant farmers. The Council was organized by the association of the Nagano-Prefecture Japan Farmers' Association, the Emancipation Society, Mr. K. Tachibana, the head of the Aikyo Juku (Village Loving School), and Mr. R. Nagano of the Japan Village Government Union, which had been established in 1931, with him as its leader.

Communist Movements

The Nippon Communist Society was apparently broken up by the wholesale raids of 1914 and 1915, and the members who then escaped arrest hid themselves in the depths of society, and secretly continued their endeavours to reconstruct it. But the leaders of the new society, which they organized in 1927, were all arrested on April 16, 1928, and the remaining members had a difficult time to accomplish the work under the constant oppression of the authorities, and the society showed its activity before the public at the general election of 1931. It was for the third time scattered by the iron hand of the Gov-

ernment after February, 1931, but it have continued its secret activities by order of the International Headquarters with the sub-divisions of the communists. Its slogan of 1932 was "the reconstruction and enlargement of the Society and its popularization." It aims at and works for the abolition of parliamentary government, the destruction or revision of capitalistic control of industry and reactionary labour laws, the relief of international unemployment, the improvement of all labour managements, the betterment of the conditions and privileges of women, the abolition or lightening of the penalties imposed upon communists, and its propaganda among the factory workers and the people at large.

The Kopf[1] This federation of proletarian artists was organized in November, 1932, and it works for the education of labourers, farmers and other workers in politics and economy, the improvement of the labourers' living, the establishment of proletarian civilization on Lenin-Marxism, the freedom of speech, publication, exhibition, drama, movies and broadcasting, the creation of cultural institutions for labourers and all workers.

Political Affairs in 1933–34

The 64th session of the Diet came to an end on March 25, after passing the 1933–34 budget, of over ¥2,300,000,000 and 58 bills. Among the latter there were such important laws as the Farm-Village Debt Readjustment Law, the Relief Law for Tohoku district, the Child Ill-treatment Prevention Law, the Juvenile Protection Law, the Rice Control Law and the Iron-Manufacture Promotion Law.

On March 27 Japan served notice to withdraw from the League of Nations to which she had made valuable contributions for over 12 years (See Chapter VI).

The year also withnessed a decided decline of the left-wing socialistic parties, especially the communists, many of the leaders leaving camp and ceasing activities

The Government met unusaual difficulties in making out the Budget for 1934–35, because of military expenses and the farmer relief funds, and was compelled to face the 65th session of the Diet with a very unsatisfactory Budget of over ¥2,120,000,000.

The happiest event of the year was the birth of the Crown Prince Akihito on December 23.

(For international events of the year consult the end of Chapter VI.)

65th Session On December 23, 1933, the 65th Session of the Imperial Diet was convened and after the customary recess for the New Year's holiday, resumed its work on January 23, 1934.

Finance Miniter Takahashi presented the 1934–35 budget, which amounted to ¥2,112,000,000 (¥8,000,000 less than the previous year), of which ¥1,248,000,000 was to be met with by ordinary revenue, ¥19,000,000 to be covered by the balance of the previous year, and ¥785,000,000 to be obtained from loans. Of the ¥785,000,000 loan, ¥606,000,000 was for covering the deficit. (See Chapter VIII.)

Discussions on the 1934–35 Budget continued from January 26 to February 4, and on February 13 the House of Representatives passed it by unanimous vote without amendments. The discussion mainly turned upon the issuance of Government loans, the military expenses, the need of establishing a definite financial plan for the future, and the increase of taxes. As to the last point, Takahashi disclosed his decision to increase taxes at a most convenient time.

The problems of farmers, smaller merchants and industrials were discussed by many members, who urged the Government to take more definite and positive measures for the control of rice (the 1934 crop reaching the excessive amount of 78,000,000 koku), and the silk business.

Dissatisfaction with the outcome of the Simla Conference was expressed and acquiesced in by the Foreign Minister, but, as a whole, his answer gained confidence in the Government's policy.

On March 14 the Budget passed the House of Peers without amendment. But the amount voted for the relief of farmers was meager and by the request of the Diet the Government presented an additional budget for the purpose amounting to ¥20,990,000 for Japan proper and ¥8,200,000 for Korea, which passed the Diet as a matter of course.

Difficulties arose on the Revision of the Election Law because of the amendments made by the House of Representatives, and after a joint session of the two Houses, it was finally passed with important amendments on March 25.

On March 26 the 65th Session of the Diet adjourned, passing the budget for the fiscal year 1934–35 and 50 laws.

Political Affairs in 1934–35

The Privy Council President Changes On May 2, 1934, Prince Saionji, the Genro, entered his Tokyo residence at Surugadai and the political world grew tense with expectancy and the general public expected something important to take place. The Seiyukai and the Minseito were reconciled as preparation for regaining their long-lost power in anticipation of the resignation of the Saito Cabinet.

But the irony was that the nomination of Baron Kitokuro Ikki to the Presidency of the Privy Council took place on the following day, which reinforced the Cabinet rather than weakened it.

The Saito Cabinet Resigns The detention on May 19 of Hideo Kuroda, the Vice-Minister of Finance, on charges connected with the Teikoku Rayon scandal was sufficient reason for the resignation of the Saito Cabinet. This was a matter of political common sense. But on the other hand, the charge partook somewhat of a political nature and it was considered unwise to tender resignation hurriedly. So the resignation was delayed, but the development of the case and the outbreak of other cases to the disadvantage of the Cabinet finally compelled Premier Saito to tender resignation to the Emperor on July 3, 1934. The new cabinet with Admiral Keisuké Okada as Premier came to power on the 8th of the same month.

The Okada Cabinet The Okada Cabinet was virtually the continuation of the Saito Cabinet. It was a non-party cabinet, as was the Saito Cabinet, and had likewise the tiding-over of the crisis years as its objective. When forming the cabinet the first plan was to exclude party men, but later this restriction was modified, due to difficulties which such cabinet would probably meet. Thus it was finally composed of seven men out of officialdom and five party men (2 from the Minseito and 3 from the Seiyukai). The Seiyukai had turned down Okada's invitation to join his cabinet and when three of its members became ministers in the new Cabinet, it forthwith announced their expulsion from the Seiyukai.

Farm-village Problem By the end of October, 1934, the National Treasury disbursed approximately ¥300,000,000 for the relief of farm-villages. This means that the yearly disbursement was approximately ¥100,000,000, and, when left alone, it would necessitate increased taxation. The relief of farm-villages thus assumed the position of an important factor in national finance.

The impending quetions which had to be solved were how to dispose of the stock of rice and how to restrict overproduction so as to increase farmers' income by higher prices. The solution of the questions was complicated by the fact that over a half of the farmers could hardly afford to consume rice which they themselves raised because of the high price. This resulted in a shortage of rice in the farm-villages.

In order to cope with the situation, though partially, it was decided at the 65th session of the Diet to increase the fund for purchasing surplus rice, and also the Government undertook to find out more effective means to meet the situation. Under the Okada Cabinet a committee was appointed for the study of the problem from among the members of both Houses and also private persons. The Seiyukai and Minseito were also united in organizing a committee for drafting a more effective law dealing with the problems.

Extraordinary Session and After The Okada Cabinet at first took a lukewarm attitude towards convening an extraordinary session of the Diet in spite of the resolution passed at the last session under the Saito administration and the strong demand on the part of the Seiyukai, which was essentially a farm party. But an unexpected event compelled the Government to give heed to the above demand. A damage greatest since 1923 was sustained in the Kansai district and Central Japan by the typhoon of September 21, 1934. The year 1934 was also a very unfavourable one for farmers. An untimely cold weather checked the growth of rice plants in the north-eastern district and Hokkaido, precipitation was scanty in Shikoku and Kyushu islands, and the south-western half of the country was visited by the typhoon just mentioned. An immediate relief of farmers thus became a national necessity, and on September 28 the Government decided to convene an extraordinary session by December.

The 66th Session An extraordinary session of the Diet was, therefore, convened on November 27 and closed on December 10. The main objective of the session was the relief of the sufferers in a variety of natural calamities in the year. The budget for the relief was as follows :

Year of Disbursement	Amount (in ¥1,000)
1934–5	70,664
1935–6	68,318
1936-and after	74,957
Total	213,940

The budget passed both Houses without amendment, though it was attacked as being too small to meet the need, specially by the Seiyukai.

The session closed without giving any material harm to the Government, except the so-called "Bakudan Dōgi", or "bomb" motion, thrown on December 5 by T. Azuma of the Seiyukai demanding an increase of ¥180,000,000 in the relief appropriation.

The "bomb" took the Government and the people by surprise and the dissolution of the Diet was seriously talked about. But Okada's vague promise to give consideration to the increase when the Government thought it necessary, settled the matter for the time being, leaving the final solution to the regular session of the Diet.

Naturally the interval between the 66th and 67th sessions was a period of much political speculation and there was much gossiping in regard to the relations between the Government and the Seiyukai, and also to the possibility of dissolution. The two Houses were composed of the following :

THE HOUSE OF REPRESENTATIVES

(November 25, 1934)

Seiyukai	264
Minseito	118
Kokumin Domei	31
Tokonami and followers, Proletarians and others	27
Vacant seats	26
Total	466

THE HOUSE OF PEERS

(November 25, 1934)

Princes of the Blood	18
Kayōkai	41
Kenkyukai	155
Doseikai	23
Dowakai	32
Koseikai	66
Kōyū Club	38
Unaffiliated	36
Vacant seats	3
Total	412

The 67th Session The regular session of the Diet was convened on December 24, 1934, and closed on March 26, 1935. Notwithstanding the expectation generally entertained of a collision between the Government and the Seiyukai on the various questions pending, both sides were, in the final analysis, willing to come down the wall half way and the session was carried on in peace. The peace was, however, an armed peace and the Seiyukai took care that a number of important government bills were killed. The promise which the Government made at the last session in regard to the relief appropriation was made good to the amount of ¥15,000,000, instead of ¥180,000,000, as was originally demanded by the Seiyukai.

The Government, beside the Budget for 1935–1936 which passed without amendment, proposed over 50 bills to the Diet. Of these only 5 important bills passed the Diet and among those shelved there were such important bills as the Rice Control Law, Cocoon Distribution Law, Manure Control Law, Iron and Steel Tariff Law, and the Regulations for Fishing in the Northern Seas.

The session was enlivened unexpectedly with a discussion in regard to the interpretation of the Constitution. It was in February that a criticism on the exposition of the Constitution by Dr. Tatsukichi Minobé, Emeritus Professor at the Tokyo Imperial University and Professor at the Commercial University, was raised. Dr. Minobé's theory is that the Tennō, the Emperor, is the highest institution of the Empire and against this the assailants stated that Tennō is the absolute Sovereignty and origin of all laws. The discussion was ended, at least so far as the Houses and the session were concerned, by the promise given by the Government at the initiative of the House of Peers that it would do all to clarify the specific nature of the Japanese State.

Political Affairs in 1935–36

Legislature The year 1935 was rather a poor one in legislative activities. The 67th session of the Diet passed 44 out of the 55 bills presented by the Government and 3 of the bills proposed by the House of Representatives, but the majority of them were of the nature of administrative rules or in connection with the 1935–36 Budget. Few important laws were passed, the principal ones being the Special Profits Tax Law, the Warehouse Law, etc,

Political Movement of the Proletariat The political movement of the proletariat in 1935 was, generally speaking, a continuation of the previous year.

Since 1932 the political power of the prolearíat has waned mainly due to the nationalistic atmosphere generally prevailing in the political world. But the elections of the members of prefectural assemblies in the fall of 1935 proved favourable and this served to prepare good ground for proletarian parties to try their fortune in the general election for the Diet.

By this time the Marxists had lost their leaders and their political activities had sunk almost underground. They had lost the support of the people because of their misdeeds, such as attacking banks for funds. And side by side with this the tide of extreme rights had exhausted itself and it had not developed into a political party. It was thus that the Social Mass Party grew to power, which now occupies the leading position in the proletarian political movement. It was in 1932 that the party was formed through the amalgamation of the Social Democrats and the Mass Party. The party sent 53 candidates to the prefectural elections just mentioned and secured 25 seats in the assemblies. In the 67th session of the Diet (1934-35) the Social Mass Party had only three seats in the House of Representatives, but put up a brisk fight against the overwhelming power of the bourgeois parties in the House. They presented two important bills, i. e. the tenant bill and a bill for preventing the attachment on food of farm-households for one year. Both of them were shelved, but a prevention law quite similar in nature was passed. On February 9, 1935, the party held a mass meeting in Tokyo "for demanding the immediate dissolution of the House of Representatives." The meeting adopted 6 resolutions and handed them to the Presidents of both Houses and the Premier. The resolutions urged an immediate promulgation of the emergency industrial labour law, an increase of Government subsidies for unemployment relief, the promulgation of the tenant law and a law for preventing the attachment on food of farm-households, a thorough measure for securing the living of labouring classes in cities, the suspension of payment of all Government bonds for two years, and an immediate dissolution of the House of Representatives.

In the elections of members of prefectural assemblies which were carried out in September and October, 1935, the proletarian parties secured 41 seats and 219,854 votes. A comparison of the last three elections follows :

ELECTION OF PROLETARIAN MEMBERS IN PREFECTURAL ASSEMBLIES

	Candidates	Elected	Votes obtained	Votes for each Candidate
1927	216	28	257,832	1,193
1931	213	17	270,376	1,269
1935	96	41	219,854	2,290

Minobé Case After the close of the Diet, Dr. Minobé's case was taken up after some delay by the judicial authorities. He was heard twice by the judges of the Supreme Court in April and September, and the indictment was revoked, Dr. Minobé voluntarily resigning from membership of the House of Peers. The movement of nationalist groups against him, nevertheless, was continued all through the year and the Cabinet issued a statement on the question again on October 15, 1934, acknowledging the points put forward by the nationalists, but the agitation did not stop then and there.

In the beginning of the year 1935, however, liberalism appeared regaining power and criticism of the actions of the national socialists and militarists was heard in a considerable degree at the 67th session of the Diet. The War Ministry seemed amenable to the criticism, as shown by its thoughts and reactionary action on the part of military bodies, the removal of high officers in August, etc. Public opinion evidently welcomed the War Ministry's policy. The assassination of Lieutenant-General Nagata, Director of the Board of Military Affairs, on August 12, 1935, by Saburo Aizawa, Lieutenant-Colonel on the active list, was a turning moment for the general policy of the War Ministry. Aizawa was one of the group of officers who were associated with the May 15 affair of 1932. General Hayashi's place was taken by General Kawashima as War Minister in September and the general policy of the War Ministry naturally swung back to the former one.

Election of Members of Local Assemblies The election of the members of 38 prefectural assemblies were held from September 23 to October 14. One of the slogans in the election was "Pure Election," and the victory of the Minseito, pro-government party, over the Seiyukai was generally expected. But the result was the reverse, as shown in the following table :

MEMBERS OF PREFECTURAL ASSEMBLIES CLASSIFIED ACCORDING TO PARTIES

Result of 1935 Election

(38 prefectures only)

	1931	1935	Increase(+) or Decrease(−)
Seiyukai	635	658	+ 23
Minseito	802	619	−183
Kokumin Domei	—	31	
Proletariat	17	32	+ 15
Miscellaneous	4	32	+ 28
Neutral	66	153	+ 87
Total	1,524	1,525	

Many inferences might be drawn from the results. One was that the election was comparatively free from bureaucratic meddling and thus gave an easier chance for success for proletarian candidates. The supremacy of the old two parties well proved that their long cultivated fields could not be easily overturned by any new power, a Fascist nationalistic power, for instance. Thus only two or three of the extreme right-wing candidates were successful. The last and the greatest revelation in the election was the fact that the mainstay of the nation's politics was parliamentarism.

Dissolution of the House There were many predictions, and hopes in some cases, entertained as to the relation of the Cabinet and the Seiyukai, the Opposition, from the end of 1935 to the beginning of 1936. But what hopes entertained toward effecting a possible understanding remained unrealized and the Seiyukai hardened its front more and more towards the cabinet. Okada, thereupon, asked H. I. M. the Emperor to dissolve the House of Representatives, which was done on January 21, 1936, and it was declared that a general election would be held on February 20.

The strengths of political parties in the House of Representatives at the time of dissolution were as follows :

Total Number of Seats	466
Seiyukai	242
Minseito	127
Kokumin Domei	20
Showakai	24
Social Mass Party	3
Independents	11
Vacancy	39

General Election The 19th General Election was held on February 20, 1936, with the number of eligible voters totalling 14,479,553 and 878 candidates for 466 seats. The warcry of the General Election was "Pure Election". The Government took a mean attitude toward the whole aflair of election, and the result was :

THE 19th GENERAL ELECTION, FEBRUARY 20, 1936

(As it stood on February 24)

Number of Seats in the House of Representatives	466
Number of Voters	14,479,553
Number of Candidates	878
Collective Votes	11,117,116

According to Parties:

	Candidates	Elected	In January	Increase or Decrease	Votes Obtaincd	%
Seiyukai	336	174	242	−68	4,156,643	37.4
Minseito	296	205	127	+78	4,456,250	40.1
Kokumin Domei	33	15	20	− 5	401,261	3.7
Showakai	49	20	24	− 4	523,663	4.7
Social Mass	30	18	3	+15	518,360	4.6
Other parties	33	9	0	+ 9	285,670	2.6
Independents	101	25	11	+14	775,269	6.9
Total	878	466	427	+39	11,117,116	100.0

The defeat of the Seiyukai which had held an absolute majority in the House was unexpected, as was the great advancement of the Social Mass Party. Reasons were complicated and no final inference can be drawn from the result. But this much was clear that the general demand for a radical change in the country's politics so as to insure and advance the welfare of the mass is reflected in the return of 18 members of the Social Mass Party.

Political Affairs in 1936 and 1937

February 26 Incident

The Cabinet was anything but displeased with the result of the election, for it had brought about the defeat of the Seiyukai. But an event unprecedented in the history of the country since the Restoration of 1868 was in store for it. Early on the morning of February 26, 1936, over 1,480 soldiers rose against it and the high officials, and assassinated Admiral Makoto Saito, Grand Keeper of the Imperial Seals, Korekiyo Takahashi, Finance Minister, and Lieutenant-General Jotaro Watanabé, Inspector-General of Military Education, and seriously injured Admiral Kantaro Suzuki, Grand Chamberlain, at their residences.

Martial law was immediately put into force for a part of Tokyo surrounding the Imperial Palace under the command of Lieutenant-General Kohei Kashii.

A brief account of the uprising was given in the Japan Year Book, 1936, pp. 183 and 184. In view of the weight of its bearing on the politics of Japan since that time extracts of the statements on the incident published by the War Ministry in July, 1936, are given below :

Motives Koji Muranaka, Asaichi Isobé (civilians), Teruzo Ando, Kiyosada Koda, Yasuhide Kurihara, Katsuo Tsushima and Motoaki Nakabashi (former officers) had long been expressing concern at the degeneration of the people and the light-mindedness of the masses and anxiety about the future of the country. They were stimulated further by the opinions that gradually gained ground following the signing of the London Naval Treaty in 1930 and the Manchurian Incident in 1931 and by the desire of some sections of the army for fundamental solution of the Manchurian Incident. The political situation of Japan at home and abroad, moreover, was so tense that they could not observe it in silence.

They thought the time had arrived when the country must devise measures for the development of national fortunes by enhancing national spirit, replenishing national defence measures and armaments and stabilizing the national life. Meanwhile, they engaged in military education and through their subordnates became acquainted with the conditions of destitution in the farming and fishing villages and the impoverishment of the smaller commercial and industrial enterprisers. They sympathized with these privates, who were to defend the country's first line, and thought that they were to be pitied.

Finding that their ideas ran counter to the sound ideas held by the rank and file of the army and the navy, they came to associate with Eiichi Okura, former captain in the army, Captain Saburo Suganami and Captain Yoriyoshi Ogishi, who held the same views. In the meantime, they developed friendship with Terujiro Kita and Chikara Nishida, men of ultra-patriotic complexion, and because of their ideology found in them bosom friends. Though Kita's book, "Outline of a Draft for Reconstruction of Japan," was detrimental to the national structure, they were dazzled and influenced by the bold nature of its sentences. They erred in passing judgment on the ideas of these men.

The outbreak of the Blood Brotherhood case and the May 15 (1932) incident in Tokyo further stimulated them, and they determined to renovate the nation. They decided that in doing so they should not hesitate to resort to illegal steps. Thus these former army officers came to harbour the dangerous thought which in the end proved to be a violation of the fundamental principle of the prerogative of the Supreme Command.

From 1933, these compatriots were in secret association for the exchange of views and various measures, including the distribution of "mysterious documents" were devised and carried out. They did this solely to recruit sympathizers. In some sections of the army, they imbued the minds of subordinates with their ideas, based on dogmatic assumption, while engaged in military education.

Zensuké Shibukawa, who had at one time studied in the Military College, developed deep friendship with most of the officers mentioned before his retirement from the college and came to find in them bosom friends with whom he shared the same views. They arrived at the conclusion that the authorities concerned lacked appropriate measure to cope with the situation, that Japan's domestic and foreign policies were deadlocked, that the political parties were thinking only of their own interests ignoring the danger in which the country was placed and that the so-called financial clique was slighting the straitened circumstances of the people.

They also were of the opinion that

the prerogative of the Supreme Command had been violated when the London Naval Treaty was concluded. They attributed this state of aflairs to insincerity on the part of the statesmen close to the Throne, the bureaucrats, the military clique, the political parties and the financial clique toward the principles of the national structure. They thought that to give lustre to the real nature of the Japanese Constitution, which provides for unbroken rule throughout the ages, it was necessary to renovate the nation by striking at the so-called privileged classes.

Their sentiments were stimulated further when, in 1934, Koji Muranaka and Asaichi Isobé were dismissed from military service on the charge of having distributed secret documents. When their superior officers intended to suppress their movement, the reaction was great. This tended to encourage the movement. Still further encouragement was given by the movement for clarification of the national polity in connection with the theory of Dr. Minobé on the Emperor's prerogative in the light of the Constitution.

When the Inspector-General of Military Education (General Jinzaburo Mazaki) was transferred, they listened to an inflammatory suggestion made in a certain quarter of the public and concluded that the Supreme Command had been violated. Their indignation at this neared the breaking point. They were further moved by Lieutenant-Colonel Aizawa's assassination of Lieutenant-General Tetsuzan Nagata, then Director of the Board of Military Aflairs of the War Office. They came to the conclusion that behind the violation of the prerogative of the Supreme Command were the bloc of senior statesmen and the financial clique. They had the idea that the senior statesmen were responsible especially for the violation of the Supreme Command since the conclusion of the London Naval Treaty.

They thought that these men existed above the Constitution and that to strike at them by legal means would serve no purpose in gaining their objective. To strike at the senior statesmen, they concluded, it would be necessary to transcend the Constitution and use part of the Army in direct action. They thought this a popular way to cope with the exsting emergency. By so acting, they planned to clarify the national polity, replenish national defence and stabilize national living. They intended in this manner to urge high elements in the Army to bring about a Showa restoration.

Tsuguo Takeshima, Seichu Nibu, Naoshi Sakai, Hachiro Hayashi, Masaru Tanaka, Kanji Nakajima, Masaru Yasuda, Taro Takahashi, Minoru Tokiwa, Toshihiko Ikeda (former officers) and Mata Yamamoto (civilian) also arrived at the conclusion that the prevailing conditions ran counter to the principles of the national structure. They had long felt that it was necessary to eliminate the so-called privileged classes and urge the realization of a reformation. From 1933, they were influenced by the ideas of Koji Muranaka and others, association with whom led them to their belief in the righteousness of direct action.

Plots for Action When it was reported in December, 1935, that the forces of the First Division would be dispatched shortly to Manchuria and seeing the necessity of taking action before they left Tokyo, Koji Muranaka, Asaichi Isobé and Yasuhidé Kurihara immediately began preparations with Kiyosada Koda and Zensuké Shibukawa.

By taking advantage of the public trial of the Aizawa case, they propagated the spirit of Lieutenant-Colonel Saburo Aizawa's motive and also references to the corrupted conditions of the specially privileged class in order to draw the attention of society and to steel the determination of their confrères.

Thinking the opportunity had arrived for carrying out the reformation they decided to take action shortly after holding meetings for a number of times at several places while maintaining close contact with Captain Ichitaro Yamaguchi, Terujiro Kita, Chikara Nishida and Tetsuya Kamekawa on important matters.

In order to decide on a concrete plan, Muranaka, Isobé, Yasuhidé Kurihara, Teruzo Ando and the late former Captain Hisashi Kono met at the home of Yasuhidé Kurihara on the night of February 18, 1936. After planning the places to be attacked, methods to be used and the time to carry out the action, it was decided to move part of the troops belonging to the 3rd Infantry Regiment of the Imperial Guards Division, the 1st and 3rd Regiments of the 1st Division to attack and kill those subjects close to the Emperor in Tokyo, to attack and kill Count Nobuaki Makino by the hands of a squad led by Hisashi Kono and to have confrères living in the city of Toyohashi attack and kill Prince Kimmochi Saionji at his villa at Okitsu. It was also decided to

carry out the plot during the following week. Asaichi Isobé then went to Toyohashi on February 19 to tell Katsuo Tsushima about the preparations made in Tokyo and arranged with him for the assassination of Prince Saionji.

On the night of February 22, Muranaka, Isobé, Kurihara and Kono gathered again at the home of Kurihara to arrange the date, time and assignments and decided to carry out the planned attacks simultaneously at 5 o'clock on the morning of February 26.

In case they succeeded in the killing of Premier Keisuke Okada, Finance Minister Korekiyo Takahashi, Grand Keeper of the Imperial Seals Viscount Makoto Saito, Grand Chamberlain Kantaro Suzuki, Count Makino and Prince Saionji, they decided to prevent subjects close to the Emperor from proceeding to the Imperial Palace at the Sakashita Gate. At the same time, they decided to seize the Metropolitan Police Board to suspend its functions and also to occupy the War Ministry and the General Staff Office, and Muranaka, Isobé and Kiyosada Koda were to demand of the War Minister appropriate measures to remedy the situation.

On February 23, Kurihara went to Toyohashi to convey to Katsuo Tsushima and Tsuguo Takeshima what had been decided on and to make arrangements. Zensuké Shibukawa, who learned about the said plans on the same day, as a result of cousulting with Muranaka and Isobé, decided to find out the whereabouts of Count Makino, who was recuperating at the town of Yugawara, Kanagawa Prefecture, and to help as an outsider, the defendants in the achievement of the plan. On the same night, Muranaka, Isobé, Koda, Ando and Nonaka gathered at the 3rd Infantry Regiment and decided to attack the home of and to kill the Inspector-General of Military Education, General Jotaro Watanabé, after attacking the home of the Grand Keeper of the Imperial Seals, Viscount Saito.

On the night of February 24, Muranaka, Isobé, Kurihara, Koda and Nonaka gathered at the 1st Infantry Regiment and decided to assign Muranaka, Isobé and Koda to negotiate with the leaders of the army after carrying out the plans and also to assemble the outside participants at the 1st Infantry Regiment by 7 o'clock on the night of February 25. What had been decided on was then secretly conveyed to the confrères by the evening of February 25, all giving their approval or accepting their assignments.

Kiyonari Mugiya, Kinjiro Suzuki and Yasuhei Kiyohara, who originally did not intend to take direct action by using privates, finally decided to participate when the said plans were indicated to them, Mugiya assigning himself to a company and both Suzuki and Kiyohara leading their own companies.

On the night of February 25, Muranaka met Chikara Nishida and Tetsuya Kamekawa at the latter's home, telling them that the attacks would be carried out at dawn on the following morning and then made important arrangements. After receiving from Kamekawa an amount as funds for the uprising, Muranaka, Isobé and Koda assembled again at the 1st Infantry Regiment and decided on the demands to be presented to the War Minister following the planned attacks and occupation of the various buildings, as follows :

(1) The War Minister should immediately remedy the situation with a firm determination to effect reformation.

(2) To avoid absolutely such an inauspicious affair as firing at each other within the Imperial Army.

(3) To arrest at once the ringleader attempting to destroy the command of the army.

(4) To remove the centre figure who has been attempting a military clique movement.

(5) To summon at once the principal local confrères to Tokyo to hear their views in order to take proper steps for remedying the situation.

(6) To effect the aforementioned and absolutely not to change the positions occupied by the uprising units until a stabilization of the situation has been reached.

After the prospectus of the rising was drafted by Muranaka, it was printed for distribution.

Meanwhile, Katsuo Tsushima, who had been called on by Isobé on February 19, decided after learning the situation in Tokyo to despatch Prince Saionji, and after the following day, he and Takeshima sought to pursuade Lieutenant Tatsuo Inoué, Lieutent Toshio Shioda, Lieutenant Tetsu Itagaki, and Intendant Captain Goro Suzuki to participate. All accepted except Lieutenant Itagaki, who reserved his approval. On February 23, Tsushima, Takeshima and Suzuki received the decision reached on the plan of the attacks, date and time to be carried out in Tokyo, from Kurihara, who came from Tokyo for the purpose, and then decided to employ about 120 non-commissioned officers and privates of the

Toyohashi Non-commissioned Officers' School to attack the villa of Prince Saionji at Okitsu, Shizuoka Prefecture, at 5 o'clock on the morning of February 26. Then Tsushima and Takeshima engaged themselves in detailed arrangements for the despatching of Prince Saionji on February 25, however, they met with the sudden opposition of Lieutenant Itagaki regarding the employement of privates, and the plan to attack Prince Saionji had to be suspended, bringing the sudden appearance of Tsushima and Takeshima in Tokyo to participate in the action of their confrères.

Direct Action According to the decided plans, the assignments were made as follows :

Kurihara, Hayashi, Ikeda and Tsushima were assigned to attack the Premier's official residence and kill Premier Keisuké Okada early on the morning of February 26, and after conveying the purposes to the non-commissioned officers attached to the machine-gun corps of the 1st Infantry Regiment they ordered an emergency roll-call of the entire force in front of the barracks and then declared the purport of the rising. A section of the corps was then attached to the Nibu unit, bringing it to a total of about 300, and left the barracks about 4:30 o'clock. The Premier's official residence was attacked at 5 o'clock. The four police officers on duty, Kamozaemon Murakami, Kiyomatsu Tsuchii, Yoshiro Shimizu and Kiyomatsu Odaté, and Denzo Matsuo, private secretary to the Premier, were killed, the last Matsuo being mistaken for the Premier. They thus failed to despatch the Premier.

Motoaki Nakahashi and Kanji Nakajima were assigned to attack the residence of Finance Minister Korekiyo Takahashi and kill him. On the night of February 25, about 120 non-commissioned officers and privates of the 7th Company of the 3rd Infantry Regiment of the Imperial Bodyguards were divided into two units, one as a defending and reserve squad and the other as the attacking squad. The former was led by Sub-Lieutenant Yoshimichi Imaizumi, and the latter was assigned to take charge of the killing of Finance Minister Takahashi. About 3 o'clok the following morning, Motoaki Nakahashi and Kanji Nakajima appeared in the room where Yoshimichi Imaizumi lodged in the barracks and conveyed to him that they were ready to proceed to kill Finance Minister Takahashi for the purpose of carrying out a Showa Restoration, persuading him to act with them. He, however, avoided a definite reply. Motoaki Nakahashi then told him that he could be free to act with them or not, leaving word, however, that he should lead the defending and reserve squad as previously arranged. Imaizumi then decided to act with Motoaki Nakahashi on the ground that nothing could be helped that had happned.

About 4:30 o'clock Nakahashi conducted an emergency roll-call. Then he led about 120 non-commissioned officers and privates out of the barracks on the pretext that they were going to visit the Meiji Shrine. Taking command of the attacking squad, he attacked the Finance Minister's private residence and killed Finance Minister Takahashi about 5 o'clock. Leaving the residence in accordance with the orders of Nakahashi, Nakajima commanded the attacking squad and then went to the official residence of the Premier. Yoshimichi Imaizumi, who was posted in the vicinity of the Siamese Legatión, then reported to the commanding quarters with Nakahashi and after receiving new orders went to guard the Sakashita Gate of the Imperial Palace. On being replaced about 11 o'clock by another squad, he returned to the original regiment.

Naoshi Sakai, Taro Takahashi, Kiyonari Mugiya and Masaru Yasuda were assigned to attack and kill the Grand Keeper of the Imperial Seals, Viscount Saito, while Taro Takahashi and Masaru Yasuda were charged to attack and kill the Inspector-General of Miltary Education, General Watanabé. Taking command of about 200 non-commissioned officers and men, they left the barracks at about 4:20 o'clock. The home of Viscount Makoto Saito was reached at about 5 o'clock, and after he had been despatched, Viscountess Haruko Saito, who tried to shield the Viscount, received a bayonet wound accidentally. The home was left about 5:15 o'clock. The main force then was led to the neighbourhood of the War Minister by Naoshi Sakai and Kiyonari Mugiya, while Taro Takahashi and Masaru Yasuda, leading about 30 non-commissioned officers and men, took an army truck kept in waiting in front of the Akasaka Detached Palace and provided by Masaru Nakada. They proceeded to the home of Inspector-General of Military Education, General Watanabé, attacked the place about 6 o'clock and, brushing aside Mrs. Suzuko Watanabé, who tried to stop them, killed the General, leaving the home at about 6:30 o'clock and joining with the

main force of the Sakai unit in the vicinity of the War Ministry.

Teruzo Ando, assigned to attack the official residence of the Grand Chamberlain and to kill Admiral Kantaro Suzuki, called an emergency roll-call about 3 o'clock on the morning of February 26 in front of the barracks. Thirty minutes later, the unit left the barracks and attacked the official residence of the Grand Chamberlain at about 4:50 o'clock, wounding the Grand Chamberlain with several bayonet thrusts. When Teruzo Ando was about to give the coup de grace, he had to relinquish because of the ardent request of Mrs. Takako Suzuki and thus failed in despatching the Grand Chamberlain. The residence was left at about 5:30 o'clock. The unit returned to the neighborhood of the War Ministry.

Minoru Tokiwa, Yasuhira Suzuki and the late Shiro Nonaka, assigned to seize the Metropolitan Police Board, called an emergency roll-call of the various companies about 2 o'clock on the morning of Februaly 26, and, commanding about 500 non-commissioned officers and men, left the barracks about 4:30 o'clock and arrived at the police headquarters about 5 o'clock. They detailed a number of small units on the main road near the Sakurada Gate and the road in front of the Justice Ministry placing machine-guns and light machine-guns , at several points in the neighbourhood. A squad was placed in the telephone exchange room of the police headquarters to suspend communications with outside.

Masatada Nibu was charged to occupy the official residence of the War Minister and to suspend traffic around the War Ministry and the General Staff Office in order to facilitate the negotiations with the leaders of the army by Koda, Muranaka and Isobé. At 4 o'clock on the morning of February 26, he conducted an emergency roll-call of about 700 men, including non-commissioned officers, of whom he took command and then left the barracks at about 4:30 o'clock with Muranaka, Isobé Koda, Takeshima and Mata Yamamoto. They arrived at the official residence of the War Minister about 30 minutes later. The main gate to the residence was heavily guarded by the main force, prohibiting the admittance of all comers other than special persons.

Masaru Tanaka, attached to the 7th Field Heavy Artillery Regiment, in charge of transportation, called out about 30 men, including non-commissioned officers, about 2:30 o'clock on the morning of February 26, under the pretext of visting the Yasukuni Shrine and to go on a night march, commanded to take out one touring car and four army trucks, belonging to the regiment, left the barracks at about 3:15 o'clock, visited the Yasukuni Shrine and then proceeded to the front of the Imperial Palace and finally arrived at the official residence of the War Minister about 5 o'clock. Receiving orders from Isobé, he took a touring car and a truck with two men and went to the front of the Akasaka Detached Palace to carry the squad under the command of Taro Takahashi and Masaru Yasuda to attack the home of the Inspector-General of Military Education, General Watanabé. He provided a touring car and two trucks for Yasuhidé Kurihara, Toshihiko Ikeda, Motoaki Nakahashi and Kanji Nakajima, who proceeded to attack the Tokyo Asahi at about 9 o'clock.

Yasuhidé Kurihara, Toshihiko Ikéda, Motoaki Nakahashi and Kanji Nakajima, in command of about 50 privates and non-commissioned officers, attacked the plant of the Tokyo Asahi Shimbun about 9 o'clock on the morning of February 26, causing damage to suspend the publication of the paper temporarily. Then they went to the Tokyo Nichi Nichi, Jiji Shimpo, Kokumin Shimbun, Hochi Shimbun and the Nippon Dempo News Agency, where copies of the "rising prospectus" were distributed, demanding the publication of the text in their respective papers, and then returned to the Premier's Official residence.

Zensuké Shibukawa proceeded to Yugawara, Kanagawa Prefecture, on February 23 to ascertain the presence of Count Makino and returned to Tokyo. After the outbreak of the incident, Shibukawa, with the purpose of aiding his comrades to accomplish their aims, decided in conjunction with Teruo Nakahashi to instigate Seijuro Hasebé, President of the Yamagata Prefectural Agrarian Young Men's Federation, and others with whom he had been in contact before, to rise up in arms in correspondence with the insurgent troops. The plot was discussed on the night of February 27 at the house of Teruo Nakahashi. In order to carry out the design Shibukawa gave Nakahashi a revolver and ammunition and asked Yasuhidé Kurihara to obtain 300 additional rounds of ammunition, but he was unable to do so because the plan was discovered beforehand. After February 26, Shibukawa established contact with Captain Akimitsu Matsudaira and others in an effort to gather in-

formation and conveyed his findings to the insurgent troops. On February 28, he joined the units of Teruzo Ando and, inciting the officers to renewed efforts, went to the Premier's official residence to give his assistance to the units stationed there. Together with Naoshi Sakai, he made the rounds of the cordon thrown round the Premier's official residence and took other measures to assure the security of the position.

The late Captain Hisashi Kono was assigned to assassinate Count Makino, who was staying in a detached wing of the Itoya Inn, at Yugawara, Kanagawa Prefecture. On the night of February 25 Sergeant Tokisan Ujino, a private, civilians Akira Miyata, Seiji Nakajima, Wataru Kuroda, Genichi Mizukami and Shozo Watabiki, gathered at the 1st Infantry Regiment barrack by summons of Kurihara and, carrying two light machine-guns and other arms, left for Yugawara in two automobiles at 12:40 o'clock on the morning of February 26. Arriving at Yugawara at 5 o'clock, they raided the Itoya Inn but could not find Count Makino. In order to burn him to death, they set the detached wing on fire and destroyed it. During the attack, they shot dead patrolman Yoshitaké Minagawa on guard duty at the Inn and shot and wounded Suzué Mori, nurse attendant on Count Makino. They also shot and wounded Kamezo Iwamoto who came to put out the fire. In spite of their efforts, they could not find Count Makino. Meanwhile, Genichi Mizukami saw that Kono had been severely wounded in the skirmish with the police. He therefore took command and, drawing his sword, urged his men into the house and set fire to other parts of it or drove away persons who came to fight the fire by brandishing his sword. Kono and others who were wounded in the raid went to the Atami branch of the Tokyo Army Hospital No. 1 and there surrendered themselves.

The units which completed their Tokyo raids on February 26 occupied the Premier's official residence, the War Minister's official residence, the War Office and the Metropolitan Police Board headquarters in accordance with the pre-arranged plans and restricted traffic through the southwestern section of Kojimachi Ward in support of the negotiations being conducted by Koda, Muranaka, Isobé and others with the leaders of the army .

Their Movement after the Action Koda, Muranaka, Isobé and others, in conjunction with the unit commanded by Masatada Nibu, arrived at the War Minister's official residence at about 5 a.m. on February 26, and, in an interview with the War Minister, General Yoshiyuki Kawashima, Koda, representing the insurgents, read a statement on the reasons for the uprising and gave an account of the attacks made on various places, demanding appropriate steps to effect a renovation in State affairs. General Mazaki, Lieutenant-General Furusho, Vice-Minister of War, Major-General Yamashita and Lieutenant-Colonel Mitsui were asked over to the War Minister's official residence, where the insurgents demanded that they endeavour to cope with the emergency situation.

At about 10 o'clock the same morning, Isobé shot with his revolver and wounded Major Katakura, who had come to the front porch of the War Minister's official residence.

Then Major-General Yamashita came with a letter of admonition which the leaders of the army had drafted and read it to the insurgents, but they refused to submit.

When wartime caution was ordered to the units under the jurisdiction of the 1st Division, in accordance with the policy of the commander of the garrison that bloodshed should be avoided as far as possible and the insurgents should be induced by pursuasion to return to their barracks, some of the insurgent units were placed under the direction of Colonel Kofuji, commander of the 1st Regiment, on the evening of February 26. The wartime caution was enforced in part from early the next morning, but no immediate action was taken against the insurgents. This only confirmed the insurgent leaders in the belief that the situation had turned in their favour and strengthened their determination to carry out their plans as scheduled.

On the morning of February 27 Muranaka, on the advice of Lieutenant-Colonel Mitsui and others, proposed to his comrades to withdraw from their position in the area for the convenience of the General Staff in attending to its official duties and to return to their barracks, but they would not listen to him. At last, however, it was decided that they should concentrate their forces near the new Diet building. After this decision was made, Muranaka and Koda went to the martial-law headquarters, and in an interview with Lieutenant-General Kashii, commander of the martial-law area, Major-General Yasui, chief-of-staff, and others, handed them a statement of the reasons for their uprising, explained that they had reduced their forces and asked the

martial-law headquarters to continue the state of caution in the status quo in order to avoid a clash between the insurgents and the garrison forces. Then, on instructions from Kita, by telephone concerning the settlement of the situation, Muranaka, Isobé and others, after consultation with Koda, Kurihara, the late Nonaka and others interviewed some of the members of the High Millitary Council at the War Minister's official residence at about 4 o'clock, when they made proposals regarding settlement of the situation. They in turn were admonished to withdraw from the area in accordance with the orders of Colonel Kofuji. For a time, they expressed understanding but could not decide on withdrawal and under the direction of Colonel Kofuji spent the night at the Premier's official residence, the official residences of Finance Minister, Railway Minister, Agriculture and Forestry Minister and Education Minister, the Koraku restaurant and the Sanno Hotel.

On the morning of February 28, Muranaka, Koda and others learned that the commander of the 3rd Regiment of the Imperial Guards Division had ordered by telephone Motoaki Nakahashi to place himself along with his men under the direction of Colonel Kofuji in accordance with the Imperial command to have the insurgent troops massed near the barracks of the 1st Regiment. They complained to Colonel Kofuji against the action. Meanwhile Colonel Kofuji had received orders from the 1st Division, in accordance with the Imperial command to the martial-law headquarters, to have the insurgent units return to their barracks and had been on the verge of conveying them to Muranaka and others but because of the high feeling running among the insurgents over the telephone order to Nakahashi he reserved action. At about this time, that is, 10 o'clock, or so, Muranaka, Koda and Tsushima proceeded to the headquarters of the 1st Division and petitioned the commander and the chief-of-staff not to apply the Imperial command, which would make them rebels against the Emperor. Upon their return to the War Minister's official residence, however, Major-General Yamanaka came with the communication that action against the insurgents based on the Imperial command was about to be started. The leaders of the uprising gathered in a conference and resolved on "self-determination." Thus to the commander of the 1st Division and Colonel Kofuji, who came to admonish the insurgents, they pledged submission to the command of the Emperor.

Instigated, however, by telephone calls from Terujiro Kita, Chikara Nishida and the claim on the part of some leaders that the sudden change in the situation since the morning and the chaotic conditions prevailing gave the lie to the declaration of the authorities that the insurgents' return to the barracks was really the wish of the Emperor and also because of the change of heart on the part of the insurgents who had been active on the first line due to the chaotic situation and wild rumors, the insurgents made the resolution that if the garrison units surrounding them took oppressive measures they would give battle to the last man in their present positions. Thus they took up their positions in the Premier's official residence, the new Diet building, the War Office and the Sanno Hotel in preparation for battle.

Lieutenant-General Kashii, therefore, relieved Colonel Kofuji of his directorship over the insurgent units and ordered the surrounding units to clear the occupied areas of the insurgents, beginning with the morning of the 29th. Most of the leaders of the uprising, however, grew convinced early on the morning of the 29th through radio broadcasts and handbills distributed in the streets that operation based on the Imperial command had commenced and, seeing the surrounding units close in realized the futility of resistance and ordered the non-commissioned officers and men to return to their barracks.

By this time, scores had returned to their barracks of their own will, escaping through the insurgents' lines. By 2 o'clock, all of the non-commissioned officers and men had surrendered themselves. All the leaders except Mata Yamamoto gathered in the War Minister's official residence and, although many of them suggested self despatch, some of them claimed that it was not the time for it. Thus all the leaders except Nonaka abandoned the idea of suicide and the same evening were confined at the Tokyo Army Prison. Out of a religious mood, Yamamoto had escaped to Mt. Minobu the same noon, but on March 4 he gave himself up to the Tokyo Gendermerie Corps.

Winding-up the Incident High military officers took responsibility for the Feb. 26 incident and in March five members of the High Military Council, Generals Hayashi, Mazaki Abé, Araki and Terauchi resigned, the first four being placed on the reserve list, while

General Minami, Commander of the Kwantung Army and General Honjo, chief aide-de-camp to His Majesty retired from office. In July, 4 lieutenant-generals, 5 major-generals and 4 colonels, the majority of whom held responsible positions in the Imperial Guards and the First Division were removed from their posts. Twelve high police officials in Tokyo were also asked to resign as a sign of their responsibility.

Thirteen former army officers and four civilians were sentenced to death July 5, 1936, by the Tokyo Court-Martial for participation in the uprising.

Fifty-nine others received prison sentences ranging from life to two years. A total of 123 had been indicted of whom 47 were acquitted.

Five other former officers were sentenced to life imprisonment, and one officer on the active list received a four-year term. Of the remainder of the 10 civilians indicted for participating in the incident, five were sentenced to 15 years in prison and the others to 10 years.

Of the 73 former non-commissioned officers and 2 non-commissioned officers in active service who had been indicted, 31 were acquitted and the remaining 44 received sentences ranging from 2 to 15 years in prison, some with the stay of execution.

Nineteen privates were indicted, of whom 16 were acquitted. The other three were given prison sentences ranging from 18 to 24 months with the stay of execution.

Two other former officers who participated committed suicide immediately after the incident.

According to the War Office announcements, those participating in the incident included one officer, 20 former officers, three medical officers, 89 former non-commissioned officers, two other non-commissioned officers, 1,358 privates and 10 civilians.

The following 13 former army officers were sentenced to death : Kiyosada Koda, infantry captain, Teruzo Ando, infantry captain, and Yasuhidé Kurihara, lieutenant, the ringleaders ; Tsugio Takesima, infantry lieutenant ; Katsuo Tsushima, infantry lieutenant ; Motoaki Nakahashi, infantry lieutenant; Masatada Nibu, infantry lieutenant ; Naoshi Sakai, infantry lieutenant ; Masaru Tanaka, artillery lieutenant ; Kanji Nakashima, engineering sublieutenant ; Masaru Yasuda artillery sublieutenant ; Taro Takahashi, infantry sublieutenant, and Hachiro Hayashi, infantry sublieutenant.

The civilians sentenced to death were: Koji Muranaka and Asaichi Isobé, designated as ringleaders, and Zensuké Shibukawa and Genichi Mizukami, who either particiapted in the plot or in directing group action.

Out of the 17 officers and others who were sentenced to death 15 were shot on July 5, the remaining 2 being retained as withnesses in connection with the trials of further persons connected with the incident.

Martial law, which had been proclaimed on February 27 for a part of Tokyo, was withdrawn on July 18, 1936.

On July 29 another 6 officers in active service were sentenced to from 4 years to life military imprisonment as assisting in the activities of the insurgents.

On August 14, 1937, the Ministry of War issued a statement on the decision of the Tokyo Army Court-Martial against important civilians who took part in the February 26 Incident, 1936, to the effect that the ringleaders Terujiro Kita and Chikara Nishida were sentenced to death penalty, Tetsuya Kamekawa to life imprisonment and Teruo Nakahashi to three year's imprisonment.

The central figure who imbued the moitve power to the leaders of the February 26 Incident was Terujiro Kita. Kita who was popularly known as Ikki Kita, his penname, was a native of Sado Island, Niigata Prefecture, and being stimulated by the sad history and traditions of the members of Imperial Household who had been ill-treated by the Shogunate governments in olden times and banished to the island, became a hot-blooded patriot and made studies on the history of Japan in his young days. He quitted a middle school in the island because of illness and came up to Tokyo to begin study on social science. In his 24th year of age, he wrote and published his first book " An Outline of Japanese National Polity and the True Socialism," in which he severely attacked the transliterated Western socialism of Shusui Kotoku and his comrades (who were sentenced to death in 1911) from his unique patriotic view of the nature of Japanese nation. His book drew attention of the public among whom he found many Chinese friends, Dr. Sun Yat-sen and others who were staying in Japan, and he helped the revolutionary movement in China for some years and wrote his second book " China in Revolution and Japan's

Diplomatic Revolution" in 1916. In the summer of 1916, he went to China for the second time, and while he was in Shanghai he had time to see what was going on in his native country and think about it thoroughly. According to his conclusion Japan was misled by priviledged classes of people while there were destructive movements of communistic elements getting force among the masses, and a fundamental reformation was of urgent need to protect Japan which had the honourable history of 3,000 years from falling into nil. Kita got a strong conviction that the success of modern revolutions was in the co-operation of the army and civilian revolutionists, and in 1920 he prepared the manuscript of a book, "An Outline of the Principles of National Reformation," and showed it to Dr. Shumei Ohkawa who was then in China and got his sympathy and encouragement. In January, 1921, Kita came back to Japan cherishing a revolutionary scheme and got the co-operation of Dr. Ohkawa and his comrades. But finding difficulties with them later he decided to work alone according to his own programme and in 1926 he renamed his manuscript aforementioned and published "An Outline of A Draft for the Reconstruction of Japan" through the hand of Chikara Nishida. With the co-operation of Nishida and largely through his activities Kita succeeded in obtaining comrades among young army officers before and after the May 15 Incident of 1932, and finally became the philosophical leader of the army officers who led the February 26 Incident.

Koji Nakamura and Asaichi Isobé (who had been sentenced to death penalty on July 5, 1936, with other 15 comrades), Terujiro Kita and Chikará Nishida were shot on August 19, 1937.

Formation of the Hirota Cabinet

Admiral Okada and other members of the Cabinet tendered their resignations to the Throne on February 27, taking full responsibility for the Feb. 26 Incident. Prince Saionji was called to Tokyo for his advice in the matter of choosing the succeeding premier. Prince Konoyé, President of the House of Peers, was first recommended, but he asked for Imperial pardon because of his weak health. Then, on March 5, Koki Hirota, Foreign Minister in the Okada Cabinet, was summoned to the Imperial Palace and accepted the Imperial Order to form a new Cabinet.

The formation of the Hirota Cabinet met difficulties on its course, but was finally completed and the inauguration took place in the Phœnix Hall of the Imperial Palace before H. I. M. the Emperor at 8 p.m. March 9, 1936. Members of the Hirota Cabinet were then as follows :

Prime Minister	Koki Hirota
Foreign Affairs	,, ,,
Home Affairs	Shigenosuke Ushio
Education	,, ,,
Finance	Eiichi Baba
War	Hisaichi Terauchi, General
Marine	Osami Nagano, Admiral
Justice	Raisaburo Hayashi
Agriculture and Forestry	Toshio Shimada
Commerce and Industry	Takukichi Kawasaki
Communications	Keikichi Tanomogi
Railways	Yonezo Maeda
Overseas	Hidejiro Nagata

The two ministerial posts which had been left open at the formation of the Hirota Cabinet in March, were filled by Hatsusaburo Hirao as the Minister of Education and Hachiro Arita as the Minister of Foreign Affairs, while Gotaro Ogawa took the position of the Minister of Commerce and Industry after the death of Takukichi Kawasaki on March 27.

The first announcement of the new policies of the Hirota Cabinet was made by Dr. Eiichi Baba, Minister of Finance, on March 9, to the effect that the old financial policy of the late Finance Minister Takahashi would not be proceeded with, but as one of the new policies of the cabinet, the Finance Ministry was planning an increase of revenue from taxes and an enlarged floatation of national loans in connection with the budget for 1937–38 in order to meet the increased demands necessitated by changes of the times.

The statement of Prime Minister Hirota, published on March 17, 1936, on the policy of the new Government, rather disappointed the general public with its too reserved and abstract wording, but his intention to follow a central course was well pronounced in the words "over-hasty actions will be avoided through the wisdom of the people and a thorough understanding of the public sentiments." The gist of his statement follows :

It is the first duty of the Government to clarify the concept of our immutable national polity—a point toward which should converge all domestic and foreign policies and measures. It is a matter of urgent necessity, specially under the present circumstances to maintain the sanctity of the Constitution and the laws of the country, by instituting educational reforms and invigorating the national spirit and at the same time eradicating thoughts incompatible with our national polity.

It has ever been the consistent policy of our Government to cultivate cordial relations with all the countries on the basis of international good faith and justice, and to promote mutual well-being and common prosperity between Japan and other countries in East Asia, and especially carry out our mission as the stabilizing force of East Asia on the basis of inseparable relationship between Japan and Manchoukuo, thereby contributing toward the peace of the world and the well-being of mankind. Both our foreign policy and our national defence should accord with this national policy. In view of the present situation of international relations, the Government intend to inaugurate a consistent and coherent vigorous foreign policy and at the same time to provide fully for national defence.

It is the urgent necessity of the moment to enrich the basic sources of our national strength by making such financial and economic improvements as reforms in taxation and banking systems and by helping the expansion of trade and industry in conformity with the progress of the country. Of late unhealthy social trends have multiplied, exerting a heavy pressure on the people's livelihood and producing conflicts of interests in all quarters. There is nothing more deplorable than such a state of affairs which is directly opposed to the ideal of a state built on morality and righteousness. The Government, therefore, intend to realize thoroughly their projected programmes for the purpose of ensuring stabilization and improvement of all phases of national life so as to enable the subjects of His Majesty to live each a tranquil and contented life.

We cannot now be satisfied with renovations of governmental organs merely in their mechanical operation. Enforcement of official discipline and reforms in administrative structure have become necessary. The Government therefore intend to carry out such improvements as will adequately meet the needs of the times by taking a far-sighted view of the trend, both internal and external, without being trammelled by old conventionalities.

For a complete realization of the national policies the Government will naturally demand the faithful services of the various departments. While over-hasty actions will be avoided through the wisdom of the people and a thorough understanding of the public sentiments, the Government will take resolute steps in order to achieve what they believe to be right. They will not, oblivious of the future destiny of the country, resort to temporizing measures.

Imperial Diet, 69th Session The 69th Session of the Imperial Diet was convened on May 1, 1936 and closed on the 27th of the same month. Kojiro Tomita of the Minseito was elected President of the House of Representatives, and the formal opening ceremony was held on the 4th of May in the presence of His Majesty the Emperor, who gave the Imperial Message as follows :

> We hereby conduct the ceremony opening the Imperial Diet and so announce to the members of the House of Peers and the House of Representatives.
>
> We rejoice over the fact that the relations of the Imperial Government and foreign nations have been becoming steadily more cordial.
>
> We regret the outbreak of the recent incident in Tokyo. It is expected of Our faithful subjects that they will unite as one, Government and people, civilians and military, in order to promote the development of the national fortunes.
>
> We have ordered the Ministers of State to present to the Imperial Diet the urgent supplementary budget bill and other measures.
>
> It is expected of you that you will deliberate upon them in harmony, thereby fulfilling Our wishes.

The reference to the February 26 Incident in the Imperial Message strongly touched the hearts of members of the Cabinet and both Houses and the session was carried out in a most serious attitude of mind all through the three

weeks. On May 6, Premier Hirota, Foreign Minister Arita, Finance Minister Baba and War Minister Terauchi made speeches on the general policies and what they were planning for the improvement and readjustment of the matters specially coming under their respective jurisdiction. Important points in their speeches related to the strained international relation between Japan and the U.S.S.R., the increase of revenue from taxation and the determination of the authorities to enforce discipline in the Imperial Army. The War Minister gave a full explanation concerning the Feb. 26 Incident to the members of both Houses in a closed meeting on the 7th May and the searching interpellation of Takao Saito of the Minseito at the general meeting of the House of Representatives on the same day drew the keen attention of the House and members of the Cabinet and caused a sensation among the public, gaining the full support of the press.

Mr. Saito, after calling the attention of the Premier to the difficulty of putting into practice the manysided propositions made by the new Cabinet for the reform of the political and administrative system or organization, aimed his interpellation at the Minister of War concerning the responsibility of the War Ministry and high officers in connection with the Feb. 26 Incident. First, he sharply criticized the undue direct actions of the military officers to meddle with political affairs apparently against the will of the Emperor Meiji expressed clearly in his Precepts to the Soldiers and Sailors, which said "therefore neither be led astray by current opinions nor meddle in politics, but with single heart fulfil your essential duty of loyalty," and in violation of civil and military laws which prohibit the political activities of military men in active service, pointing to the danger of political activity of military men who are apt to appeal to force and may lead to armed despotism. Secondly, Mr. Saito, referring to the assassination of Premier Inukai or the May 15 Incident in 1932, rebuked the loose measures taken by the military authorities in handling the secret activities of young officers in 1931 and 1932, and the consequent inability to check the recent uprise of soldiers in Tokyo, and asked that the responsibility should be shouldered by military officers of the highest ranks. In the course of his speech, he cited the words of Military Prosecutor Yamamoto who reasonably demanded the death penalty for the three leaders of the May 15 Incident at the Court-Martial, and lastly, he voiced the demand of the nation for stern measures to be taken against the leaders of the insurgents of February, and demanded that adequate steps should be taken in the education of soldiers in the future to ensure that they should not be led away from their duty to the detriment of the honour of the Japanese Army and the general welfare of the people.

Many important bills awaited the decision of the Diet in this short 69th Session, such as supplemetary budgets, the autonomous rice control bill, the rice control law revision bill, the joint unhulled rice storage subsidy bill, the cocoon disposal control bill, the bill to revise the silk manufacturers' guild law, the bill to revise the silk industry law and the important fertilizer control bill, all of these pertaining to the welfare of the agricultural communities, the shipping business control bill, the bill for the establishment of two companies to aid the rehabilitation of the north-eastern districts, the bill for the establishment of a central bank for commercial and industrial guilds, the seditious literature restriction bill, the national mobilization secrets protection bill, and the workers' discharge reserve fund and allowance bill. The supplementary budgets (given in full in the Japan Year Book, 1936, pp. 237–280) passed both Houses without amendment. As to the workers' discharge reserve fund and allowance bill, hot discussions arose from both the sides of capital and labour, but the bill was finally passed after important amendments had been made to make it applicable only to factories and mines with 50 or more workers and to make the discharge allowance less than 3 per cent of the wages paid up to the time of discharge. The bills in connection with rice control were presented to the Diet to settle the long debated problems started with the presentation of similar bills which had been laid on the table at the 67th Session in 1935 after a desperate fight between farmers and merchants. This time they just got through both Houses with a conditional clause added to the original. The seditious literature restriction bill passed with important amendments to restrict the scope of its application and changing the name of the law into the seditious literature temporary restriction law. The Houses passed all the 46 bills presented by the Government in addition to the budgetary bills and over 150 memorials and resolutions, with the exception of the national mobilization secrets protection bill which was laid on the table because

of the danger of its restricting the freedom of the people.

For the Renovation of Parliament Among the resolutions of the Houses there were requests for the renovation of the constitution of both Houses and the revision of the election law, and the Government in compliance with these resolutions established on July 15, 1936, the Diet System Investigation Committee and the Election Law Investigation Committee, the former consisting of 43 members including the Premier, Presidents and Vice-presidents of both Houses, some distinguished members of both Houses and some Government officials; and the latter consisting of 48 members similar to the former. Points in question are, in the case of the Lower House, the need of change in the time and duration of the session from the present three months, from the end of December to that of March, to the four months from November to March, the appointment of a standing committee during the time the Diet is not in session, and in the case of the Upper House, a change in the time of office of members so as to bring about a radical change in the constitution of the House of Peers which has remained untouched since 1925.

Important Policies of the Hirota Cabinet The much talked about new policies of the Hirota Cabinet met with difficulties before being finally decided upon. A part of the Government insisted on the separation of the defence policies and the general policies, the greater importance to be placed on the former, while the other part required the realization of numerous political, social and economic measures to fulfil the special mission of the Cabinet and to answer the expectations of the people, who wanted something in the way of a reformation after the precious sacrifice of the Feb. 26 Incident.

Important policies and new measures heaped up on the table of the Cabinet meetings in such numbers that discussion on them became impossible in the limited time of the usual meetings, so after preliminary selection and study, a Cabinet meeting to consider important national policies was held on August 25, 1936, when it decided on and published the following 7 national policies:

(1) Completion of National Defence; (2) Improvement of the Educational System; (3) Readjustment of National and Local Tax Systems; (4) Stabilization of the Living of the People by a more effective prevention of natural disasters, completion of health protection, further economic measures for helping villagers and city merchants and manufacturers of small means; (5) Promotion of Industry and Expansion of Foreign Trade by the increase and control of electric power, self-supply of liquid fuel and iron and steel, full supply of materials for the fibre industries, aid and control of foreign trade, encouragement of aviation and sea transportation businesses and encouragement of emigration; (6) Establishment of important policies with regard to the relation of the Empire with Manchoukuo such as the emigration of Japanese to Manchoukuo or the greater investment of the Japanese capital in that country; (7) Improvement or Reformation of the Administrative System.

Formation of the Budget for 1937–38 The budget for 1937–38 was to be formed for the realization of the 7 national policies and as a matter of natural consequence the total figures compiled by the Ministries reached ¥3,400,000,000, including ¥480,000,000 of the Army, and ¥340,000,000 of the Navy extraordinary demands. (A full record of the formation of the budget is given at the end of Chapter VIII, Public Finance.)

New Taxation Plan and its Effect Since 1931 the deficit in national ways and means had been covered by the floatation of national loans, but it had long been considered improper to rely upon such a negative policy, and Dr. Baba, in his statement on March 9 on the general economic policy of the Hirota Cabinet, disclosed that the expansion of national expenditure was inevitable, to meet which the people might be asked to pay increased taxes rather than subscribe to national loans. This statement suggested a fundamental financial change in the tax system, money interest rates and the floatation of national loans, and the stock markets were thereby greatly disturbed by rumours and Dr. Baba was compelled to publish a milder statement on the following day. But his intention of raising tax rates was unchanged.

The main points of the new taxation plan made known by the Government on September 22, 1936, were (1) to effect a fundamental reform in the national and local tax systems so as to equalize the burden of the people which is unbalanced by locality between tax on fixed property and movable property and between corporations and individuals as explained by the following table:

PER CAPITA TAX BURDEN IN 1936-37

(In Yen)

	National Tax	Local surtax on ¥100 National Tax
Average of the whole nation	6.170	152.070
Tokyo Prefecture	22.552	55.360
Kagoshima „	1.774	424.020
Osaka „	16.160	78.910
Aomori „	1.524	466.140

Note: The amount of national tax borne by a person is indicative of his economic power.

(2) to make Japanese subjects of the present day bear the burden by increasing national income from increased and new taxes so as to lessen the burden of posterity as much as possible, and to reform the tax system so that the national treasury may easily extend its helping hand to local treasuries or vice versa.

By the Baba reformation of the tax system the estimated net national revenue from taxes was to increase by ¥197,500,000. The estimated increase of old taxes amounted to ¥337,300,000, while new taxes amounted to ¥80,200,000, making the total of ¥417,500,000, of which ¥220,000,000 was to go to local governments for the readjustment of their finance.

The stock market, which had been scared by the first announcement of Dr. Baba in March, was gradually quieted, and stimulated by prospective inflation and the rising tendency of commodity prices the index number of the price of popular shares rose from 108.6 in August to 116.3 in December. On the contrary, the long term capital market was heavily affected by the new tax system, and the floatation of debentures during the last quarter of 1936 became almost impossible.

The commercial world in general was confused because of the ambiguity of the final outcome of the policies of the Cabinet and was unable to make new contracts, while banking circles raised voices of criticism against the new income tax, stock exchange tax, tax on property, etc.

The rise in prices of commodities which had been expected as usual during the second half of the year and along with the rising tendency of prices the world over was taken advantage of by the Government in November to raise the price of tobacco. The general rise was such that the average index number of prices rose from 159.1 in June to 173.5 in December. The living cost of the people began to rise accordingly, and the Baba finance became so unpopular that the existence or continuation of the Hirota Cabinet began to be much discussed in the newspapers and leading periodicals.

The unpopularity of the Cabinet was due not only to the Baba financial plan but also to other national policies, such as that of electric power control, together with the seemingly lack of power to put the policies into practice. But the first cause of its weakness lay in the defects of its financial scheme, which overlooked the welfare of the mass of people both in cities and villages.

Advance to the National Control of Economics The financial policy of the Hirota Cabinet advanced to the national control of important economic organs and industrial enterprises. The phrase "Quasi-wartime economic system," which was frequently used by the Financial Minister and journalists in the latter half of the year, well voiced the Government's intention for national economic control. The control cannot be said to be as thorough as that in Fascist countries, but it entered in no small degree into the free commercial and industrial fields in 1936. The first aim of this economic control was the completion of national defence, the second was the remedying of the defects of individualistic capitalism and the third was the establishment of an economic policy of self-sufficiency along with the world tendency of forming economic blocs. From the outset, the Hirota Cabinet took as its first mission the strengthening of national defence although it did not by any means try to destroy the existing capitalistic economic system or reject the old principle of commercial freedom, but it purported to effect a peaceful change in the economic system of Japan, beginning with those enterprises the control of which was an acute necessity for the betterment of the life of the people and the strengthening of defence.

Among the bills which were put by the Government before the 69th session of the Diet and which passed both Houses, were many which aimed at this betterment of the life of the people and the strengthening of defence, for instance, the Rice Control Law, the Cocoon Disposition Control Law, the Important Fertilizers Business Control Law, the Important Commodities of Trade Control Law, the Automobile Manufacturing Business Law, the Revised Industrial Control Law, and the

Navigation Control Law. These laws had been planned by former cabinets so were not the legitimate offspring of the Hirota Cabinet control ideals, but they passed into law because of the Diet's desire to strengthen economic control to meet the quasi-wartime needs.

New Diet Building

The new Diet Building was completed in the autumn of 1936 at a total cost of approximately ¥25,800,000 spent over a period of 19 years. It stands on an eminence of 26.6 metres above sea-level at Nagatacho, Kojimachiku, in grounds of about 694 ares (17 acres).

For the erection of the building, a special bureau was created within the Ministry of Finance on June 9, 1918, and on September 16 of the same year, an announcement was made through the official gazette, offering prizes for the best designs. After a careful examination of the designs presented, four prize winners were gazetted on October 16, 1919, and on the basis of these an official plan was drawn and the construction work started.

The site for the Diet was marked as such as early as 1887, one year before the construction work on the old provisional Diet building at Uchisaiwaicho was commenced. It looks on to the Imperial Palace in the north-east and fronts, across the Kasumigaseki Detached Palace, on various offices of the Central Government at Sakuradacho and Kasumigaseki. In the rear, it faces the Sannō Grove across the ravine of Nagatacho.

The ground-breaking ceremony took place on January 30, 1920, and in May, 1925, a Building and Repair Administration Bureau was established and the responsibility of the construction of the building was turned over to the bureau. The steel frame was completed in 1927 and the ceremony of putting up the roof-tree according to a Japanese custom was held on April 7, of the same year.

The building has in the centre a tower of 65.5 metres in height, the section on the right of the tower being assigned to the House of Peers and that on the left to the House of Representatives. The building covers an area of 123.96 ares, the total floor space being 521.65 ares. It has a frontage of 206.36 metres and is 88.63 metres in depth.

It is a three-storied building with a basement, except the central section which is four-storied with a basement. The tower in the centre is eight-storied, the uppermost floor being intended as an observatory. The entire building is divided into 390 major rooms and a number of minor ones.

The foundation consists of concrete piles of the pedestal type which reach the gravel layer and of a ferro-concrete base which is constructed on the concrete piles. On the ferro-concrete base stands the steel frame which was made entirely of products of the Yawata Iron Works. The outer walls of the building are made of granite, the upper portions consisting of products of Hiroshima prefecture and the lower being products of Yamaguchi prefecture. The four columns of the front porch each stand 14.85 metres high and are 1.818 metres in diameter, their capitals being decorated with the phoenix and arabesque patterns.

Thirty-seven different kinds of marble, gathered from various parts of the country, are used for finishing the interior of the building, that used for the central hall is coral lime-stone similar to Italian travertin, a product of Okinawa prefecture, and is used in architecture for the first time in this country. The central hall and the hall in front of the Imperial rest-chamber are decorated with mosaics made by the use of 1,600,000 small different-coloured pieces of marble.

The Chambers of the House of Peers and the House of Representatives each cover an area of 7.437 ares. The former has 460 seats and the latter 466 seats but either of them may be increased to a maximum of 635 seats in case of necessity.

The Imperial rest-chamber and the chamber for Princes of the Blood are finished with a coating of genuine lacquer on Japanese cypress. The entrance doors of the Imperial rest-chamber are decorated with gold lacquer pictures inlaid with the mother-of-pearl.

The carpeting of the floors of the Imperial rest-chamber and the chamber for Princes of the Blood is of silk while the floors of the rooms for the State Ministers are covered with Chitosé dantsū (Carpets) manufactured at the Fukuoka Industrial Laboratory. The large bronze doors of the front Imperial entrance which weighs 1,125 kg. each were manufactured by the Tokyo Academy of Fine Arts.

The building is equipped with all modern conveniences, such as heating and cooling systems, elevators, pneumatic carriers, five preventing and ventilating apparatuses, vacuum-cleaners, loud-speakers and other electric equipment of all kinds. The exterior can

be flood-lit with 24 light projectors of 1,000 watts each. The assembly chambers are illuminated by 416 lamps installed behind the stained glass of the ceilings, the lamps being divided into four groups so that the illumination can be increased or reduced at will. In addition, there are 20 lamps hanging from the ceiling, which serve as a decoration and which may be lit by means of storage batteries in case of interruption of the electric current supply.

There is also a notice announcing system whereby the secretaries can announce 12 different notices, such as "Meeting is opened," "Speech by State Ministers," and "Debate" from their desks to about 90 halls and chambers and rooms in the building simultaneously by means of indicators. A special bell system, a new Japanese invention, based on successive diminution of frequency is also installed, whereby notices can be announced from the chief secretary's room as to which house is in plenary session, the House of Peers or the House of Representatives.

The new Diet building was constructed on the basis that domestic products to the greatest possible extent should be used, so not only are the building materials of home production but also are all the interior ornamentations, furniture and furnishings, and some of them were obtained only after considerable difficulty, while others were put to new and unusual uses in order that the construction of the new seat of national legislature should stimulate the development of architecture and promote the industry of the country.

Sino-Japanese Issue On August 24, 1936 a Chinese mob attacked four Japanese at Chengtu, Szechwan province, killing two newspaper correspondents and seriously injuring the other two. This event aroused the indignation of the whole Japanese nation as similar misdeeds against Japanese subjects in China had become of rather frequent occurrence. Negotiations between the Japanese envoys at Nanking and Chinese Foreign officials were becoming a matter of continuity for the peaceful settlement of these matters.

The Japanese Government and people took the occurrence of these regrettable incidents as a natural outcome of the anti-Japanese education and policy of the Nanking Government. The recurrence of such incidents could not be prevented, the Japanese inferred, by a mere proclamation of the Chinese Government enjoining of Chinese people to behave more friendly toward the Japanese. The Japanese Government seemed rather too cautious, while the public opinion in Japan was strong enough to back the Government in taking any aggressive measures on China. The Nanking Government took a negative attitude all through and, taking advantage of the East Suiyuan issue at the end of the year, communicated to the Japanese representatives that it would be difficult to bring the Nanking negotiation to a successful conclusion so long as the East Suiyuan question was not settled, and assumed an attitude threatening to repudiate all agreements so far reached. The final outcome of all conversations between the representatives of the two Governments, which had extended over three months, was the visit of Ambassador Kawagoe to Mr. Chang Chun, Chinese Minister for Foreign Affairs, on December 3, 1936 when a note embodying points on which agreement had been reached was handed him, and the Nanking parley entered a holiday, both sides publishing statements contradicting each other. (See Chapter VI, Foreign Relations.)

The Sino-Japanese issue in the last three months of 1936 left the final solution to a later occasion. The Japanese press and the people as a whole were not satisfied with the activities of the authorities concerned with the issue, considering their attitude as disclosing weakness on the part of the Hirota Cabinet and taking, on the other hand, the unfriendly attitude of the Nanking Government so heavily to heart that another crisis between the two nations seemed likely at any moment.

Control of Electric Power Control of electric power in Japan by the Government was included in the items of the seven national policies set out by the Hirota Cabinet as mentioned elsewhere and became one of the most important subjects of discussion in industrial and commercial circles. The plan was representative of the national control of all economic enterprises and the existing electric companies were necessarily opposed to it as against their interests, and the economic world condemned it as being contrary to the principle of commercial freedom and a kind of public robbery of another's property because under the plan it was intended to purchase compulsorily all the facilities and equipments of the companies at a price estimated by the Government. Heading the criticism of the plan the Ministry of Communications, the compiler of the bill, made

amendments to the first plan, but the main difficulty lay in the value of the fixed assets of the power companies which were capitalised aggregately at over ¥800,000,000, besides which much doubt was entertained as to the practical result of the control, which aimed at the lowering of the price of electric power. The presentation of the bill to the 70th session of the Diet at the beginning of 1937 was therefore postponed and the question left over for the decision of the present Konoe Cabinet.

Japan-German Agreement In cognizance of the fact that the object of the Communistic International, or the so-called Comintern, is the disintegration of existing States recognized by it as Imperialistic or capitalist, and that its interference in the internal affairs of nations not only endangers their internal peace but threatens international peace, and desiring to co-operate for defence against communistic disintegration, Japan and Germany agreed, on November 25, 1936, on a mutual exchange of information concerning the activities of the Comintern, confer upon necessary measures of defence and carry out such measures in close co-operation. When this agreement was announced by the Government the general public received it with a reserved expression of feeling, not so much of dissension at the agreement but at the way it was arrived at, for the Government had kept the negotiations so secret that the final result failed to get the full sympathy of the people. Actually there was no fundamental objection from any quarter, any dissatisfaction that was voiced being merely against its sectional nature and proposing that the agreement should have been of a more thorough understanding for mutual help. The matter is handled in the chapter on foreign relations, and it will suffice here to point out the Japanese historical friendly feeling towards the German people. The affinity of the Japanese feeling towards the German people before the world war originated in and was fostered by Germany's tutorship in the medical and military sciences. German philosophers, headed by Kant, have found many followers among the Japanese and their influence, even over the Japanese indigenous religion of Shintoism in its philosophical exposition, has become noticeable in recent years. In musical education, especially in respect to the piano, Japan owes as much to Germany as to Austria, France and other countries. In spite of the Kaiser's outcry at what he termed the "Yellow Peril," the hostility between the two countries around the Chinese question, and, at the time of the World War, the fact that Germany and Japan found themselves on opposite sides, the people of Japan have always cherished an admiration toward the German people for their love of their country, their rare fighting spirit, their scientific ability and their national strength as demonstrated during and after the War.

Question of the Revision of the Administrative System Much talk and discussion took place on the question of the revision of the administrative system of the central and local governments after the formation of the Hirota Cabinet, but it was only on October 23 that it was first introduced to a regular Cabinet meeting. For the improvement of the central governmental system Finance Minister Dr. Baba, Railway Minister Mr. Maeda, Communications Minister Mr. Tanomogi and Education Minister Mr. Hirao, and for that of the local governmental system the Home Minister Mr. Ushio, the Minister of Justice Mr. Hayashi, the Minister of Agriculture and Forestry Mr. Shimada, the Minister of Commerce and Industry Dr. Ogawa and the Minister for Overseas Affairs Mr. Nagata were asked by the Premier Hirota to make joint investigations concerning the economic and administrative relations of the local governmental system and the fundamentals of the constitution of both houses of the Diet.

The problems of the renovation of the political organs included one regarding the reformation of the legislation organ, and many rumours were heard about the intentions of military circles, for it was said that they were against political parties and any formation of the cabinet by a political party in Japan. Early in November, the Minseito, the Seiyukai and the Social Mass parties held meetings and passed decisions demanding to know the real intention of the Minister of War. Whereupon the War Minister, Lieutenant-general Terauchi, made clear in the Cabinet meeting held on November 6 his ideas on the constitution of the Imperial Diet as follows :

The sole intention of the Ministries of War and Navy is in the establishment of a constitutional government characteristic to Japan in accordance with the special nature of the Japanese national structure, and military circles entertain no idea of minimizing the power of the Imperial Diet in any degree. What they wish is that the Im-

perial Diet may carry on its functions in accordance with the Constitution of the Japanese Empire so as to rightfully represent the demands and opinions of the people in general. All the political demands of the Army and Navy shall be expressed through the Ministers of War and Navy and no other individuals or officers in responsible positions, and the Imperial Army is by no means responsible for the rumours concerning its intentions on the reformation of the Houses.

A fuller explanation on what the military circles demanded for the renovation of all political organs was given out on November 9. The gist of it follows :

On the reorganization of the central governmental system, (1) the establishment of an organ for the investigation of important national policies, control of the Ministries, formation of a national budget and more reasonable distribution of money among the different Ministries, by the reconstruction of the existing Commission of Information, the head of the organ to be made a member of the Cabinet ; (2) the establishment of an organ for the unified control and improvement of officials in all departments of the central government, the organ to be under the direct supervision of the Premier ; (3) to reinforce Japan's foreign policy by the amalgamation of the Ministry of Foreign Affairs and that of Overseas Affairs ; (4) to amalgamate the Ministries of Agriculture and Forestry and Commerce and Industry for the readjustment of the administration of commerce and industry and for the strengthening of the organs for foreign trade, fuel and electric enterprises ; (5) to transfer the Shrine Bureau of the Home Ministry to the Education Ministry for the more effective promotion of the national spirit ; (6) the reorganization of the Ministry of Home Affairs for the renovation of the administration of home affairs, by relieving it of the work of the Shrine Bureanu and public engineering, and giving it the power of controlling all the organs related to public health ; (7) the unification of the administrations of air and land transportations and communications specially to encourage the progress of air transportation managed by private companies and to strengthen the control of shipping and harbour enterprises ; and (8) to effect improvements in the working of all Ministries to do away with contradictions, overlapping and rivalry among Ministries in official works and investigation organs :

On the reformation of the local governmental system : to improve and renew all the phases of local governments in accordance with the renovation of central government and in compliance with the advance of the national destiny ; and as to the Imperial Diet, to reform the Houses by the revision of the Parliamentary and Election Laws to meet the present conditions of Japan. These demands have as their fundamental aim the bringing about of a strong Government which may be able to work out its functions for the expansion of trade and commerce, the progress of industry and the completion of national defence in order to keep pace with the progress of the world and cope with the changes of the times.

On December 2, at a meeting of the Commission for the Investigation of the Parliamentary System, the members of the Commission met Lieutenant-General Terauchi, War Minister, to hear his ideas on the reformation of the Imperial Diet and increase understanding on both sides through open-hearted conversations. The War Minister denied all the reports in the press concerning the opinions of a part of the Army and expressed regret at the existence of a mis-informed propaganda as to the real wish of the Army on this subject, and said ; " In my belief there should be no such idea as to be against our national structure or the Constitution of the Japanese Empire and abuse the fundamental nature of the Imperial Diet in working out its functions, influenced by western democratic ideas. In view of the present state of affairs it is an urgent need that the Parliamentary and Election Laws be revised so that a healthy public opinion and the wisdom of the people may be fully reflected upon all the political working of the constitutional government in accordance with our unique Constitution. Such is my earnest hope as one who has endeavoured to readjust military discipline and make clear Japan's national characteristics. National and international affairs in Japan require the unity of the whole nation and self-examination and sacrifice on the part of all the organs responsible for the destiny of the country in order to make a steady national advance, conquering all obstacles and rallying all the forces of the nation."

Then he unreservedly admitted that the meddling of soldiers in active service with political affairs is strictly prohibited by the Election Law, the Military Criminal Code and regulations

and reported that the War Minister had already given orders to the whole army not to deviate from its duties.

On November 16, the four Ministers of State who had been entrusted with the investigation on the reformation of the central governmental system held their third meeting and came to the following decision as to the central organ of control: (1) the new organ may be called the Sōmu Cho or General Board; (2) the present Investigation Bureau, Resources Bureau, Statistics Bureau and Information Commission shall be brought into the new General Board, changing the name of the Information Commission to Information Bureau and that of the Investigation Bureau to Planning Bureau and enlarging their functions; (3) the Legislation Bureau shall remain independent as it is now; (4) the proposed Personnel Bureau and Budget Bureau shall not be establshed, leaving the responsibility of the budget formation to the existing office and enlarging the official forces under the present Chief Secretary of the Cabinet for the management of personnel; (5) the head of the new General Board shall be newly appointed and his official rank shall be the highest rank of Shinnin-Kwan; and (6) the head of the General Board shall be present at Cabinet meetings, but whether he be made a regular member of the Cabinet or not shall remain undecided for the time being. But, when a written bill on the proposed General Bureau was prepared by the Legislation Bureau and put before the fourth meeting of the four Ministers, which was held on December 5, opinions were divided on various important points and the final decision was postponed, with the hope, however, of getting the final bill drawn up before the coming session of the Diet in order that the establishment of the Board may be realized in the fiscal year 1937–38.

On December 11, the five Ministers of State who had been entrusted with the investigation on the renovation of the local governmental system held their fourth meeting and after discussions on the reports of each Minister came to the conclusion that the question of the complete autonomy of the greater cities independent of the prefectural government had to be settled as soon as possible, but in view of the shortness of time for drawing up a bill for all the greater cities in Japan the Tokyo Metropolitan bill only should be prepared and introduced to the coming session of the Diet. As to the revision of the regulations on the constitution of the Imperial Diet they decided to wait for the reports of the investigation commissions Parliamentary Law, the Election Law and the House of Peers Law.

Positive Attitude of Political Parties

The 70th session of the Imperial Diet was convened on December 24, 1936, to sit for three months ending with March 25, 1937. The difficulties of the Hirota Cabinet were expected to arise over the Tax Increase Bill, the Electric Power State Management Bill and the Compulsory Education Prolongation Bill and it was felt that the Government must exert itself to overcome the antagonistic forces represented by many members of both Houses. To make the matters worse, there was a dissatisfaction at the foreign policy of the Government in general and a still smouldering complaint at the Government's attitude towards the political parties.

From what transpired at the meetings of the political parties preparatory to the 70th session of the Diet it was revealed that the parties were going to take a much more positive attitude in the discussions in the coming session of the Diet than they had been wont to do in former sessions. The Imperial edict at the opening of the 69th session called forth the sense of responsibility anew, not only among Governmental circles but also among party men, and the latter began to pay closer attention to the doings of the Hirota Cabinet. They were expected to enter into hot discussions over many drastic measures to be taken by the Government for political, economic and educational renovation discordant, in their eyes, to the present state of national progress, together with evident failures in the handling of international affairs by the Government. In certain circles the view was entertained that the political parties were aiming at the overthrow of the Government during or after the 70th session of the Diet in order to bring about a possible pro-party government under the premiership of, for instance, General Ugaki or General Minami. No matter whether there was any truth in such a surmise it was true that the progressive elements of both leading parties met several times to discuss upon these questions with the aim of bringing about the co-operation of the Minseito and the Seiyukai in the fight against the Government. A complete unity of these parties en masse was much doubted, but there was some possibility of it should an emergency arise in the session which might concern the common interest of both parties,

although on the other hand, both parties were rather handicapped because of their being represented in the Cabinet.

The 70th Session of the Imperial Diet

The 70th session of the Imperial Diet, convened on December 24, 1936, was of great import to the Hirota Cabinet, which had been formed to cope with the grave state of national and international affairs and the February 26 Incident and which was now to ask the judgement of the nation concerning its plans and administration for the first time, because the 69th session had been a short and extraordinary one. There was a fresh expectation in general for the session because it was to be held for the first time in the new and permanent edifice of the Imperial Diet Building which had been completed in November, 1936.

Before the formal opening of the session the political parties held their general meetings and gave voice to what they thought of the general situation and their attitude towards the Government.

The Miniseito published its statement, saying, "The present state of national and international affairs in Japan calls for the fundamental reformation of international policies and administration of national affairs. But what the present Government is doing is far from their promise for the reformation of national administration thus causing a general unrest in the banking and industrial circles and deepening the economic depression among the working classes in urban and country districts alike so that the whole nation is put on the verge of an outbreak of thought confusion, while the foreign policy of the Cabinet has brought about a standstill of diplomacy between the country and Russia, China or Great-Britain, because of its inability to establish a stable diplomatic policy." The Seiyukai put emphasis on the effective activities of the Imperial Diet as an organ representing the mass of people in answer to the Imperial wish for discussing important matters with the subjects, calling special attention to the new taxation policies of the Government and its wavering diplomatic policy concerning matters pertaining to the welfare of the Oriental countries. The Social Mass party passed decisions on waging war, against the oppression of the Government of the Governmental labour unions, on a movement for the institution of the Trade Union Law and Tenant Law, on free discussion in the Diet, on the Budget, the revision of the tax system, the reformation of the governmental system, the revision of the Election Law and the control of the electric power business, and on the realization of a diplomatic policy in accordance with the wishes of the people, evincing their anti-Fascist political ideas.

The Strength of the Political Parties The strength of the political parties in the Houses on the day of the opening of the Imperial Diet was as follows:

The House of Peers;	
Princes of the Blood	18
The Kenkyukai	160
The Koseikai	66
The Kayokai	42
The Koyu Club	36
The Dowakai	34
The Doseikai	22
Independents	30
Total	408
The House of Representatives;	
The Minseito	205
The Seiyukai	171
The Showakai	25
The Kokumin-Domei	12
The Tohokai	9
The Social Mass Party and Local Proletarians	21
Other small groups	18
Independents	4
Vacant seats	1
Total	466

The general atmosphere at the opening of the 70th session of the Diet suggested a strong attitude of the leading political parties against the policies of the Government, especially against the lukewarm Arita diplomacy. But the collision between the House of Representatives and the Hirota Cabinet occurred on January 21 in connection with the interpellation of Mr. Hamada and the answer of Lieutenant-General Terauchi, War Minister.

Premier Hirota's Address The 70th session of the Diet reopened on January 21, 1937, after over three weeks' adjournment and the Premier, the Foreign Minister and the Finance Minister delivered addresses reviewing in general the important national and international policies.

Premier Kōki Hirota stated in his address that it was Japan's mission to make contributions to the establishment of an enduring peace in the world, that Japan was confronted internally by a number of problems in all phases of national affairs, while externally the conditions of the world were in a

disturbed state and the international political situation of Japan was becoming more delicate than ever presupposing diplomatic difficulties of all kinds on her path ahead, that in order to surmount these possible difficulties Japan should on the one hand make known to the world the high aims of the country in order to get a full understanding of these aims among the nations and she should on the other hand bring about a general renovation of the government machinery to effect the repletion of national strength.

The Government, he assured, was endeavouring to insure Japanese position as the stabilizing power of East Asia by strengthening her special relations with Manchoukuo and establishing amicable relations with China being convinced that the adjustment of the present Sino-Japanese situation was of paramount importance for maintaining a lasting peace in East Asia. Then he dwelt upon the Japan-German Agreement concluded in November, 1936, and said Japan had always been exercising strict control over the communist movement in the country and in view of the visibly increasing menace of the Comintern she felt the need of international co-operation for combating the organization and concluded, to begin with, an agreement with Germany. As to Japanese relation with other nations he spoke of Japan's effort for smoothing the Soviet-Japanese relations, and Japan's friendly relations with Great Britain and the United States of America.

Then he went on to speak on the important policies of the Government which had been announced before the 69th session of the Diet in the spring of 1936. "We have decided," he said, "to submit to the Diet seven concrete programmes for national defence and other matters, together with the budget and bills which are necessary in order to carry out those programmes. The first item is the repletion of national defence. If our country is to insure its existence, carry out its national policies, and maintain its position as the stabilizing force of East Asia and march forward in peace, no deficiency can be permitted to exist in the system of our national defence. The Army requires immediate augmentation of its strength to meet the need of defence on the continent. The Navy, in this age of no treaty limitation, must be provided with adequate equipment consonant with our principle of non-menace and non-aggression. The second item is the programme for educational reforms. Under the present circumstances of our country it is of urgent necessity to reinvigorate the national spirit through a proper reform of our educational system suited to the needs of the times. The public school system is the root and stem of all educational undertakings in Japan. All other facilities for education should be placed on the solid foundation of public schools. Therefore, it has been decided to extend the period of compulsory education in public schools and to introduce improvements into its system along the lines recommended by the Education Reform Council.

"The third item is the revision of the taxation system, national and local, to increase the tax revenue of the Government for carrying out a number of important programmes for the repletion of national defence, for the development of national strength and for the reinforcement of the national foundation, and at the same time to set up a flexible system of taxation and to effect a fair distribution of the tax burden. The fourth item is the stabilization of national life. The Government plans to contribute to the stabilization of national life by concentrating efforts on the prevention of natural calamities, the improvement of health measures, the economic rehabilitation of farming and fishing villages and the encouragement to merchants and industrial enterprisers of limited means."

As regards the measure for the mitigation of losses sustained by natural calamities efforts would be made, he assured, for afforestation and riparian works. For the improvement of the health of the people more effective measures for the prevention of tuberculosis would be carried on, while the national health insurance system would be inaugurated. For the economic rehabilitation of villagers the Government would exert efforts to reform the smallholding system, to harmonize the interests of tenants and landowners, for funding the debts of villagers and to compensate or lighten the losses of farmers and fishermen sustained by natural calamities. To better the business conditions of petty merchants and small industrial enterprisers the Government intended to encourage the organization of guilds or associations, to extend financial aid to them, to inaugurate a compensation system for their losses and to localize various industries.

"The Government has formulated," the Premier's address continued, "a comprehensive plan for the development

of the north-eastern districts which are in extreme distress, and has already started to carry it on. For the purpose of easing the credit situation the Government has established people's banks and pensioner's banks. For the development of industry and the promotion of foreign trade various steps have been taken.

"The fifth is industrial development and commercial expansion. In the first place, the control of the electric power industry commands our attention. In view of the universality of electricity and of the public nature of electric enterprises, the Government proposes to control the electric power industry so as to develop water power resources on a national basis and complete a network of transmission wires, to establish a policy regarding charges and meet the requirements of national defence. As regards liquid fuel and iron and steel, the Government, in view of the increasing importance of accelerating the self-supply of liquid oil in the face of prevailing circumstances both at home and abroad, has reorganized and strengthened the machinery for the execution of its fuel policies, by extending the existing installations, and by formulating and carrying out a policy for the establishment and development of synthetic oil production. At the same time, the Government, for the self-supply and self-sufficiency of iron and steel and also for the independence of the iron and steel industry, is making efforts for the formation of a comprehensive iron and steel policy covering Japan and Manchoukuo, the improvement and proper control of the iron and steel industry in Japan, the development and securing of iron resources and strengthening other fundamental measures.

"Regarding fibre materials, the Government will take measures for developing the sources and establishing the industry for manufacturing fibre substitutes..

"That our foreign trade has continued to increase year after year and make a steady and favourable development in the midst of the world-wide economic depression, is due to the assiduous efforts of traders for many years past and to the improvement of the productive technique. However, with international trade being hampered by obstacles of all sorts, the prospect does not permit optimism. We must, in co-operation with other Powers, remove trade barriers and at the same time, with the Government and people in unison, take all necessary measures for the promotion of our trade. The Government intends to strive for a smooth development of our foreign trade by strengthening the control, by making adjustment between the industries of our country and those of other countries concerned and by remedying various abuses in transaction, and will make efforts for the reorganization of domestic industries into those for export purpose and the protection and development of our markets abroad.

"In view of the important bearing of the development of aviation and shipping industries upon the prosperity of a nation, the Government has decided to take measures for the full development of air routes, for the encouragement and control of the aircraft industry, for the inauguration and improvement of regular air services, and for the encouragement of the construction of superior vessels and also of oceanic shipping business.

"The sixth is the establishment of the important policy toward Manchoukuo. The Government has formulated a plan for sending a large number of emigrants to Manchoukuo and also taken steps to encourage investments in the country. Encouragement of emigration to Manchoukuo will strengthen the inseparable relations between Japan and Manchoukuo and also will contribute to the healthy development of that country, while assistance extended to its economic development will serve as a short cut for the realization of economic co-operation between the two countries.

"The seventh is the reform and improvement of administrative machinery. The Government is making an intensive study of the problem for reforming and improving both central and provincial administrative machinery, securing thereby smoothness of administration. We intend to realize it step by step when definite plans are made.

"The necessity of reforming the parliamentary system along with the reform and improvement of administrative machinery has been recognized. A resolution for that purpose was adopted at the last session of the Diet. In consequence, the Government has appointed three commissions, the Parliamentary System Investigation Commission, the Election System Investigation Commission, and the Commission for the Investigation of the House of Peers System. Competent men, both in and out of the Government service, are serving on those commissions which are

pushing on necessary studies. Recommendations have already been made on those points of the parliamentary and election systems which require reform. In pursuance of those recommendations the Government intends to go through necessary formalities and to introduce at this session legislation bills providing for reform of the parliamentary and election systems. For securing constitutional development we believe it vitally important to inculcate upon the people always a true understanding of constitutional self-government and make them assume a stronger sense of responsibility therefor, and we intend to make greater endeavours in this direction also. Under the circumstances politics are positively not permitted to run counter to the guiding principle of our constitutional government. We are convinced that our nation is bound to supprt solidly the great purpose of the Constitution under the peerless national polity."

Foreign Minister Arita's Address "As I stated in May last at the Extraordinary Session of the Diet, the national policy of Japan aims at ensuring the stability of East Asia, to contribute thereby to the cause of world peace, as well as at promoting the welfare and happiness of mankind by upholding international justice. And we have been striving earnestly and unremittingly toward the achievement of those aims.

"In surveying the conditions of the world it is to be noted that the international political situation is still lacking in stability. In fact, it appears to be growing worse than ever owing especially to the activities of the Communist International, or the Comintern. In these circumstances, it is truly significant that there was concluded on November 25 last year an agreement between Japan and Germany concerning the Communist International. This agreement is intended for a common defence against the activities of the Comintern whose tenets are not only incompatible with the national polity of our country but inconsistent with human nature itself.

"The Japanese Government has always been endeavouring to suppress the communist movement, which long since made its way also into this country. In China, subsequent to the adoption by the Kuomintang of a policy of toleration toward the Communist Party, the movement spread widely so that there were established a few years ago Soviet Areas in various prts of Kian Kiangsi and Fukien, and the so-called Communist-bandit armies infested numerous localities. It was with grave concern that Japan watched the developments in China under the Red invasion. Then, in the summer of the year before last, the Seventh Congress of the Comintern, convened at Moscow, passed a resolution and declared openly that certain countries including Japan and Germany were to be the major objects of its future operations. At the same time the Comintern adopted new tactics of campaign based upon the formation of the so-called people's front, which has proved successful in several countries of Europe, especially in Spain where it has brought on a civil war which is raging even now, attended with terrible scenes of fratricide. In East Asia the Comintern commenced skilfully to sovietize China while damaging the Sino-Japanese relations through a movement called the Anti-Japanese People's Front organized throughout that country. In Manchoukuo and also in Japan there appeared signs of the growth of communist manoeuvres.

"In the face of the operations of the Comintern, tenacious as they are ingenious, our Government was obliged to devise more stringent measures of defence and formulate an adequate policy for the protection of our national polity and the preservation of the stability of East Asia. Of course, we are seeking to achieve the purpose of defence and of detection and investigation through our domestic organs. But the Comintern is an international organization with a large number of branches scattered all over the globe, which maintain close contact between one another, and conduct their campaigns under directions from headquarters, each exploiting the peculiar conditions of its own territory. Therefore, measures for guarding against such operations should necessarily be extended to an international scale. That is why Japan has concluded with Germany the present agreement providing for the exchange of information and the study of the necessary steps to be taken.

"The object of this agreement is a joint defence against the Comintern, and we should be glad to enter into agreement with any other country within the scope of that aim. Needless to say, the Japanese Government are not bound in any way outside the scope of the above-mentioned aim. It seems to have been those who entertained misunderstandings or misgivings regarding the character of the agreement. But I wish to state definitely that the conclusion of the agreement, which was

dictated by the need of protecting our national polity and preserving the peace of East Asia, does not affect in the slightest degree our policy of promoting friendly relations with all Powers in the spirit of universal concord and harmony.

"The Japanese Government is endeavouring to further the unity and solidarity between the peoples of Japan and Manchoukuo and to consolidate the neighbourly and inseparable relationship between the two countries. And for that purpose, we decided, as I stated at the previous session of the Diet, upon the abolition of our extraterritorial rights and the adjustment and transfer of our administrative rights in the South Manchuria Railway Zone. Under this policy, and as the first step, there was signed on June 10 last year a treaty concerning partial abolition of our extraterritorial rights and adjustment of our administrative rights in the South Manchuria Railway Zone. The conclusion of this treaty was hailed by the people of Manchoukuo with profound satisfaction, and its operation has since proved eminently successful. It is gratifying to us all to note that Manchoukuo is making steady and healthy progress along all lines, and the economic and commercial relations between that country and ours are growing more and more intimate.

"It was some time ago that the Japanese Government proposed to China three basic principles, hoping to effect thereby the much needed adjustment of Sino-Japanese relations. However, in August last there occurred the Chengtu incident, which was followed by a series of unfortunate incidents at Pakhoi and elsewhere. From an examination into the nature of these incidents we could see clearly that every one of them was not merely an ordinary case of murder or assault, but that they were all traceable to the anti-Japanese policy of China. While it was necessary to obtain settlements of individual cases as such, it was evident that unless we eliminated their underlying causes we could not possibly prevent the recurrence of similar incidents, nor could we protect the lives and property of our nationals and safeguard our rights and interests in China, and consequently we could never hope for a friendly and harmonious intercourse between the two nations.

"Therefore, in order to forestall the recurrence of any untoward incidents at their very source, the Japanese Government, while demanding utmost sincerity in the exercise of the control of all anti-Japanese agitations, invited the Nanking Government to discuss various questions, upon the solution of which depended the adjustment of Sino-Japanese relations. In other words, we desired that the Nanking Government, instead of stopping short at the negative policy of merely controlling the anti-Japanese movement, should go a step further and alter their own attitude toward Japan, which was one of the chief causes of anti-Japanese agitations, and we urged upon that Government to prove their sincerity on various concrete issues having to do with the rehabilitation of Sino-Japnese relations. Negotiatıcns were begun at Nanking between the representatives of the two countries early in September, and continued for over three months. Believing that, in view of the Chinese attitude, indefinite prolongation of the negotiations would only serve to bring on fresh complications, we demanded that the Nanking Government put into practice those points on which both sides had so far reached an agreement of views, leaving the remaining questions to later conversations. Thereupon the Chengtu and Pakhoi incidents as such were settled on December 30.

"The policy of Japan toward the U.S.S.R. lies, as a matter of course, in the maintenance and insurance of normal relations. In order to enhance friendly relations between the two countries through the solution of pending issues, our Government has continued to conduct negotiations during the past year regarding the revision of the fishery treaty, and the problems of border demarcation and settlement of disputes between the Soviet Union and Manchoukuo, and also has assisted in the negotiations between the Soviet authorities and representatives of Japanese interests on the matter of extension of the period of oil prospecting in North Saghalien. As regards this oil question, a contract was concluded in October extending the prospecting period by five years. The text of a new fishery convention was also drawn up in the middle of last November after deliberations lasting for one and a half year. But at the very moment when the instrument was to be signed, the Soviet Governmnt asked for a postponement of the signature on the grounds of non-completion of the necessary domestic procedure, and thereafter persistently refused to sign. We called the attention of the Soviet Government repeatedly to the basic nature of Japan's fishery right in the northern waters and to the perpetuity re-

quired of the treaty intended to regulate the exercise of the said right. As the result of these later conversations a provisional arrangement was concluded at last on December 28, which will permit our fishery enterprise to go unobstructed for the coming session. Our Government intends of course to continue negotiations regarding the signing of the above-mentioned new convention and expects to arrive at a settlement at an early date.

"The establishment of Commissions for the Manchoukuo-Soviet border demarcation and settlement of disputes was proposed by our Government in the belief that such bodies would contribute substantially toward the prevention of disputes between Japan, Manchoukuo and the Soviet Union, and the harmonization of the tripartite relations. I may say that an agreement of views has been reached on all the basic questions involved, excepting one or two points. And our Government hopes to see this question settled as soon as possible.

"Toward Great Britain our policy to strengthen the traditional relations remains unchanged. When the two countries, taking a broad view, give full and sympathetic consideration to each other's position, there can be no doubt that a way will be found of adjusting their interests. It is the intention of our Government to exert further efforts in that direction.

"Japan's relations with the United States are of late happily improving, owing, I believe, as well to our consistent policy of contributing, in cooperation with that Power, to the maintenance of peace in the Pacific, as to a deeper understanding on the part of the American people regarding the situation in East Asia. The Japanese Government will continue to spare no efforts in the cultivation and improvement of the cordial relations already existing between the two nations.

"The naval limitation treaty among the world's three major sea Powers, Japan, Great Britain, and the United States, has expired with the last year. Our Government, adhering as faithfully as ever to the principle of non-menace and non-aggression, have certainly no desire to initiate a race for naval construction. Indeed, we have seized every opportunity to express our sincere aspiration for naval limitation, and it is still the cherished hope of the Japanese Government that there will be concluded as soon as possible a just and fair treaty of limitation among the Powers concerned, to contribute to the cause of world peace.

"Recently, we notified the Italian Government of our decision to withdraw our Legation in Ethiopia and to establish a consulate in its stead. At the same time, the Italian Government assured us that they would give favourable consideration concerning the protection of our commercial and other interests in Ethiopia. Negotiations on that basis are now in progress. I should say that we have only taken what seemed to be the proper step in view of the actual situation and also in consideration of the friendly relations between our country and Italy.

"Our Government is also desirous of establishing closer economic relations with the countries in the South Seas. Although there are those who misunderstand, or even attempt to discredit our intentions, we entertain no aggressive designs, but only seek to promote our trade and join efforts with those countries in the development of the natural resources through the furtherance of peaceful and friendly relations.

"I am happy to say that Japan's foreign trade, despite the numerous measures of restriction adopted by many countries, rose to an unprecedented volume last year, demonstrating the vigour and vitality of our nation's economic and industrial life. As for the trade restrictions of other lands, they are of such character that there is no way to have them removed save through diplomatic negotiations. Our Government is doing its best in that regard. To cite a conspicuous instance, some time ago our Government was compelled to invoke the Trade Protection Law against Australia in order to counter the measures of the Australian Government to restrict the importation of Japanese goods. Thereafter we initiated trade negotiations which were continued for several months until toward the end of last year, when an amicable understanding was reached, and the relations between Japan and Australia were restored to a normal basis.

"As for the Netherlands Indies, through the intermediation of the Government of that country and of our own, the shipping interests of the two countries concluded an agreement in the course of the past year. The conclusion of this agreement, which had been claimed by the Netherlands Indies as a postulate for any discussion on trade, paved the way to the trade negotiations between the Governments, which have been carried on with tangible results. Our trade negotiations with British India are also making satisfactory pro-

gress.

"While carrying on these negotiations, our Government is also devoting its best efforts to the work of opening up new and promising markets everywhere, to say nothing of preserving and enlarging the old, so as to bring about the expansion of our foreign trade as a whole."

Finance Minister's Address Dr. Eiichi Baba, Minister of Finance, delivered his adress on the financial policy of the Government and the national budget for 1937–38. The gist of his address folows :

In view of the present political situation of Japan, national and international, it is a matter of course for Japan to make out important schemes and realize them for the expansion of national fortune and the stability of the living of the people. The Government, therefore, deems it its most important duty to put emphasis on and carry out such policies as the completion of national defence, reformation of education, readjustment of national and local taxation systems, stability of the living of the people, promotion of industry and expansion of trade, settlement of common policies between Japan and Manchoukuo, and reorganization and improvement of the administration system, beginning with 1937. The Budget for 1937–38 includes the estimated expenses for these important policies while in the revenue account it contains items for an increase of ordinary revenue in accordance with the Government's policy of stabilizing the national finance. Both revenue and expenditure of the Budget for 1937–38 amount to ¥3,038,500,000 an increase of ¥733,000,000 in revenue and ¥727,000,000 in expenditure as compared with the previous year. To make a brief explanation of the revenue estimates, the ordinary revenue amounts to ¥2,236,-100,000 an increase of ¥634,300,000 as compared with the working budget for 1936–37. This increase results from the revision of the taxation system, reviewal of the customs duties and other plans for increasing revenue. The increase from the revision of the taxation system reaches ¥417,500,000 that from the reviewal of customs duties is estimated at ¥43,700,000, that from the raising of tobacco prices and the new alcohol monopoly amounts to ¥39,300,000, and the amount of transfer from the Special Accounts to the General Account is ¥71,800,000, making the total of ¥572,-500,000.

It is clear that a fundamental reform of the taxation system is inevitable under the present circumstances in which Japan is placed and from the financial condition of the nation versus the economic capacity of the people. The ¥417,500,000 which will come from the revision of the taxation system consists of ¥337,300,000 from the revised rates of existing taxes and ¥80,200,000 from new taxes which are, a property tax, a special tax on Foreign Courrency, a Gasolene Tax, a Stock Exchange Tax and a Securities Transfer Tax. Of the total, ¥220,000,000 is to be distributed among local governments for the readjustment of their financial status. The second plan for an increase of revenue is the reviewal of customs duties. The rates of duties for imported commodities were generally revised in 1926 and since then revision has been effected only in parts, and the Government considers it reasonable to review most of them at this time and the estimated increase of revenue from this source will reach ¥35,200,000 for the fiscal year 1937–38. The remaining ¥8,400,000 comes from the new Trade Statistics Tax and the Exports Control Tax, which are to be instituted to get the money necessary for the completion of statistics on foreign trade and the extension of the compensation system on exported commodities and subsidy for the compensation on imported goods, and other measures for a greater expansion of trade. The third is the raising of tobacco prices and the alcohol monopoly. In the fiscal year 1937–38, the increase of revenue from the raising of tobacco prices will amount to ¥25,400,000. Then, in accordance with the Government's fuel policy a monopoly of alcohol is planned, including the manufacture of alcohol to be mixed with gasolene, the income from it being estimated at ¥21,-600,000. The fourth item for increasing revenue is the transfer from the Special Accounts to the General Account, when ¥42,600,000 will be transfered from the special accounts of Communications and Imperial Railways and ¥19,200,000 from the Overseas Special Accounts. In view of the effect of the increased tax on interest on deposits in banks and in conformity with the lowering tendency of interest rates in general, the Government is going to lower the annual interest rate of the Postal Savings Deposits to 2.64 per cent as from next April.

With all this increase of revenue it is still insufficent to make both ends meet, and the Government wants to float, for the General Account, public loans amounting to ¥802,400,000. For the com-

pletion of national defence, stabilization of national living and other important programmes the floatation of public loans of this amount cannot be helped. For the Special Accounts another ¥155,000,000 loan is to be floated, making the total of deficit covering public loans reach ¥957,000,000.

As to the estimates of expenditure, the new demands for the realization of important policies in 1937–38 amount to ¥1,063,000,000 including ¥692,100,000 for the completion of national defence (inclusive of expenses for the Manchurian Incident), ¥1,400,000 for the improvement of education, ¥237,100,000 for the readjustment of the taxation system common to the central and local governments, ¥54,800,000 for the stabilizaion of the living of the people, ¥57,700,000 for the promotion of industry and expansion of trade and ¥24,900,000 for the institutions of co-operation between Japan and Manchoukuo.

The expenditure for the completion of national defence heads the list, but the Government has also paid due attention to a better national living and industrial and trade expansion. For the refunding of debts of villagers, aids to petty merchants and small industrial enterprisers and subsidies for shipbuilding the figures in the Budget may seem comparatively small, but, as a matter of fact, these measures will have enough effect to stimulate a greater movement of Governmental and private funds for the industrial and economic development of Japan. We must expect the swelling of national ways and means for some years to come. But the income from the revision of the taxation system and other new plans will increase in the normal years after 1937 and the annual amount of loans may be maintained at the amount for 1937–38, and it is expected that these may be reduced in a few years.

With regard to the present economic condition of the country and the Government's financial policies, the Government has, since its coming into power and in conformity with the real state of the banking and money market, carried on a low interest rate policy and endeavoured to genaralize and diffuse it throughout the economic circles of Japan in order to lighten the economic burdens of the people in general and promote a healthy development of industry and trade in Japan. As the result, interest rates are lowering all round, a policy which the Government intends to continue. Between May 1 and September 19, 1936 the Government converted ¥2,100,000,000's worth of 5 per cent bonds to 3.5 per cent. This rate of interest for national bonds will be maintained for some time to come, and the remaining 5 per cent and 4.5 per cent bonds, which amount to ¥2,900,000,000, will be converted to bonds of a lower rate of interest at a suitable occasion. The trade returns of the Empire in 1936 amounted to ¥5,221,000,000, recording the highest in the trade history of Japan. In its sum total and details of exports and imports, the 1936 trade has traced a proper road. But there are many points which need our attention for the expansion of trade in 1937. The present exchange rate of the yen has to be maintained by the working of the Foreign Exchange Control Law, to which end the regulations of the old Foreign Exchange Control Law were stringently revised at the end of 1936. The increase of speculative imports compelled the Government to take extraordinary counter measures. The Government is determined to take all necessary measures for the prevention of the flight of capital and fluctuations of the exchange rates, paying close attention to the international movement of capital, and taking due care not to injure in any way the progress of industry and trade. But the co-operation of the people concerned is highly requested. It is also of paramount importance in the present state of social and economic affairs, to strengthen the power of banking organs, to heighten their credit and to help them to operate their functions in full.

The Budget for 1937–38 amounts to a sum unprecedented in the history of Japan, but it reflects the present extraordinary situation of Japan and evinces the progress of the country, yet I believe that the present condition of Japan's economy is quite endurable to the burden. So much so because there are many measures, carried on by the Government with a part of the Budget, for the promotion of industry and trade that may accordingly augment the economic power of the nation.

It is a high time for the people of Japan to keep unity and co-operation in all matters pertaining to the economic expansion of the country, refraining from speculation and covetous inclinations which may hinder a healthy progress of national economy, and establishing clever measures and sound policies for the national and general benefit.

Mr. Hamada's Interpellation After the ministerial addresses Mr. Kunimatsu Hamada of the Seiyukai went up to

the platform as the second interpellator on the day and first expressed his sympathy towards the Hirota Cabinet which was endeavouring to solve many difficult problems especially complicated in the days following the February 26 Incident and which was trying an adjustment of international relations. Then he spoke of the so-called "propellent power" of the army on the political matters in present Japan, pointing out several talks which had emanated from certain sections of the War Ministry and which had appeared in the press, and the May 15 and February 26 incidents. He took the Fascist idea in the Imperial army in Manchoukuo as a copy of a similar idea in Japan, inferring that there was a despotic or Fascist idea in the undercurrent of the talks and movements of a part of the military circle. He pointed out in particular the revision of the rules pertaining to the personnel who might hold the portfolios of War and Navy Ministers. He condemned the hasty procedure of the Hirota Cabinet in revising the rules so that these portfolios should be assumed only by high officers in active-service, saying that there had been a long fight for extending the sphere of appointment to these positions to the high officers in the first reserve in order that a healthy development of constitutional government might be assured. Mr. Hamada charged it as a concrete example of Fascism in the army, although he understood that it was partly for the reinforcement of military discipline. Another example of the Fascist tendency of the Hirota Cabinet, Hamada said, was its overlooking of the decision of the House of Representatives, repeated three times, requiring the Government to establish a standing committee of the House for the months in which they did not sit. He turned his point to the question of the huge budget and spent some words on it and then once more he dwelt upon the Fascist ideology among military men and went on to defend political parties against criticism of their former political abuses, proving that for the abuses of the political parties the Government had been partly responsible and exemplifying his statements by quoting abuses in military circles as well, and calling attention to the misunderstanding, as far as he saw it, of some military men on the true function of political parties in the Diet as the representatives of the people. He concluded his interpellation with questions in regard to the foreign policy of the Hirota Cabinet and the diplomatic conditions between Japan and several important countries.

War Minister Lieutenant-General Terauchi said in answer to Mr. Hamada's question that there were some words in his interpellation which seemed to insult military men, and that the use of such words would not help the harmonious understanding between the army and the people in general.

This answer provoked anger on the part of Mr. Hamada who stated that there was no intention of insulting the Army or Navy in his mind and consequently no use of such words, and concluded in the following words: "Let us make investigation of the official shorthand record. If there be any insulting words I will commit "Harakiri," if not, you do."

Resignation of the Hirota Cabinet

The Hirota Cabinet tendered its resignation en bloc to the Throne on January 23, 1937, after two days extraordinary adjournment of the Diet. The events surrounding the formation of the succeeding Cabinet revealed many facts important to Japan's history of politics and gave valuable suggestions concerning the future of the constitutional government of Japan.

The cause of the resignation of the Hirota Cabinet appeared to be in the apparent dissension between the Cabinet and the political parties and the lack of the Premier's earnestness in pushing his policies bacause of the weakening support of the military.

Premier Hirota's attitude toward the 70th Session of the Diet was rather negative. Criticism of the diplomatic failure of the Hirota Cabinet in general and the discouraging atmosphere regarding the important bills and budget before the meeting of the Diet was such that it was expected that the political parties would force the resignation of the Government. Both the Minseito and the Seiyukai were represented by two members in the Cabinet, yet their attitude towards it became worse with the approach of January 21 when the 70th session of the Diet was to begin its business. Premier Hirota took no measures to better his position, and made no visit to the presidents of the leading parties to get their understanding as to the standpoint of the Government. It is usually understood, in such a case, that the Government is aggressive and disregards the co-operation of the political parties. But it was not so in Hirota's case, for he easily yielded to the adverse situation and handed in his resignation after but two days' deliberation, in spite of all surmises in

political circles that there might come either a dissolution of the House of Representatives, or the Government would manage matters so as to get through the 70th Session and resign, if necessary, after the session, and after having made full preparations for the quick succession of a new cabinet.

The hot words exchanged between the War Minister and Mr. Kunimatsu Hamada on January 21 were too insignificant to be the cause of the resignation of the Hirota Cabinet, but the Army was unwilling to discuss matters any further with the party men in the House of Representatives, not because of the alleged insult of Mr. Hamada against them but for the reason that there was a difference of opinion between the Army and members of the House of Representatives in regard to the recognition of the seriousness of the situation which Japan was thrown into judged from the declarations of the leading parties at their general meetings and the move of the party men in the Houses. The Army insisted upon an immediate dissolution of the House of Representatives. Mr. Hamada and his party found no reason for making an apology on what he had said in his interpellation although the general atmosphere among the parties seemed to be towards a compromise.

Opinions were divided among the Cabinet members as to the dissolution of the House of Representatives and Navy Minister Vice-Admiral Osami Nagano and Dr. Gotaro Ogawa, Minister of Commerce and Industry, took the trouble to try and arbitrate between the dissenting parties in and out of the Cabinet. Dr. Ogawa belonged to the Minseito and was anxious to bring the matter to a satisfactory conclusion in order to get the budget passed by the Diet, seeing that parties were not actually opposed to it, and to save his comrades from the blow of dissolution. Vice-Admiral Nagano found no reason for a deadly clash between the Government and the Lower House in the quarrel of the War Minister and Mr. Hamada, and was gravely concerned about the passage of the budget, which was threatened with postponement for at least half a year by the possible dissolution, for the Navy wanted to hasten the completion of its programme with the coming of the first year of freedom from treaty disarmament. The two Ministers had a consultation and the Minister of the Navy called on the Presidents of the Minseito and Seiyukai on the night of January 22 and early in the morning of the following day, and got the full understanding of the two Presidents.

But all the efforts of the Ministers proved futile. The Army took a firm stand and handed the resignation of the War Minister Lieutenant-General Terauchi to the Premier by the morning of the 23rd, evincing thereby the uncompromising attitude of the Army on the issue.

Premier Hirota did not give his consent to the asking of the Throne for the dissolution of the Lower House, but, on the contrary, decided on his own accord to give up all measures for maintaining the life of the Cabinet. He probably saw it useless to push the matter any further. He saw that the support of the circles who wanted a quick and drastic renovation of the political and economic systems of Japan had become weak because of their dissatisfaction at his too cautious way of handling important matters. Besides, the movements in political circles, public and secret, had suggested that some schemes for the change of the Government had been going on. As a matter of fact several propositions for the establishment of a new political party continued to appear in the press in preparation for the bringing about of a new Cabinet. On January 23, 1937, Premier Hirota announced his reason of resignation to the effect that since assuming the duties of Premier by imperial Order in March, 1936, he had done his best for the proper administration of state affairs, but in spite of all his efforts the difficulty of the political situation had become an unsurmountable obstacle.

On the same day the War Minister published his statement in regard to his stand on the matter. "Mr. Hamada's address in the House is not to be taken as the reason of my resignation. It is true that leading parties have their members in the Cabinet, but in spite of this fact, their declarations and presidents' addresses at their general meetings before the opening of the Diet, the interpellations of their representatives on the 21st of January, and the general atmosphere of the House of Representatives on the same day clearly indicate that there is a great gap between the understanding of Japan's present situation, national and international, by the Army and by the political parties. It is hard, in my opinion, to surmount the difficulties before us by a temporary compromise unless we all come to the right recognition of Japan's real situation. The existing state of affairs leads me to the con-

clusion that they are against my hope for the strengthening of military discipline, completion of national defence and renovation of state administration."

Ugaki's Failure On January 24, 1937, Mr. Kurahei Yuasa, Grand Keeper of the Imperial Seals, called on the Genro, Prince Kimmochi Saionji, with the Imperial message on the nomination of the new Premier. Mr. Yuasa brought back the Genro's recommendation to the Throne on the same day and it was soon made known that Imperial order for the formation of the next Cabinet had been sent to General Kazushige Ugaki who had been enjoying a quiet life for years at Nagaoka, Shizuoka prefecture, after his retirement from the post of Governor-General of Chosen.

The news surprised those who had been expecting the Imperial order to go to Konoé, Hayashi, or Hiranuma, not with disappointment but rather with much satisfaction in the bold decision of the Genro and other dignitaries nearest to the Throne. But the Army and its sympathizers were surprised at the recommendation which was a great mistake in their eyes.

General Ugaki came up to Tokyo on the 25th and was granted an audience and then began his task, first to get War and Navy Ministers. But he met with strong antagonism from the Army which answered that no high officers were willing to be recommended to the portfolio in spite of the combined efforts of the Chief of the General Staff, the War Minister and the Inspector-General of Military Education. Ugaki was supported by almost the entire press and majority of people, who sent him thousands of letters and telegrams of encouragement to fight against the adverse situation in which he was quite unexpectedly put. It was impossible for him, however, to choose the War Minister without the recommendation of the three just mentioned because of the regulation that limited the post to a General or Lieutenant-General in active service, the number of these being very small and all of them being under direct control of the Ministry.

Many suggestions were proposed to General Ugaki as extraordinary means of accomplishing his purpose, but he did not like to take any drastic measure in face of the apparent antagonism because of the peace of the country, and after five days' deliberation and negotiations, that is, on the 29th, he gave up his task and asked the pardon of the Throne for his inability to form a Cabinet.

At least a part of the Army was opposed from the beginning to Ugaki's coming into power, in spite of the general support of the press, political circles and economic world.

General Ugaki had long been expected to assume the Premiership some day and when the opportunity came it was found that an unsurmountable obstacle was on his way in the direction that he had worked for most and loved most. The fundamental reason of the Army's opposition was known only to some high officers in the War Ministry and Ugaki himself. But it is probable that there were questions on the wisdom of his becoming the Premier because of the thorough reinforcement of military discipline for which the War Ministry had been working after the February 26 incident of 1936, because of Ugaki's career in the Army and his influence.

The outcome of the five days' efforts surprised the Genro and dignitaries and was most regretful for General Ugaki himself. The event, however, taught the nation of the sincerity and determination of the Army in its efforts for the completion of military discipline and of its deep concern for the political direction of the country, although criticisms were heard in some quarters as to the way in which the Army had acted.

The Birth of the Hayashi Cabinet

Mr. Yuasa was again sent to the Genro, Prince Saionji, who recommended, this time, first, Baron Kiichiro Hiranuma, President of the Privy Council, and, second, General Senjuro Hayashi. The first candidate declined and General Hayashi was called to the Palace and was ordered to form the Cabinet.

General Hayashi was not apparently opposed by the Army, but its attitude towards the formation of his Cabinet was by no means positive. Public sympathy was rather small and his political ability was much doubted. The birth of the Hayashi Cabinet was premature for it consisted of but eight members instead of thirteen. The eight were :

Premier, Minister for Foreign Affairs and Minister of Education,	General Senjuro Hayashi
Minister for Home Affairs,	Mr. Kakichi Kawarada
Minister of Finance and Minister for Overseas Affairs,	Mr. Toyotaro Yūki
Minister of War,	Leutenant-General Kotaro Nakamura

Minister of Navy	Vice-Admiral Mitsumasa Yonai
Minister of Justice	Mr. Suehiko Shiono
Minister of Agriculture and Forestry and Minister of Communications,	Mr. Tatsunosuké Yamazaki
Minister of Commerce and Industry and Minister of Railways,	Engineer Vice-Admiral Takuo Godo

These gentlemen formally received their portfolio on February 2. But Lieutenant-General Kotaro Nakamura was taken ill a few days afterwards and was succeeded by General Sugiyama who was in the post of the Inspector-General of Military Education. On the tenth of the same month, the portfolio of Communications was assumed by Count Hideo Kodama.

Premier's Statement On February 8, Premier General Hayashi issued a statement. The gist of statement, embodying the platform, follows: In view of the situation prevailing at home and abroad and in accordance with the degree of urgency of each matter, the Cabinet presents its platform as follows:

(1) The Government seek to make manifest the national polity, to elucidate the great principles of worship of the Divine and adoration of the Emperor and to enhance the spirit of oneness of the national religion and political administration in order to deepen the fountain of the advancement of the nation's fortunes.

(2) We seek to observe the articles of the Constitution fixed by Imperial will, to effect sound development of the constitutional politics unique to Japan and to listen to public opinion in order that fair and righteous politics may be carried on.

(3) We seek to pursue a national diplomatic policy based on national unanimity that is calculated to bring about a permanent peace to East Asia and common prosperity among nations in accordance with international justice in order that international relations will be made brighter.

(4) To assure the security of the Empire, to protect its advance and to realize national policies we seek to complete our national defence and promote productive power of the country in order that the strength of the nation may be cultivated at its very root

(5) We seek to carry out schemes for systematic development of industry in a manner suitable to economic conditions at home and abroad and to enforce appropriate measures of protection and control, and at the same time to develop the creative power of the people and encourage the spirit of enterprise.

In order that the foregoing aims may be achieved, we must guard against too radical a reform, combat conventionalism and enforce renovation that is suited to the times. Justification needs modification according to the needs of the times. But we must realize the pending renovation of general administration, stabilize the living of the people and remove the causes of uneasiness in the public mind.

The various policies of the Government shall be realized one after another.

The causes of the complicated and troublesome state of affairs in Japan and abroad and the unrest of society are in the neglect of co-operation, stubborn selfishness and rivalry and strife of individual interests. Harmony is most wanted for reasonable settlement of all matters.

The members of the present Cabinet are ready to sacrifice themselves to serve the public free from all factional ideas. In setting out to serve the State under the Great Command, we seek to lay bare our loyal hearts to take measures directed straight at renovation and thus to fulfill our duty of assisting the Emperor in the administration of the State.

Premier's Address The Premier and Foreign Minister, General Senjuro Hayashi, delivered his administrative address at the 70th Session of the Diet, February 15, 1937, as follows:

The political programmes of the Government were announced on the 8th of this month. It is the fundamental duty of all those who serve the State, no matter under what cabinet, to formulate policies according to the basic principles of our national polity and to advance and realize the ideals on which this country is founded. It goes without saying therefore, that the Government will, first of all, strive to clarify the concept of our national polity and to elucidate the great principles of piety and of loyalty to the Throne. The Imperial Constitution stands unshakable under the solemn polity of our nation, and the Government looks forward to a steady and healthy development of our unique constitutional government which is adapted to our peerless national polity and is capable of holding its own

ground against the tide of whatever political thought or doctrine may sweep the world. As regards Japan's foreign policy, we are guided by the immutable principle of securing the stability of East Asia and seeking the common prosperity of all nations in accordance with international justice and fair play. Under this policy and through the co-operation of both Government and people, it is our hope to deal with all diplomatic affairs properly and effectively and to place our international relations in a happy and peaceful atmosphere. Then, in the light of the current situation, there is the imperative need of perfecting our national defence in order to insure the security of the Empire, to accelerate our national progress and to carry out thoroughly our national policies. The growth of national strength requires a sturdy and virile spirit on the part of the people and a vigorous productive power in industry. It is important that we should adjust our programme for industrial expansion to the economic conditions both at home and abroad and to take the necessary measures of protection and encouragement on the one hand and of suitable control on the other. Of course, in doing this, we should guard against possible impairment of the creative power of the people or their spirit of enterprise, which should be fostered and encouraged.

It is along these general lines that the Government intend to effect the long-awaited administrative renovation and to stabilize livelihood of our nation. I earnestly hope that we shall be able to carry out the work of our Government on a fair and just basis and to bring about such reforms as are adapted to the needs of the day. The elimination of long-standing evils by avoiding sluggishness and rejecting extremes will, I belive, meet with no objection from any quarter but win the whole-hearted support of all people. However, its realization is, as experience has taught us in the past, not altogether an easy task owing to long entrenched customs and traditions and to conflicts of interests. It can never be accomplished without self-denial, public-spirit and the united efforts of the entire nation. I ask sincerely for your co-operation by which I hope to realize this purpose.

The Cabinet, having been formed during the present session of the Diet, has decided to withdraw for once and reexamine the budget and all the bills that were prepared by the previous Cabinet. But to do that thoroughly has proved impracticable due to lack of time. However, in view of the urgent necessity of checking the rise of prices for stabilizing livelihood, the budget has been reduced nearly 270,000,000 yen by postponing certain appropriations. However, we will carry out all programmes suited to the present circumstances and do everything to find the way for the execution of some of the programmes that were formulated by the previous Cabinet. As for the adjustment of the taxation system, we have attempted to make a thorough revision of the new tax bills proposed by the previous Cabinet, but lack of time has compelled us to abandon our plan. Nevertheless, in order to perfect our national defence and to finance the urgent current undertaking there is no means of obtaining funds save by raising taxes. So it has been decided to make provisional increases in the present tax rates, and bills for provisional tax increases are being submitted to the Diet together with those for certain new categories of tax.

Now turning to our foreign affairs, we will further strengthen our intimate and inseparable relations with Manchoukuo, and pay special attention to the adjustment of our relations with China and the Soviet Union.

As regards China, it is to be deeply regretted that despite our efforts in the past to act in concert with that country for the purpose of ensuring stability in East Asia, the Chinese Government have yet failed to understand fully our true intentions, and there have arisen a number of problems between the two countries. I believe that it is of urgent necessity at this juncture to cultivate cordial feelings between the two nations and to improve their relationship so that they may be brought to work in close co-operation for the peace and stability of East Asia.

For the sake of the peace of the Orient it is of course necessary that the Soviet Union should correctly comprehend Japan's position in East Asia and that both the Soviet Union and Japan should seek to establish harmonious relations. To speed the negotiations on the pending issues toward an amicable settlement is to contribute to the accomplishment of the end. I wish therefore to urge upon the authorities of the Soviet Union to take a broad view and co-operate with us in that regard.

Japan's policy of promoting friendship with Great Britain and the United States is immutable. Between the former country and ours there exist prob-

lems of various sorts requiring adjustment. But none of them is of such character as will impair the foundations of the Anglo-Japanese friendship. I firmly believe that they will be solved through mutual understanding.

Finance Minister Yuki's Address The essential points of the address of Mr. Toyotaro Yuki, Finance Minister, were as follows: The Budget for 1937–38 has been withdrawn because of the change of the Cabinet. The Government has not had enough time since for a thorough revision of the Budget and the original is presented to the Diet with the necessary alteration in the items that the present Government think should be made. The completion of national defence is of paramount importance as the Premier has already mentioned in his address, but it must be backed by the powerful economic capacity of the nation, and we have to endeavour for the development of industry and the expansion of trade to increase the national economic capacity. At the same time it is an acute need that we project measures for the stabilization of the living of the people. There are many other important matters that call for the immediate attention of the Government, and under these circumstances we must be fully prepared for an inevitable swelling of the sum of our national expenditure. To meet the need we cannot help increasing tax revenue and increasing floatation of public loans. As to national loans with the present economic capacity of the nation a considerable amount of additional bonds can be absorbed. The people are requested to willingly bear the increased tax burden at this time. But the increase of taxes may affect a great sphere of national life, and care has to be taken, in enforcing it not to cramp the enterprise of the people and effect a decline of their productive power, while realizing the real economic state of the country and causing no fear among the people. With these points in mind, the Government is going to postpone the use of approximately ¥269,000,000 of the total Budget for 1937–38, which amounts to ¥3,038,500,000. It would, of course, have been better to have gone through all the items individually in the Budget formed by the Hirota Cabinet, but we had not the length of time, so we have decided to put aside the said amount for the present out of the new demands. As to the estimates of revenue the Government considers it necessary to make a thorough study of the reform of the tax and customs duties systems drawn up by the Hirota Cabinet. But again we have been unable to do so in the short space of time and have been compelled to be satisfied with a tentative reform, in the hope that we may draw up our own programme later. As to the finances of local public bodies the Government has found it necessary to lighten the heavy tax burden of the people in farm and fishing villages, and has planned to give ¥70,000,000, mostly to the country towns and villages, in 1937–38. Our economic system is so delicately constructed that a discordance in one quarter will upset the smooth working of the entire body, and we must be cautious not to check the progress of the whole because of the need of a section. The Government, therefore, is endeavouring to see the relation of a part to the whole and to effect a gradual harmonious progress of parts for the whole. Again we should take care not to effect too radical a change of the economic world in the course of fulfilling our economic programme. It is easy to run to extremities but hard to stop at a proper point. But I am determined to do the hard part. For a healthy development of industry and to strengthen the foundation of the economic world in Japan, it is of urgent necessity that measures be taken for a unified promotion of all branches of industry.

The conditions in farming, forestry and fishing villages are turning to the better, but the Government will carry on its programme for a further improvement of these villages. At the same time the constant care and protection of small merchants and industrial enterprisers is a duty of the Government in a country like Japan. Equal care should be taken in aiding agricultural villagers and city workers who are engaged in commerce and industry for the general progress of all kinds of industries in Japan. For the expansion of industries we expect the active help of banking organs, especially in financing enterprises for the increase of productive power, side by side with the measures carried on by the Government. As to the control of interest rates the Government will not introduce any artificial measures, but will endeavour to lead the money market towards a gradual lowering of interest rates. The control of banking organs will not be carried out by any drastic measures, but it will work in such a way as to guide them in discharging their duties. The remarkable expansion of our exports in recent years is due to the activities of our

traders in international markets with good and cheap commodities. In the future, however, Japanese trade cannot rely upon the good and cheap commodities alone. A proper control of commodities for export is needed to ward off the ever rising tariff walls abroad and reciprocal treaties must be concluded with nations for a good consumption of indispensable import goods and a greater increase of exports.

To maintain the present exchange rate the Government will devise necessary means in view of its importance. As to the extraordinary measures recently taken for foreign exchange the Government will continue to keep watch, paying due attention, in the working of the policy, not to incur injury to the industry and trade of the country. Concerning international economy the Government deems it necessary to make a fundamental deliberation. The present state of international relations is partly due to the economic seclusion of several countries in the world. Liberation of the imprisoned international economy and clearance of international trade obstacles will mollify the straitened international relations and not a little contribute to world peace. It is most important to bring back international economy to its normal condition.

The rising tendency of commodity prices is universal, but an unnaturally rapid rise of prices will inevitably have an undesirable effect on industry and trade, make the Governmental activities difficult within the limit of the budget, and disturb the peaceful living of the people. The rapid rise of prices in Japan to-day is partly due to the temporary increase of demands caused by speculation and partly to the sudden increase in the amount of the Budget. The Government, therefore, has exerted efforts to prevent a further increase of expenditure, but no artificial measures will do good for checking the rising tide of prices. The exploitation of resources in Manchoukuo with Japanese investment and technical genius is most desirable for the common prosperity of the two countries. However great our difficulties may be, they simply set us, in the last analysis, tests for our advance to a mightier nation. To insure a greater national expansion, subduing the present adversities, the united efforts of the Government and the people are indispensable, especially in the realm of finance and economy, which has the most complicated mechanism.

Address of the Foreign Minister Mr. Naotaké Sato, who assumed the office of Foreign Minister on March 3, delivered an address at the Governors' conference, May 17, as follows :

As regards our relations with China, it is regrettable that, owing to a series of unfortunate incidents that have occurred within the past year, the solution of those various pending issues, which is necessary for the amelioration of the Sino-Japanese relations, is being delayed. United opposition against Japan has become nowadays something like a current slogan in China. The South-Western régime, hostile to Chiang Kai-shek, is openly committed to an anti-Japanese policy. Chang Hsueh-liang, on the occasion of the Sian incident a short while ago, sent out a circular telegram calling for an immediate declaration of war against Japan. It is clear that anti-Japanism is being made not infrequently a pawn in the game of Chinese domestic politics. The Nanking Government itself, taking advantage of the newly awakened spirit of nationalism, is urging upon the people the cessation of internal hostilities for the sake of resisting foreign aggression, and is thus endeavouring to consolidate its own position. Indeed we should not overlook the considerable success of the Nanking Government in bringing various local régimes under its control, in rehabilitating its finance through monetary reforms and undertaking various constructive works with foreign loans. The settlement of the South-West problem and the outcome of the Suiyuan affair and the Sian incident, all seem to show China's progress toward unification.

Now it may not be amiss to say that the anti-Japanese sentiment in China is at least partly traceable to misunderstanding on the part of the Chinese who suppose that Japan harbours aggressive designs on their country. Of course, we have no such designs, and we will make clear our true intentions to the Chinese and try to improve the Sino-Japanese relations. In view of the circumstances such as stated above, the Japanese Government is planning to create a harmonious atmosphere between the two nations through more frequent personal contacts, and to promote their cultural and economic cooperation, and thereby to establish between the two countries a mutually interdependent economic relationship founded upon the common interests of the peoples.

The Soviet Union which has recently been devoting its efforts to the development of light industries under the so-

called "Second Five-year Plan," is from next year on to focus its attention upon the continuous industrial growth and the cultural advancement of the people in accordance with the "Third Five-year Plan." The Soviet Government is seeking to effect an expansion of armaments along with the repletion of the nation's economic strength. In the Far Eastern possessions of the Soviet Union, which are most vitally related to our country, the work of constructing military works and developing war industries is being pushed forward with utmost vigour and speed. On the other hand, the internal political situation of that country appears to be quite complicated judging from the so-called anti-revolutionist conspiracy trials of last August and of January this year.

The Japanese Government is trying to eliminate all unnecessary frictions between the two countries, and at the same time to solve the pending issues relating to such important questions as of fishery, North Saghalien concessions, and the Manchoukuo-Soviet Border Commission. However, unnecessary frictions have arisen more recently owing to the frequent occurrences of untoward incidents concerning the treatment of our officials and residents and of our ships at the hands of Soviet authorities, and also complaints and incidents regarding our treatment of Soviet officials and Soviet ships in Japan. We have asked the Soviet Government to see to it that such things do not happen in the future. . . .

It goes without saying that international trade and economic intercourse are essential to all countries, especially to a country like ours which is thickly populated but not endowed sufficiently with natural resources. The restoration of the freedom of trade or the opening of the sources of raw materials which the Japanese Government has on all available occasions advocated can be deemed as an assertion of our right of national existence. It is our earnest desire to co-operate with all nations in order to contribute toward economic development of the world and to share in a common prosperity with them. It is my belief that the ensuring of an untrammelled growth of trade and economic activities of every nation is the prime requisite of establishing international peace.

Despite the fact that our foreign trade amounts in value to only a little less than 4 per cent of the total value of world trade, it has witnessed of late a steady increase establishing a new record last year of ¥5,500,000,000. The first semester of this year is expected to show even a further increase as compared with the corresponding period of last year. Yet on the other hand, there has been no change in the attitudes of various foreign Powers of instituting restrictions of all sorts against foreign trade to meet the existing international situations, especially in their attitude of keeping watch against our growing export trade. Fortunately, however, the plea for the removal of trade barriers is gaining ground among nations as may be seen from the currency accord of last year among England, the United States and France in connection with the devaluation of the franc, or from the meeting of the Economic and Financial Commission of the League of Nations, and from the Conference of the Pan-American Union. Moreover, it became clear at the meeting of the League of Nations Commission on raw materials, held in March this year, that not a few countries are in agreement with our claims mentioned before. The realization of these claims being, however, considerably difficult at present, it is inevitable that, in order to maintain and promote our trade and commerce, we should be compelled to take appropriate steps as occasions demand against obstructive measures of other Powers directed against our exports. In this connection, I may say, the present condition is such that, as Japan's economic strength expands, problems more or less important arise one after another in all parts of the world and our officials abroad are constantly kept busy negotiating over them. For instance we carried on trade negotiations for the past several months with India, Burma, the Netherlands Indies, Australia, etc., which have resulted in the present satisfactory trade relations with them. Negotiations with a view to translating these relations into formal treaty or agreement are now in progress. There are not a few other pending trade questions namely, with Turkey, Italy, Siam, Central and South America, and other countries, over which negotiations are now in progress.

The Foreign Office authorities are thus continuously putting forth their utmost efforts in all directions for the development of our foreign trade. For that purpose, aside from such civilian co-operation, as is obtainable through the exchange of visits of economic groups like the economic mission recently sent to China, and the similar mission which has recently gone to the United States and will also go to England, it is of

course essential to maintain co-operation among various branches of the Government. It is necessary for Japan so to secure and encourage her industries and foreign trade as to enable them to meet satisfactorily the general conditions of international economic situation or the individual measures adopted by various Powers. And for this purpose the utmost and concerted effort of the whole nation is required.

Now, the chief aim of the so-called international cultural work is to propagate abroad the essence of our national culture and to foster thereby a correct understanding in foreign countries toward Japan. One of its means is to make foreigners visiting these shores acquainted with, and appreciate fully the true nature of our culture.

Dissolution of the House of Representatives The 70th Session of the Imperial Diet which had been convened on December, 24, 1936, was closed on March 31, 1937, with the Dissolution of the House of Representatives. The session was a very extraordinary one, for, during its sitting, the Hirota Cabinet resigned and the Hayashi Cabinet came into power, it adjourned three times, at the end of January and in the beginning of February, on account of the change of the Cabinet, and at the end of March it was prolonged for 6 days beginning with the 26th and finally on the last day it met the Dissolution. All through the Cabinet, both old and new, was unsympathetic with the parties in the House of Representatives, while parties, on their part, took a negative and equivocal attitude toward these governments as a whole, although some of their members were brave enough to make attacks on the movement of a part of the Imperial Army or Government's social policies.

The Dissolution was also peculiar. The Diet was closing on March 31 in peace, hurriedly passing resolutions and bills left over to that day, 49 important bills including the budget for 1937-38 being voted already, when it all of a sudden was dissolved to the surprise of the members of the House of Representatives and the general public.

The Government stated concerning the reason of the Dissolution as follows :

To cope with prevailing conditions at home and abroad, surmount the current difficulties and promote the national fortunes, co-operation between the Government and the people in the proper sense is absolutely essential. Thus the Cabinet, though it had just been formed, sought in the present session of the Diet the passage of many bills in all sincerity. The manner in which the Lower House has discussed these bills, however, has been extremely lacking in earnest, with the result that proceedings have been blocked with regard to important bills having the greatest bearing on national defence and stabilization of the living of the people, urgent business held up and doubts aroused as to whether parliamentary discussion could be carried on further in the way required by the seriousness of the prevailing situation.

We therefore saw much reason in the clamour for renovation of the Diet. In the hope of appealing to the just conscience of the people, submitting to the will of the people and making manifest the principles of the constitutional government of Japan, and at the same time in expectation of sound political awakening on the part of the people and co-operation between them and the Government in surmounting the present serious situation, we have petitioned the Throne for dissolution of the House of Representatives.

The 20th General Election

Results of the General Election in April, 1937 Of the total 122 election districts not one was carried complete by either the Minseito or the Seiyukai, the two leading parties. On the contrary, the number of districts in which all the candidates of these parties were defeated was 13 for the Minseito and 7 for the Seiyukai, due largely to the rise in the power of the Social Mass Party. The following tables, compiled by the Asahi, show the ups and downs of the political parties at the election :

NUMBER OF VOTES OBTAINED BY PARTIES

Parties	Number of votes In Tokyo	Total
Minseito	271,697	3,666,067
Seiyukai	214,301	3,608,882
Social Mass Party	174,808	900,916
Showakai	18,196	404,846
Kokumin-Domei	22,292	281,826
Tohokai	—	212,505
Other small parties	61,097	286,661
Independents	41,365	845,612

SUCCESSFUL CANDIDATES BY PARTIES

Parties	Candidates	Elected	%
Minseito	266	179	67.3
Seiyukai	268	175	65.3
Social Mass Party	65	36	55.4

Parties	Candidates	Elected	%
Showakai	35	18	51.4
Kokumin-Domei	20	11	55.0
Tohokai	20	11	55.0
Other small parties	43	7	16.3
Independents	109	29	26.6

DIFFERENCE OF POWER OF PARTIES BEFORE AND AFTER THE ELECTION

Parties	Before the Election	After the Election	Increase (+) or Decrease (−)
Minseito	206	179	−27
Seiyukai	172	175	+ 3
Social Mass Party	19	36	+17
Showakai	24	18	− 6
Kokumin-Domei	11	11	—
Tohokai	9	11	+ 2
Other small parties	4	7	+ 3
Independents	19	29	+10

NUMBER OF OLD AND NEW MEMBERS OF THE HOUSE OF REPRESENTATIVES

Parties	New	Old	Former	Total
Minseito	21	149	9	179
Seiyukai	31	122	22	175
Social Mass Party	15	19	2	36
Showakai	0	16	2	18
Kokumin-Domei	0	11	0	11
Tohokai	3	8	0	11
Other small parties	2	4	1	7
Independents	9	17	3	29
Total	81	346	39	466

The general election of April 30, 1937, was carried out without a clearer aim than that of the Government, which asked for the "repentance" of the House of Representatives because its behaviour had been unsatisfactory in the eyes of the Cabinet and the election was the outcome of the Dissolution brought about by its behaviour. It was neither a fight between the Government and the parties around important issues nor an election of confidence on Government's policies. In any case, the result of the election were entirely against the Government. The victory of parties whose platforms were decidedly against the Government was overwhelming, and the combined forces of the Minseito and the Seiyukai in the Lower House kept the absolute majority as it was in March. The number of the representatives sent by the Social Mass Party, which was most strongly opposed to the Government's political ideas, was nearly doubled. On the other hand, the number of the representatives of the Showakai the ministerial party was reduced from 24 to 18 and another pro-governmental party the Kokumin-Domei gained nothing, while the independents who were in sympathy with the Government sent but a few members to the new House of Representatives. All the efforts of the Government to turn the results to its benefit were defied. The general election presented the people with a chance of expressing their deep concern with the political affairs of the country and the bustle of the election which had been thought meaningless by many at the outset gave birth to many points suggestive of the future of the Imperial Diet. The first of them was that the voters did not sympathize with the political ideas destructive of the existing parliamentary system, the second was that they showed a strong opposition against the attitude of the Government which seemed to fill the political stage to the exclusion of others, and the third was that they expressed their earnest wish for the renovation of the Diet in the votes that went to the Social Mass Party.

Voting Analysis According to the Local Bureau of the Home Department, which has been investigating the voting at the 20th general election of April 30, 1937, the percentage of absentees increased by 5.4%, being 26.7 against 21.3 at the previous election, and in the comparison of invalid votes, blank votes increased by 2,012 and voting papers on which were written miscellaneous things increased by 3,682, while on the whole the total number of invalid votes decreased by 2,779.

	The 20th General Election (April 30, 1937)	The 19th General Election (February 20, 1936)
Total number of electors on the election day	14,075,010	14,303,780
Number of voters	10,317,756	11,249,663
Absentees	3,757,254	3,054,118
Percentage of absentees	26.7	21.3
Total number of vallid votes	10,203,677	11,132,677
„ „ „ spoilt votes	114,040	116,819
Blank votes	13,130	11,118
Voting papers containing miscellaneous written matter.	25,101	21,419
Others	75,809	84,282

Advance of the Social Mass Party One of the most outstanding results of the 20th general election of April 30, 1937, was the advance of the Social Mass Party. The party gained 18 seats more than it did at the 19th general election of February 20, 1936, and obtained 382,556 more votes. A comparison of the three largest parties at the two general elections follows :

RESULTS OF THE 19TH AND THE 20TH GENERAL ELECTIONS

Parties	19th Election	20th Election	Percentage of Increase (+) or Decrease (−)
Minseito			
No. of persons elected	205	179	− 12.5
No. of votes obtained	4,456,250	3,666,067	− 17.7
Seiyukai			
No. of persons elected	174	175	+ 0.5
No. of votes obtained	4,156,643	3,608,882	− 13.1
Social Mass Party			
No. of persons elected	18	36	+100.0
No. of votes obtained	518,360	900,916	+ 73.8

In many important election districts in Tokyo, Osaka, Kyoto and Kobé, candidates of the Social Mass Party obtained the largest number of votes. It is said that a large number of votes went to the party not only from labourers and farmers but also from well-educated people, small traders and industrialists, and even from Government officials. It is becoming a party of the people, and it may be safely inferred that the best elements of the voters are requiring a new party and a new Government which will rightfully reflect the public opinion for a radical reform of all political affairs.

Premier's Statement On May 3, Premier General Hayashi published a statement in connection with the result of the 20th general election as follows : Japan's political situation, national and international, is critical to the utmost extent. To surmount the crisis there is no other way than to aim at a radical reform in all directions, discarding conventionalism and yet not overrunning the times. With this conviction the Government worked with the 70th Session of the Imperial Diet and came to realize that the renovation of the constitution of the Diet is one of the important things basic for the reform of all other organs of State, being the first step of realizing the principles of Imperial constitutional government. I humbly asked the Throne for the Dissolution of the House of Representatives after a careful deliberation of these points, apart from the success or failure of the Government's policy in this respect. The 20th general election was carried out fairly. We expect the new representatives of the people to sacrifice their self-interest and to be eager to serve H.I.M. the Emperor in the momentous work of realizing the ideals of the Foundation of the Country in accordance with the principles of the national polity, in helping the progress of our unique constitutional government and in making contributions to the Imperial régime fully versed in the present political situation of Japan. This is what the whole nation expects of them. The Government is determined to carry on faithfully its policies indispensable at this time with the conviction and expectation stated above. We earnestly require a full co-operation of the people in unison and in sympathy with the intention of the Government.

This statement was received by the public as voicing the Government's determination to carry on its mission in the face of all criticism none of which supported the Government's stand. The unanimous opinion was that the Government would have to retreat in a few months, either before the proposed extraordinary session of the Diet in August or at its beginning when a non-confidence decision would be passed by a unanimous vote.

Resignation of the Hayashi Cabinet In spite of the Premier's statement matters went from bad to worse for the Hayashi Government. Movements for the formation of a new ministerial party all failed, while the much talked about disruption, if there had been any possibility of one, of the existing large parties was checked by the Dissolution and the general election, for these events worked contrary to the hope of the

Government for bringing about such a disruption and strengthened the unity of political parties in their common fight against the Hayashi Cabinet.

The general state of political affairs and the trend of public opinion in May tied up Hayashi's hand in trying to get persons for the vacant ministerial chairs. Besides, secret movements for a new cabinet began to be more active, along with the public movements and decisions of leading parties for the downfall of the Hayashi régime.

On May 31, 1937, the resignation of the Hayashi Cabinet en bloc was finally announced, Premier General Hayashi giving his reasons at the last meeting of his Cabinet in the afternoon of that day as follows: As to the political situation after the election, my mind was fully expressed in my statement on the third of May. I have endeavoured to make out important policies since, but I regret that there occurred a misunderstanding between the Government and a part of the House of Representatives concerning my action of asking the Throne for the Dissolution of the House at the end of March, although the general public understand, I believe, fully well the plain reason of the action. But this is the most important moment for Japan that requires a complete unity of the Government and the people to cope with the difficulties of the times and to exert all efforts for the advance of the national fortune, allowing no dissension within the country. The Government deeply feels the responsibility in its inability to carry out the important policies, however short its time of office might have been. But I feel this is the time for us to tender our resignation to the Throne, when a foundation for the renewal of the national polity has been laid, and open the way for a new cabinet which may be able to promote Japan's constitutional government in accordance with the fundamentals of our national structure.

Konoé Comes to Power

The public nomination for the new Premier was Prince Fumimaro Konoé, President of the House of Peers. The Imperial wish was the same, for the Genro, Prince Saionji, the President of Privy Council Baron Hiranuma and the Grand Keeper of the Imperial Seals Mr. Yuasa unitedly recommended Konoé to the Throne on the first of June, 1937. Late in the afternoon, Prince Konoé was granted an audience in the Imperial Palace and received the Imperial Order for the formation of a new cabinet.

Konoé's coming to power was welcomed by all circles in Japan. His family prestige is second to none among the Japanese subjects, his political career as the President of the House of Peers has been brilliant, and his knowledge of and sympathy with the conditions of the people as well as that of military issues is thought to be deep and thorough. He is young, being 46 years old, and has but one defect, that of physical weakness.

The formation of the new cabinet went on smoothly in favourable circumstances. Prince Konoé was successful in the first place in persuading the War and Navy Ministers to stay in their former chairs, then in bringing Dr. Eiichi Baba, Minister of Finance in the Hirota Cabinet, to the chair of Home Miniter, and finally in getting Mr. Koki Hirota, the former Premier, for the Foreign Affairs portfolio. According to his policy of forming a cabinet in which all the political forces are represented, Prince Konoé was able to get one Minister from each leading party, Mr. Ryutaro Nagai, Chief Secretary of the Minseito, to be Minister of Communications, and Mr. Chikuhei Nakajima, one of the four members of the Acting-Presidential Board of the Seiyukai, to be Minister of Railways.

The Konoé Cabinet was formally inaugurated in the presence of His Majesty the Emperor at the Phœnix Hall of the Imperial Palace, at half past three in the afternoon of the fifth of June, 1937. The 13 members of the Konoé Cabinet are:

Premier,	Prince Fumimaro Konoé, President of the House of Peers
Minister for Foreign Affairs,	Mr. Koki Hirota, M.H.P., former Premier
Minister for Home Affairs,	Dr. Eiichi Baba, M.H.P., former Minister of Finance
Minister of Finance,	Mr. Okinori Kaya, Late Vice-Minister of Finance
Minister or War,	General Sugiyama, who held the same portfolio in the Hayashi Cabinet

Minister of Marine,	Admiral Mitsumasa Yonai, who held the same portfolio in the Hayashi Cabinet
Minister of Justice,	Mr. Suehiko Shiono, who held the same portfolio in the Hayashi Cabinet
Minister of Education,	Mr. Eiji Yasui, Governor of Osaka Prefecture
Minister of Agriculture and Forestry,	Count Yoriyasu Arima, M.H.P., Chairman of the Board of Trustees of the Central Chest for Co-operative Societies
Minister of Commerce and Industry,	Mr. Shinji Yoshino, former Vice-Minister of Commerce and Industry
Minister of Communications,	Mr. Ryutaro Nagai, M.H.R., Chief-Secretary of the Minseito
Minister of Railways,	Mr. Chikuhei Nakajima, M.H.R., Member of the Acting-Presidential Board of the Seiyukai
Minister for Overseas Affairs,	Mr. Sonyu Ohtani, M.H.P.

Personal histories of these Ministers are given in the fourth chapter of this volume. The new Cabinet came into power with the full support of the press, the military circle, the leading political parties and the economic world. It was believed that the Konoé Cabinet intended to make all efforts to overcome the quasi-war time crisis by the united force of the defence services, the bureaucracy and the political parties, keeping harmony with military forces and heeding the wishes of officialdom. The economic policy of the Cabinet was to adjust the international payments of Japan, to establish a concrete programme for the development of productive power in the country and to get a clear prospect of demand and supply and control the relations of the two most effectively.

Birth of a New Party The formation of a party, either entirely new or by the amalgamation of radical elements in the Minseito and the Seiyukai or by the supposed disruption of the Seiyukai, had been much talked about in the last two years. But, the unity of members of these two leading parties was much stronger than was supposed by many, and became much more so after the dissolution of the House of Representatives in March, this year. Therefore, eminent figures in the political world who it had been presumed would assume the presidency of the new party made no move in that direction.

In the meantime, the Seiji Kakushin Kyogikai or the Political Reform Council began a movement for the formation of a new party, and held, on July 8, a preparative meeting of ten committee men including Genkuro Eto, Katsumaro Akamatsu, Shiro Koiké and Tsunekichi Yamazaki. At the meeting it was decided that the name of the new party should be the Nippon Kakushinto (the Nippon Reform Party), and programmes were prepared for holding the inaugural meeting on the 18th at the Shiba Kyocho Kaikan (Shiba Hall of the Capital and Labour Harmonizing Council) and for beginning activities with a lecture meeting to be held on the 21st at the Hibiya Public Hall.

The proposed general meeting for the organization of the Party was held as scheduled, when representatives of member bodies gathered together from all parts of Japan including the four members of the House of Representatives, Genkuro Eto, Katsumaro Akamatsu, Shiro Koiké and Tsunekichi Yamazaki. The meeting passed decisions on the general principle and policies of the party as follows :

General Principle. The Nippon Kakushinto aims at the manifestation of the true Nippon in accordance with the principle of her national polity.

Policies (1) The establishment of a constitutional government and administrative system unique to Japan ; (2) the establishment of a national planned economy based on its unification through peace and war times ; (3) the unification of industry and economy in Japan and Manchoukuo ; (4) the establishment of fundamental readjustment policies for national and local finances ; (5) the completion of the provisions for national defence and the programme of national mobilization ; (6) the establishment of an international policy in accordance with Imperial Justice ; (7) the establishment of an educational system and means in accordance with Japanese principles ; (8) the re-establishment and creation of national culture in accordance with Japanese principles ; (9) the institution of measures for the elevation of the national physical standard ; and (10) the establishment of policies for the relief of poverty-stricken people.

Officials of the party were appointed as follows : Chairman of the General Committee, Genkuro Eto ; Chief for the Party Affairs, Katsumaro Akamatsu ; General Committee, Shiro Koiké, Tsunekichi Yamazaki, Itcho Sasai, Tatsuo Tsukui, Kyuzo Takayama, Hyozo Kanda, I. Ishibashi and Katsumaro Akamatsu ; Chief of the Policy Investigation Council, Itcho Sasai.

The 71st Session of the Imperial Diet

The 71st extraordinary session of the Imperial Diet was convened on 25th of July, 1937, the opening ceremony being honoured by the presence of H. I.M. the Emperor.

The addresses of the Premier, the Minister for Foreign Affairs and the Minister of Finance were delivered at the general meeting of both Houses on the 27th. The gists of their addresses follow :

Premier Prince Konoè's Address The Premier's administrative address follows :

I desire to elucidate, first of all, the principle which underlies the endeavours of the Government to fulfill its immense responsibilities. This principle is to make all our policies stem from a single source, namely, the spirit of the solemn and superb polity of our Empire. Expression of this spirit means that externally we should, in concert with other Powers, strive to establish true peace firmly in the world in accordance with international justice and to enhance more and more the prestige of our nation abroad and that internally we should define clearly the relationship between Sovereign and subjects and enable each of the people to find his proper place in accordance with social justice, bringing about thereby a steady and healthy advance of the national fortunes. Such, then, is the principle the Government expects to observe in formulating and carrying out its policies along various lines.

It is a source of profound regret that, with the troublesome question with the Soviet Union brought to a peaceful settlement and relations with other Powers increasingly amicable, there has occurred the present incident in China and that the Government has been compelled to make an important decision. I am very grateful, however, that the Government has been accorded the united support of the nation at this critical moment. In sending troops to North China, of course, the Government has no other purpose, as was explained in its recent statement, than to preserve the peace of East Asia. I cannot but hope most fervently that reconsideration and self-discipline on the part of the Government and people of China will make speedily possible a fundamental adjustment of Sino-Japanese relations.

In view of the current circumstances at home and abroad, it is of the most urgent necessity for us to perfect our national defence and develop the economic power of our country. Accordingly, as the basic means of carrying out our national policy, the Government feels imperative need to devise a comprehensive scheme aiming principally at expansion of the nation's productive power, establishment of equilibrium in international accounts and adjustment of supply and demand. Investigations are in progress with a view to formulating a concrete programme based on the conception of Japan and Manchukuo as a single unit.

Various other plans, including reform of the administrative machinery and the parliamentary system, have been reserved for later consideration. There are a few, of course, that have already been worked out definitely or are under investigation. The Government has definitely decided, for instance, to establish the Ministry of Health and Social Affairs, and the appropriation needed for it is being submitted to the Diet for approval.

As regards education, I am convinced of the great importance of laying down anew foundations of our educational system that will be in accord with the principle of our national polity. But it is extremely difficult to accomplish reform of our educational system in a brief period. The Government intends to appoint an educational council and to continue careful deliberations on the question.

Japan is at present passing through one of those trials that will enable it to rise to greater heights of prosperity and power. To achieve such spectacular progress, or to execute the various attendant reform measures, I believe there is no other way than to have all our people act as one with a firm resolve and the utmost perseverance. Internal friction or rivalry not only will frustrate that purpose but is likely to bring national humiliation upon us. At the time of forming the Cabinet, I thus followed a policy calculated to promote as much as possible the unity and co-operation of the nation.

In consonance with the spirit of national unity, the Government is prepared to carry out reforms where reforms are needed and to go the way

that is "new and ever new." It is its intention, moreover, to take up and solve, one by one, those questions that hitherto have been considered difficult of solution.

Mr. Hirota's Speech follows :

It is not necessary for me to expatiate afresh on our national policy, which aims at securing Japan's position as a stabilizing force in East Asia and contributing toward the establishment of true peace throughout the world. In order to carry out this policy we should, first of all, consider the relations between Japan, Manchoukuo, China and the Soviet Union.

In surveying the conditions of present-day China, the Government profoundly regret to note that anti-Japanese sentiments and movements have been encouraged and systematically exploited for the purpose of unifying public opinion and arousing nationalistic consciousness, and that untoward incidents evidently resulting thereform are taking place in various quarters in China. At the time of the Chengtu incident last year, the Japanese Government took occasion to ask the Chinese to rectify their attitude toward Japan, which constituted the fundamental obstacle to friendly intercourse between Japan and China, and to invite the Nanking Government to demonstrate its sincerity regarding the concrete questions bound up with amelioration of the relations between the two countries. Unfortunately the negotiations came to an impasse, owing to Chinese recalcitrance. Since then, Sino-Japanese relations have been, frankly speaking, far from satisfactory. Japanese policy in East Asia is directed solely toward realization of the stability of that region through conciliation and co-operation between Japan, Manchoukuo and China and by stopping the Communist invasion of the Orient. The Japanese Government therefore earnestly hopes that China will as soon as possible come to have a full understanding and appreciation of our basic policy.

Today in China not only is such understanding or appreciation absent, but anti-Japanese sentiments have been still more intensified, of which the Lukowkiao incident of the seventh of this month was only the logical consequence. As regards the present incident, the Japanese Government has maintained, as announced in its official statement of July 11, a policy of seeking a settlement on the spot and non-aggravation of the situation. Accordingly, the Government has been doing its best to effect a peaceful local solution, and at the same time to induce the Nanking Government to take proper steps for an early settlement of the question. It is my earnest hope that prompt reconsideration on the part of the Chinese authorities will lead to a faithful execution of the terms of settlement arrived at on the night of July 11. The Governments of the Powers have been informed in detail through our diplomatic representatives of this policy of the Japanese Government, and I believe they understand fully Japan's attitude of patience and self-restraint. On the other hand, there is no knowing what will be the possible repercussions among the Chinese masses, dependent as this is upon what stand the Nanking Government may take. There exists, it must be admitted, the danger of an untoward outbreak at any moment. We have more than once called the attention of both the Chinese Central Government and the local authorities to the necessity for control of anti-Japanese activities and protection of our nationals in China. In order to insure the safety of our fellow-countrymen, the Japanese Government is prepared to use all available means which may be called for by the development of the situation. Thus, in a word, China holds the key to the settlement of the present incident, as it depends entirely upon what course it may choose to follow. I confidently hope that the Nanking Government will adopt such effective and appropriate measures as will accord with our desire and bring about an early and amicable settlement.

The Government is giving careful consideration to our relations with the Soviet Union. Incidents have continued to occur along the Manchoukuo-Soviet frontier. The most serious case was the recent illicit invasion and occupation of Manchoukuo islands in the Amur, which led to an armed clash of the Japanese-Manchoukuo forces and the Russian forces to restore the status quo ante, in that region. The situation threatened for a time to develop into one of extreme gravity. However, the affair ended, in a peaceful settlement, the Soviet Government agreeing to restore the status quo ante in that region. The Japanese Government is deeply concerned over the state of things on the Manchoukuo-Soviet frontier, which gives rise to frequent friction. What is needed first of all is to take practical steps to prevent these border disputes. For that purpose, we should lose no time in setting up those two commissions for the demarcation of the border line and the settlement of disputes

which for some years past have been under consideration and also devise other means of removing the tension all along the frontier. I cannot but urge most strongly upon the Soviet Government to co-operate freely and unreservedly with us in this task for the sake of the peace of East Asia.

Again, it is a matter of no small concern for the Government whether or not our nationals engaged in fishing in the northern waters and those having oil and coal concessions in North Saghalien are to be accorded full guarantees for the legitimate operation of their enterprises. It is our policy never to tolerate the creation of any such circumstances as will in substance destroy those enterprises sanctioned, as they are, by treaty. In short, there remains between Japan and the Soviet Union a number of issues still pending, for the solution of which the Government will do its utmost.

As for our relations with Great Britain, I am deeply moved when I say that a short while ago, on behalf of His Majesty the Emperor, His Imperial Highness Prince Chichibu, accompanied by Princess Chichibu, attended the coronation ceremonies of the King and Queen of England, and by their mission they have enhanced the traditional friendship that binds our two nations. It has always been the consistent policy of the Government to promote Anglo-Japanese friendship, and more recently the two Governments have come to an agreement of views regarding the advisability of entering into frank conversations with the object of adjusting the relations of the two countries. We hope to bring about an early attainment of that aim.

Japanese - American relations have been of late really good, being marked by ever-growing amity and goodwill. I am glad to say that the economic mission which visited the United States some weeks ago has by its candid exchange of views with various circles accomplished much toward establishing closer contact between our two nations economically and otherwise.

Last year this country concluded the anti-Comintern agreement with Germany. The Government is striving for an effective application of the said agreement and at the same time for the furtherance of friendly and intimate relations between Japan and Germany.

Now to turn to our trade relations with other countries.

Obviously the expansion of our export trade constitutes not only an indispensable condition of our national existence, but one of the most important means of balancing our international accounts under the present economic circumstances of the country. But as a matter of fact, the foreign Powers, for economic, financial, or other reasons, still continue to maintain commercial barriers of various kinds against Japanese goods. The Government is working for a smooth development of our export trade by concluding such individual agreements with the governments of those countries as may be best suited to their respective circumstances, or by arranging for private agreements to be arrived at between our business interests and those of other countries. I am glad to say that since last spring our trade negotiations with India, Burma, the Netherlands East Indies and Turkey have all been brought to a successful conclusion. The Government will strive more energetically than ever for the maintenance and furtherance of Japan's commercial interests, and at the same time make all possible endeavours to insure free access to raw materials and natural resources and to promote the freedom of international trade. It is gratifying to note the growth of certain tendencies favourable to restoration of the freedom of trade. I desire to take this opportunity to declare the readiness of the Japanese Government to participate heartily in any international undertaking to convert these tendencies into a reality.

Finance Minister Mr. Okimori Kaya's Address I have the honour of explaining the supplementary budget for 1937–38 and the Government's financial policy. Number 1 of the supplementary budgets for 1937–38 is for expenses for the present North China Incident. It amounts to ¥96,800,000. For immediate use ¥10,000,000 was disbursed for the expenses at the War Ministry from the second reserve of the Treasury, and ¥86,700,000 is to be expended for matters handled by the Ministries of Foreign Affairs (¥700,000), Finance (40,800,000), War (¥46,000,000) and Navy (¥9,100,000). To meet the need, the Government is going to float North China Incident Loans in addition to using some reserves of the Treasury. Besides, ¥200,000 is added to the sum from the Special Account for the Chosen Government-General.

In addition to No. 1 of the supplementary budgets for 1937–38, the Government will present to the present Session a second supplementary budget to cover the expenses for the establishment of the Ministry of Health and Social

Affairs, institutions for training technical workers, promotion of gold production, completion of the Board of Planning, relief and prevention of natural calamities, enforcement of the Foreign Exchange Control Law, and the increase of the reserve funds in the Treasury.

For the advance of the national fortune we have to take positive measures on important matters in all direction. But at the base of all positive measures there must be a sound development of economic power and the realization of all undertakings will be limited after all to the grade of our national economic power. For a sound development of our economic power and its maintenance it is of first importance to put Japan and Manchoukuo under a united economic programme and to draw a concrete united plan and carry it out for the expansion of productive power, proper adjustment of international payment and harmonious relations between demand and supply.

For the realization of important measures human power and dexterity in the work are much required, but the first necessity is the abundance of materials. We have to make efforts first to get a sufficient supply of materials, and the present situation of Japan in this line is such that we must develop the productive power in the country and improve the condition of international payments so as to enhance the consuming power of imported materials. For the development of productive power plans have to be established along three lines, to ensure the self supply of necessary provisions in wartime, to increase the production of commodities of which the supply is insufficient in peace-time, and to increase production of commodities which may contribute to better international payments. At the same time selections must be made as to the kinds of production according to their importance and urgency for the present need to make both ends meet in international payments in such a country as Japan which is short of both raw materials and capital.

It is most important to maintain the present exchange rate of the yen for carrying out important national policies and for the stability of national life. In the present condition of our international payments it is but natural that the exchange rate will tend to decline when it is left uncontrolled. With the present state of affairs, a decline of the exchange rate will not only affect Japan's foreign trade badly but will also cause the rise of commodity prices in the country and the lower exchange rate and the rise of prices may counteract each other, carrying matters from bad to worse and threaten the living of the masses, hinder the systematic working of national economy and lay obstacles against the realization of the Government's programmes. A lower exchange rate will neither increase our exports in the face of the difficult international trade relations nor decrease the imports of Japan, which must largely rely upon foreign commodities and materials. It will, on the contrary, augment our burden in international payments. To get safely through the transition period, that is, until our national productive power is properly developed we have to exert ourselves to maintain the present standard of the exchange rate, to improve the condition of international payments and to promote foreign trade, fully acknowledging the great need of foreign supplies of materials for years to come, and yet restricting unnecessary payments abroad by a careful control of imports and other items of payment.

Consumption of materials is restricted by the productive power and the volume of imports of a nation, and demands must be harmonized with the supply so as not to cause an undue rise of prices and yet keep the balance of international payments. The Government must therefore devise means for a proper control of demand and supply, making a thorough investigation on these matters. Efforts are being made by the Government to draw up united programmes on all the points above mentioned, and a full co-operation of the people concerned is earnestly requested in carrying them out.

The productive power, international payments and demand and supply of Manchoukuo are in a close relation with those of Japan, and for the establishment of our financial and economic schemes Manchoukuo must be considered as one with Japan and the Government will keep in close relations with the Government of that country for the realization of its proposed programmes.

The demands of capital for industrial enterprises in Japan have greatly increased recently, and the paid-up capital and loans of the banks have remarkably increased. In view of an ever increasing tendency of demands for capital the Government will take necessary measures for a smooth movement of capital and keep the interest rates as low as possible. The Bank of Japan has lowered the discount rate

of mortgaged bonds and has decided to devise a new means for discounting bills on the security of the debentures of corporations undertaking those enterprises which are important from the national point of view. These measures will work for the good of the Government's bond policy and the general money market.

The rise of price of gold is universal. But the valuation of gold bullion reserved in the Bank of Japan for the issuance of convertible notes is fixed at one yen per 750 mg. of pure gold in accordance with the Coin Law, so the real value of the considerable gold reserve of the Bank is not duly calculated. The Government is going to make a revaluation of the gold reserve in order to get a fund for the control of the exchange rate; but the Government has no intention to effect any change on the present exchange rate, but will take all measures necessary for maintaining the Tokyo-London rate at 1s 2d.

The foreign trade of Japan for the first half of 1937 inclusive of colonies reached ¥1,602,000,000 in exports and ¥2,243,000,000 in imports. The increase of exports over the same period of 1936 is ¥338,000,000 while that of imports is ¥664,000,000. The increase of the latter is conspicuous owing to the increased demands for materials along with the advance of national policies. The Government is shipping gold for the maintenance of the present exchange rate, but the amount of gold shipped in the future will be limited to the annual amount of gold produced, and a bill pertaining to the production of gold will be presented to the present session.

Then the Finance Minister dwelt upon the problems arising in connection with the rise of prices in the country, about the revision of customs duties, and finally on the effect of the North China Incident on domestic economic conditions, closing his address with a warning against speculations which may arise in such a time of emergency.

The minute reports of the North China Incident made by the War Minister, General Gen Sugiyama, before the Diet on the same day and on several other occasions held the attention of the audience, and the Diet gave consent to the Government's request for the second supplementary budget in relation to the North China Incident which reached ¥419,600,000, without any amendment.

The 71st Session of the Diet passed two bills presented by the Lower House and the 34 bills introduced by the Government, including budgets for the Incident and for the establishment of the Ministry of Health and Social Affairs. Only one bill was laid on the table. The closing ceremony was held on the 8th of August, 1937.

The Board of Planning The Imperial Ordinance authorizing the formation of the Board of Planning, and ordering the abolition of the Board of Investigation, was promulgated on May 14, 1937. On the same day, the new Board embarked on its important mission with the appointment of a President, a Vice-President, and other officials.

According to Article I of the Ordinance the functions of the Board are

(1) To make recommendations to the Cabinet, acting on the instruction of the Prime Minister. With pertinent observations, both in regard to important national policies and to their co-ordination and adjustment.

(2) To investigate the important policies proposed to the Cabinet by its Ministers and to make recommendations based on due observation of them. Policies proposed by different Departments are referred to the Board, which is to study them in the light of their importance, and investigate them from the point of view of the unity and harmony of all national policies.

(3) To investigate important policies, and to study the means of co-ordinating and adjusting them.

(4) To make recommendations concerning control over budget estimates on proposed policies.

(5) To have authority to call for explanations or explanatory data such as deemed necessary for carrying out its functions outlined above.

Institution of the Imperial Academy of Arts The Teikoku Geijutsu In or the Imperial Academy of Arts was instituted on June 24, 1937, by the promulgation of Imperial Ordinance No. 280, and the first meeting of the members of the Academy was held on July 9. The governmental policy for controlling and encouraging the progress of arts in the country had met many difficulties for years, obliging the successive Governments to make changes in the practical handling of the matters pertaining to the policy. But, all troubles seem to be settled by the formation of the Imperial Academy of Arts.

The purpose of the Academy is to promote the progress of all arts in Japan and make contributions for the elevation of national culture. The membership of the Academy is limited to 80, the members being appointed by the Cabinet according to the recom-

mendation of the Minister of Education who is entrusted with power to choose candidates from among the persons who have long careers and full knowledge of fine arts, music or literature. The functions of the Academy are to make studies on important matters pertaining to arts and to take necessary measures for the progress of arts in Japan. The former Imperial Academy of Fine Arts was dissolved with the institution of the new academy, transferring its members en masse to the new organization.

The North China Incident

On Wednesday night, July 7, 1937, a small unit of Japanese troops was engaged in manoeuvres on their usual grounds, near Marco Polo Bridge, southwest of Peiping, and in the vicinity of Lukouchiao and Lungwangmiao on the Yungting River. With the regular summer inspection but a fortnight ahead, all Japanese troops in the area had been drilling day and night for weeks. The Chinese authorities had been notified of these manoeuvres, as usual, and nothing untoward had occurred or been anticipated.

But suddenly, at 11:40 o'clock on this particular night, the Japanese troops were fired upon by Chinese soldiers from the directions of Lukouchiao and Lungwangmiao. The Japanese were utterly unprepared to return the fire, for they were only 150 strong and had a supply of live ammunition amounting only to one ball-cartridge per person, which was being kept by the commanding officer. All that they could do at this critical moment was to halt their manoeuvres, concentrate at a spot some distance from the Chinese, and send for help to their headquarters, situated about two and a half miles away in the former British barracks at Fengtai. Re-enforcements came quickly, and with the Japanese replying with real shots to the Chinese fire, the first clash occurred.

The Chinese authorities at Peiping were immediately notified, and a joint Sino-Japanese mediation party hurried to the scene. But before it arrived, the Chinese troops at 5:20 a.m. again opened fire. Cessation of hostilities was at last arranged for at 6:00 o'clock on Thursday morning. However, the Chinese soldiers, either in ignorance or in wilful disregard, of the terms of settlement, fired on the Japanese troops who were forced to protect themselves. So fighting broke out for the second time at 3:00 o'clock in the afternoon, and for the third time at 6:00 o'clock in the evening.

A more definite agreement for maintaining a truce was reached on Friday, July 9, between Colonel Matsui of the Japanese Special Mission Service at Peiping and the representatives of the 29th Army, according to which the Chinese were to withdraw to the right bank of the Yungting and the Japanese to remain on the left. And, save for spasmodic shots fired by the Chinese soldiery in various localities, this day passed quietly.

The Chinese troops involved in this affair were a part of the 37th Division, belonging to the 29th Army. This division, under the command of General Feng Chi-an, was composed of remnants of General Feng Yu-hsiang's troops, well-known for their anti-Japanese spirit. In view of the fact that, during the preceding months, the Communists and Bule Shirts had been busily carrying on propaganda for the so-called "Anti-Japanese People's Front," the attitude of these troops was a matter of concern to both Chinese and Japanese authorities. Accordingly it was with no small relief that the news of speedy settlement of the affair was received.

On the following day, however, at about 5:00 o'clock in the afternoon, approximately 100 Chinese soldiers, in violation of the terms of the truce, appeared with trench mortars 3 miles to the north of Lukouchiao, and launched an attack upon the Japanese. At 7:00 o'clock another Chinese contingent of some 100 men marched into the village of Lungwangmiao from a northwesterly direction, and there opened fire upon the Japanese, who then launched a counter-attack and drove the Chinese from the village. These clashes were ended by an agreement between the authorities of the two sides to suspend hostilities for the night.

The situation seemed quiet for the moment and some members of the Tokyo Government had even left the capital, when, on Saturday afternoon, July 10, news poured into Tokyo of the northward movements of armies belonging to the Chinese Central Government, the mobilization of air forces in all parts of China, and the proclamation of martial law in the Peiping area. The rapid worsening of the situation endangering Japanese lives in North China became evident.

In view of these disquieting developments members of the Cabinet assembled late on July 10 and discussed the question of sending troops to North China in order to forestall any event that might precipitate a general clash.

At the same time, without abandoning hope for an early settlement, or at least of minimizing the affair, the Government, on Sunday morning, July 11, sent instructions to the authorities on the spot to continue endeavours in this direction. On the basis of these instructions, negotiations were conducted with the Chinese; an agreement was reached on July 11, and, at 4:00 o'clock in the afternoon, the Chinese representatives, General Chang Tsu-jung, mayor of Tientsin, and General Ying Yung, chief of the Public Safety Bureau of Hopei, wrote to the Japanese representative, Colonel Matsui, agreeing to the following terms :

(1) Apology by the representatives of the 29th Army and punishment of those directly responsible.

(2) Chinese troops to evacuate Lukouchiao and to be replaced by the Peace Preservation Corps for the purpose of keeping the Chinese troops sufficiently separated from the Japanese.

(3) To take adequate measures for curbing the activities of the Blue Shirts and Communists.

It will be duly seen that these terms were extremely easy to carry out, having no political or economic significance whatsoever, and that the intention of the unoffending side was to arrive at as rapid and simple a settlement as possible.

Meanwhile, in Tokyo, the Japanese Government had been studying measures for coping with the situation. The decision to send necessary forces to North China was maintained in view of the alarming news which continued to come from China regarding the provocative actions of the 29th Army soldiers, and the movements of Chinese troops not only in North China but also in South Hopei. The following statement was issued by the Japanese Government at 4:00 p.m. on that same day :

The Japanese forces garrisoned in North China have always maintained a calm and patient attitude toward successive anti-Japanese outbursts in North China. On the night of July 7, an unfortunate clash occurred when the Japanese troops were wantonly fired upon by soldiers of the 29th Army, which had been co-operating with our forces in maintaining peace and order in that region. This led to such an atmosphere of tension in the Peiping and Tientsin districts as to cause deep anxiety for the safety of the lives and property of Japanese nationals. However, the earnest endeavours of the Japanese authorities to localize the affair and prevent further aggravation succeeded in bringing the 29th Army auhorities to agree to a peaceful settlement.

On the night of July 10, however, soldiers of the 29th Army, in violation of the agreement, suddenly fired upon Japanese troops, causing considerable casualties. The Chinese have since pushed on warlike preparations by increasing their forces on the front lines; the troops stationed at Siyuan have advanced to the South, while troops of the Central Government have been moved forward. The Chinese have thus not only failed to evince any desire for a peaceful solution, but have gone the length of flatly rejecting all Japan's offers for amicable settlement, thus leaving no room for doubt that the present incident is the outcome of a well-organized agitation for warlike action against Japan.

There is no need of stressing on the vital importance to Japan and Manchoukuo of the maintenance of peace and order in North China. What is more urgently needed for the peace of East Asia is that the Chinese not only apologize for their most recent lawless actions and manifestations of antagonism to Japan, but give adequate guarantee against a recurrence of such outrages in the future. An important decision has been reached by the Japanese Government at today's Cabinet meeting to take all necessary measures for dispatching military forces to North China.

But, desirous as ever of preserving the peace of East Asia, the Japanese Government has not abandoned its hope that negotiations may yet assure the non-aggravation of the situation, and that prompt reconsideration on the part of China may bring about an amicable solution. The Japanese Government is, of course, prepared to give full consideration to the safeguarding of the rights and interests of the Powers in China. (See Chapter VI, Foreign Relations.)

The development of the Incident from July 12 to August 4 is as follows :

July 12 Mr. Hidaka, counsellor of the Japanese Embassy at Nanking, visits Mr. Wang Ching-hui, Nanking's Foreign Minister, and urges that his Government not obstruct the execution of the settlement arrived at on the spot. He reiterates the request two days later to another Nanking official. The Nanking Government, however, refuses to listen and declares that it will not recognize any local arrangement.

July 13 General Sung Che-yuan, chairman of the Hopei-Chahar Political

Council, whose establishment in 1935 was recognized by the Nanking Government, returns from his country home and takes up negotiations with Lieutenant-General Katsuki, new commander of the Tientsin garrison. In spite of this, minor clashes take place owing to the anti-Japanese spirit of the 29th Army. China fails to carry out her promise to lift martial law, release the Japanese held in detention and restore communications between Peiping and Tientsin, and furthermore, morning reveals the whole city of Peiping bedecked with anti-Japanese posters and seething with anti-Japanese demonstrations. On this day 4 Japanese motor lorries are fired upon near Yungtingmen.

July 17 Mr. Hidaka calls on Mr. Wang again and hands him a memorandum urging the Nanking Government not to interfere with the execution of the agreement arrived at between the authorities in North China and to suspend immediately all military preparations against Japan.

July 18 General Sung Che-yuan in accordance with the agreement expresses his regrets to General Katsuki concerning the Lukouchiao incident. Thus the first practical step toward a satisfactory settlement of the incident seems to have been taken. However, the attitude of the officers and men of the 37th Division is far from conforming to that of General Sung. To all appearances they are awaiting Nanking's decision whether or not to reject the local settlement.

July 19 Japanese guards at Lukuochiao are fired on by Chinese soldiers, and the commanding officer, Captain Yamazaki, is severely wounded.

Mr. Tung Tao-ning, chief of the first section of the Asiatic Bureau, calls on Mr. Hidaka at 2:30 p.m. and hands him an aide mémoire, in which the Nanking Government declares the movements of Chinese troops to be a defence measure and submits the following :

(1)The two Governments to agree upon a date for both sides simultaneously to stop the movements of their troops and also to recall their armed forces to their original stations.

(2) They should enter into diplomatic negotiations with a view to reaching an immediate settlement.

(3) The authorization of the Central Government is necessary for any agreement made on the spot concerning any question, even of a local character.

(4) The Chinese Government is willing to accept any means of settlement recognized by international law or treaties, such as direct negotiations, good offices, mediation or arbitration.

Comments on the memorandum made in Tokyo are (1) that it evades the two points put forward by Mr. Hidaka on July 17, (2) the simultaneous withdrawal of troops would imply that Japan was partly responsible for the affairs, whereas in fact China was solely responsible, since the incident was started by the firing of Chinese soldiers, (3) the contention that the Chinese troops movements are a defence measure is absurd, since Japan's decision to send troops to North China was motivated by the heavy concentration of Chinese troops in North China beginning on July 9, until there were more than 80,000 men of the 29th Army in the Peiping-Tientsin region and more than 25 divisions along the railway lines leading to these cities, and finally (4) that because the Nanking Government recognized the Hopei-Chahar Political Council and its freedom to enter into local agreements, there is no justification for Nanking to declare now that local agreements are null and void unless they have the Central Government's authorization.

The headquarters of the Japanese garrison at Tientsin announces at 10:00 p.m. that they will be compelled to take such action as they deem appropriate on and after July 20, unless the Chinese immediately cease their provocative actions.

July 20 The Japanese commander makes representations, and General Sung Che-yuan renews his pledge to cause the withdrawal of the 37th Division under General Feng Chi-an from Yamenkou and Papaoshan by noon of July 21, and its replacement by the Peace Preservation Corps. General Sung also announces that on his own responsibility he will see that the incident is localized.

The Nanking Government has assembled nearly 350 planes at Loyang and Hsuchou, part of which have begun joint operations with Chinese troops in Hopei.

July 23 At General Chiang Kai-shek's orders, General Hsiung Pin, assistant Chief of the Chinese General Staff, goes from Nanking to Poating by plane, and reaches Peiping in the evening. The arrival of such an important officer is interpreted by the Chinese troops as encouragement to resist.

July 26 At 3:30 p.m. strong note from General Katsuki is delivered to General Sung at Peiping by Col. T. Matsui, demanding, in view of the repeated violation by the Chinese of their pledges, (1) withdrawal by noon on July 28 of the 37th Division troops

near Lukouchiao and Papaoshan to Changsintien on the Peiping-Hankow Railway south of Lukouchiao; (2) withdrawal to the west bank of the Yungting River by noon on July 28 of all 37th Division troops inside the walled city of Peiping and all 37th Division troops stationed at Siyuan, northwest of Peiping; and (3) subsequent withdrawal of all the foregoing troops to the Paoting area, 90 miles south of Peiping. The note warns that if the Chinese fail to carry out these demands, the Japanese Army will "be compelled to conclude that the 29th Army's authorities lack sincerity and to take any action it may deem appropriate," with full responsibility lying with the 29th Aarmy.

July 27 At Tokyo: After a meeting called at 1:30 p.m. the Cabinet submits for Imperial sanction an order mobilizing reinforcements to be sent to China. Through its Chief Secretary the Cabinet issues a statement pointing out that China's consistent anti-Japanese policy has repeatedly menaced the peace in North China, citing Japan's policy of attempting to settle the trouble locally and peacefully, and recalling that Japan has submitted very lenient conditions for settlement to the Hopei-Chahar Political Council which accepted them but failed to carry them out. The statement recalls that, while Japan was exerting every effort for a peaceful solution, the Nanking Government was making preparations for war and thus causing unrest. It reviews the various attacks upon Japanese troops by Chinese soldiers and shows that the Japanese Army has been forced to take defensive action. The statement disclaims territorial ambitions and enmity toward the Chinese people, and promises recognition of foreign rights and every effort to protect foreign rights and nationals. It closes with an expression of a continued desire to minimize the situation and expedite an amicable settlement.

At Nanking: The Foreign Ministry at 10:30 p.m. belatedly issues a statement indicating its willingness to accept the "emergency form of settlement" worked out between the Japanese and the North China local authorities.

At Peiping: With the safety of 18,000 Japanese civilians at stake, General Katsuki finds no alternative to swift and drastic action toward the forcible eviction of the 29th Army. Late at night General Katsuki informs General Feng and the Mayor of Peiping of his decision.

July 28 The Japanese troops begin moveing toward the Chinese lines at 5:00 a.m. General Katsuki simultaneously issues a statement declaring the crisis has been caused by China's breach of faith in rushing Central Army troops northward, contrary to the Ho-Umezu Agreement, and in other preparations for war against the Japanese. He explains that every means to reach a peaceful settlement has been exhausted, and that the peace of North China, which is of vital importance to both Japan and Manchoukuo, has been disrupted with consequent imminent danger to the lives and property of Japanese residents. The statement says this punitive action is aimed only at the Chinese forces and not at the Chinese population; announces that the Japanese troops will not use force inside Peiping unless challenged by the Chinese soldiery.

General Sung Che-yuan, commander of the 29th Army, General Chin Tehchun, Mayor of Peiping, and General Feng Chi-an, commander of the 37th Division, secretly flee to Paoting.

July 29 About 2,000 men of the 29th Army, reinforced by some 1,000 men of the Peace Preservation Corps, launch an obviously premeditated attack on the principal Japanese buildings and the Japanese garrison at Tungchow. Civilians falling into their hands are butchered; other atrocities are committed.

July 31 Despite rain, Japanese planes fly over Tungchow and bomb the Chinese, who abandon the siege and retreat to the south. At 4:20 p.m. the Kawabé detachment, which has been fighting south of Peiping, reaches Tungchow, mans the five gates to the city, overpowers the Chinese soldiers remaining at the scene, and restores order.

The Japanese troops find all Japanese homes ransacked and many of the residents killed. Survivors describe some of the atrocities. Men, women and children were ruthlessly butchered and in many cases their bodies were mutilated. The maidservants of the Kinsuiro, a Japanese-managed hotel, were strung together on a wire run through their noses or throats and were thus led out to be shot. Their bodies were subjected to horrible outrages and then thrown into a lotus pond.

August 4 It is ascertained that of the 151 Japanese and 187 Koreans residing in Tungchow, more than 200 men, women and children were killed in the massacre.

CHAPTER VI

FOREIGN RELATIONS

Earlier Contacts with Foreign Countries

China and Korea China and Korea were the first foreign nations to come into contact with Japan. To these two countries the ancient Japanese were indebted in a large measure for various institutions of civilization. It was, however, not until about the middle of the fourth century A. D., when the Empress Jingo sent an expedition to south Korea and established a resident Japanese government in Silla, one of the three Korean kingdoms, that the Japanese began systematically introducing Chinese culture and learning through Korea. After this, Chinese civilization continued to influence the Japanese to an increasing extent, and in 593 the Prince Regent Shotoku began the construction of an imposing Buddhist temple and pagoda called Shitennoji (or Tennoji) at Naniwa, present Osaka. This was intended to help propagate Buddhism among the Japanese as well as to impress the Chinese envoys and traders who, in those days, were in the habit of coming to this country by small sailing craft and landing at what is now known as Osaka.

Other contacts with China and Korea occurred on the occasion of the Korean resistance against the encroachment of the Chinese under the Tang dynasty in the seventh century, when the Emperor Tenchi sent assistance to Korea, and at the time of the invasion of the northern shores of the island of Kyushu by an expeditionary force under Kublai Khan in the thirteenth century, which was the first instance of the security of Japan being menaced by foreign invasion. The Mongolian expedition was finally repulsed by the Japanese with the help of a hurricane which wrecked practically all the Monogolian fleet.

Another major event in Japan's earlier foreign relations was the expedition sent to Korea by Hideyoshi Toyotomi in 1592. This expedition was recalled without any decisive results shortly after the death of Toyotomi. It is regarded as probable that the failure of this military action was partly due to the assistance given to Korea by China, which claimed sovereignty over the Korean peninsula.

Chinese civilization was also brought to Japan by the Chinese refugees who emigrated when the Manchus invaded and subjugated China proper in the middle of the seventeenth century.

Spain and Portugal Japan's first contact with Western countries occurred in the middle of the sixteenth century, when Portuguese and Spanish traders first visited the shores of this country. These traders were instrumental in introducing Christianity.

Britain and the Netherlands Shortly afterwards, Dutch and English traders arrived in Japan and were granted every facility for the conduct of business. In the meantime, the Jesuit and Franciscan missionaries had erected churches in various parts of the country, and their activities came to be regarded with grave apprehension as it was believed that they had political motives. Consequently, the Shogunate Government ordered all missionaries to leave Japan and strictly prohibited Christianity in 1597. The Shogunate Government later went so far as to close the country entirely against communications with foreign countries, issuing a decree to this effect in May, 1636. After this, only a limited number of Chinese and Dutch traders were allowed to reside at Deshima in Nagasaki, and all contact with foreigners was made through them.

Russia Over one and a half centuries of complete seclusion followed until 1792, when Russia sought the opening of the Japanese ports to trade through her representative. In 1806, two Russian ships attacked the coast of Saghalien, plundering a Japanese town and carrying off a number of its inhabitants.

Great Britain during the Napoleonic wars attempted to supplant the Dutch merchants at Deshima by British nationals. These British ventures were followed by the arrival of Americans in Japan. Arriving in the Bay of Yedo in 1837, aboard a ship called the Morrison, these Americans tried to convince the leaders of the Tokugawa Shogunate of the inevitability of Japan entering into relations with the Western powers. A similar attempt was made by King William II of the Netherlands

who, in February, 1844, sent a friendly communication to the Shogunate Government urging Japan to enter into treaty-relations with Western countries. It was not, however, until 1853, when the American fleet commanded by Commodore Perry arrived at Uraga, that the leaders of the Tokugawa régime came to consider seriously the question of regular foreign contacts.

The United States As a result of Commodore Perry's visit, Japan concluded her first treaty of amity with the United States on March 1, 1954, providing for the opening of the ports of Shimoda and Hakodaté to American citizens and for the extension of reciprocal aid to vessels in distress. Russia, Great Britain, France and other Western countries soon concluded treaties of a similar nature.

The conclusion of these treaties, for which no Imperial sanction was sought immediately, gave rise to a strong anti-foreign sentiment and several resident foreigners were murdered. A British squadron avenged these outrages by bombarding the city of Kagoshima at the southern tip of the Island of Kyushu in 1863. A similar attack was made on Shimonoseki the following year by a combined fleet of British, American, French and Dutch warships.

The international engagements entered into by the Shogunate Government were sanctioned in 1865 by the Throne, which reassumed its civil and military powers from the Shogunate Government in 1868 after having left de facto power in other hands for nearly seven centuries.

The Meiji Era

The "Maria Luz" Incident The first noteworthy incident in Japan's foreign relations in the Meiji Era was what is known as the Maria Luz incident which took place in 1872, when the Japanese Government successfully helped in releasing 200 Chinese slaves from the Peruvian ship Maria Luz at Yokohama. This action was upheld by an international tribunal presided over by Emperor Alexander II of Russia and was instrumental in strengthening the position of Japan as an independent nation in international politics.

Saghalien and the Loochoo In 1872, the Japanese Government proposed to buy the Island of Saghalien for ¥2,000,000, but the negotiations for this purchase were broken off on the advice of Count Kuroda, who contended that the island was worthless. Three years later Japan gave up all claim to Saghalien in exchange for Russia's recognition of Japan's sovereignty over the Kurile Islands.

The Loochoo Islands, a group lying between Kyushu and Taiwan, were formally incorporated in the Japanese Empire in 1871, when, inviting the King of Loochoo to Tokyo and creating him a peer, the Japanese Government organized the archipelago into a prefecture called "Okinawa-ken."

The Bonin Island Dispute The Bonin Islands, called in Japanese "Ogasawara-jima," were officially recognized as a territory of Japan in 1875 by the United States following a dispute as to sovereignty therein between the two nations.

Expedition to Formosa When a group of shipwrecked Loochooan sailors were massacred by the savages of Formosa (now known as Taiwan) in 1872, the Japanese Government sent a punitive expedition to the island, and a strong protest was received from China. The situation threatened to become very tense, but through the intervention of British Minister at Peking, the trouble was settled, Japan evacuating the island and China consenting to pay an indemnity to the families of the victims of the outrage.

Treaty Revision Revision of Japan's unequal treaties with the foreign Powers was accomplished in 1894, after a series of unsuccessful attempts, which had led to the collapse of several of the most powerful Cabinets. The treaties of commerce and navigation concluded by the Shogunate Government with the Western Powers provided for the opening of the ports of Yokohama, Kobé, Osaka, Nagasaki, Niigata and Hakodaté, together with Tokyo, to commerce and residence, with extraterritorial privileges for foreign residents. These treaties also required Japan to maintain a very low scale of import duties.

It was for the purpose of seeking revision of the treaties, on the basis of a provision therein that revisions could be made after, 1871, that Prince Tomomi Iwakura's mission was sent to America and Europe in 1871. The great difficulty standing in the way of the proposed revision was the agreement among the eighteen nations concerned to the effect that they would act conjointly in their negotiations with Japan. The United States alone consented to conclude a separate treaty, but a provision in it that it should not be put into force until after the conclusion of similar treaties with the other nations deprived the document of its practical effect.

In 1882, Count Kaoru Inouyé made overtures to the British Government

and a preliminary conference followed to discuss the basis of negotiations, at which elaborate preparations were made for a great conference, in which every treaty Power should be represented. Great Britain and Germany showed their willingness to make liberal concessions and for a time it looked as if Count Inouyé's efforts would be crowned with success. However, the conditions of the proposed new treaties leaked out and, feeling indignant over what they described as a humiliation to Japan, the vernacular newspapers started vigorous campaign against the proposed revision. This coincided with the sinking of a British steamer in which all the Japanese passengers perished, and this incident poured oil on the fire of the anti-foreign agitation then prevailing throughout the country. The situation was so threatening that the Japanese Government found it advisable to postpone the negotiations for revision.

The next foreign minister to take up his onerous task was Count Shigenobu Okuma, who started fresh negotiations in 1888. Before officially starting negotiations, however, he adopted a high-handed policy towards the foreign residents in this country with a view to convincing them of the advisability of revising the treaties. In approaching the foreign Powers concerned, Count Okuma preferred to negotiate with them individually instead of collectively and first of all made overtures to Mexico, offering to allow the presence of foreign legal assessors in the Japanese Supreme Court in cases involving foreigners during a space of at least three years after the enactment of the new legal codes on Western lines. This offer was accepted. After the signing of this treaty, the United States, Germany and Russia soon expressed willingness to make agreement on similar lines, it having been agreed that the new treaties should take effect in 1890. Before the signing of similar treaties by the other Powers, however, a vehement agitation broke out in Japan against the appointment of foreign assessors, and an attempt was made on the life of Count Okuma, in which he was seriously injured.

The treaty revision negotiations, which were thus interrupted, were resumed by Viscount Shuzo Aoki, who succeeded Count Okuma as Foreign Minister. Viscount Aoki's seven proposals did not provide for the presence of foreign assessors on Japanese tribunals, and there seemed to be a good chance of these proposals being accepted by Great Britain, when, owing to an attempt made on the life of the Grown Prince of Russia then visiting Japan, Count Aoki had to resign and was succeeded by Viscount Buyo Enomoto.

Viscount Enomoto continued efforts to complete the desired revision of the treaties, but soon had to resign when the Government was defeated on the budget. In 1892, Count Munemitsu Mutsu assumed the foreign portfolio and immediately reopened negotiations with Britain. A new difficulty was added in 1893 when the House of Representatives submitted a petition to the Throne urging the abolition of consular jurisdiction, restoration of tariff autonomy and prohibition of coastal trade. To make the situation worse still, the people agitated against foreigners being allowed unrestricted right of residence and against foreign ownership of property in Japan. The Government, however, dissolved the Diet and concluded a new treaty with Great Britain on July 16,1894, at London, signed by Lord Kimberley and Viscount Aoki, thereby finally settling the long pending question. Similar treaties were concluded with Austria, France, Germany, Italy, Russia and the United States in 1897.

The Sino-Japanese War The war with China, which arose from a complicated dispute over the independence of Korea, resulted in enhancing the prestige of Japan in the eyes of the entire world. The question whether or not Korea was an independent nation was a long standing one and an open clash of interests between Japan and China led to the inevitable war.

In 1880 Japan opened a legation in Seoul, but peaceful relations between Japan and Korea were often disturbed as the result of intrigues, if not active interference, by the Chinese. In 1882, a Korean mob attacked and burned the Japanese Legation, and the legation officials had to flee to a British gunboat then lying at anchor off Chemulpo. This incident, though settled by Count Inouyé, then Foreign Minister, who visited Seoul and suceeded in inducing the Korean Government to offer an official apology and pay an indemnity, pointed to the inevitability of war between Japan and China.

Another incident, though not directly connected with the affair just referred to, proved a more direct cause of the Sino-Japanese War. This incident took place on December 4, 1884, when, during the celebration of the opening of the Postal Bureau of Korea at Seoul, at which were present all the foreign diplomats and high officials of the Korean Government, the leader of the

reactionaries was murdered and the progressives sought the assistance of Japanese troops in carrying out an anti-reactionary coup d'état. However, the Chinese troops in Seoul, who outnumbered the Japanese by twenty to one, sided with the reactionaries and the Japanese troops were forced to retreat to the Japanese Legation, which was then attacked and burned by the Chinese. In settlement of the dispute arising from this incident what is known as the Treaty of Tientsin was signed on April 18, 1885, between Count (later Prince) Hirobumi Ito and Viceroy Li Hung-chang, under the provisions of which China and Japan agreed not to send troops to Korea without previously notifying each other.

Actual warfare between China and Japan started when a party called the "Tong-haks" rebelled against the corrupt officialdom of Korea. Seeing the régime which she favoured seriously menaced by this uprising, China despatched troops to Korea and Japan also sent an expedition in accordance with the Treaty of Tientsin. After minor clashes both on land and sea, Japan and China declared war on August 1, 1894, after which the Japanese carried out a short and entirely successful campaign. The result of the Sino-Japanese War was the Treaty of Shimonoseki, concluded on April 14, 1895, by which China recognized the full and complete independence of Korea and ceded the Liaotung Peninsula and the adjacent waters, as well as Formosa and the Pescadores, to Japan. In addition, China promised to pay an indemnity of 200,000,000 taels to Japan and open up Shashi, Chungking, Soochow and Hangchow to trade and the Yangtse-kiang river to navigation. The acquisition of the Liaotung Peninsula by Japan, however, was objected to by Russia, with the apparent support of Germany and France, and Japan had to return the territory to China, receiving, as compensation, a sum of 30,000,000 taels.

The Boxer Uprising The rendition of the Liaotung Peninsula by Japan was followed by the acquisition of territorial interests in China by various Powers. First of all, Russia obtained the right to extend the Siberian Railway through Manchuria as far as Dairen. Then Germany was granted a 99 years' lease of Kiaochow, while Russia forced China to grant her a lease of the Liaotung Peninsula for a period of 25 years. Great Britain and France subsequently obtained similar leases of Weihaiwei and Kuangchow Bay respectively.

This foreign penetration infuriated a group of Chinese patriots calling themselves Boxers who rose in arms in South Chihli in May, 1900 and besieged Peking, where the foreign envoys and their families faced imminent massacre. The legations were relieved by an allied force furnished by Japan, Russia, Great Britain, the United States, France and Germany. In this expedition, the Japanese played the most important part, sending some 10,000 troops and 54 field guns.

The Anglo-Japanese Alliance Sharing common interests in the Far East, Japan and Great Britain concluded a treaty of alliance on January 30, 1902, in order to maintain the status quo and general peace in the Far East, simultaneously making it clear that the two countries were specially interested in maintaining the independence and territorial integrity of China and Korea. Against this, France and Russia took the precautionary measure of making the Franco-Russian Alliance applicable to the Far East.

The Russo-Japanese War After her penetration into Manchuria, Russia was forced to agree on April 2, 1902, to withdraw her troops from that region, largely through the intervention of Japan, Great Britain and the United States. According to this agreement, Russia was to complete her evacuation of Manchuria within 18 months. Shortly afterwards, however, she made new demands on China, in exchange for her agreement to withdraw troops, apparently with a view to securing a position of political and economic predominance in Manchuria. This was followed by the sending of Russian soldiers in the guise of civilians to Korea.

Thus menaced, Japan made proposals to Russia for the conclusion of an agreement aimed at guaranteeing Korean independence and reciprocal recognition of Japan's preponderant interests in Korea and Russia's special interests in Manchuria. These proposals were virtually rejected by Russia, with the result that Japan declared war on February 10, 1904. This conflict ended in the victory of Japan and a treaty was signed at Portsmouth, New Hampshire, U.S.A., between the two countries through the good offices of President Roosevelt, on September 5, 1905.

By this treaty Russia recognized the preponderant interest, political, military and economic, of Japan in Korea, and the two signatories agreed to evacuate Manchuria simultaneously. Russia also turned over its lease of Port Arthur and Dalny (Dairen) and their adjacent lands and waters to Japan, while provision

was made for joint Russo-Japanese operation of the Manchurian railway. The treaty also stipulated the cession to Japan of the southern part of Saghalien Island as far north as the 50th degree of north latitude, together with the adjacent islands.

After the Russo-Japanese War Japan concluded a convention with China, on December 2, 1905, known as the Treaty of Peking, embodying the relevant terms of the Treaty of Portsmouth. This was followed by the signing of the Franco-Japanese Convention, on June 10, 1907, the exchange of what are known as the Takahira-Root notes on November 30, 1908, and the conclusion of the Russo-Japanese agreement, on July 30, 1907, all these pacts being designed to preserve peace in the Far East.

Annexation of Korea As a result of the Russo-Japanese War, Korea was made a virtual protectorate of Japan, but to make Japan's protection over Korea complete, Prince Hirobumi Ito, as Japanese ambassador, concluded a convention with the Korean Government on November 17, 1905, providing for the transfer of the control of Korean foreign relations to Japan and establishment of a Japanese Residency-General in Seoul.

Later developments in Korea, however, led to the abdication of the Korean King on July 17, 1907, and a week later a new agreement was signed according Japan practical control of the administration of the country. The formal Treaty of Annexation of Korea to Japan was signed on August 22, 1910.

The Taisho (1911–1926) and Showa Era (1926–)

The World War Less than two months after the outbreak of the European War, Japan participated on the side of the Allies, sending an ultimatum to Germany on August 16, 1914, followed by declarations of war on Germany and Austria on August 23 respectively. Refusing to send troops to Europe, her activities were confined to her attack on the German fort at Tsingtao and rendering naval assistance for the protection of allied shipping in the southern Pacific and other waters.

At Tsingtao, the Japanese military and naval forces occupied the German base on November 7, 1914, after operations lasting only a week. In the meantime, the Japanese Navy occupied between October 3 and 19 all islands in the southern Pacific north of the equator with the exception of the island of Yap, which a British squadron had taken before the arrival of the Japanese. From the beginning Japan insisted on occupying these islands permanently, and, in March, 1917, a secret agreement between Japan and Great Britain provided for the permanent occupation of these islands by Japan in return for her despatch of destroyers to the Mediterranean Sea. At the Peace Conference, however, her claim to permanent sovereignty was rejected and she was given only a mandate over the islands.

The Washington Disarmament Conference Japan first participated in international efforts to limit armaments in 1921 at the Washington Conference which opened on November 11. After strongly insisting on a 7–10–10 ratio against the navies of Great Britain and the United States, she accepted a 3–5–5 ratio with regard to capital ships.

At this conference, Secretary Hughes of the United States proposed with regard to capital ships that the United States, Great Britain and Japan scrap respectively 30 ships totaling 845,740 tons, 23 ships totaling 583,375 tons and 17 ships totaling 448,928 tons, including those in course of building, and that the three countries be allowed to retain 506,050 tons in 18 ships, 604,450 tons in 22 ships and 299,700 tons in 10 ships, respectively. After negotiations on the basis of the Hughes proposal, an agreement was reached, with some changes made in the ships to be scrapped. By this agreement Japan was allowed to retain the "Mutsu" instead of the "Settsu" and the United States the "Washington" and the "Colorado" instead of the "North Dakota" and the "Delaware," while Great Britain agreed to scrap four King George V class ships, building two new ships of not more than 35,000 tons each instead. Consequently, the capital ship tonnage which the three Powers were allowed to retain was 525,000 tons in 18 ships for the United States, 581,200 tons in 20 ships for Great Britain and 313,000 tons in 10 ships for Japan.

As regards the replacement of obsolete ships, it was agreed that capital ships might be replaced after 20 years in service, providing that the new ships do not exceed 35,000 tons each in displacement. On completion of the replacement stipulated above, the United states and Great Britain were to have 15 capital ships totaling 525,000 tons each against 9 ships aggregating 315,000 tons for Japan, while France and Italy accepted a total capital ship tonnage of 175,000 tons each.

With regard to auxiliary ships, no agreement was reached on the total

tonnage for each country, France claiming 350,000 tons in auxiliary ships and 90,000 tons in submarines, to which Great Britain and the United States were vigorously opposed. The proposal made by Britain favouring the total abolition of submarines added to the difficulties of making a total tonnage agreement regarding auxiliary ships. It was finally decided that an auxiliary ship must not exceed 10,000 tons in displacement and must not carry guns of more than 8 inches in calibre.

As to fortifications and naval bases in the Pacific, it was agreed that the status quo should be maintained.

In addition to the general disarmament treaty the five Powers also concluded an agreement limiting the use of submarines and poison-gas in warfare.

At this conference, Japan was represented by Admiral Baron Tomosaburo Kato, then Minister of Marine, and the treaty was to remain in force until December 31, 1936.

Tri-partite Conference This conference opened on June 20, 1927, and was participated in by Japan, Great Britain and the United States, with a view to settling certain questions left over from the Washington Conference. Japan was represented by Admiral Viscount Makoto Saito, then Governor-General of Chosen. At the outset the three countries presented their respective proposals, when it became evident that there was an almost unsurmountable difference between the claims of Great Britain and the United States.

The Japanese delegate did his best to reconcile the British and American theses, while making it clear that Japan was in no position to accept the 3-5-5 ratio in regard to auxilary ships. In this latter connection, Japan succeeded in reaching a compromise with Great Britain but failed to induce the United States to agree to it. Thus all efforts ended in failure and the three Powers concerned closed the conference after publishing a joint declaration.

The London Conference At the naval disarmament conference called in London on January 21, 1930, in which the United States, Great Britain, Japan, France and Italy participated, the Japanese delegation, headed by Mr. (later Baron) Reijiro Wakatsuki, upheld what they called "the three great principles" of Japan. These were (1) a total tonnage of 8-inch gun cruisers for Japan equal to 70 per cent of that possessed by the United States, (2) no abolition or material reduction of submarines and maintenance of the then existing submarine strength of Japan, i. e. 78,500 tons, and (3) a ratio of 7-10 against the United States in the global tonnage of auxiliary vessels on the basis of the two foregoing conditions.

The conference was fraught with numerous difficulties. In the first place, opinion was divided as to whether global tonnage or different categories of vessels should be taken as the basis for proposed reduction, but this difficulty was overcome by a compromise allowing these two bases of reduction to be discussed simultaneously. By far the greatest difficulty was the difference between the Japanese and American theses, Japan claiming the ratio of 7-10 and the United States insisting on that 5-3. To make the situation still worse, France claimed a global tonnage of 721,400 tons. The American-Japanese entanglement, however, was in a large measure smoothed out through informal conversations between Mr. Tsuneo Matsudaira, Japanese Ambassador in London, and Mr. David A. Reed, of the American delegation.

To summarize the Japanese-American compromise, Japan was accorded a global tonnage of auxiliary vessels equal to 70 per cent of that held by the United States, and in regard to submarines, Japan reduced her claim of 78,500 tons to 52,700 tons on the condition that parity was to be maintained between Japan and the United States in this respect. As for the ratio of 10,000-ton cruisers, Japan was allowed to retain a number of such ships equal to 70 per cent of those possessed by the United States until 1936, while the United States was allowed to lay down the keels of three more ships of this category on condition that they should not be completed during the stated period.

Besides extending the naval holiday for a period of another six years, the London Naval Treaty, which was signed on April 22, 1930, affects Japan in the following respects :

(1) Japan was required to remove from active service the capital ship "Hiyéi", although she was allowed to retain it for training purposes.

(2) Japan was allowed to replace the minelayers "Aso" and "Tokiwa", provided that the two new ships should not exceed 5,000 tons in displacement.

(3) Japan was required to dispose of the "Asama", "Yakumo", "Izumo", "Iwaté" and "Kasuga" when the first three vessels of the Kuma class were replaced by new ships.

London Conference in 1935 Japan was represented by Admiral Osami Nagano and Matsuzo Nagai, former Japanese

Ambassador to Berlin, at the naval disarmament conference convened at London in 1935, in accordance with the London Naval Treaty of 1930, Part V (2). Admiral Nagano advocated the establishment of a common upper limit of naval armaments to be fixed as low as possible and reduction of offensive armaments to assure the principle of "non-menace and non-aggression." But Japan's proposal failed to obtain support from other nations, and so following the final presentation of Japan's formula and the other delegations' rejection of it, the Japanese delegation informed Viscount Monsell, on January 15, 1936, that it could no longer usefully continue participation in the conference and withdraw from it.

In the meantime, the Japanese Government notified the U. S. A. Government their intention to terminate the Washington Naval Treaty, on December 29, 1935, and all the agreements, except Part IV of the London Naval Treaty, between Japan, Great Britain, U. S. A. and other two nations on the limitation of naval armaments lost force on December 31, 1936.

Present Naval Questions Following Japan's withdrawal from the London Naval Conference of 1936 because of her inability to agree to qualitative rather than quantitative disarmament, the so-called "Naval Treaty of 1936" was concluded among Great Britain, the United States, France and Italy. The Japanese Government was invited by the British Government to become an adherent to the Treaty, but on June 28, 1937, it notified the British Government that it was unable to do so.

Prior to the Japanese notice and anticipating Japan's refusal to participate in the new treaty, the British Government notified the Governments of Japan and the United States that Britain would maintain a surplus of 40,000 tons in destroyers and transfer 4 ships from the category of "A" class cruisers to that of "B" class cruisers. In reply, the United States announced its intention to apply the escalator clause. To meet the increased tonnages of Britain and America, the Japanese Government decided to maintain a surplus tonnage in destroyers and submarines and notified the British Governments to that effect on August 31. The Japanese notice contained the following three major points :

1. The Imperial Japanese Government acknowledges receipt of the British notice that Britain will maintain a surplus of 40,000 tons in destroyers.

2. The Japanese Government wishes to give notice that Japan will maintain a surplus of a total of 26,657 tons including 11,059 tons in destroyers and 15,598 tons in submarines.

3. The Japanese Government requires the maintenence of a surplus tonnage in submarines in consideration of the fact that the surplus tonnage in destroyers is comparatively small.

On September 3, the Japanese Government notified the Government of the United States to the following effect :

"In view of the fact that the British Government has notified of its intention to maintain a surplus of 40,000 tons in destroyers through the invocation of Article 21 of the London Naval Treaty, the Japanese Government also intends to maintain a surplus tonnage in destroyers and submarines through the exercise of its treaty rights.

"According to the fixed ratio, the Japanese Government is entitled to the maintenance of a surplus of 28,000 tons in destroyers. As the surplus tonnage in destroyers does not reach these figures, the Japanese Government desires to effect a transfer of tonnage by maintaining a surplus of 15,598 tons in submarines in addition to the surplus of 11,059 tons in destroyers."

Limitation of Use of Submarines A procès-verbal was signed on November 6, concerning the continuance of the provisions in Chapter 4 of the London Naval Treaty which limit the use of submarines. The Japanese Government also participated in the procès-verbal. Other participants include Great Britain, the United States, France and Italy.

Limitation of Gun Calibre. Following Japan's refusal to participate in the London Naval Treaty of 1936, the British Government tried to persuade the Japanese Government to accept the provisions limiting the calibre of guns mounted on capital ships to 14 inches, at the least. The Japanese Government, however, declined to agree to such limitation. On March 27, 1937, Foreign Minister Naotake Sato handed a note to Sir Robert Clive, the British Ambassador in Tokyo, which read in substance as follows :

"As clarified at the London Naval Conference, the Japanese Government is not in a position to agree to a qualitative limitation of naval armaments which is not accompanied by a quantitative limitation. As no need is recognized for a change in the principle which it set forth at the London Naval Conference, the Japanese Government cannot accept the proposal to limit the gun calibre without limiting the quantity of naval armaments."

The League Disarmament Conference Late in 1932, when the general disarmament conference was called at Geneva after years of preparation by the disarmament commission of the League of Nations, Japan also submitted a plan of her own with regard to naval limitation and reduction. This proposal, which was published on December 11, 1932, made it known that Japan was desirous of making it the guiding principle of the conference that offensive power should be reduced and that the geographical and other special circumstances of each country should be fully taken into consideration in making any settlement.

As regards the formula of the projected agreement, Japan proposed to divide it into general and special agreements. In the general agreement, it was proposed to arrange for the qualitative reduction of all vessels, and also the quantitative reduction of "offensive" vessels, belonging to Japan, Great Britain, the United States, France and Italy.

With regard to the special agreement, all the countries of the world should be divided into four groups, under (1) the Pacific group, (2) the Atlantic group, (3) the European group and (4) the South America group; and each group should arrange for limitation and reduction of the armament of each of its members. Any country interested in more than one group should participate in the disarmament discussions of all groups in which it is interested.

Relations with League of Nations

Japan's connection with the League of Nations began with the inception of the international organization in April, 1919, when the Covenant was officially adopted at Paris, and came to a virtual end on March 27, 1933, when Japan gave notice of her withdrawal from membership on grounds of dissatisfaction with the dealings of the Geneva body with the Sino-Japanese dispute, particularly with the report adopted by the League Assembly on February 24 and the recommendations for the settlement of the problem as contained therein. The withdrawal became completely effective on March 26, 1935, in accordance with the provisions of the League Covenant.

Contribution to League's Work During the period of her participation in the activities of the League Japan made a material contribution to its work. In the Secretariat of the League, too, Japanese co-operation was by no means negligible, Dr. Inazo Nitobé and Dr. Yotaro Sugimura having served as Assistant Secretary-General in succession until early March, 1933, shortly before Japan's virtual withdrawal. What follows is a cursory review of Japan's relations with the League.

From the inauguration of the League until 1933, Japan served as one of the five permanent members of the Council. Moreover, she contributed a considerable sum to the revenue of the body, her annual subscriptions between 1926-1932 having amounted to 16.5 per cent of the total expenditure.

The problem of general disarmament was taken up by the disarmament preparatory commission of the League in 1925. After meeting in session several times the commission submitted its draft formula for general disarmament to the Council in January, 1931 and the General Disarmament Conference was convened to meet at Geneva to discuss limitation of the military, naval and aerial armaments of all countries late in 1932, when Japan's delegates submitted their proposal regarding naval disarmament as outlined elsewhere.

Relations with the Permanent Court As regards the Permanent Court of International Justice at the Hague, Japan has rendered due assistance to the League of Nations' efforts for arbitration at this court by sending jurists to sit on its benches, but she has not yet participated in the general provisions for peaceable disposal of international disputes, which were adopted at the Assembly in 1928. Nor has she decided yet on the adherence to the "optional clause" of the Hague court, which has been signed or accepted by Great Britain, France, Italy and about forty other countries, thereby expressing their willingness to accept compulsory arbitration in international disputes.

Relations with the International Labour Office Among the various conventions drafted by the International Labour Office of the League of Nations, Japan has ratified the following on the dates given in parenthesis:

(1) Convention concerning workmen's compensation for occupational diseases (November 2, 1922).

(2) Convention fixing the minimum age for admission of children to industrial employment (June 3, 1926).

(3) Convention fixing the minimum age for admission of children to employment at sea (June 4, 1924).

(4) Convention for establishing facilities for finding employment for seamen (November 2, 1922).

(5) Convention concerning the age for

admission of children to employment in agriculture (December 9, 1923).

(6) Convention concerning the compulsory medical examination of children and young persons employed at sea (June 7, 1924).

(7) Convention concerning workmen's compensation for occupational diseases (October 8, 1928). Note : this convention does not apply to such overseas dependencies of Japan as Chosen, Taiwan, Karafuto, the Kwantung Leased Territory and the mandated islands in the Southern Pacific.

(8) Convention concerning equality of treatment for national and foreign workers as regards workmen's compensation for accidents (October 8, 1928). Note : this convention also does not apply to the overseas dependencies of Japan mentioned above.

(9) Convention concerning the simplification of the inspection of emigrants on board ship (October 8, 1928.) Note : this also does not apply to the above mentioned territories.

The League commission on international communication and transit has drafted several conventions, of which Japan ratified the one concerning freedom of communication in 1922, and two others concerning seaports and railway systems in 1926.

World Economic Conference

This conference was preceded by informal inter-governmental pourparlers held in Washington in May, 1933, through the good offices of President Roosevelt of the United States, with the object of coming to some general understandings in preparation for the more formal negotiations. At these pourparlers Japan was represented by Viscount Kikujiro Ishii, veteran diplomat and privy councillor, who headed the Japanese delegation to the London Conference.

The London Conference opened on June 12.

During the following sessions of the conference, however, a series of unforeseen difficulties arose and finally the exchange problem proved an unsurmountable stumbling block, wrecking the parley officially on July 27, when the plenary session was declared adjourned indefinitely.

Relations with Great Britain

Abrogation of 1905 Convention The trade relations between Japan and India received a serious setback in 1933 when notice was served Japan in April through the British Government of the abrogation on October 10, 1933, of the Indo-Japanese Trade Convention of 1905.

This step was followed by an increase of the import duty of the Indian Government on Japanese cotton fabrics from 50 per cent to 75 per cent ad valorem on June 6, 1933. The duty on British cotton fabrics remained at 25 per cent This drastic action on the part of the Indian Government caused the Japanese cotton spinners to boycott Indian cotton, and the situation was such that the British Government suggested the opening of negotiations between the industrial and trade interests of Japan, India and Great Britain in the hope of finding a solution.

Simla Conference Opinion was divided among industrialists in Japan with regard to acceptance of the British proposal, but it was finally decided to send representatives both to London and Simla to confer with representatives of the British and Indian interests. For the Simla conference, which was scheduled to be held on September 22, with the British and Indian delegates present, Mr. Setsuzo Sawada, former chief of the Japanese Bureau of the League of Nations, Mr. Susumu Terao, chief of the Trade Bureau of the Commerce and Industry Ministry, and Mr. Tetsuichiro Miyaké, Consul-General at Calcutta, were appointed to represent the Japanese Government, although they were not given full powers because the British Government had made it known that any agreement to be reached at Simla was subject to the approval of the British Government, while no official assurance was obtainable as to whether such an agreement would be adopted by the British Government without modification.

The Agreement Negotiations were not easy due to conflicts of interests of the two countries and more than 3 months was spent before it came to the final agreement of January 5, 1934, at New Delhi. Agreement was reached on various important problems relative to the commerce between Japan and India, including : (1) most-favoured-nation treatment ; (2) a provision to open negotiations with a view to modifying customs tariff ; (3) measures to be taken to adjust the effects of the exchange fluctuations ; (4) customs duties applicable to Japanese cotton piece-goods imported into India ; (5) a quota to be applied to the same ; and (6) enforcement of the agreement entered into. The gist of the agreement follows :[1]

1 For particulars of the agreement see "Commercial Treaty between Japan and India" (Appendix).

(1) Customs duties to be imposed on Japanese cotton piecegoods should not exceed following rates.

Duty on plain greys	50 per cent, ad valorem or 5.25 annas per pound
Duty on others	50 per cent. ad valorem

It is understood that the Government of India shall not impose on Japanese cotton piece-goods other than plain greys a specific duty exceeding 5.25 annas per pound subject to agreement concerning most-favoured-nation treatment.

(2) Basic quota of Japanese cotton piece-goods to be exported to India in a piece-goods year shall be 325,000,000 yards, and it shall be linked with 1,-000,000 bales of India raw cotton exported to Japan in corresponding cotton year.

(3) Treaty shall come into force immediately after exchange of ratifications and shall remain in force until March 31, 1937.

Specific Duties. The conference however could not come to happy ending because of specific duties imposed by the Government of India on December 23, 1933, which were applicable to large part of Japanese miscellaneous goods exported to India. The increase in duties were so heavy as to deal a serious blow to the export of miscellaneous goods from Japan, notably hosiery, earthenwares and potteries, enamelled ironwares and pencils. The new duties were prohibitive, although Sir Joseph Bhore told Mr. Sawada that the new tariffs were meant to protect domestic industry and in no way unreasonable.

On January 22, Mr. Sawada met Sir Joseph Bhore, member of the Executive Council, Railways and Commerce, to call attention of the Indian Government concerning the new duties imposed upon the Japanese miscellaneous goods presenting Japanese views in a written form. On January 26 in answer to the inquiry of Sawada on the intention of the Government of India to increase duties on Japanese rayon goods, Bhore admitted the fact, and it caused another apprehension among the Japanese manufacturers and traders concerned.

The Indo-Japanese Trade Agreement was signed in London on July 12, 1934.

Revision of the Convention According to the proposal of the Japanese Government, which presented on April 24, 1936, for revision of the Japanese-Indian convention, negotations were opened between Mr. Yonezawa, the Japanese Consul-General at Simla and the Commercial Secretary of the Government of India on July 20. After the commencement of the negotiations the British Government notified the Japanese Government on October 21 of its intention to abrogate the Japanese-Indian convention of July 12, 1934. Consequently the Japanese-Indian negotiations were continued at Delhi and resulted in an agreement.

In regard to the Japanese-Indian agreement which was signed provisionally on April 12 the Japanese Government issued a statement reading as follows :

Anglo-Japanese Trade Issue (See the Japan Year Book, 1935, pp. 195, 196.)

With reference to an adjustment of the relations between Japan and Great Britain, Mr. Shigeru Yoshida, the Japanese Ambassador at London, started his activities in May, 1936, utilizing every occasion available for taking up the question with the British Authorities. As trade relations between the two nations are considered the principal factor responsible for the aggravation of the Anglo-Japanese relations, an Anglo-Japanese trade commission was created to try and adjust any trade differences. The commission held its first meeting on November 4, when, attended by 20 British and Japanese members, an exchange of views took place.

On April 11, 1937, the Keelung affair involving the trouble caused between some sailors belonging to the British Far Eastern Squadron and the police authorities in Keelung, which had been pending since October, 1936, was settled and the seemingly strained situation was greatly eased. To add to the influence brightening the prospects of Anglo-Japanese relations, the coronation of King George VI was held in London in May with Prince Chichibu attending on behalf of the Emperor of Japan, thereby renewing the friendship between the British Royal Family and the Japanese Imperial Family.

The feeling between Japan and Britain has thus been greatly improved and the negotiations between Ambassador Yoshida and the British authorities have been making fairly good progress. Indications at the time of writing are that the Anglo-Japanese negotiations will soon enter upon the main stage.

Japano-Canadian Trade Relations

Japan applied the Commerce Adjustment and safeguarding Law against the Canadian goods in July, 1935 in answer to the latter's placing prohibitive high tariff walls against the Japanese goods. Circumstances surrounding the matter were treated in the Japan Year Book of 1935, pp. 443–445. Even then there

was an indication that a new agreement would be arranged between the two countries. In the meantime negotiations were made between Minister Kato and Premier King and a new agreement was made on December 26, 1935, which has been in operation since January 1, 1936. The substance of the agreement is as follows :

The Canadian Government, in accordance with the general policy respecting trade and tariff matters, decided to make the following modifications in its customs regulation :

1. The classification " goods of a class or kind made or produced in Canada," as it appears in the Customs Tariff, will be restricted to goods which are of a class or kind made or produced in commercial quantities sufficient to supply at least ten per cent of the normal Canadian consumption.

Adequate notice will be given of the transfer for customs purposes of a product from the category " not of a class or kind made or produced in Canada " to the category " of a class or kind made or produced in Canada."

2. In computing the value for duty of goods of a class or kind not made or produced in Canada, the value of the Yen will be the current exchange value in tems of the Canadian dollar at the time the goods were exported to Canada.

3. In computing the value for ordinary duty and for special duty under Section 6 of the Customs Tariff of goods of a class or kind made or produced in Canada the value of the Yen during the twelve months beginning January 1, 1936, will be at the rate of 39.5 cents ; being the average exchange value of the Yen in terms of the Canadian dollar, for the five-year period 1930–34, besed on the exchange rates published in the Statistical Year Book of the League of Nations.

For the succeeding twelve-month period the Yen will be taken at the average exchange value for the five-year period 1931–35, computed on the same basis, and similarly for each succeeding year. It is understood, of course, that if the Yen should reach a value in Canadian currency higher than the value set forth or provided for above, such value would thereupon cease to apply and would be replaced by the current exchange value.

4. The values established under authority of Section 43 of the Customs Act will be cancelled on January 1, 1936, on an extensive list of commodities.

5. Opportunity will be afforded for appeal to the Tariff Board of Canada respecting any value for duty which may in future be established under Section 43 of the Customs Act. In the event of such an appeal the value for duty in force will, upon the expiration of three months after the date of appeal, cease to have any force or effect unless the Tariff Board, following a public inquiry, finds that such value or some lower value is required to prevent the importation of the goods into Canada from prejudicially or injuriously affecting the interests of Canadian producers or manufactures. If a lower value is found by the Tariff Board to be appropriate such lower value will promptly become effective.

The Canadian Government has decided to cancel on January 1, 1936, the surtax of 33 1/3 per cent ad valorem levied on goods the produce or manufacture of Japan under the regulations made by Order in Council P.C. 2108 of July 22, 1935, as modified by Order in Council P. C. 2317 of August 3, 1935.

The Japanese Government decided to cancel, on January 1, 1936, the surtax of 50 per cent ad valorem levied on certain goods the produce or manufacture of Canada under the provisions of the Imperial Ordinance No. 208, 1935 and the proclamation No. 162 of the Department of Finance of Japan of July 20, 1935.

Trade Relations Between Japan and Australia

Japan was again compelled to apply the Commerce Adjustment and Safeguarding Law or Trade Protection Law (given in full at the end of Chapter XI) against Australia on June 25, 1936, under the circumstances explained in the declaration of the Japanese Government, full text of which was given in the Japan Year Book, 1936, pp.198–200. But the negotiations since succeeded in bringing about a provisional agreement between the two countries on December 26, 1936, and the Government of the Commonwealth of Australia decided to take the following actions as on and from the January 1, 1937, in relation to trade between Australia and Japan :—

1. The Commonwealth Government will repeal the Statutory Rule No.. 92 of 1936 notified in the Commonwealth Gazette on July 8, 1936.

2. The Commonwealth Government will reduce the existing intermediate tariff rates on cotton piece-goods and artificial silk piece-goods admissible under the following items of the Australian Customs Tariff 1933–1936 :—

Cotton piece goods
Tariff item 105 (A) (1) (a)
105 (A) (1) (c)
105 (A) (1) (d)
105 (B)
105 (C)
120 (D) (1)
130 (B) (1)
Artificial silk piece goods
Tariff item 105 (D) (1) (b)
To the following rates, viz.:—
Cotton piece goods
Unbleached 1½ d per square yard
Bleached, 1½d per square yard
Printed dyed or coloured 2 d per square yard
Artificial silk piece goods
4 d per square yard

3. The Commonwealth Government, in addition to according Japan the benefits of Australian intermediate tariff on cotton piece-goods and artificial silk piece-goods admissible under the aforesaid items of the Australian Customs Tariff, will accord to Japan the benefits of Australian intermediate tariff on cotton piece-goods and artificial silk piece-goods admissible under the items 105 (A) (1) (e), 105 (A) (3) and 105 (A) (4).

4. The Commonwealth Government will exempt from primage duty Japanese cotton piece-goods and artificial silk piece-goods admissible in accordance with the decisions set out in paragraphs (2) and (3).

5. During the period January 1, 1937 to June 30, 1938, the Commonwealth Government will permit importation into Australia of 76,875,000 square yards of Japanese cotton piece-goods (other than calico for bag-making admissible under the tariff item 105 (A) (2) and 76,875,000 square yards of Japanese artificial silk piece-goods at the rate of 51,250,000 square yards for each of the two classes of piece-goods per annum.

Any cotton piece-goods or any artificial piece-goods exported from Japan within the quota allotment during the period ending June 30, 1938, but not arriving in Australia until after that date, will be admitted into Australia provided they are imported into Australia not later than September 30, 1938.

In answer to the above the Japanese Government decided to take the following actions as on and from the January 1, 1937, in relation to trade between Japan and Australia :—

1. The Japanese Government will cancel the surtax of 50% ad valorem and abolish the licensing system provided in the Imperial Ordinance No. 124, 1936.

2. The Japanese Government will permit importation into Japan from Australia during the period ending June 30, 1938, of not less than 800,000 bales of Australian sheep's wool. Any sheep's wool exported from Australia for which import permission has been accorded during the period ending June 30, 1938, but which does not arrive in Japan until after that date, will be admitted into Japan, provided such wool is imported into Japan not later than September 30, 1938.

Japan-Dutch Conference

On the heels of the Indo-Japanese trade conference, Japan decided to negotiate on trade with Holland. In the talks at The Hague in December, 1933, between the Dutch Premier and Japanese diplomatic representatives, it was decided that Japanese and Dutch delegations negotiate in Java on the trade relations of Japan and the Dutch East Indies and that the outcome of their discussions be further debated at The Hague by representatives of both governments.

Dutch East Indies constitute one of Japan's most important markets, and since 1932 they had been taking more from this country than from Holland itself, a situation that naturally led the Dutch industrialists to campaign for restrictions against Japanese commodities.

With the purpose, on the part of the Dutch East Indies, to adjust the one sided trade relation with Japan for it bought ¥157,487,000 and sold ¥55,709,000 in 1933, the Japan-Dutch trade conference was opened at Batavia on June 8, 1934.

General committee meetings were opened on June 26 and adjourned indefinitely without any result on December 21, 1934.

Shipping Conference For some time since 1931 there had been a very severe competition in freight business between the Java, China and Japan Line and the Japanese shipping companies. In order to improve the situation freight conference had been arranged towards the close of 1932 between the abovementioned Dutch Line and the Japanese shipping interests. In 1934 parties interested in the quota system of cargoes held a conference at Kobé. After the Japan-Dutch Conference, a new Conference was held at Kobé in February, 1935. But before going to discuss any question of practical importance the conference came to a deadlock as soon as the question of language to be used came up, and, on February 22, the Conference was adjourned.

Since the rupture of the Kobé Confer-

ence the Dutch Government barred imports of the Japanese goods through the issuance of ordinances restricting imports and business, and through a restriction placed on handling of imported goods by the Japanese companies, which resulted in a marked decrease of imports of Japanese goods, the former ratio of trade between Japan and the Dutch East Indies which was 3 to 1 having been changed to 2 to 1.

The freight conference on Japan-Java-Line expired in June, 1935 and the freight competition became very severe. Japan then established the Nanyo Kaiun Kaisha, Ltd., with the Ishihara Sangyo, the Nanyo Yusen, and the Osaka Shosen as its investing companies. The result, however, was adverse to Japanese shipping companies. The ratio of placing of steamers which was 7 to 8 in Japan's favour has become 3 to 2.

In November of 1935 a shipping conference was held at Kobé, but both sides stuck to their own views and the conference brought about no satisfactory result. Later the matter was taken up again by the Japanese Consul-General Mr. Ishikawa at Batavia with the officials of the Dutch Government, and on June, 1936 an agreement was made between the two countries. According to this new agreement, the Japanese steamers have been enabled to load 64.28 per cent of the outgoing cargoes and 60 per cent of incoming cargoes.

The Japanese-Dutch negotiations entered their main stage in the autumn of 1936 and on April 9, 1937 an agreement of opinion was reached between the Japanese and Dutch representatives. Thus after three years' efforts, the negotiations between the two countries were brought to a successful end. It was decided that the new agreement should be signed formally at The Hague as a supplement to the Japanese-Dutch Treaty of Commerce and Navigation of 1931.

Relations with Soviet Russia

After the Siberian expedition in which Japan participated from 1918 until 1920, diplomatic relations were not restored between the Japanese and Russian Governments until 1924, although Japan had withdraw her troops from Siberia a few years previously.

After her participation in the World War, Japan concluded an agreement with Russia on July 3, 1916 for the purpose of preventing Russia from making peace with Germany independently of the other Allies. At this time there was a rumour that the two countries had concluded an offensive and defensive alliance. Following the establishment of the communist régime in Russia, in 1917, Japan sent the 3rd and the 12th divisions and a part of the 7th division to Siberia between August and October of 1918, in compliance with a proposal from the United States, in order to enable some 50,000 Czechoslovak troops (formerly prisoners of war taken by the Russians from the Austrian armies) to establish contact with the allied armies in the East. This expedition automatically disrupted the diplomatic relations between Japan and Russia, and even after the Czechoslovak troops had re-established liaison with the other allied armies, the Japanese remained in Siberia with fresh troops relieving the first expeditionary forces. The American and other foreign troops were withdrawn early in 1920, but Japan in spite of the demand for withdrawal by the Soviet Government of Irkutsk on March 11, 1920, continued to station her troops in the vicinity of Vladivostok and Habarovsk for the professed purpose of protecting the Japanese residents there. On March 18 and 19, 1920, partisan troops attacked the Japanese consulate, Nikolaevsk, killing all the officials and guards. On March 31, the Japanese Government issued a statement to the effect that Japan had no territorial designs in Siberia, but that the withdrawal of troops was impossible in the circumstances. Japan maintained relations with the Far Eastern Republic, constituted an independent state in February, 1921, until January, 1922, when this region was incorporated in the U. S. S. R.

With a view to restoring diplomatic relations with Soviet Russia, with which she shared interests on the Asiatic mainland, Japan undertook to negotiate with the Russian representatives on several occasions at Changchun and Dairen. Such efforts were resumed in 1923 in Tokyo, where M. Joffe and Mr. Toshihiko Kawakami met in conference officially representing Soviet Russia and Japan through the good offices of Count Shimpei Goto, but no satisfactory results were forthcoming. It was at Peking that the diplomatic relations between the two countries were resumed officially on January 20, 1925, when Mr. Kenkichi Yoshizawa, the Japanese Minister there, succeeded in concluding an agreement with M. Karakhan, the Soviet representative, after seven months' negotiations.

The Fishery Dispute The first fishery convention between the two countries had been concluded in 1907, and after the resumption of Soviet-Japanese re-

lations, efforts were made for its revision and, following the visit to Russia by Count Shimpei Goto in this connection, the revised convention was signed on January 24, 1928, remedying such provisions as had proved disadvantageous to the Japanese and otherwise improving the pact to meet the new situation. However, this revision was later found to be imperfect and disputes arose one after another between the Japanese fishing interests and the Soviet authorities regarding the details of the fishery convention.

Among other issues in this connection the most notable in recent years was that concerning the exchange rate of the rouble. This dispute originated in the inspection of the Vladivostok office of the Bank of Chosen by the local Soviet authorities and the subsequent prohibition of free tansactions in rouble exchange. As a result, the Japanese fishing interests, which had been paying various taxes and rates to the Soviet authorities with Soviet currency obtainable at the Vladivostok office of the Bank of Chosen at depreciated exchange rates, now faced the necessity of exchanging the yen for the rouble at an official rate five or six times higher than the open market value. In order to settle this problem, the Japanese Government demanded that either the rents of the fishing leases or the official exchange value of the rouble be reduced, and this proposal was followed by prolonged negotiations in Moscow and Tokyo.

The negotiations were started in Moscow in October, 1930, but soon afterwards the Soviet Ambassador to Japan, M. Troianovsky, took up the dispute in Tokyo, and communicated the willingness of his Government to reduce the official exchange rate of the rouble by 25 per cent, when selling debentures of the state operated corporation, Aco (in charge of the Russian fishery interests), fixing the rate at 75 sen in Japanese currency. In reply Japan insisted on the rate of 30 sen for the rouble, and negotiations continued until April 26, 1931, when a compromise was reached providing that the payments of the Japanese fishing interests to the Soviet authorities during the year of 1931 should be made with Aco debentures to be purchased at the rate of 32.5 sen for the rouble.

In view of this dispute and other difficulties arising from the differences between the two countries in the interpretation of the provisions of the Fishery Convention, Japan proposed on June 22, 1931, to open a conference with Soviet Russia to reconsider the whole convention. After a delay of five months, Soviet Russia consented to negotiate with Japan and pourparlers were started between Mr. Koki Hirota, the Japanese Ambassador, and M. Karakhan, Assistant Commissar of Foreign Affairs of Soviet Russia, on November 27, 1931. No substantial progress, however, was made during the negotiations, which were carried on with frequent interruptions for several months.

On February 20, 1934, the auction for the current year of the fishery grounds was held at Vladivostok. Bids were submitted by both Japanese and Soviets. The Soviets, however, declared that the Japanese bids were unacceptable, because they were accompanied by a guarantee made out at the rate of 32.5 sen, instead of 75 sen ruled by the Vladivostok fishery authorities, per ruble, and the Soviets' bids, which numbered 60, were accepted as valid. The reason that the Japanese interests insisted upon a 32.5 sen rate of exchange is based upon a provision in the Shidehara-Troianovsky Agreement of April 26, 1931.

On February 25 the Russian authorities proposed a compromise which purported to permit Japanese bidders to enter new offers at 32.5 sen on February 28 for the remaining 66 fishing grounds, provided that the exchange rate question would be held open for future negotiations. This was accepted by the Japanese interests and the grounds were given them at the auction held on May 20.

The question of yen-ruble exchange still remained and negotiations to settle the matter were opened on June 17 at Moscow, from then up to February 21, 1935, the negotiations were held 15 times. As Japan thought it necessary to revise it, the Foreign Office caused Ambassador Tamekichi Ohta, in Moscow, to make a proposal to the Moscow Government in May, 1935, one year prior to the date of maturity, in conformity with Article XV of the treaty, for its revision.

On April 26, 1936 the Japanese Government proposed, at the conference held at the Embassy at Moscow, between the councillor Sako and Mr. B. I. Kozlovsky, second head of the eastern department of the Foreign Commissariat, to revise the 1928 fishery convention and to extend 1932 Hirota-Karakhan agreement for 12 years, which the Soviet declined. As the basic claim of Japan was not heeded the negotiation was impossible to come to a satisfactory close before May 27, which was the final date

set for the revision of the convention. However, a provisional agreement for the extension of the 1928 convention was signed at Moscow on May 25. According to this agreement, the present convention has become valid till December 31, 1936.

Non-Aggression Pact Proposal (See the Japan Year Book, 1935, p. 199.)

Negotiations for Sale of the N. M. R. Through the good offices of the Japanese Government a conference was opened in Tokyo on June 26, 1933, between representatives of Soviet Russia and Manchoukuo regarding the proposed sale of the North Manchuria Railway (formerly the Chinese Eastern Railway). Japan took no active part in the railway negotiations, except that a few Japanese officials attended the sessions as observers.

According to a memorandum stating the fundamental principles for the transfer of the North Manchuria Railway submitted by the Soviet Russia at the third official meeting held on July 4, 1933, the sale price was put at 250,000,000 gold roubles. The price offered by Manchoukuo was ¥50,000,000. The Soviet side based its calculation on the amount of its investment totalling 411,690,000 gold roubles up to 1932 and, taking into consideration the depreciation of economic value of the railway and its condition of damage, it finally estimated the total amount of transfer at 250,000,000 gold roubles. The Manchurian side appraised the value on the basis of the prevailing construction cost. In March, 1934, the Soviet side brought down the price to ¥200,000,000, but the Manchurian side lowered it to ¥100,000,000 in April of that year. Through mutual concession, the price was fixed at ¥170,000,000 on September 21, 1934. During the intervening period Foreign Minister Koki Hirota held interviews with Ambassador Youreneff ten times and Mr. Shigenori Togo, Director of the Europe and Asia Bureau, of the Foreign Office, saw M. Benedict I. Kazlovsky, one of the Soviet delegates, eight times on negotiations. Finally, the negotiations were concluded on January 21, 1935, and on March 23 the signing of the agreement took place at the official residence of the Foreign Minister in Tokyo. (The Agreement is given in full in the Appendix.)

North Saghalien Oil Concession The North Saghalien Oil Concession contract, based on Article VI of the Japanese-Soviet Basic Treaty, concluded in October, 1925, has proved very disadvantageous to Japan as well as the Japanese-Soviet Fishery Treaty. The whole area where oil prospecting is to be undertaken is divided like a checker board. If one bloc of the board is assigned for Japan to prospect, the adjoining bloc is claimed by the Soviet side as its prospecting field. When Japan succeeds in turning out oil by prospecting, paying an enormous amount of expenses, and changes it into an oil mining section, the Soviet side enlists the adjoining bloc into its oil fields, thus profiting without much trouble and expenses. It is also disadvantageously provided for in the treaty that the term of oil prospecting in unexploited fields covering an area of 1,000 versts in Ocha districts is fixed at only 10 years. Moreover, North Saghalien is open to the practicability of actual work for a brief period of only two or three months during summer. The actual period of operation throughout 10 years is therefore only about 20 or 30 months. The term will mature at the end of 1936. The North Saghalien Oil Company has been negotiating with the Soviet Government for extension of the term of prospecting since about seven years ago.

Oil Prospecting Rights Negotiations were opened between the president of the Karafuto Petroleum Company and the authorities of the Soviet People's Commissariat for Heavy Industries in the spring of 1936, which resulted in an understanding to extend the term of the Japanese right to prospect the oil resources in the northern half of Saghalien by five years. Documents containing detailed items of the understanding were signed at Moscow on October 10, 1936, between the president of the Japanese company and the Soviet People's Commissar for Heavy Industries.

Revision of Fishery Agreement Although the German-Japanese agreement is directed against the Comintern, with which the Soviet Government declares itself to have nothing to do, and is aimed at the creation of a common German-Japanese front against Communism, the Soviet Government suspects that the pact is directed against the Soviet Union. Out of this suspicion, the Soviet Government went the length of refusing to sign a new fishery agreement with Japan, which had already been initialled. As a result, the Soviet-Japanese situation was greatly aggravated because it became impossible to enforce a new agreement to replace the Soviet-Japanese Fishery Agreement and the Hirota-Karakhan Agreement, both scheduled to expire at the end of the year. The situation was rectified only by making provisional arrange-

ments for the extension of the terms of the said two agreements by one year.

Official documents embodying the provisional arrangements were signed at Moscow on December 28, 1936, between Mr. Mamoru Shigemitsu, the Japanese Ambassador to the U. S. S. R., and Mr. Stomoniakov, the Soviet Assistant People's Commissar for Foreign Affairs, on December 28.

Oppression of Japanese Residents The number of Japanese residents within the territory of the Soviet Union once reached several thousands but it has decreased to only a very few due to the pressure brought to bear upon Japanese residents by the Soviet authorities. In November, 1936, when the oppression of the Japanese residents was most severe, a staff member of the Shosen-gumi, a Japanese firm in Vladivostok, was arrested and sentenced to death on a charge of espionage. This was followed by the arrest on January 4, 1937, of Mr. Takahashi, mananger of the Shosen-gumi, on a similar charge.

Again on January 19, the Soviet authorities at Vladivostok illegally inspected and detained the Kongo Maru, a freighter of the Chosen Yusen Kaisha in regular service between Osaka and Vladivostok, and the Siberia Maru, a freighter of the North Japan Steamship Company also in regular service betwen Tsuruga and the Soviet port. As these acts of the local Soviet authorities were calculated to interfere with the legitimate business of the Shosen-gumi and as such caused the situation to assume threating aspects, the Japanese Foreign Office lodged a strong protest with the Moscow Government through the Japanese Ambassador there, Mr. Mamoru Shigemitsu.

The Japanese protest, however, could not prevent the Soviet authorities from repeating such illegal acts. On January 21, the director of the Soviet Far Eastern Railway Bureau caused the international train service between Soviet territory and Suifenho, a town on the eastern border of Manchoukuo, to be suspended under the pretext of oppression of Soviet railway workers by the Japanese and Manchoukuo authorities. The Manchoukuo General Direction of State Railways investigated the affair and found that the Soviet pretext was entirely unfounded. The General Direction therefore called the attention of the Soviet authorities to the fact that their action in suspending the traffic on the trunk line of the Asiatic-European route constituted a great obstacle to international transportation business and urged them to reconsider their attitude.

In addition, the Soviet authorities took illegal action in connection with the taking over of mail matters aboard international trains reaching Manchouli on January 14 and 16, thereby causing a great delay in the delivery of matter addressed to Europe. This matter was settled only after the Manchoukuo Foreign Office filed strong protests with the Soviet consular authorities at Manchouli and Harbin.

Frontier Troubles There were as many as 280 cases of border troubles occurring betwen the Soviet Union and Manchoukuo in 1935 and more than 30 cases in 1936. In regard to the matter, Mr. Arita, the Japanese Foreign Minister, and Mr. Youreneff, the Soviet Ambassador to Japan, reached agreement of opinion on April 23, 1936 and according to the agreement, Japan and Manchoukuo presented a joint formula for creating the proposed commissions to deal with the border troubles and define the border line on July 16. The Soviet side, however, refused to accept the formula with the result that the negotiatinos were brought to a standstill.

In the meantime, border troubles continued to occur. During the first six months of 1937, more than 80 cases of such troubles were reported. The troubles culminated on June 30 in the Kanchatze affair which was explained by the Japanese Foreign Office as follows :

"Two Manchoukuo islands, the Kanchatze and Chinamuho, in the Amur River were illegally occupied by Soviet troops which thus attempted to obstruct the navigation of Manchoukuo ships on the river. In view of the strained situation caused by the affair, the Japanese Government instructed its Ambassador at Moscow, Mr. Mamoru Shigemitsu, to urge the Soviet authorities to settle the matter at an early date.

"Acting on the instructions, Ambassador Shigemitsu called the attention of Mr. Stomoniakov, the Soviet Assistant People's Commissar for Foreign Affairs, on the night of June 28 to the fact that the Japanese Government was deeply concerned over the occurence because of its responsibility of cooperating with Manchoukuo in its national defence. The Japanese envoy expressed his hope for an early settlement of the question from the standpoint of Far Eastern peace and urged the Soviet official to see that the illegal action of the Soviet troops in occupying the Manchoukuo islands be rectified. Mr. Stomoniakov promised to submit a report to the Soviet Government on his conversation with the Japanese envoy.

"On the afternoon of January 29,

Ambassador Shigemitsu held an interview with Mr. Litvinov, the Soviet People's Commissar for Foreign Affairs, and in the course of their conversation, the latter agreed to have the two Manchoukuo islands evacuated by Soviet troops and also to have armed Soviets in the neighbourhood withdrawn. At the same time, the Soviet diplomat expressed his hope that the Japanese Government would also take steps to ease the situation.

"As regards the invasion of the area south of the Kanchatze waterway by three Soviet gunboats, which occurred at 3 o'clock on the afternoon of January 30, the actual state of affairs has already been clarified by the statement issued by the Kwantung Army.

"In spite of the agreement reached between Ambassador Shigemitsu and Commissar Litvinov whereby the two Manchoukuo islands would be evacuated, the Soviet soldiers continued occupying the islands. They even went the length of taking provocative action against the Japanese and Manchoukuo garrison troops with the result that the Japanese and Manchoukuoans acted in self-defence, inflicting considerable losses to the Soviet side.

"The Japanese Government regrets deeply that the Soviet side should have failed to live up to its pledge but is still hoping that in order to prevent further untoward events from occurring, the Soviets will evacuate the two Manchoukuo islands as soon as possible."

As the result of the efforts of Ambassador Shigemitsu, the issue was finally settled on July 3 when Commissar Litvinov agreed to effect the evacuation of the Manchoukuo islands immediately and the agreement was carried out.

Relations with the United States

The mutual friendship of Japan and the United States largely hinges upon their respective interests on the Asiatic continent, most notably in Manchuria and China proper. The United States first made it known in 1899 that she had an equal claim in China to that of other Powers by advocating the so-called open door policy. The United States thought it necessary to assert this principle in order to catch up with the other Powers, which had already acquired extensive interest in China, and it followed naturally that the Americans should sympathize with Japan in her desperate attempt in 1904–5 to force Russia out of Manchuria and leave the region open to all nations interested.

The Four-Power Treaty For the same reason the United States objected to Japan's occupation of Shantung during the World War. The result was that Japan formally restored the territory to China on May 17, 1919 and at the Washington Conference, 1921–22, agreed to complete evacuation thereof. The Four-Power Treaty concerning the insular possessions of the signatories in the Pacific and the Nine-Power Treaty regarding the sovereignty and the open door principle of China, which were signed at the Washington Conference, also had a more important bearing upon Japan and the United States than on the other signatories. The Four-Power Treaty provided that the signatories should mutually respect the right of the Powers regarding their respective insular possessions in the Pacific and also that in case a dispute arose regarding such rights with likelihood to prove detrimental to the peaceful relations between the powers concerned, the parties involved in such a dispute should call a joint conference of the other signatories to discuss settlement of the entire issue. So far as Japan is concerned, however, this provision applies only to Karafuto, the Pescadores and her mandated islands in the Southern Pacific. The most important provision in this treaty for Japan is embodied in its fourth article which stipulates that the Anglo-Japanese alliance, which had been concluded at London on July 13, 1911, should terminate simultaneously with the conclusion of this treaty.

The Nine-Power Treaty The Nine-Power Treaty also has an important bearing on Japan in that it consolidated the open door policy in connection with China, where Japan has greater interests than any other foreign country, especially in Manchuria. This treaty was invoked against Japan both by the United States and the League of Nations in connection with the Manchurian incident.

In the first article of this treaty, what are known as Root's four principles were incorporated, providing, first, that the sovereignty and independence as well as the territorial and political integrity of China should be respected, second, that most perfect and unrestricted opportunities should be offered China in order that she might be able to establish and maintain a powerful stable government, third, that efforts sould be made to establish and maintain the principle of equal opportunity for commerce and industry to be undertaken by people of all nationalities

throughout the territory of China, and fourth, that the signatories should refrain from utilizing conditions in China to seek special rights or interests detrimental to the interests of the subjects or citizens of other friendly nations, or from recognizing actions detrimental to the welfare of such friendly nations.

The Immigration Question In view of the agitation in the United States against Japanese labour, the Tokyo Government had taken every precaution not to aggravate this issue and from 1907, when what is known as the "Gentleman's Agreement" was concluded, Japan continued to restrict emigration to the United States by withholding passports from intending emigrants above a limited number.

However, on August 19, 1913 the State of California promulgated the Alien Land Law (the Webb Bill) prohibiting Japanese and other aliens ineligible for citizenship from owning land, in spite of three protests by Baron Sutemi Chinda, Japanese Ambassador in Washington. In 1919, the Japanese Government took the further precaution of stopping the emigration of so-called "picture brides" to the United States, but nevertheless an ever increasing anti-Japanese sentiment continued to prevail in the United States, and on April 19, 1920, the Federal Immigration Bureau revised the regulations governing the entry of the adopted children of Japanese parents. Moreover, the State of California enacted a secoud law of exclusion barring the Japanese and other aliens from leasing land, or owning land in the name of corporations or from operating land owned in the name of their American-born children.

The immigration problem assumed its greatest gravity in 1924, when the United States Congress passed a new federal immigration law, which included a provision absolutely prohibiting immigration of Japanese labourers. While this bill was before the Congress, the Japanese Government instructed its ambassador at Washington, Mr. Masanao Hanihara, to call the attention of the United States Government to the importance attached by the Japanese to the proposed legislation. The steps taken by Mr. Hanihara, however, resulted in provoking the American sentiment owing to a phrase "grave consequences" which he used inadvertently in a communication to the Secretary of State, Mr. Hughes.

When the United States President signed the bill on May 24, 1924, the Japanese Government sent in a strong protest but could not improve the situation in any way. The Japanese people took this action on the part of the United States as a serious insult to their national honour.

A resolution calling for ejection of Japanese farmers for the next 10 days from Arizona farmlands was adopted at a convention of about 200 American tenant farmers near Phoenix, the capital of Arizona State in the United States, on August 15, 1934. A movement of forcing Japanese farmers out of their farmlands was subsequently staged several times. These American farmers approached the Governor of the State to recognize their movement, but, when he rejected their petition they resorted to direct action to force Japanese farmers out. The situation then spread to California and in February, 1935, an anti-Japanese exclusion bill was submitted to the Californian State Legislature. The bill provided for an absolute prohibition of Japanese people from engaging in agriculture under any circumstances. The exclusion bill was submitted to an agriculture committee of the Lower House and then was turned over to a judicial committee. Finding that the bill was too exacting and aimed at depriving the Japanese farmers of the right of agriculture, the committee doubted it might conflict the U. S. Constitution and submitted it to the Plenary session of the Californian State Lower House with a desideratum for amendment, but it was shelved at the Upper House. The problem thus was apparently solved, but the exclusion tendency against Japanese was growing keener. Even Japanese who legally entered that country and are engaged in peaceful vocations are not given the treatment accorded the American citizens.

Other Issues The attempted intervention in the Manchurian and Shanghai affairs in 1931 and 1932 by the American Secretary of State, Col. Henry L. Stimson, at one time seemed to menace seriously the relations between Japan and the United States.

Hirota-Hull Messages As soon as Mr. Koki Hirota took office as Foreign Minister he commenced to devote himself to strengthening Japan's friendly relations with her neighbouring countries. As one of the manifestations of such endeavour, he sent through Mr. H. Sato, the new Ambassador, his personal message to Mr. Hull, the Secretary of State of the United States, on February 21, 1934 :

"I firmly believe that, viewed in the light of the broad aspect of the situa-

tion and studied from all possible angles, no question exists between our two countries that is fundamentally incapable of amicable solution. I do not doubt that all issues pending between the two nations will be settled in a satisfactory manner, when examined with a good understanding on the part of each of the other's position, discussed with an open mind and in all frankness, and approached with a spirit of co-operation and conciliation."

To this, Secretary Hull replied on March 3 with his personal message in the form of a letter to Mr. Hirota, a summary of which is as follows.

"I believe that there are in fact no questions between our two countries which, if they be viewed in proper perspective in both countries, can with any warrant be regarded as not readily susceptible to adjustment by pacific processes."

American-Japanese Relations in 1936

The diplomatic relations between Japan and the United States have been quite amicable although arguments were exchanged between them regarding the naval question. Apart from the naval question, mention must be made of the fact that the United States raised its tariffs on Japanese cotton cloth. In May, 1936, Congress and industrialist circles in America urged the Japanese Government to control exports of cotton cloth but arrangements in this connection failed to be concluded.

Reference may also be made of the fact that since the autumn of 1936, there have been increasing signs pointing to the possibility of the Japanese salmon-fising operations off Alaska being made an issue.

German-Japanese Agreement

The Governments of Japan and Germany having decided on the fundamental policy of creating a common front against Communism, detailed negotiations were commenced during the latter part of July at Berlin between the Japanese Ambassador to Germany and the German authorities. The negotiations resulted in an agreement which was signed provisionally on October 23. After the approval of the Japanese Privy Council had been secured, the anti-Comintern pact was formally signed on November 25 between Viscount Kintomo Mushakoji, the Japanese Ambassador in Berlin, and Colonel von Ribbentrop, the German representative. The pact went into effect simultaneously with the signing.

The conclusion of this agreement with Germany attracted a great deal of public attention all over the world as the most important diplomatic step taken by Japan since her withdrawl from the League of Nations in 1933. On November 25, the Japanese Foreign Office issued a statement announcing the signing of the agreement and explaining its significance.

Statement of the Foreign Office Regarding the Agreement against the Communist International

(December 25, 1936.)

1. Ever since its establishment, the Communist International, or the so-called Comintern, with its headquarters at Moscow, has been engaged in all sorts of activities, greatly menacing the peace of the world, for the purpose of destroying the national and social structures in every country in pursuance of the fundamental policy of world revolution. At its Seventh Congress, held in the summer of last year, the Comintern decided on a policy of organizing a united front with the Second International to oppose Fascism and imperialism and at the same time made it plain that the future objectives of Comintern activities were to be Japan, Germany and Poland. It further resolved to support the Chinese Communist armies in order to fight Japan. The actual operations subsequently carried on by the Comintern have become extremely ingenious, rendering them all the more dangerous.

As to the extent to which the Comintern interferes with the internal affairs of all countries and exerts a baneful influence on the well-being of nations and the peace of the world, it is only necessary to look at the present disturbances in Spain to realize its magnitude. At least those countries that lodged protests with the Government of the Soviet Union at the time of the Comintern congress certainly have full cognizance of the harmfulness of Comintern activities.

2. The Communist invasion has hitherto been more marked in the Orient, especially in China, than elsewhere. Outer Mongolia and Sinkiang have already suffered from its calamitous effects, and China proper is now being subjected to the depredations of the Communist armies. As a matter of fact, the activities of the Comintern in China have increased notably in vigor since its Seventh Congress.

In Manchoukuo, also the Comintern has been surreptitiously endeavouring through the Manchurian district committee of the Chinese Communist Party to organize cells, to win over and instigate bandits and to direct the raids by partisan troops all over the country.

In Japan, the extreme leftiest movement temporarily showed signs of decline after the Manchurian incident, but since the Seventh Congress of the Comintern it has again become energetic. It has crept into the channels of lawful agitation in conformity with the resolution of that congress and has launched a unified front movement that is intended to be the basis for revival of the Communist movement.

3. The Japanese Government, which, in order to safeguard Japan's immutable national policy and insure national security and to maintain everlasting peace in East Asia, has pursued a clear-cut and consistent policy toward the Comintern, finds it necessary to take more rigorous measures of self-defence against the increased menace set forth above.

The organization and activities of the Comintern being of an international character, any programme of counter-action should necessarily be based on international co-operation. Germany, ever since the establishment of the present régime in 1933, has put into execution drastic anti-Communist policies. Last year at the Seventh Congress of the Comintern, Germany and Japan were selected as the special objectives of Comintern operations. Thus Japan and Germany are placed in similar circumstances vis-à-vis the Comintern. Consequently the Japanese Government, as the first step in its defensive undertaking, conducted negotiations with Germany and concluded an agreement on November 25 to take effect immediately.

4. This agreement, the fundamental object of which is common defense against the destructive operations of the Comintern, contains provisions for the exchange of information regarding Comintern activities, for consultation on, and execution of joint invitations to third Powers. There is, besides, a supplementary protocol stipulating in concrete terms the manner in which the agreement is to be executed.

5. The Japanese Government is desirous of co-operating with as many Powers as possible for the purpose of perfecting its defensive measures against the Comintern menace, but for that purpose alone. It should be pointed out that in connection with, or behind, this agreement there exists no other agreement whatsoever, that the Japanese Government has no intention to form, or join in, any special international bloc for any other purpose and finally that the present agreement is not directed against the Soviet Union or any other specific country. (The text of the agreement is given in Appendix.)

Italo-Japanese Agreement

The friendly relations between Japan and Italy were greatly improved by the avowed intention of the Italian Government to create a consulate-general in Manchoukuo and the decision of the Japanese Government to close its legation in Ethiopia following the annexation of that territory by Italy. Taking advanage of the situation, negotiations were opened between the two Governments concerned during the early part of November, following the conclusion of the German-Japanese anti-Comintern pact, for the conclusion of an Italo-Japanese agreement.

The negotiations were aimed at the virtual recognition of Manchoukuo by the Italian Government, the creation of a Japanese consulate in Ethiopia and the maintenance and promotion of the economic interests of Japan in that territory. Announcements were issued on December 28, both in Tokyo and Rome, concerning the Italo-Japanese agreement which took the form of an understanding. In this connection, the authorities of the Japanese Foreign Office issued an informal statement which read as follows :

(I) Communique The Japanese Government have notified the Italian Government that they are prepared to close the legation in Ethiopia and establish in its stead a consulate at Addis-Abeba.

The Italian Government have agreed to respect the commercial and other interests of Japan in Ethiopia and give specially favourable considerations concerning those interests.

(II) Statement of The Foreign Office Spokesman (December 2, 1936.) In order to meet the development of the situation in Ethiopia, it was deemed appropriate to close the Japanese legation there at proper time and establish in its stead a consulate. The Japanese Government, therefore, instructed their Ambassadors in European countries late in June this year to observe closely the development in Ethiopia and the attitude of the Powers which are members of the League of Nations. Now at last, the step has been consummated as a result of negotiations with the Italian Government. The German Government, as was then announced, notified the Italian Government on the 25th of July his year that they would abolish their legation in Ethiopia and set up a consulate-general.

As the Japanese Government decided upon the establishment of a consulate, the Italian Government assured us that

they would give their favourable consideration for the protection of our trade and other interests. Accordingly, on the basis of that assurance, conversations are expected to be opened for the adjustment of trade relations between Japan and Ethiopia.

Although there is no negotiation of political nature going on at present, it is a well known fact that Japan and Italy are assiduously cultivating cordial relations through their co-operation in cultural and other fields.

An agreement is said to have been concluded between the Italian Government and the Manchoukuo Government concerning the establishment of an Italian consulate-general at Mukden, but this has nothing to do with the setting up of our consulate in Ethiopia. This we add specially as there seems to be some misunderstanding.

Japan-Siamese Relation

The Government of Siam notified Japan on November 5, 1936, of its intention to abrogate he Japannese-Siamese commercial treaty. Such a notice was served, not only on Japan but all countries which had concluded commercial treaties with Siam. The memorandum which the Siamese Government presented to the Japanese Government read in substance as follows :

" With a view to realization of complete equality with other countries and to the restoration of self-government, both legally and financially, the Government of Siam hereby notifies Japan of its intention to abrogate the Japanese-Siamese Treaty of Commerce and Navigation and its Annexes which were signed at Bangkok on March 10, 1924. It is understood, however, that the said treaty will remain effective for one year after issuance of this notice, according to the provisions of article 20 of the said treaty."

Japanese-Burmese Commercial Treaty

As Burma was scheduled to be separated from India on April 1, 1937, negotiations were opened between representatives of Japan and Burma at New Delhi in December, 1936, for conclusion of a Japanese-Burmese commercial treaty. As a result, a protocol was signed provisionally beween Mr. Yonezawa, Japanese Consul General, and the Financial Secretary of the Government of India on March 1, 1937, the formal signing to take place in London between representatives of Japan and Great Britain.

The principal points of the Japanese-Burmese protocol are as follows :

" Japan and Burma have agreed to accord each other the most favoured nation treatment. Japan may export 42,000,000 yards of cotton cloth to Burma annualy if she imports 65 per cent of the amount of raw cotton which Burma is capable of exporting. However, it is under no circumstances necessary for Japan to import more than 70,000 bales of Burmese raw cotton.

" If Japan cannot import Burmese raw cotton to the stipulated amount, the Japanese exports of cotton cloth to Burma shall be reduced at the rate of 300,-000 yards to each 1,000 bales of the shortage. However, Japanese exports of cotton cloth to Burma shall not be reduced if an abnormal rise in the prices of Burma raw cotton or a shortage of supply arising from active demand in the market renders it impossible for Japan to import Burmese raw cotton to the stipulated amount.

" In principle, the 43,000,000 yards of cotton cloth which Japan is allowed to export to Burma shall be divided into 15 per cent of unbleached cotton cloth, 10 per cent of bleached cotton cloth, 45 per cent printed cotton cloth and 30 per cent of other coloured cotton cloth. A transfer from one category to another may be effected upon the following conditions :

1. The import quota shall not be increased on account of such a transfer.

2. In effecting a transfer the increase or decrease in the amount of unbleached, bleached and coloured cotton cloths shall not exceed 20 per cent and the increase or decrease in the amount of printed cotton cloth shall not exceed 5 per cent.

Japan and Transvaal

The authorities of the Transvaal in South Africa having prohibited the residence of coloured races in the gold-producing district including Johannesburg, the capital of the Transvaal, and having refused to permit coloured races to engage in wholesale business, which is closely related to the export and import trade, Mr. Ohta, Japanese Consul at Cape Town, endeavoured to have the unjustified regulation revised. Thanks to the efforts of Consul Ohta the Japanese claims were accepted by the authorities in their entirety on June 15, 1936, the parliament of South Africa passing a bill dividing the said regulations, and settling the question.

Japanese-Egyptian Negotiations

The Japanese-Egyptian negotiations which had been under way since 1935 at Cairo were discontinued on account of the political change which occurred in Egypt in May, 1936. The Japanese

representative at the negotiations, Minister Kasama, withdrew from Cairo on May 16 as a result.

Japan and Turkey

The Government of Turkey notified the Government of Japan on October 27, 1936, of its intention to abrogate the provisional trade convension between Japan and Turkey which was enforced on January 1, 1935, and the arrangement made between the two countries concerning the enforcement. At the same time, the Turkish Government expressed its readiness to conclude a new treaty. The Turkish note addressed to Japan read in substance as follows :

With a view to concluding a new commercial treaty in conformity with its policy towards domestic industry and the prevailing conditions of foreign trade, the Government of Turkey has decided to abrogate the provisional Japanese -Turkish trade convention and arrangements concerning its enforcement. It is understood that the notice which the Turkish Government gives Japan about its decision will take effect on January 2, 1937. Simultaneously the Turkish Government wishes to express its preparedness to consider a formula on which to base negotiations for conclusion of a new treaty.

Relations with South and Central America

Anti-Japanese questions have often been heard of in regard to Brazil in South America but none of the questions has ever been brought up between the diplomatic organs of the two countries. But mention must be made of the fact that Brazilian economic mission headed by Mr. Salgado Fillio, former Minister of Labour and member of the Lower House at the time, visited Japan in July, 1936, and greatly strengthened the tie of friendship between the nations.

In regard to Paraguay in Central America, it may be noted that about 35 families of Japanese emigrants settled in that country during 1936. Later, a French financial syndicate thought the co-operation of Japan in the industrial development of Paraguay would be of great benefit to that country and negotiations were conducted in this connection and on December 5, 1936, the President of Paraguay issued a decree authorizing the exportation of products of the country to Japan to the amount of 250,000 pesos annually through the French financial syndicate and the entry into Paraguay of a total of 1,000 families of Japanese emigrants within 5 years or no more than 200 families annually.

Abolition of Perpetual Leases

With reference to the abolition of perpetual leases in Japan, which are relics of the extraterritoriality system, the Japanese Government opened negotiations with Great Britain, which is the most closely connected with the question, and approached the United States. As a result, an understanding was reached with the two countries, whereby perpetual leases held by British and American nationals in Japan will be changed to ordinary ownership without compensation on April 1, 1942.

Similar negotiations were also conducted with Italy, the Netherlands, Portugal and Denmark, and resulted in an exchange of notes between Japan and the four nations. This marked the consummation of the efforts of the Japanese Government to have the perpetual lease system discontinued.

The Manchurian Incident

What is known as the Manchurian Incident broke out with the blasting of a section of the South Manchuria Railway near Liutiaokou by Chinese regular troops on September 18, 1931. It has brought about the foundation of a new nation in Manchuria and the withdrawal of Japan from the League of Nations. The incident though called in the singular was not really a single incident, but a series of incidents which followed one another after the unexpected outbreak, the inevitable sequel to long-continued and growing anti-Japanese activities on the part of the old Mukden militarists.

The hostilities which occurred in Shanghai in January, 1932, as well as the threatening situation in Tientsin some time earlier were only two of the manifold ramifications of the Manchurian Incident. The state of affairs known as the Manchurian Incident continued until the truce concluded on May 31, 1933, at Tangku between the Japanese and Chinese forces, which to all intents and purposes wound up the Jehol expedition carried out by the combined Japanese and Manchoukuo armies to pacify the province and protect the provincial people from local banditry and invading troops from the south across the Great Wall.[1]

Founding of Manchoukuo

The Manchurian Incident having re-

1 For particulars of the incident see the Japan Year Book, 1933, Chapter VII.

sulted in the over-throw of the old régime of Chang Hsueh-liang, various groups came to declare independence in different districts of Manchuria.

The chief principles of the projected new government called for the suppression of the military cliques, co-operation with the rest of the world in line with the principle of the open door and equal opportunity for all, elimination of anti-foreignism, and promotion of the welfare of the people in place of the oppression and grinding taxation from which they had hitherto suffered.

Thus, on March 1, 1932, a manifesto was promulgated announcing that Manchoukuo was founded in response to the unanimous aspirations of the 30,000,000 people of Manchuria and Mongolia. On March 7, Mr. Henry Pu-yi, who had once reigned over the entire territory of China as the 12th Emperor of the Ching dynasty, consented to become the Chief Executive of Manchoukuo. This was followed by the installation in office of Mr. Henry Pu-yi and the ceremony celebrating the founding of Manchoukuo at Changchun on March 9. (For particulars see Chapter on Manchoukuo.)

Japan and Manchoukuo

The Japanese Envoy On August 8, 1932, General Nobuyoshi Muto was appointed commander of the Kwantung army with concurrent offices as Ambassador Extraordinary and Minister Plenipotentiary to Manchoukuo and Governor of the Kwantung Leased Territory.

Recognition of Manchoukuo The Japanese Government extended de jure recognition to Manchoukuo on September 15, 1932, when the protocol completing this procedure was signed at the Chief Executive's offices in Hsinking between General Muto representing Japan and Premier Cheng Hsiao-hsu representing Manchoukuo.

The official English translation of this protocol follows :

Whereas Japan has recognized the fact that Manchoukuo, in accordance with the free will of its inhabitants, has organized and established itself as an independent State ; and

Whereas Manchoukuo has declared its intention of abiding by all international engagements entered into by China in so far as they are applicable to Manchoukuo ;

Now the Governments of Japan and Manchoukuo have, for the purpose of establishing a perpetual relationship of good neighbourhood between Japan and Manchoukuo, each respecting the territorial rights of the other, and also in order to secure the peace of the Far East, agreed as follows :

1. Manchoukuo shall confirm and respect, in so far as no agreement to the contrary shall be made between Japan and Manchoukuo in the future, all rights and interests possessed by Japan or her subjects within the territory of Manchoukuo by virtue of Sino-Japanese treaties, agreements or other arrangements or of Sino-Japanese contracts, private as well as public ;

2. Japan and Manchoukuo, recognizing that any threat to the territory or to the peace and order of either of the High Contracting Parties constitutes at the same time a threat to the safety and existence of the other, agree to co-operate in the maintenance of their national security ; it being understood that such Japanese forces as may be necessary for this purpose shall be stationed in Manchoukuo.

The present Protocol shall come into effect from the date of its signing.

The present Protocol has been drawn up in Japanese and Chinese, two identical copies being made in each language. Should any difference arise in regard to interpretation between the Japanese and the Chinese texts, the Japanese text shall prevail.

Partial Abolition of Extraterritoriality The basic treaty between Japan and Manchoukuo concerning the partial abolition of Japanese extraterritorial privileges in Manchoukuo, for which preparations had been underway for sometime, having been ratified by the Privy Councils of the two nations, was signed at Hsinking on June 10, 1936, by representatives of the two Governments concerned. The treaty was announced on June 12 and enforced on July 1.

The Shanghai Affair

The Causes Anti-Japanese feeling in China was increasingly accentuated following the Wanpaoshan affair, the conflict between Koreans and Chinese in Chosen and the Manchurian incident in particular. Among other places Shanghai was the scene of most vigorous and organized anti-Japanese activities, which culminated in the publication of an article disrespectful to the Imperial family of Japan by the Minkuo Jipao, a Chinese newspaper in Shanghai, in January, 1932. Shortly afterwards there occurred an assault on two Japanese Buddhist priests and three Japanese Buddhist believers of the Nichiren sect by a mob of workers of the Sanyu Business Company, manufacturers of towels, on January 18, when all of the

Buddhist group were seriously wounded, one of them dying later on January 24.

Indignation among the Japanese residents in Shanghai over this outrage was such that they immediately held a mass meeting and lodged a strong protest with Wu Tiehcheng, mayor of Shanghai.

The Ultimatum Consul-General Murai had filed an official protest with Mayor Wu of Shanghai demanding an apology from the mayor, the arrest and punishment of the marauders, payment of solatiums and expenses of medical treatment for the injured and also immediate dissolution of anti-Japanese organizations.

Seeing the general situation, Consul-General Murai sent an ultimatum to the Chinese with a time limit set for 6 p.m. on January 28 and received a reply from Mayor Wu promising to suppress the anti-Japanese agitators and accept all the Japanese demands.

Opening of Hostilities On the evening of January 28, however, Chinese crowds gathered around the municipal offices of Shanghai loudly accusing the mayor of having weakly yielded to the Japanese, and a serious situation threatened to prevail in all parts of the city, with the result that the Municipal Bureau of the International Settlement had to declare a state of siege, the foreign garrison forces taking up their positions in their respective areas of defence.

The situation, however, went from bad to worse, and the Japanese and Chinese troops came into a collision, which lasted from January 29 to March 3, when the former completely drove out the latter from the Chapei district.

On the completion of this achievement, General Shirakawa, commander of the Japanese expeditionary forces, and Vice-Admiral Nomura, commander of the Japanese fleet, ordered suspension of all hostilities at 2 p.m. on March 3.

Sino-Japanese Issue and the League

Japan's Attitude Following the outbreak of the Manchurian Incident, the Council of the League of Nations held an urgent session in compliance with a request of Dr. Alfred Sze, the Chinese representative, on September 22, 1931.

The League Adjourns Following the publication of the statement of the Tokyo Government, the intentions of Japan gradually came to be understood by the Powers, and the League Council adjourned on September 30 after adopting a resolution.

Activities of Council The situation, however, threatened to grow worse on October 8, the air raid on Chinchow was reported, and on the following day Japan lodged a protest against the anti-Japanese movement and sent a naval force to South China.

For three days from October 14, the Council discussed the question of the proposal to invite an observer of the United States to attend the Council meeting. The Japanese representative objected to this proposal from a juridical viewpoint, but at a private session held on the 15th, the Council passed this proposal as a question of "procedure" by a majority vote with Japan alone dissenting.

Accordingly the United States was represented by Mr. Prentiss Gilbert, the American consul-general at Berne, as an observer at the Council meeting from October 16.

At its private session on October 17, which is known as the 13-power conference because of the absence of the Japanese and Chinese representatives, the Council, with the attendance of the American observer, resolved that the 13 Powers take steps to call the attention of Japan and China to the Kellogg-Briand anti-war pact with regard to the Manchurian situation.

Consequently the Powers interested sent notes to Japan and China to that end, and the Japanese Government replied to these notes on the basis of a decision reached at an urgent meeting of the Cabinet held on October 22.

Briand's Proposal In the course of this conference M. Briand proposed a tentative plan to Mr. Yoshizawa, suggesting that Japan recognize the sovereignty of China in Manchuria, that China suppress her anti-Japanese agitation, boycott and anti-Japanese education, that China guarantee the safety of the lives and property of the Japanese nationals in China, that China recognize the right of Japanese nationals to reside, travel and engage in business in Manchuria, and that China confirm before the League of Nations the rights vested by all the existing treaties including what is known as the "Twenty-one Demands."

There were indications of these five proposals, if accepted by China, proving instrumental in improving the situation by making it possible for Japan to start direct negotiations with China regarding the concrete procedure of the withdrawal of the Japanese troops.

The situation, however, underwent a sudden change for the worse for an unknown reason, and at its session of

October 22 the Council proposed to make Japan complete the withdrawal of her troops by November 15 with neutral observers seeing to it that perfect peace and order would be maintained after the Japanese evacuation, and to make Japan and China appoint their respective representatives to take charge of the evacuation of the occupied area, it also being suggested that Japan and China start direct negotiations immediately after the completion of the evacuation.

These proposals were regarded as the most disadvantageous ones to Japan that had ever been considered by the Council.

The Counter Proposal Against this, the Japanese representative, Mr. Yoshizawa, submitted a counter-proposal to the Council on the 23rd to the effect that the Japanese Government should withdraw those of its troops still remaining in a few localities outside the railway zone as the then-prevailing atmosphere of tension cleared and the situation improved, by the achievement of a previous understanding between the Chinese and Japanese Governments as regards the fundamental principles governing normal relations, that the Japanese and Chinese Governments should confer together at once with a view to arriving at the understanding mentioned above, and that the Japanese and Chinese Governments should appoint representatives to arrange the details of execution of the evacuation and of taking over the districts evacuated.

The Japanese counter-proposal was defeated by a vote of 13 to 1, and the Council's resolution also failed to pass by a unanimous vote, the vote being 13 to 1 in favour of the Council proposal, the Japanese representative dissenting.

The Five Principles Following this, the Japanese Government published a statement on October 26, regarding the "fundamental principles." In this statement Japan made it clear that these so-called "basic principles" related to :

1. Mutual repudiation of aggressive policy and conduct.
2. Respect for China's territorial integrity.
3. Complete suppression of all organized movements interfering with freedom of trade and stirring up international hatred.
4. Effective protection throughout Manchuria of all peaceful pursuits undertaken by Japanese subjects.
5. Respect for the treaty rights of Japan in Manchuria.

Tension Continues The League of Nations' Council held its third session to discuss the Sino-Japanese issue on November 16, 1932. Whereas League circles had been looking to the withdrawl of the Japanese troops by that date, the situation in Manchuria was such that Japan could not live up to their expectation, with the result that a frontal clash threatened to take place between Japan and the League of Nations.

In this connection League circles were reported advocating severence of economic relations with Japan, withdrawl of diplomatic representatives from Japan or exclusion of Japan from the League. These reports were met by an outburst of strong nationalistic sentiment in Japan and serious tension prevailed.

The Council met on November 16 as scheduled amid an atmosphere of such tension and was continued until December 10.

The Resolution Before adjourning, the Council adopted a resolution by a unanimous vote on December 10. This resolution in effect provided that the Japanese Government should withdraw its troops within the railway zone in proportion as the safety of the lives and the protection of the property of Japanese subjects were effectively secured and that the two parties should undertake to adopt all measures necessary to avoid any further aggravation of the situation and to refrain from any initiative which might lead to further fighting and loss of life.

Regarding this resolution, the Japanese representative declared that his Government accepted the resolution on the understanding that it would not prevent the Japanese military authorities from taking action in defence of lives and property of Japanese nationals against bandits and other lawless elements rampant in various parts of Manchuria.

Opinion Adverse Just after the League Council met in its 66th regular session on January 25, 1932, troubles broke out in Shanghai and Mr. W. W. Yen, the Chinese representative, appealed to the Council on January 29 to invoke Article 15 of the Legue Covenant in regard to the affair.

Thus, at the Council meeting on January 30, it was decided that only the first paragraph of Article 15 of the Covenant would be invoked, in regard to the Shanghai incident alone. Accordingly, representatives of the neutral members of the Council organized an

international committee at Shanghai to gather information on the spot and submit it to the Council.

This committee sent in four reports successively, first under date of February 6, second under date of Febuary 12, third under date of February 20 and fourth under date of March 6. Of these, the first report was very favourable to Japan, but the second report proved decidedly unfavourable to Japan, it declaring that the Japanese and Chinese troops had been in a state of open hostilities since February 3.

Consequently, the Council caused the representatives of the 12 members of the Council other than Japan and China to address an appeal to Japan on February 16, regretting that it appeared that Japan could no longer trust to the peaceful settlement to be provided by the League of Nations.

Japan's Refutation Thereupon, in a statement published on February 23, the Japanese Government refuted this appeal in detail asserting that, although China had been treated in the past, by common consent, as if the expression connoted an organized people, such fictions could not last forever, nor could they be tolerated when they became grave sources of actual danger. Thus the Japanese Government declared that the time had inevitably come when realities, rather than fictions, had to be reckoned with.

Views unfavourable to Japan were also expressed in various quarters about that time, and Japan's relations with the League of Nations seemed seriously menaced.

A Parley Proposed On February 27, 1932, the Japanese delegation at Geneva unofficially notified the representatives of the 12 member Powers of the Council that Japan was willing to participate in a roundtable conference if the Powers would sponsor such a parley at Shanghai.

The armistice conference was officially opened at Shanghai on March 24, but the progress of the parley was delayed owing to a divergency of opinion between the Japanese and Chinese delegates regarding the time to be fixed for the final withdrawal of the Japanese troops.

During this period of deadlock China made a sudden appeal to the League of Nations on April 11, reporting a rupture of the conference.

The Mixed Committee On receipt of this appeal, the Committee of 19, organized by the League Assembly on March 11 to continue in charge of the entire Sino-Japanese issue, immediately accepted this representation and opened a session on April 16 to discuss the situation.

At its session on April 19, the Committee of 19 drafted a resolution for the Assembly with the object of breaking through the reported deadlock between Japan and China.

This proposal was met by strong opposition from the Japanese Government as well as the military and public opinion of Japan, and another crisis arose between Japan and the League of Nations. But the situation was improved and the League Assembly adopted the Lampson plan by a unanimous vote on April 30. The crisis having thus passed, the armistic conference was resumed at Shanghai on April 28, and despite the occurrence of the tragic bombing outrage on the occasion of the celebration of the Emperor's birthday on April 29, an armistice was finally signed on May 5, 1932.

The League Commission of Inquiry The League of Nations' Commission of Inquiry, appointed in line with the resolution of December 10, 1931, and comprising the Earl of Lytton of Great Britain, Général de Division Henri Claudel of France, Major-General Frank Ross McCoy of the United States, Dr. Heinrich Schnee of Germany and Count Pldrovandi of Italy, arrived in Japan on February 29, 1932 accompanied by a party of their secretaries. The Commissions left Japan for China on March 11, and spent about four months to make investigations in China and Manchuria.

Preliminary Report What the Commission learned was presented to the League of Nations on April 29 as a preliminary report.

In the course of this preliminary report, the Enquiry Commission stated that Manchuria was not under the authority of the Nanking Government and was infested by banditry, so that the Japanese troops could not be withdrawn, adding that the Nanking Government did not exercise its Power in any part of Manchuria in the prevailing situation.

The Final Report The full text of the final report of the Commission was published at 9 p.m., Tokyo time, on October 2 in Tokyo, Geneva and Nanking simultaneously.

The contents of the report were considered comparatively impartial in its description of the outline of the history of the Sino-Japanese relations, Japan's interests in Manchuria and the general observations of the prevailing situation.

However, that the Commission gave

only a cursory account of the Shanghai incident, as if this incident had been outside the scope of its investigation work, was taken to show that the Commissioners did not fully understand what their true mission was.

Further, the failure of the Commissioners to recognize the military action taken by Japan on September 18, 1931, which was dealt with in the fourth chapter of the report, as an act of self-defence, was highly resented in Japan. It was also generally held both in official and private circles in Japan that the sixth chapter of the report, in so far as the description of the circumstances pertaining to the founding of Manchoukuo was concerned, was full of prejudiced misrepresentations and that the last two chapters containing what they called "principles and conditions of settlement" and "consideration and suggestions to the Council" were for this reason practically superfluous, especially after the de jure recognition extended to Manchoukuo by Japan.

Resolution of February 24 Following the publication of the Lytton Report, the League of Nations started its discussion thereon at the Council meeting convened on November 21, 1932, and, after complicated proceedings through the Assembly, the Committee of Nineteen and other committee meetings, a report with several recommendations was adopted by a vote of 42 to 1 on February 24, 1933, at the Assembly meeting, at which Siam abstained from voting and 12 countries were not represented.

The report was on the whole based upon the Lytton Report and was distinctly unfavourable for Japan and Manchoukuo, one of the recommendations contained therein purporting to recognize Chinese sovereignty and administrative integrity in Manchuria.

Japan's Withdrawal After voting against the report of the League of Nations Assembly on the Sino-Japanese dispute, the Japanese delegation to the League meetings, headed by Mr. Yosuké Matsuoka, left Geneva without attending further meetings of the League, thereby expressing the firm determination of Japan.

In Japan, the Government decided on severance from the League of Nations and submitted a project to this end to the Throne. Accordingly the Privy Council met in plenary session on March 27, 1933, in the presence of the Emperor to recommend the project for Imperial sanction with a unanimous vote.

The Throne immediately sanctioned the project, a telegram was despatched to Geneva addressed to the Secretary-General of the League of Nations notifying the body of Japan's withdrawal from its membership, and simultaneously with this the Emperor issued an Imperial rescript announcing the policy to be followed by Japan after this action.

The official translation of the Imperial rescript follows :

"When the League of Nations came into being upon the restoration of a general peace, Our Imperial Father was pleased to order the entry of Our Empire thereinto ; and We, in Our turn, have laboured assiduously to fulfil the high purpose of the late Emperor. It is thus that Our Empire has for these thirteen years past extended consistently its co-operation to the League.

"Now Manchoukuo having of late been founded, Our Empire deems it essential to respect the independence of the new state and to encourage its healthy development, in order that the sources of evil in the Far East may be eradicated and an enduring peace thereby established. Unhappily, there exists between Our Empire and the League of Nations a wide divergence of view in this regard and it has devolved upon Us to cause Our government to take, upon mature deliberation, the necessary steps for the withdrawal of Our Empire from the League.

"However, the advancement of international peace is what, as evermore, We desire, and Our attitude toward enterprises of peace shall sustain no change. By quitting the League and embarking on a course of its own, Our Empire does not mean that it will stand aloof in the extreme Orient nor that it will isolate itself thereby from the fraternity of nations. It is Our desire to promote mutual confidence between Our Empire and all the other Powers and to make known the justice of its cause throughout the world.

"Every country is overtaken today by emergencies of an unprecedented magnitude. Our Empire itself is confronted by a situation fraught with momentous possibilities. It is indeed an hour that calls for an intensification of effort on the part of Our entire nation. We command that all public servants, whether civil or military, shall faithfully perform each his appointed duty, and that all private citizens shall pursue their wonted tasks with diligence. Stray not, in advancing, from the path of rectitude ; and in action, embrace always the golden mean. Strive to meet the present situation with a united will and with courage and resolution. So

may ye carry forward the glorious work bequeathed by Our Grandsire and contribute to the prosperity and well-being of Mankind."

Jehol Expedition The expedition carried out by the joint forces of Manchoukuo and Japan to Jehol to pacify this province of the new nation, and the subsequent truce concluded at Tangku between the hostile Chinese troops and the Japanese expedition on May 31, 1933, practically put an end to the long-protracted state of affairs popularly known as the Manchurian Incident.

The Jehol expedition, which was launched following a declaration to this end made by the Manchoukuo Government on February 26, 1933, announcing that it was despatching without delay necessary forces "to exterminate completely all bandits within and to dislodge all the invading armies from the province," was executed with amazing speed and on March 4 a Japanese contingent occupied Chengte, the capital of the province; a few days later the Japanese troops taking several important positions along the Great Wall.

After having been driven out of the province, however, the Chinese troops continued hostile operations on the Great Wall positions from the south, and the Japanese forces were obliged to advance south across the Great Wall more than once to destroy the bases of Chinese hostilities.

The Truce In fact, on the second occasion the Japanese advanced within a few miles of Peiping and Tientsin, but they refrained from actually entering these cities, and instead succeeded in including the representatives of the Chinese forces to sign a truce on March 31 at Tangku, providing for a demilitarized zone between Peiping and Tientsin districts and the Great Wall.

The Manchoukuo authorities, immediately after the pacification of Jehol, started a constructive programme in the province, readjusting finances and mapping out plans for future industrial and economic development for the people of the province.

Solution of Pending Questions There are many issues that have been pending between Japan and China since the signing of the Tangku truce pact on May 31, 1933. Pressed by necessity, the through railway connection problem was solved in June, 1934, and since July 1 of that year the Sino-Manchoukuo International Train Service has been in operation between Mukden and Peiping. This was followed by the Frontier Customs question which was solved in December of that year, and the trade relations of China and Manchoukuo are going on smoothly. The Sino-Manchoukuo Postal question was also solved and the postal service has been in operation since January 1, 1935.

Exchange of Ambassadors In July, 1924, Japan and China agreed on the exchange of ambassadors, but, due to the subsequent internal problems of China, the matter had been left unrealized. Sino-Japanese relations assumed a sudden turn for the better early in 1935. Taking advantage of this situation, Foreign Minister Koki Hirota made a proposal to the Nanking Government for the promotion of the Japanese Legation in China to the status of an embassy and the matter was formally announced in Tokyo and Nanking at the same time on May 17. The Japanese Government promoted Mr. Akira Ariyoshi, Minister to China, to Ambassador, and the Chinese Government promoted General Tsiang Tso-pin, Chinese Minister to Tokyo, to Ambassador. At the initiative taken by Japan, both Great Britain and the United States at once promoted their Ministers in China to Ambassadors.

North China Incidents Infringement of the Tangku truce pact on the Chinese side and violation of an official note exchanged between the Japanese and Chinese Governments regarding the retrocession of Tientsin in 1902 were the real causes of the North China incidents. Sun Yung-chin, bandit chieftain, with his followers, was expelled from Jehol Province by Japan-Manchoukuo combined forces to Shunhua in Hopei Province, where he was given support of a peace preservation corps under General Yu Hsueh-chung, chairman of the Hopei Provincial Government. It was discovered that General Yu supplied him with ammunition and foodstuffs. The Sun banditry, however, was subjugated by the Kwantung Army late in May, 1935. It was also found that General Ho Ying-chin, chairman of the Peiping branch of the National Military Council, had been giving bandits in Manchoukuo certificates of the Northeastern Volunteer Corps. All these were apparent instances of infringement of the Tangku truce pact. Another event that made the North China situation serious was assassination of two pro-Japanese Chinese journalists. On May 3 Mr. Pei Yu-han, president of the Tientsin Hsin Pao, a Chinese daily, and Mr. Hu Ching-pu, president of a Chinese magazine, the Kuo Hsien, were assassinated in the Japanese Concession in Tientsin, by

Chinese terrorists belonging to the Blue Shirt Party and Third Peiping Gendarmery in concert with other similar secret societies. Mr. Pei was an employee of the Japanese army. This was China's violation of the official note regarding the retrocession of Tientsin.

Japan's Notification Colonel Takashi Sakai, chief-of-staff of the Japanese Garrison in Tientsin, and Major Tan Takahashi, Japanese resident army officer in Peiping, called on General Ho on May 29 and blamed the dual policy of Generalissimo Chiang Kai-shek towards Japan, pointing out these two anti-Japanese incidents. They handed the following demands of Japan to the General Ho :

1. Dismissal of Yu Hsueh-chung who is directly responsible for the incidents and the evacuation of the Central Army of China from Hopei Province.

2. Dismissal of Chang Tingyo, Mayor of Tientsin, and Li Chunyo, Director of the Tientsin Public Peace Bureau, both directly responsible for the assassination.

On June 10 the Nanking Government replied that it accepted all the demands made by Japan.

Establishment of Two Governments Towards the close of November, 1935, an independent government was established with the demilitarized zone as the centre, which was named as the East Hopei Anti-Communist Autonomous Committee. Mr. Yin Ju-keng, special administrative inspector of the Lwanchow-Shanhai-kwan area of the zone, became its chairman. In December, the Committee was renamed as the East Hopei Anti-Communist Autonomous Government and appointed Mr. Yin its chairman.

The Kuomintang Government despatched its War Minister, General Ho Ying-ch'in to the north. As the result of his conference with General Sung Cheh-yuan and General Han Fu-chu the Hopei-Chahar Political Council was established as an organ to manage the administration of North China. General Sung Cheh-yuan was appointed as its chairman and assumed the office on December 18, 1935. This institution, while being under supervision of the Kuomintang Government, is a new political organ which has in its hand the power to negotiate with Japan and Manchoukuo for the maintenance of amicable relations with them. The domain over which the power of this political organ will be exercised comprises Hopei and Chahar Provinces, and Shantung, Suipuan and Shansi Provinces are governed by Han Fu-chu and Yen Hsi-shan respectively.

Sino-Japanese Questions in 1936 and 1937

With reference to Sino-Japanese relations, mention must be made of the fact that the students' movement launched towards the end of 1935 served greatly to intensify the anti-Japanese sentiment throughout China. As a result, on January 21, 1936, a police official named Sumida of the Japanese Consulate in Swatow was shot to death with a revolver while en route to his office. On July 10 of the same year, a Japanese merchant named Kayao in Shanghai was shot and killed with a revolver while taking a walk. This occurrence was followed on August 20 by the bombing of a resident Japanese military officer at Changsha and his family physician.

With the anti-Japanese movement thus changing to terrorism, there appeared a strong opposition to the decision of the Japanese Government to reopen its consulate-general at Chengtu in Szechwan Province. Acting Consul-General Iwai and his party were interfered with in their preparations for the opening of their office and on August 24 a Chinese mob went to the length of murdering two Japanese newspapermen, Messrs. Watanabe and Fukagawa, and badly injuring Messrs. Tanaka and Seto.

The anti-Japanese outrages continued in September. On the third day of the month, a resident Japanese druggist at Pawhoi in Kwangtung Province was slain by a Chinese mob including students who were directed in their action by the 19th Route Army, which was urging the declaration of war against Japan. On September 17, another anti-Japanese outrage occurred involving the hurling of a bomb at a Japanese merchant named Mori at Swatow. This was followed by the murder of Mr. Yoshioka, a police official of the Japanese Consulate at Hankow ; on the 19th of the same month two Japanese seamen attached to the 3rd Squadron, were assaulted, one being killed and the other injured.

September 28 witnessed the burning of the branch office at Hsiangtan of the Nisshin Kisen Kaisha (Sino-Japanese Steamship Company). The office was set afire after being looted. On the following day, a mine was found to have been placed in the neighbourhood of the Japanese Consulate at Changsha. The Chinese outrages did not stop there for on October 8, a hand grenade was thrown into a Japanese store at Hankow. Indeed, the terroristic acts of

the Chinese against Japanese were too many to be entirely enumerated here.

Sino-Japanese Negotiations In view of the frequent anti-Japanese terroristic actions, the authorities of the Japanese Foreign Office and War Department resolved to open important negotiations with the Nanking Government with a view to preventing further aggravation of the situation and adjusting the relations between Japan and China. On August 24, following the outbreak of the Chengtu affair, Foreign Minister Arita issued the following statement to the foreign correspondents in Tokyo, setting forth the views of the Japanese Government on the intended Sino-Japanese negotiations.

"I had occasion, in our interview on April 25th last, to explain to you at some length the foreign policy of my country.

"Since assuming the office of Minister for Foreign Affairs, I have been endeavouring to adjust the relations between Japan and China as prerequisite to stability in East Asia. Unfortunately, however, our endeavour has yielded no tangible result. On the contrary, various questions having been left unsettled, there has been created a gloomy atmosphere which is lowering upon the relations of our two countries. It so happened that, at Chengtu on August 24th last, two Japanese were ruthlessly slaughtered, and another two Japanese very seriously injured, by a lawless Chinese mob. The negotiations on this affair had scarcely commenced at Nanking when a succession of untoward occurrences came to pass at Pakhoi, Swatow, Hankow and Shanghai, the victims being Japanese soldiers, officials and residents.

"The Chinese authorities have, on more than one occasion in the past, issued statements or made pledges, undertaking to control the anti-Japanese agitations in China, but these undertakings have been without avail. In fact, Japanese in China have repeatedly suffered outrages of unspeakable violence at the hands of Chinese agitators, over a dozen cases of this nature, to count the principal ones only, occurring in the short space of the last ten months. Thus the lives and property of the many Japanese in China are gravely threatened, and a feeling of profound unrest is naturally prevalent among them.

"All thies unfortunate incidents may rightly be said to be the logical consequences of the anti-Japanese education, anti-Japanese instigation and other forms of anti-Japanese policy practised for many years for which the Nationalist Government and the Kuomintang cannot evade their responsibility. Even if some of the incidents may, as is maintained on the Chinese side, be possibly attributable to Communist attempts to alienate Japan and China, they should not be settled in the same manner as ordinary cases of murder and of assault and battery are disposed of in China. The mere settlement of the incidents themselves is not enough. A decisive step forward should be taken to strike at the root of the trouble in order to prevent the recurrence of any such incidents. On the one hand, China should carry out an effective control of anti-Japanese agitations. In this connection, let it be remembered that no number of edicts exhorting friendship with Japan serves any useful purpose, as is evidenced by the existing state of affairs. On the other hand, more constructive efforts should be made to drastically improve the relations between Japan and China eradicating once for all the fundamental cause of the anti-Japanese trouble. And, if necessary, consideration has also to be given to measures to meet the Communist menace.

"In the spirit of what I have just said, the Japanese Government are conducting negotiations with the Nanking Government with respect to the settlement of the respective incidents and to the adjustment of the relations between Japan and China. The negotiations, however, are making no appreciable progress, and in the meantime fresh incidents of the same unfortunate character are cropping up.

"It is the sincere desire of Japan that a settlement may, as far as possible, be peaceably reached through diplomatic negotiations, and that the stability of East Asia may be genuinely assured. However, as you are aware, opinion is steadily gaining ground among the Japanese public and among the Japanese in China that any further negotiations with China are useless. Should the negotiations be so terminated, the lives and property of the large Japanese population in China could not, of course, be left exposed to any further danger. It will, therefore, be necessary to consider the steps to be taken in case of that eventuality.

"The outcome of the present negotiation can be in one of the two ways only: either very much better or very much worse will be the Japanese-Chinese relations. In the existing situation they shall not be permitted to drift in the ambiguous state of affairs as has been prevailing in the past. China is now at the momentous cross-roads, to

decide whether or not to shake hands with Japan. I very earnestly hope that China will grasp our hand in friendly response whatever difficulties she may have to surmount."

The negotiations were commenced between Mr. Shigeru Kawagoe, the Japanese Ambassador to China, and General Chang Chun, the then Chinese Foreign Minister. Carrying the negotiations a step further, Ambassador Kawagoe had an interview with General Chiang Kai-shek, president of the Chinese Executive Yuan, on October 8. The negotiations were centered on the North China question, the specific trade in North China, the control of anti-Japanese activities, the employment of Japanese advisers and the conclusion of a Sino-Japanese anti-Communist agreement.

The Chinese attitude towards the negotiations suddenly changed as a result of the outbreak of the East Suiyuan affair and on December 3 the negotiations in progress for nearly three months had to be discontinued. Two days later, Ambassador Kawagoe withdrew from Nanking to Shanghai. In connection with the discontinuance of the Sino-Japanese negotiations, the Japanese Foreign Office issued an informal statement on February 10 which read :

Concerning the Sino-Japanese negotiations pertaining to the deplorable incidents such as the Chengtu incident, although a statement was issued by our Embassy in China on December 3, it seems useful to clarify the Japanese policy and the views of our Government.

1. The murder of the Japanese journalists at Chengtu on August 24 was an inevitable outcome of the anti-Japanese education and anti-Japanese policy which the Nanking Government had carried on for so many years. Of this anyone will be convinced who is cognizant of circumstances and the facts of the case. That the recurrence of such incidents can not be prevented by a mere proclamation of the Nanking Government on the cultivation of neighbourliness is evident from the fact that on the heels of the Chengtu incident there occurred in close succession the Pakhoi incident of September 3, the Hankow incident of September 17 and the Shanghai incident of September 23. Therefore, in taking up these matters with the Nanking Government, the Japanese Government was not satisfied with dealing with these incidents as ordinary cases of murder or assault in China and settling them accordingly. It was thought necessary to take fundamental measures for future guarantees, and we demanded, therefore, that the Nanking Government take steps in earnest for control of the anti-Japanese agitation which is the underlying cause of these incidents.

On the other hand we invited the Chinese Government to go a step further from the negative stand of merely controlling the anti-Japanese agitation and to show its sincerity toward the improvement of Sino-Japanese relations by settling such long pending questions as aerial navigation, the employment of advisers, the control of lawless Koreans and the reduction of Customs duties.

II. Mr. Suma, consul-general at Nanking, in pursuance of the Japanese Government's policy, entered into preliminary conversations with Mr. Chang Chun, Foreign Minister of the Chinese Government, on September 8. Subsequently, Mr. Kawagoe, Japanese Ambassador, met Mr. Chang Chung seven times and Mr. Suma conversed with Mr. Chang or Mr. Kao Tsung-wu, director of the Asiatic department of the Chinese Foreign Office, more than 20 times.

As a result, the Chinese attitude toward the Japanese proposals was ascertained to be as stated below, giving us a general idea to the course of future negotiations :

With regard to the control of the anti-Japanese agitation, the Chinese representative during the conversations declared that the Chinese Government not only would suppress all sorts of anti-Japanese agitation of its own accord and assume responsibility for all anti-Japanese operations whether by the Kuomintang or any other organizations, but would be ready to take necessary measures for thorough suppression of the anti-Japanese agitation, revision of school books and control of anti-Japanese utterances or press articles.

As to the question of joint defense against Communism, one of the questions relating to adjustment of Sino-Japanese relations, no agreement was reached, although there were some points on which both sides concurred. As to the North China questions, it was agreed in principle to promote the economic development of that region through the co-operation of the two countries.

As regards the other problems, it is true that some hitch was experienced with the question of air service between China and Japan, but an agreement of views was reached regarding the proposed engagement of Japanese advisers by the Chinese Government, control of

lawless Koreans in China and reduction of the Chinese customs tariffs. Besides, the Chinese Government accepted most of Japan's requests regarding the settlement of the series of anti-Japanese incidents. Consequently, it was arranged that the Japanese consulate-general at Chengtu be reopened before long.

Later, however, the Chinese Government, taking advantage of the East Suiyuan issue, communicated to the Japanese representatives that it would be difficult to bring the Nanking negotiations to successful conclusion so long as the East Suiyuan question was not settled. Besides, the Chinese representatives assumed an attitude threatening to repudiate all agreements reached in their conversations with the Japanese representatives, and Mr. Chang Chun evaded a meeting with Mr. Kawagoe, despite the latter's repeated requests.

In consequence, Ambassador Kawagoe came to the conclusion that further delay in the negotiations because of an issue entirely irrelevant to the Nanking parley would serve no useful purpose but would only complicate the situation.

On December 3, Mr. Kawagoe handed Mr. Chang a note embodying points on which an agreement had been reached between representatives of the two countries and asked that the Chinese Government translate them into action as soon as possible.

III. Such is an outline of the actual situation of the Nanking negotiations. The Japanese Government is now watchfully waiting for the response of the Chinese Government to Ambassador Kawagoe's request. At the same time, should the Nanking Government fail to take effective steps for control of the anti-Japanese movement, and the lives and property of Japanese in China be jeopardized or the rights and interests of Japan violated, we are prepared, in view of the current condition in China, to take adequate measures to cope with the situation.

The Chengtu and Pakhoi Affairs Immediately after the outbreak of the Chengtu affair, the Japanese Embassy in China dispatched a secretary to conduct an investigation on the spot. Simultaneously, Mr. Yakichiro Suma, the then Japanese Consul-General at Nanking, commenced negotiating with General Chang Chun, the then Chinese Foreign Minister, on September 8 for a settlement of the matter. The Japanese Government attached great importance to the issue, believing that it should not be dealt with as a local affair because it was closely related to the Nanking Government and urged that a solution should be sought through negotiations between the Japanese Government and the Nanking Government so that the cause of such troubles may be eliminated once for all.

The Japanese Army also paid serious attention to the affair and on August 27, Major-General Kita, military attaché at Shanghai of the Japanese Embassy, issued a statement declaring that the Chengtu affair had two points which should be given serious consideration. In the first place, the statement declared, the Nanking Government and the Kuomintang, ingnoring the vested rights of Japan, illegally interfered in the preparations for the re-opening of the Japanese Consulate General at Chengtu and incited the Chinese people at large to oppose such re-opening. Secondly, the victims of the Chinese outrage at Chengtu were Japanese nationals duly equipped with passports and thus entitled to full protection by the Chinese authorities.

The military attaché's statement said :

"Of late, an anti-Japanese movement has been revived at various places in China, causing the frequent occurrence of untoward incidents. This reflects the deep-rooted anti-Japanese sentiment among the Chinese and so long as such conditions are allowed to exist, all efforts to adjust the relations between the two countries will be futile. Consequently, it is necessary that measures should be taken to eradicate the fundamental cause of troubles if a solution of the matter is desired.

"I believe that proper measures will be taken to solve the present affair after full details have been ascertained. In this connection, emphasis must be laid upon the necessity of dealing with the situation fundamentally in order to make the great sacrifice worth paying, instead of handling the affair as being connected with the re-opening of the Japanese consulate-general at Chengtu alone. The Japanese army will extend its full support to the diplomatic organs in their efforts to solve the matter and also will render indirect assistance in the attainment of the aim."

The Japanese naval authorities on September 3 ordered the Ataka and Atami, both of the 11th division of the 3rd Squadron and lying at Shanghai, to weigh anchor and sail up the Yangtze River to Hankow. As an additional measure to cope with the strained situation, they also ordered the Wakatake, Sanae and Kuretake, all of the 13th destroyer-flotilla, to leave South China for Shanghai on September 4 to co-

operate with the Izumo, Hasu and Kotaka in patrol work.

Close on the heels of the Chengtu affair, another anti-Japanese outrage was committed by Chinese in Pakhoi in Kwantung Province. Attaching great importance to the Pakhoi affair, the Japanese Government, which was notified of the occurrence by the Chinese side on September 8, instructed Mr. Yoshitake, acting Japanese consul-general at Canton, on September 11 to serve upon the Kwantung Provincial Government an important warning which contained the following points :

1. The Japanese Government absolutely refuses to regard the Pakhoi affair as a minor local question involving the 19th Route Army because the affair was caused by the lukewarm attitude of the Chinese authorities toward the anti-Japanese movement. The Central Chinese Government must assume the entire responsibility for the occurrence.

2. The authorities of the Kwantung Provincial Government, as local authorities under the direct control of the Nanking Government, must assume responsibility for the occurrence within their jurisdiction and should take proper steps to deal with the matter.

3. At the same time, the authorities of the Kwantung Provincial Government must immediately prohibit all anti-Japanese activities within their jurisdiction lest similar affairs should be repeated in the future.

4. In case the Chinese authorities fail to take effective, adequate measures immediately, they will be considered as lacking in sincerity in the protection of Japanese lives and property. The Japanese Government will then adopt whatever measures are deemed necessary.

Upon receipt of a report on the outbreak at Pakhoi, the Japanese naval authorities ordered the Wakatake and Sanae, both of the 13th destroyer-flotilla of the 3rd Squadron, to hasten to Pakhoi from Shanghai in order to assist the Saga, another Japanese warship already there, in watching the developments in the situation. Simultaneously, the four Japanese warships—Kuma, Fuyo, Karukaya and Asagao—which sailed from Tsingtao on September 10 were instructed to proceed southward to patrol the Pakhoi area.

Meanwhile, the anti-Japanese sentiment in Kwantung Province steadily heightened with the 19th Route Army loudly demanding the immediate declaration of war against Japan. This army constructed military establishments at various strategic points on the coastal line and prevented the Japanese enquiry commission from landing at Pakhoi to perform its duty. On account of the provocative attitude of the 19th Route Army, the situation in the Pakhoi area was so threatening that the Chinese official dispatched to investigate the affair on the spot escaped back to Canton without discharging his mission.

Thus, it became impossible for the Japanese enquiry commission to perform its task. Upon being informed of the conditions, the Japanese Government presented a demand through Mr. Shigeru Kawagoe, the Japanese Ambassador to China, for the evacuation of the Pakhoi area by the 19th Route Army on September 16. At the same time, the Japanese naval authorities served a strict warning upon both the Nanking Government and the Kwangtung Provincial Government.

At this point, General Chiang Kai-shek, president of the Chinese Executive Yuan and concurrently chairman of the National Military Council, came to realize the firm attitude of the Japanese Government and for the first time undertook to make the Kwangtung faction come to terms with the Japanese side. As a result, an agreement was reached on September 20, whereby the 19th Route Army evacuated the Pakhoi area and on September 23, the Japanese enquiry commission fulfilled its mission of ascertaining the actual state of affairs surrounding the murder of the Japanese resident by the Chinese mob.

The negotiations concerning both the Chengtu and Pakhoi affairs were opened at Nanking and were carried on even after the conversations in regard to an adjustment of the Sino-Japanese relations had been brought to a standstill. The negotiations finally resulted in an exchange of official notes between the Japanese Ambassador, Mr. Shigeru Kawagoe, and the Chinese Foreign Minister, General Chang Chun, on December 30 and both affairs were thus settled.

East Suiyuan Question During the early part of November, 1936, skirmishes began to occur between the Chinese troops in Suiyuan Province and the Inner Mongolian forces in the eastern section of Suiyuan, which attracted considerable attention of all circles. On November 20, the central publicity headquarters of the Kuomintang, the Chinese Nationalist Party, issued a statement calculated to impress foreign countries that Japan was implicated in the Suiyuan affair, thus attempting to influence the negotiations in progress at the time between Mr. Shigeru Kawa-

goe, the Japanese Ambassador to China, and General Chiang Kai-shek, president of the Chinese Executive Yuan.

In order to clarify the situation, the Japanese Foreign Office also issued a statement on November 21, which read in substance as follows :

"Japan is always concerned over the conditions prevailing in the adjoining districts of Manchoukuo territory but she has nothing to do with the clash that took place between the Suiyuan troops and the Inner Mongolian forces. It hardly requires mentioning that the Japanese Army, not to say the Japanese Government, is not assisting the Mongols in any way."

Developments Following Sian Affair The Sian affair involving the forcible detention of General Chiang Kai-shek, president of the Chinese Executive Yuan and concurrently chairman of the National Military Council, by a group of troops under the control of Marshal Chang Hsueh-liang, the erstwhile Mukden warlord, suddenly occurred in the provincial capital of Shensi on December 12 but the Generalissimo returned safely to Nanking. Further, neither the Nanking Government nor the Kuomintang showed any agitation over the occurrence. These facts were taken to prove that the national unity of China had been greatly strengthened and accordingly, it came to be urged in various circles that China should he looked again in her new light .

It happened that the political change in Japan during March brought about the formation of the Hayashi Cabinet in succession to the Hirota Ministry. On March 3, Dr. Naotake Sato who had just returned home with the intention of resigning from the post of Ambassador to France and retiring from active diplomatic service was appointed Foreign Minister of the new Cabinet. Speaking before the House of Peers and the House of Representatives, on March 8 and 11 respectively, Minister Sato set forth his foreign policy, which was well received abroad.

The Chinese interpreted Minister Sato's statements as meaning a revision of the three basic principles enunciated by Mr. Koki Hirota when he was Foreign Minister of the Okada Cabinet for adjusting Sino-Japanese relations. Further, as a result of the plenary session of the Central Executive and Central Supervisory Committees of the Kuomintang, which was held at Nanking in February, 1937, General Chang Chun was replaced by Dr. Wang Chung-hui, fermer judge of the Permanent Court of International Justice, as Foreign Minister of the Nanking Government. Following his assumption of the office, the new Chinese Foreign Minister emphasized that an adjustment of the relations between China and Japan should be based on the principles of reciprocity and equality.

In the meantime, there appeared increasing signs of a close cooperation between the Nanking Government and the Chinese Communist Army following the Sian affair. The movement launched by radical Chinese organizations for the establishment of a popular front against Japan was also intensified. All these combined to heighten the anti-Japanese sentiment among the Chinese people until finally they commenced to work desperately for placing North China under the complete control of the Nanking Government, besides demanding dissolution of the East Hopei Anti-Communist Autonomous Government.

Under these circumstances, anti-Japanese outrages were repeated by the Chinese. On May 22, a police official of the Japanese Consulate at Swatow was subjected to violence. This caused the authorities of the Japanese Foreign Office to give warning that the sympathetic attitude which the Government and people of Japan had been manifesting towards China might be lost if the Nanking Government did not deal with the anti-Japanese activities in an appropriate manner.

Immediately following the outbreak of the Swatow affair, the Japanese political situation underwent a change with the Hayashi Cabinet being replaced by a new Ministry formed under the Premiership of Prince Fumimaro Konoye, then president of the House of Peers. Ex-Premier Koki Hirota again assumed the portfolio of Foreign Affairs, which was interpreted by the Chinese to signify the revival of the so-called three Hirota principles. For this reason, they again accelerated their anti-Japanese movement and brought about conditions more unfavourable to an adjustment of Sino-Japanese relations.

The North China Incident On Wednesday night, July 7th, a small unit of Japanese troops was engaged in maneuvers on their usual grounds, near Marco Polo Bridge, southwest of Peiping, and in the vicinity of Lukouchiao and Lungwangmiao when suddenly, at 11:40 o'clock the Japanese troops were fired upon by Chinese soldiers from the directions of Lukouchiao and Lungwangmiao. The Japanese were utterly unprepared to return the fire, for they were only 150 strong and had a supply of live am-

munition amounting only to one ball-cartridge per person, which was being kept by the commanding officer. All that they could do at this critical moment was to halt their maneuvers, concentrate at a spot some distance from the Chinese, and send for help to their headquarters, situated about two and a half miles away in the former British barracks at Fengtai. Reinforcements came quickly, and with the Japanese replying with real shots to the Chinese fire, the first clash occurred.

Matters are developing from bad to worse, the fight extending finally to the direction of Shanghai at the time of writing this article, August 13, 1937.

In the meantime, an agreement was reached on July 11th, and, at 4:00 o'clock in the afternoon, the Chinese representatives, General Chang Tsu-jung, mayor of Tientsin, and General Ying Yung, chief of the Public Safety Bureau of Hopei, wrote to the Japanese representative, Colonel Matsui, agreeing to the following terms :

(1) Apology by the representatives of the 29th Army and punishment of those directly responsible.

(2) Chinese troops to evacuate Lukouchiao and to be replaced by the Peace Preservation Corps for the purpose of keeping the Chinese troops sufficiently separated from the Japanese.

(3) To take adequate measures for curbing the activities of the Blue Shirts and Communists.

In Tokyo, the Government had been studying measures for coping with the situation. The decision to send necessary forces to North China was maintained in view of the alarming news which continued to come from China regarding the provocative actions of the 29th Army soldiers, and the movements of Chinese troops not only in North China but also in South Hopei. The Japanese Government issued a statement on Japan's decision to augument Imperial force in North China. (See Chapter V.) at 4:00 p.m. on that same day :

The decision of dispatching troops to North China was not intended to frighten China into submission, nor did it mean that Japan was embarking upon a war with her. The action taken by the Japanese Government was entirely in keeping with its avowed intention not to aggravate the situation ; it was calculated to forestall any conflict which would inevitably lead to hostilities on a major scale. (See Chapter V.)

The full reports on the North China Incident will be given in the Japan Year Book, 1938.

Chronological Index of Principal Events

For the convenience of reference a chronological index of principal events in the country's foreign relations is appended :

OPENING OF THE COUNTRY
- 1853—Arrival of American fleet.
- 1854—First Japanese-American Treaty.
- 1856—Arrival of first American civil envoy, Townsend Harris.
- 1857—Harris concludes convention with the Shogunate.
- 1858—Japanese-American Commercial Treaty signed.

OCCUPATION OF TSUSHIMA BY RUSSIA
- 1861—A Russian fleet seizes the island of Tsushima but abandons it shortly afterwards through the intervention of Great Britain.

BOMBARDMENT OF KAGOSHIMA AND SHIMONOSEKI
- 1863—A British fleet bombards Kagoshima city.
- 1864—A combined fleet of Great Britain, the United States, France and the Netherlands bombards Shimonoseki.

IMPERIAL SANCTION OF TREATIES
- 1865—Treaties with Britain, France, the Netherlands, Russia and the United States are sanctioned by the Emperor.

TREATY REVISION
- 1871—Prince Iwakura's mission leaves for the United States and Europe.
- 1882—Count Inouyé's Negotiations with Britain.
- 1888—Count Okuma's Negotiations.
- „ Viscount Aoki's Negotiations.
- 1894—Revised Anglo-Japanese Treaty signed.
- 1897—Similar Treaties concluded with other Powers.

THE PERUVIAN SLAVE SHIP INCIDENT
- 1872—Japanese Government seizes Peruvian slaver "Maria Luz" in Yokohama.

EXPEDITION TO TAIWAN
- 1872—Japan sends a punitive expedition to the island.

EXCHANGE OF SAGHALIEN AND THE KURILE ISLANDS
- 1875—Japan cedes Saghalien to Russia in exchange for the Kurile Islands.

BONIN ISLAND PROBLEM
- 1875—The United States recognizes Japan's territorial sovereignty over the Bonin Islands.

CONVENTION OF TIENTSIN
1885—Count Ito and Li Hung-chang sign the convention defining Sino-Japanese relations in Korea.

NON-ALIENATION OF FUKIEN PROVINCE
1889—Japan guarantees the non-alienation of Fukien province from China.

SINO-JAPANESE WAR
1894—Japan declares war.
1895—Treaty of Shimonoseki concluded.

ANGLO-JAPANESE ALLIANCE
1902—Alliance signed in London.

RUSSO-JAPANESE WAR
1904—Japan declares war.
1905—Treaty of Portsmouth signed.

JAPANESE-AMERICAN ARBITRATION TREATY
1905—Treaty signed in Washington, D. C. on Feb. 11.

PROTECTORATE OF KOREA
1905—Protectorate convention concluded.

PEKING TREATY
1905—Sino-Japanese convention embodying relevant terms of Portsmouth Treaty signed.

EXCLUSION OF JAPANESE SCHOOL CHILDREN IN CALIFORNIA
1906—Movement is started in California for exclusion of Japanese children from common schools.

FRANCO-JAPANESE AND RUSSO-JAPANESE AGREEMENTS
1907—Franco-Japanese Convention concluded.
1907—Russo-Japanese Agreement concluded.

NEW JAPAN-KOREAN AGREEMENT
1907—New Agreement concluded allowing Japan complete supervision of Korean domestic administration.

IMMIGRATION PROBLEM IN CANADA
1907—Japan exchanges on Dec. 3 a memorandum with Canada in connection with the immigration problem.

U.S.-JAPAN ARBITRATION TREATY
1908—Treaty concluded on Sep. 12.

JAPAN-AMERICAN ACCORD
1908—Official Notes exchanged regarding the preservation of peace in the Far East.

ANTUNG-MUKDEN RAILWAY ISSUE
1909—An agreement is signed on Aug. 15 between Japan and China regarding the Antung-Mukden Railway.

PROPOSAL TO NEUTRALIZE THE SOUTH MANCHURIA RAILWAY
1910—Japan refuses on Jan. 21 to accept the proposal of Secretary of State Knox of the United States regarding neutralization of the South Manchuria Railway.

RUSSO-JAPANESE AGREEMENT
1910—A new agreement is concluded on July 4 between Japan and Russia regarding the maintenance of the status quo in Manchuria.

FINAL TREATY REVISION
1910—Japan notifies Great Britain and 10 European countries on July 17 that existing treaties will be revised a year later. On August 4, similar notices are served to France and Austria-Hungary.

ANNEXATION OF KOREA
1910—Treaty of Annexation concluded.

INTERNATIONAL COPYRIGHT TREATY
1910—Japan signs the International Copyright Treaty in Berlin on September 8.

FRANCO-JAPANESE AGREEMENT REGARDING PATENTS AND COPYRIGHT
1911—An agreement is concluded on May 8, regarding patents and copyright in China.

NEW ANGLO-JAPANESE TREATY
1911—Treaty concluded on the basis of the arbitration treaties between Great Britain and the United States.

PUBLICATION OF THE REVISED TREATIES
1911—The United States publishes revised treaty with Japan on April 5. Great Britain, Spain, and Sweden do likewise on April 6, May 15 and July 13 respectively. Italy, Belgium, Denmark, the Netherlands, Switzerland and Canada publish revised treaties with Japan simultaneously on July 15, followed by Germany, Austria-Hungary and France on July 16, August 3, and August 26 respectively.

SETTLEMENT OF RUSSO-JAPANESE INDEMNITIES
1911-The Foreign Office announces that the amounts of the indemnification of private Russian and Japanese subjects for damage done during the Russo-Japanese War have been determined.

RECOGNITION OF THE REPUBLIC OF HUNGARY
1911—Japan accords recognition on September 13.

RUSSO-JAPANESE EXTRADITION CONVENTION
1911—Convention concluded on September 13.

ANTI-JAPANESE ALIEN LAND LAW IN CALIFORNIA
1913—Passage of the so-called Webb Bill.
NANKING INCIDENT
1913—Negatiations regarding the Kunchow, Hankow and Nanking incidents are concluded on October 7, the Chinese accepting all the Japanese demands.
MANCHURIA RAILWAY TREATY
1913—A treaty is concluded between Japan and China regarding the railway building concessions.
RECOGNITION OF THE CHINESE REPUBLIC
1913—Japan recoginzes the Republic of China on October 6 simultaneously with the election of Yuan Shih-kai as president
ABOLITION OF FOREIGN SETTLEMENTS IN CHOSEN
1814—The protocol abrogating the foreign settlements in Chosen, signed on April 20 the preceding year, is published.
THE GREAT WAR
1914—Japan declares war on Germany and Austria.
SINO-JAPANESE PARLEYS
1915—The Chinese Government requests Japan January 8 to delimit the war zone in Shantung and withdraw her troops from that zone. Accordingly, Minister Hioki in Peking holds a conference with Yuan Shih-kai on January 18 to discuss Japan's counter proposals. Japan serves an ultimatum on May 6, and the Chinese Government accepts all the Japanese proposals.
SPANISH-JAPANESE TREATY
1915—Ratifications of a commercial treaty are exchanged on July 10.
ANTI-INDEPENDENT PEACE AGREEMENT
1915—Japan participates on Oct. 19 in the agreement of the Allied powers signed in London prohibiting the signatories from concluding a separate peace with Germany.
WARNING TO CHINA
1915—Anticipating distrubances in connection with the apparent designs of Yuan Shih-kai to revive the Imperial government in China, Japan issues a warning to China on October 28.
PARTICIPATION IN THE ALLIED ECONOMIC CONFERENCE
1916—Baron Yoshio Sakatani leaves for Europe on May 1, to attend the Conference in Paris.
RUSSO-JAPANESE AGREEMENT
1916—The third Russo-Japanese agreement for protection of Japanese and Russian interests in the Far East is signed on July 3.
ISHII-LANSING AGREEMENT
1917—Japan and the United States exchange notes declaring that territorial propinquity creates special relation between countries. This exchange of opinion, published on November 7, is generally known as the Ishii-Lansing Agreement.
SINO-JAPANESE MILITARY ENTENTE
1918—Entente is concluded on May 16, and its text published by the Japanese Foreign Office on May 30.
SIBERIAN EXPEDITION
1818—Japanese participation announced.
DECLARATION OF THE RENDITION OF SHANTUNG
1919—Count Uchida, the Foreign Minister announces the restoration of complete Chinese sovercignty on May 17.
RECOGNITION OF FINLAND
1919—Japan recognizes the independence of the Finnish Republic on May 23.
CONTROL OF THE SIBERIAN RAILWAY
1919—The Siberian Railway Joint Control Conference decides on June 2 to place the Ussuri line, 531.1 km. in length, and the Heilungkiang line, 2,735.6 km. in length, under the control of the Japanese experts' department of the Siberian expenditionary forces.
SEQUESTRATION OF GERMAN PROPERTY
1919—An Emergency Imperial Ordinance is issued on June 23 announcing sequestration of German property.
SIGNING OF THE PEACE TREATIES
1919—Prince Kimmochi Saionji signs the Versailles treaties at 3 o'clock in the afternoon of June 28.
PARTICIPATION IN EUROPAN PROBLEMS
1920—Baron Chinda proposes on March 2 participation in the conference concerning the Dardanelles International Control, but the Japanese proposal is rejected owing to opposition from Great Britain, France and Italy.
DEMAND FOR THE EVACUATION OF SIBERIA
1920—The Soviet Government of Irkutsk

sends an ultimatum to Japan on March 11.

NIKOLAEVSK AFFAIR
1920—Attack on Japanese consulate launched.

DECLARATION OF SIBERIAN POLICY
1920—Japanese Government issues statement re withdrawal of troops.

ANTI-JAPANESE IMMIGRATIONS
1920—Revision of regulations by the Immigration Bureau of the United States.

RENEWAL OF THE ANGLO-JAPANESE ALLIANCE
1920—The Japanese and British Governments notify the Secretariat of the League of Nation on July 14, that the duration of the Anglo-Japanese alliance will be extended for another year.

REOPENING OF THE GERMAN EMBASSY IN TOKYO
1920—Dr. Solf arrives in Japan as the first German ambassador after the Great War.

WASHINGTON CONFERENCE
1921—Conference opens with Japan participating.

THE GENEVA TRI-PARTITE NAVAL DISARMAMENT CONFERENCE
1927—Conference opens with Japan participating.

THE LONDON NAVAL DISARMAMENT CONFERENCE
1930—Conference opens with Japan participating.

THE MANCHURIAN INCIDENT
1931—Outbreak occurs at Mukden.

THE JAPAN-MANCHOUKUO PROTOCOL
1932—Protocol signed whereby Japan extends de jure recognition to the new State.

THE WORLD ECONOMIC CONFERENCE
1933—Conference opens with Japan participating.

THE JAPAN-INDIA TRADE CONFERENCE
1933—Conference held at Simla and New Delhi, India.

1934—New treaty signed at London, on July 12.

MANCHOUKUO ESTABLISHED
1934—The New State was proclaimed "Empire" and Mr. Pu-yi endorsed as Emperor. March 1.

THE JAPAN-BRITAIN TRADE CONFERENCE
1934—Conference adjourned on March 14 in failure.

THE JAPAN-DUTCH CONFERENCE
1934—Conference opened at Batavia on June 8 which adjourned on December 21 indefinitely.

TRANSFERENCE OF NORTH MANCHURIA RAILWAY
1935—Transference of North Manchuria Railway by the U.S.S.R. to Manchoukuo formally signed at Tokyo on March 23.

JAPAN'S WITHDRAWAL FROM THE LEAGUE OF NATIONS
1935—Becomes completely effective on March 26.

THE VISIT OF THE EMPEROR OF MANCHOUKUO
1935—The Emperor of Manchoukuo visits Japan and makes a formal call upon the Emperor of Japan on April 6.

SETTLEMENT OF NORTH-CHINA INCIDENT
1935—All demands of the Japanese garrison at Tientsin on various problems relating to North China accepted by the Nanking Government.

WITHDRAWAL FROM THE WASHINGTON NAVAL TREATY
1935—Japanese Government notifies the U.S.A. Government their intention to terminate the Washington Naval Treaty, December 29.

JAPAN-GERMAN AGREEMENT
1936—The Agreement guarding against the communist International was entered into, between Japan and Germany on November 25, 1936.

List of the Envoys to and from Foreign Countries

JAPANESE ENVOYS TO FOREIGN COUNTRIES

(July 1, 1937)

Country	Representative	Address
Great Britain	Shigeru Yoshida, Ambassador	Embassy of Japan, 37 Portman Square, London, W.I. England

Country	Representative	Address
Great Britain	Shinjiro Matsuyama, Consul-General	Consulate-General of Japan, 15 St., Helen's Place, Bishopsgate, London, E.C. 3. England
France	Iwataro Uchiyama, Chargé d'Affaires	Ambassade du Japon, 24 rue Greuze, Paris, (16°) France
Germany	Viscount Kintoma Mushakōji, Ambassador	Ambassade du Japon, Berlin W. 62, Ahornstr., 1, Allemagne
,,	Sentaro Edo, Consul-General	Consulat Général du Japon, Hamburg, 1, Amsterdamm, 39, (Europahaus) Allemagne
Italy	Dr. Yotaro Sugimura, Ambassador	Ambassade du Japon, Viale Regina Magherita, 260, Rome, Italie
Belgium	Saburo Kurusu, Ambassador	Ambassade du Japon, 1 Boulevard Général Jacques, Ixelles, Bruxelles, Belgique
The U.S.S.R.	Mamoru Shigemitsu, Ambassador	Ambassade du Japon, Malaya Nikitskaya, 13, Moscou. U.R.S.S.
,,	Yujiro Sugishita Consul-General	Consulat Général du Japon, 24 Pekinskaya Ulitsa, Vladivostok, U.R.S.S.
,,	Bunichiro Tanaka, Consul-General	Consulat Général du Japon, 3 Ulitsa Imeni Dzerzinskavo, Alexandrovsk-Sakhalinsky, Sakhalin, U.R.S.S.
,,	Shigeru Shimada, Consul-General	Consulat Général du Japon, 54 Komsomolskaya Ulitsa, Habarovsk, U.R.S.S.
Turkey	Toshihiko Taketomi, Ambassador	Ambassade du Japon, Ayaz Pacha 77, Péra, Stamboul, Turquie
Manchoukuo	General Kenkichi Uyeda, Ambassador	Embassy of Japan, Hsinking
,,	Hanroku Nagaoka, Chargé d'Affaires	Consulate-General of Japan, Harbin
,,	Hakuo Shibasaki, Chargé d'Affaires	Consulate-General of Japan, Hsinking
,,	Takaichi Nakano, Chargé d'Affaires	Consulate-General of Japan, Tiehling
,,	Hiroshi Kawamura, Consul-General	Consulate-General of Japan, Chientao
,,	Shohei Morioka, Consul-General	Consulate-General of Japan, Mukden

CHAPTER VII

NATIONAL DEFENCE

The Imperial Precepts to The Soldiers and Sailors

The forces of Our Empire are in all ages under the command of the Emperor. It is more than twenty-five centuries since the Emperor Jimmu, leading in person the soldiers of the Otomo and Mononobé clans, subjected the unruly tribes of the land and ascended the Imperial Throne to rule over the whole country. During this period the military system has undergone frequent changes in accordance with those in the state of society. In ancient times the rule was that the Emperor should take personal command of the forces; and although the military authority was sometimes delegated to the Empress or to the Prince Imperial, it was scarcely ever entrusted to a subject. In the middle ages, when the civil and military institutions were framed after the Chinese model, the Six Guards were founded, the Right and Left Horse Bureax established, and other organizations, such as that of the Coast Guards, created. The military system was thus completed, but, habituated to a prolonged state of peace, the Imperial Court gradually lost its administrative vigour; in course of time soldiers and farmers became distinct classes, and the early conscription system was replaced by an organization of volunteers, which finally produced the military class. The military power passed over entirely to the leaders of this class; through disturbances in the Empire the political power also fell into their hands; and for about seven centuries the military families held sway. Although these results followed from changes in the state of society and were beyond human control, they were deeply to be deplored, since they were contrary to the fundamental character of Our Empire and to the law of Our Imperial Ancestors. Later on, in the eras of Kokwa and Kaei, the decline of the Tokugawa Shogunate and the new aspect of foreign relations even threatened to impair our national dignity, causing no small anxiety to Our August Grandfather, the Emperor Ninko, and Our August Father, the Emperor Komei, a fact which We recall with awe and gratitude. When in youth We succeeded to the Imperial Throne, the Shogun returned into Our hands the administrative power, and all the feudal lords their fiefs; thus, in a few years, Our entire realm was unified and the ancient régime restored. Due as this was to the meritorious services of Our loyal officers and wise councillors, civil and military, and to the abiding influence of Our Ancestors' benevolence towards the people, yet it must also be attributed to Our subjects' true sense of loyalty and their conviction of the importance of "Great Righteousness." In consideration of these things, being desirous of reconstructing Our military system and of enhancing the glory of Our Empire, We have in the course of the last fifteen years established the present system of the Army and Navy. The supreme command of Our forces is in Our hands, and although We may entrust subordinate commands to Our subjects, yet the ultimate authority We Ourself shall hold and never delegate to any subject. It is Our will that this principle be carefully handed down to posterity and that the Emperor always retain the supreme civil and military power, so that the disgrace of the middle and succeeding ages may never be repeated. Soldiers and Sailors, We are your supreme Commander-in-Chief. Our relations with you will be most intimate when We rely upon you as Our limbs and you look up to Us as your head. Whether We are able to guard the Empire, and so prove Ourself worthy of Heaven's blessings and repay the benevolence of Our Ancestors, depends upon the faithful discharge of your duties as soldiers and sailors. If the majesty and power of Our Empire be impaired, do you share with Us the sorrow; if the glory of Our arms shine resplendent, We will share with you the honour. If you all do your duty, and being one with Us in spirit do your utmost for the protection of the state, Our people will long enjoy the blessings of peace, and the might and dignity of our Empire will shine in the world. As We thus expect much of you, Soldiers and Sailors, We give you the following precepts:—

(1) The soldier and the sailor should

consider loyalty their essential duty. Who that is born in this land can be wanting in the spirit of grateful service to it? No soldier or sailor, especially, can be considered efficient unless this spirit be strong within him. A soldier or a sailor in whom this spirit is not strong, however skilled in art or proficient in science, is a mere puppet; and a body of soldiers or sailors wanting in loyalty, however well ordered and disciplined it may be, is in an emergency no better than a rabble. Remember that, as the protection of the state and the maintenance of its power depend upon the strength of its arms, the growth or decline of this strength must affect the nation's destiny for good or for evil; therefore neither be led astray by current opinions nor meddle in politics, but with single heart fulfil your essential duty of loyalty, and bear in mind that duty is weightier than a mountain, while death is lighter than a feather. Never by failing in moral principle fall into disgrace and bring dishonour upon your name.

(2) The soldier and the sailor should be strict in observing propriety. Soldiers and sailors are organized in grades, from the Marshal and the Admiral of the Fleet down to the private soldier or ordinary seaman; and even within the same rank and grade there are differences in seniority of service according to which juniors should submit to their seniors. Inferiors should regard the orders of their superiors as issuing directly from Us. Always pay due respect not only to your superiors but also to your seniors, even though not serving under them. On the other hand, superiors should never treat their inferiors with contempt or arrogance. Except when official duty requires them to be strict and severe, superiors should treat their inferiors with consideration, making kindness their chief aim, so that all grades may unite in their service to the Emperor. If you, Soldiers and Sailors, neglect to observe propriety, treating your superiors with disrespect and your inferiors with harshness, and thus cause harmonious co-operation to be lost, you will not only be a blight upon the forces but also be unpardonable offenders against the state.

(3) The soldier and the sailor should esteem valour. Ever since the ancient times valour has in our country been held in high esteem, and without it Our subjects would be unworthy of their name. How then may the soldier and the sailor, whose profession it is to confront the enemy in battle, forget even for one instant to be valiant? But there is true valour and false. To be incited by mere impetuosity to violent action cannot be called true valour. The soldier and the sailor should have sound discrimination of right and wrong, cultivate self-possession, and form their plans with deliberation. Never to despise an inferior enemy or fear a superior, but to do one's duty as soldier or sailor—this is true valour. Those who thus appreciate true valour should in their daily intercourse set gentleness first and aim to win the love and esteem of others. If you affect valour and act with violence, the world will in the end detest you and look upon you as wild beasts. Of this you should take heed.

(4) The soldier and the sailor should highly value faithfulness and righteousness. Faithfulness and righteousness are the ordinary duties of man, but the soldier and the sailor, in particular, cannot be without them and remain in the ranks even for a day. Faithfulness implies the keeping of one's word, and righteousness the fulfilment of one's duty. If then you wish to be faithful and righteous in any thing, you must carefully consider at the outset whether you can accomplish it or not. If you thoughtlessly agree to do something that is vague in its nature and bind yourself to unwise obligations, and then try to prove yourself faithful and righteous, you may find yourself in great straits from which there is no escape. In such cases your regrets will be of no avail. Hence you must first make sure whether the thing is righteous and reasonable or not. If you are convinced that you cannot possibly keep your word and maintain righteousness, you had better abandon your engagement at once. Ever since the ancient times there have been repeated instances of great men and heroes who, overwhelmed by misfortune, have perished and left a tarnished name to posterity, simply because in their effort to be faithful in small matters they failed to discern right and wrong with reference to fundamental principles, or because, losing sight of the true path of public duty, they kept faith in private relations. You should, then, take serious warning by these examples.

(5) The soldier and the sailor should make simplicity their aim. If you do not make simplicity your aim, you will become effeminate and frivolous and acquire fondness for luxurious and extravagant ways; you will finally grow selfish and sordid and sink to the last degree of baseness, so that neither loyalty nor valour will avail to save you

from the contempt of the world. It is not too much to say that you will thus fall into a life-long misfortune. If such an evil once makes its appearance among soldiers and sailors, it will certainly spread like an epidemic, and martial spirit and morale will instantly decline. Although, being greatly concerned on this point, We lately issued the Disciplinary Regulations and warned you against this evil, nevertheless, being harassed with anxiety lest it should break out, We hereby reiterate Our warning. Never do you, Soldiers and Sailors, make light of this injunction.

These five articles should not be disregarded even for a moment by soldiers and sailors. Now for putting them into practice, the all important is sincerity. These five articles are the soul of Our soldiers and sailors, and sincerity is the soul of these articles, If the heart be not sincere, words and deeds, however good, are all mere outward show and can avail nothing. If only the heart be sincere, anything can be accomplished. Moreover, these five articles are the Grand Way of Heaven and Earth and the universal law of humanity, easy to observe and to practise. If you, Soldiers and Sailors, in obedience to Our instruction, will observe and practise these principles and fulfil your duty of grateful service to the country, it will be a source of joy, not to Ourself alone, but to all people of Japan.

The 4th day of the 1st month of
the 15th Year of Meiji.
(Imperial Sign Manual)

General

Special Position of Army and Navy The Japanese Army and Navy are under the direct command of the Emperor and neither the Government nor the Diet has any right to interfere in the strategic actions or the number of men or ships to be maintained. In making any decision on military and naval strength or the organization thereof, the Emperor consults the Chiefs of the respective General Staffs, who are thereupon required to submit their plans direct to His Majesty. The plans are then handed to the Prime Minister, who in his turn consults the Diet as to the necessary appropriations. Thus the Diet, while powerless to interfere with the actual naval and military projects, is entitled to determine the amount to be appropriated for their execution. If, however, the Service estimates are reduced in such a way as to render the original projects impossible of excution, this is deemed to be an infringement of the Imperial Prerogative under Article XII of the Constitution.

The Board of Field Marshals and Fleet Admirals This Board was created in 1898 as the Emperor's highest advisory body on military and naval affairs. Its members are at present as follows :

Field Marshal H. I. H. Prince Kan-in ;
Field Marshal H. I. H. Price Nashimoto ;
Fleet Admiral H. I. H. Prince Fushimi.

The High Military Council This is a larger advisory body which was created in 1887. Its membership includes, in addition to that of the above-mentioned Board, the Ministers of War and Marine, the Chiefs of the Naval and Military General Staffs and other generals and admirals specially nominated by the Emperor. Its functions are to advise the Emperor on all matters appertaining to war, especially on the correlation of the various departments of military administration, in the broader sense of the world. The Council may meet sections to deliberate and tender advice on issues concerning the Army or Navy separately.

Present members specially nominated by the Emperor are :

Lieutenant-General	H. I. H. Prince Asaka
Lieutenant-General	H. I. H. Prince Higashkuni
Admiral	Sankichi Takahashi
Admiral	Hisanori Fujita
General	Hisaichi Terauchi
Admiral	Nobumasa Suetsugu
Admiral	Minéo Ōsumi
Lieutenant-General	Kotaro Nakamura

The Military Service System The system of compulsory military service in Japan is by no means a new one. It was established for the first time at the political innovation of Taika (646 A.D.). And the underwent a number of changes in course of time. It was improved greatly by the Taihorei promulgated by the Mommu Tenno in the year 701 A.D. According to this law the whole country was divided into several military districts to facilitate the operation of the law and one-third of the youth in each district was compulsorily enlisted for military discipline. The number of the trained men in Japan in those days is said to have reached more than 100,000. A long period of peace then ensued, with the result that the law gradually dropped out of practice, giving room to the emergence of a division of people into two classes ; namely, warriors on the

one hand and farmers on the other.

The present law relating to military conscription was promulgated in 1872. By this law the conscription system of the country was brought back to what it was in the former times. This is numbered as one of the greatest achievements of the Meiji Tenno.

The fundamental aspects of the Japanese military service system are that it is based upon the unique nature of the Japanese policy and that the people, though the system is called compulsory so far as nomenclature goes, are not only willing, but deem it the highest honour, to serve in the army and the navy. All Japanese men, between 17 and 40 (except those who are disabled or those who have been imprisoned for six years or more) are required to serve.

The service is divided as follows :

(1) Jobi hei-eki (standing service). This is of two kinds : (a) Gen-eki (active service), 2 years for the army and 3 years for the navy ; (b) Yobi-eki (1st reserve service), 5 years and 4 months for the army and 4 years for the navy.

(2) Kobi hei-eki (2nd reserve service), 10 years for the army and 5 years for the navy.

(3) Hoju hei-eki (replenishment reserve service). This is divided into two categories : — (a) First Supplementary Untrained Reservists, 2 years and 4 months for the army and 1 year for the navy, (b) Second Supplementary Untrained Reservists, 12 years and 4 months for the army and 11 years and 4 months for the Navy.

(4) Kokumin hei-eki (national service or Militia), extending in principle for the necessary period in either arm for the man to reach the age of 40.

Men are subjected to medical examination for conscription at the age of 20, and are classed as follows :

Class I ; Class II, A, Class II, B ; Class III ; Class IV ; and Class V. They are then allocated to the various categories of service according to their medical class as follows :

Medical Class	Description	Service to which Allocated
I, II A and B	Fit for active service.	Active service or replenishment reserve.
III	Fit for national service, but not for active servsce.	National service
IV	Unfit for any service.	Exempt from all service.
V	Nature of fitness undecided (may be included in Class I or Class II, A or B, in the following year.)	Allocation Postponed

They are then drafted to different branches of service according to the districts to which they belong and their ability and occupation.

Those who are fit for active service (Class I, Class II, A and B) are enrolled by lottery, at each conscription district, for active service or 1st or 2nd replenishment reserve. (Volunteer enrolments for active service are accepted.) Those having finished the period of active service are placed on the 1st reserve list for terms as stated above. At the end of such terms they are removed to the 2nd reserve, and then finally to the national service. Those who have gone through the period of replenishment reserve service are also transferred to the national service.

Sole supporters of families, and criminals sentenced to over 6 years' imprisonment or penal servitude are also exempt from service,. Those studying at certain schools, Government or private, which are recognized to be of equivalent or superior status to that of middle schools are exempt from conscription examination until the completion of their studies or until they attain their 27th year. Those staying abroad enjoy postponement of service under similar conditions, the age limit being 37.

By virtue of a revision of the conscription law in 1927, the active service of conscripts who have finished the course of a Young Peoples' School is reduced by six months, while that of the graduates from normal schools by nineteen months. In other words, the former have to serve only eighteen months and the latter only five months, instead of full two years. A similar system of short term active service has also been adopted by the Navy.

The term of active service for graduates of middle schools and higher grade schools who have received full disciplinary training while at school and passed the final examination thereof is reduced to 12 months.

The conscription examination of such students is postponed till they reach the age of full 27 years.

After 3 month's active service they may be chosen as cadets and get special

traning for the remaining 9 months. They may be promoted, according to ability, to either corporals or second lieutenants in the first reserve service at or after the expiration of active service. From among the graduates of technical or scientific departments of universities cadets may be chosen to supply technical officers of artillery, engineer and air forces.

Examination for Conscription According to medical examination, conscripts are classified into six grades as mentioned above. The figures for the past 8 years, 1928–1936, were as follows :

	Total Number Examined	Class I	Class II A	Class II B	Class III	Class IV	Class V
1928	568,796	171,744	64,970	119,783	171,758	39,861	680
1929	585,819	175,979	69,372	119,721	178,790	41,075	882
1930	595,505	174,482	69,275	121,961	187,863	40,989	938
1931	619,146	178,355	72,617	124,942	200,263	42,245	724
1932	621,844	174,282	71,556	125,938	207,401	41,951	716
1933	631,099	178,994	72,796	132,681	205,777	40,141	710
1934	641,969	185,432	72,979	135,275	206,810	40,822	651
1935	633,886	188,470	72,833	130,041	201,716	40,108	718
1936	630,802	195,832	73,722	134,744	186,610	34,316	578

Statistics on height and weight ascertained through the medical examinations for recent 8 years, 1928–1936, are as follows :

	Average Height	Average Weight
1928	1.596 m.	52.639 kg.
1929	1.602 m.	52.823 kg.
1930	1.598 m.	52.727 kg.
1931	1.600 m.	53.007 kg.
1932	1.600 m.	52.841 kg.
1933	1.602 m.	52.816 kg.
1934	1.603 m.	52.994 kg.
1935	1.603 m.	52.950 kg.
1936	1.603 m.	53.176 kg.

The grades of education attained by men examined for conscription in recent 8 years, 1928–1936, were :

	University	Higher School	Middle School	Higher Elementary School and Young People's School	Elementary School	Elementary School (Unfinished)	Uneducated
1928	81	1,209	43,309	266,611	209,413	42,200	5,973
1929	143	3,589	50,684	284,081	205,362	36,408	5,553
1930	493	7,303	65,944	296,829	197,312	31,812	4,812
1931	1,721	11,406	65,698	313,628	192,772	28,913	5,009
1932	3,741	13,188	69,147	324,204	182,064	25,323	4,177
1933	6,616	15,049	70,422	339,677	174,024	21,634	3,677
1934	9,031	16,467	72,622	356,135	165,240	18,802	3,672
1935	10,057	17,031	72,034	358,107	155,851	17,394	3,412
1936	10,285	17,155	70,992	373,823	140,910	14,591	3,046

Of those listed above as uneducated 3,463 for 1928, 3,045 for 1929, 2,873 for 1930, 3,090 for 1931, 2,543 for 1932, 2,268 for 1933, 2,433 for 1934, 2,220 for 1935 and 2,044 for 1936 were illiterates. The ratio of illiteracy, which was 4.28 per cent in 1903, 3.44 in 1911 and 2.17 in 1915, has been decreasing steadily, being 0.88 in 1925, 0.70 in 1927, 0.61 in 1928, 0.38 in 1934, 0.35 in 1935 and 0.32 in 1936.

Classified according to occupations of the households from which conscripts come in 1936, farmers head the list with 196,419 or 31.1 per cent of the total. Details follow :

Farmers	196,419
Fishermen	17,512
Miners	8,658
Industrial workers	192,348
Commercial workers	95,867
Transportation	24,486
Communications	5,807
Officials	16,698
Educators, priests, literary men, etc.	30,436
Miscellaneous	14,117
Unoccupied	28,454
Total	630,802

Volunteers The number of volunteers who are from 17 to 20 years of age, regulated by the Military Service Law, Article 7, was 25,891 in 1935 and 13,926 of which were allowed to enter the active service, a decrease of 182 in the number of volunteers and an increase of 1,132 in that of those who passed examination as compared with the previous year.

Conscripts and Leave of Absence Conscripts may return home to attend to family business for periods varying with the necessity of the case, but in no case exceeding 14 days. This departure from the general rule was proposed in 1919 to meet the convenience of the families of conscripts and was carried into effect at once.

Courts-Martial The Court-Martial Law provides that (1) all offences committed by officers and men shall be given public trial, (2) accused persons shall be given the benefit of counsel in their defence. Provision is also made for appeal.

The Army has eight courts-martial, namely, the High, the Divisional and six other temporary ones; the Navy has seven, the High, the Tokyo, the Admiralty and four other temporary ones. Courts-martial are always composed of judges (military or naval officers), law officials (civil) and clerks. The number of these varies in accordance with the nature of the court in question.

Gendarmerie The gendarmerie is under the control of the War Minister and mainly takes charge of military police, although it may assist civil or judicial police. Orders may, therefore, come from Ministers of Home Affairs and Justice. As military police its function is to see military laws and order kept. Guarding of military secrets, policing of fortress districts and naval stations, enforcement of laws concerning conscription, active service, calling out of the reserve, enforcing levy and martial laws, general surveillance of military discipline, and keeping order in war districts; there things come under its administrative responsibility. The searching and detection of crimes among military men, the collection of evidences and the arrest of culprits come under its judicial responsibility. The number of gendarmes is: Japan proper 1,450, Korea 490, Manchuria 190, and Formosa 90.

The Army

Outline History The Army under the Imperial régime was organized for the first time in the fourth year of Meiji (1871), when the samurai of the Kagoshima, Kochi and Yamaguchi clans formed an Imperial Bodyguard consisting of a few battalions, and four regular army divisions were established in Tokyo, Osaka, Kumamoto and Sendai. In January, 1873, the Government adopted a conscription system, by which members of all social classes were held equally liable for military service. The divisions in Nagoya and Hiroshima, which were established that year, were the first fighting units in this country to contain members of the farmer, merchant and other non-samurai classes. The total strength of the Japanese Army at that time was seven divisions consisting of about 36,000 men on peace standing and 46,250 on a war footing.

The number of soldiers to be mobilized was steadily increased after the Saigo Rebellion of 1877, but it was with this "cadre" of seven divisions that Japan defeated China in 1894–5. In the ten years following the Japan-China War, six more divisions were established with the result that Japan was able to put nearly one million men in the field during the Russo-Japanese War of 1904–5.

In 1922 Japan's Army strength reached twenty-one divisions consisting of 308,000 men on peace standing. The peaceful atmosphere in world affairs after the European War and the national financial condition made it necessary for Japan to reduce the army, and as the result of a readjustment effected between 1922 and 1924, a reduction of 1,800 officers, 56,000 men and 13,000 horses was made. This corresponds to a reduction of about five divisions on peace standing. In May, 1925, four more divisions (the 13th, 15th, 17th and 18th) was abolished, and the present strength of the Japanese Army is 17 divisions and about 230,000 men on peace standing, inclusive of the Taiwan and Kwantung Armies.

Army Expenditure

The Army expenditure from 1893–94 down to 1937–38 have been as follows:

Year	Running Expenses	Extraordinary Expenses	Total
1893-94	¥ 12,420,000	¥ 2,301,000	¥ 14,721.000
(Just before Sino-Japanese War)			
1896-97	32,614,000	30,629,000	53,243,000
1903-04	39,353,000	7,529,000	46,884,000
(Just before Russo-Japanese War)			
1906-07	37,835,000	30,045,000	67,870,000
(Just after Russo-Japanese War)			
1912-13	80,175,000	23,950,000	104,125,000
1917-18	88,344,000	35,093,000	123,437,000
1923-24	176,224,000	47,704,000	223,927,000
1924-25	179,331,000	27,403,000	206,734,000
1925-26	170,761,000	44,044,000	214,805,000
1926-27	167,561,000	29,380,000	199,941,000
1927-28	174,190,000	43,913,000	218,104,000
1928-29	167,620,000	81,486,000	249,106,000
1929-30	178,898,000	48,356,000	227,255,000
1930-31	174,546,000	26,278,000	200,824,000
1931-32	163,679,000	63,808,000	227,488,000
1932-33	148,266,000	225,309,000	373,575,000
1933-34	166,471,000	296,173,000	462,644,000
1934-35 (Budget)	169,038,000	284,656,000	453,694,000
1935-36 („)	179,803,000	313,155,000	492,958,000
1936-37 („)	190,900,000	317,400,000	508,310,000
1937-38 („)	217,804,071	510,161,269	727,965,340

ARMY BUDGET FOR 1937-38

(In Yen)

	Ordinary	Extraordinary	Inconnection with Manchurian Incident	Total
Fundamental needs	216,399,408	119,639,178	—	336,038,586
New demands				
For strengthening Imperial Armies in Manchoukuo	—	—	234,728,244	234,728,244
For a greater air force and defence thereof	9,216,117	58,087,313	34,885,103	102,188,533
For improvements of army organization and facilities	5,530,058	19,210,954	—	24,714,012
Scientific preparations	—	40,000,000	—	40,000,000
Others	3,423,865	4,813,154	—	8,237,019
Total of new demands	18,170,040	122,111,421	269,613,347	409,894,808
Reductions from the total of new demands				
Because of the removal of armies in Japan proper to Manchoukuo	16,443,185	941,850	—	17,385,035
Reduction in accordance with the net expenditure in the past 3 years	25,885	18,750	—	44,635
Others	296,307	242,077	—	538,384
Total of the reductions	16,765,377	1,202,677	—	17,968,054
Net new demands	1,404,663	120,908,744	269,613,347	391,926,754
Sum total	217,804,071	240,547,922	269,613,347	727,965,340

Explanations Of the fundamental needs ordinary expenses include disbursements for supporting standing armies, offices and schools while extraordinary expenses are for usual improvements, repairs, etc. indispensable in peace time.

Among the new demands ¥234,000,000 is to be expended for the support and re-inforcement of Imperial Armies in Manchoukuo. Armies in home land will be removed to Manchoukuo and their expenses is to be reduced according-

ly from the ordinary expenses for the fundamental needs mentioned above to the amount of ¥17,000,000.

For a greater air force it is proposed to require ¥352,830,000 in the coming 5 years, 1937–1942, and ¥102,000,000 in the above table is a part of it. For special improvements of army facilities ¥127,860,000 is required for coming 5 years and ¥24,714,000 is allotted to this year. It included all the expenses for improvements of army facilities such as training of soldiers in new army techniques of all kinds, reorganization of corps, general reduction and sanitary equipments.

To keep pace with the advance of scientific equipments and strategem in the armies of the world ¥900,000,000 is to be expended under a 7 year programme and ¥40,000,000 is for the first year of the programme. (See Chapter VIII, Public Finance, Budget for 1937–38).

Administrative Organization

Administration of the Army is conducted by the following three organs, the chiefs thereof working under direct order from the Throne :

The Ministry of War The central organ for military administration. The Ministry contains eight departments, the names and functions of which are listed below :

(a) The Minister's secretariat takes charge of all secret affairs, papers and other records, and general office work.

(b) The Bureau of Personal Affairs is in charge of all the affairs concerning the personnel of the army, It consists of two sections, the one dealing with appointments, promotion, etc., the other of decorations.

(c) The Bureau of Military Affairs is the real centre of military administration, and is responsible for the establishment of the system and organization of the Army, for the proclamation and withdrawal of martial law, and for all the affairs concerning ceremonies to be observed by the soldiers, morals and discipline among the men, the drafting of men and horses to various units, the conscription system, etc., etc.

(d) The Replenishment Bureau is divided into two sections, one for mobilization and the other for co-ordination, and is responsible for the estblishment and improvement of the mobilization system, preparation and coordination of war supplies, improvement of military transportation, etc.

(e) The Arms and Ordnance Bureau consists of the section for rifles and guns and the section for various supplies. It is in the charge of arms, ordnance, and various supplies of war.

(f) The Intendance Bureau has four sections, the Paymaster's, Audit, Clothing and Provisions, and Construction. This bureau is responsible for expenditure, the inspection of accounts, preparation of budgets, provisions, clothing, structures, etc.

(g) The Medical Bureau is responsible for all sanitary and medical arrangements among officers and men. It consists of the section for sanitary affairs and the section for medicine and surgery.

(h) The Judicial Bureau is responsible for the organization of courts-martial and all other affairs in connection with martial law.

The Ministry of War also supervises the following organizations situated in various parts of the country.

(a) The Military Aviation Bureau is the central organ for the study of military aviation, and is required to organize the education of pilots and mechanics, to supervise repairs, replenishment, and purchases of aeronautical supplies, etc.

(b) The Technical Investigation Bureau conducts researches on all technical developments likely to effect military efficiency. Inspection of ordnance and various war supplies is conducted by this bureau. Under its supervision is the Laboratory of Military Science which conducts research on methods of scientific warfare.

(c) The Military Technical Board. This is an organ for deliberation on all techical problems submitted by the War Minister.

(d) The Military Arsenal is responsible for the establishment of designs and plans of arms and ordnance, as well as repairs and examination of various supplies of war inclusive of gunpowder. It has branches in Osaka, Nagoya, Oji, Kokura and Heijo.

(e) The Woolen Factory at Senju is engaged in the manufacture of woollen yarn and clothes, for military supplies.

(f) The Remount Bureau has charge of horse replenishment, including breeding and purchase.

(g) The Military Arms Depot is responsible for the purchase, storage, repairs, maintenance, supply, exchange, and scrapping of arms and ordnance. It also takes care of the guns installed in fortresses. The main office is in Tokyo and there are branches in Chiba, Osaka, Nagoya, Kokura, and Hiroshima.

(h) The Military Clothing Depot has its head office in Tokyo, and branches in Osaka and Hiroshima. It takes care

of the manufacture, purchase, storage, and supply of all clothing supplies.

(i) The Military Hygienic Supplies Depot is responsible for the manufacture, purchase, storage, supply, and inspection of all hygienic supplies.

(j) The Military Depot of Provisions and Forage, with its head office in Tokyo and branches in Osaka and Ujina, is in charge of the preparation and supply of provisions and forage.

(k) The Fortifications Bureau is responsible for the construction, inspection, and maintenance of all defensive structures, besides being required to conduct researches on artillery and military engineering.

(l) The Military Transport Bureau is situated at Ujina and looks after all matters concerning the transportation of troops.

The General Staff It deliberates on national defence and strategy. It is also required to train and supervise all staff officers. The Staff College and the Land Survey Bureau are under the control of the Chief of the General Staff.

The Land Survey Bureau is responsible for the replenishment of military maps, production of maps for public use and the training of experts for the Bureau services.

The Department of Military Training It is in charge of all military schools and the training and education of officers and men, as well as the co-ordination and development of military education; aeronautical education of military aviation, however, is entrusted to the Aviation Bureau, and the training of staff officers comes under the General Staff.

The Department consists of the headquarters and sections for cavalry, artillery, engineers and commissariat.

Field Organization

The Division A division generally consists of 2 infantly brigades, 1 cavalry regiment, 1 engineer battalion, and 1 commissariat battalion. To some larger divisions, a tank corps, or a mountain artillery regiment, or a heavy field artillery regiment, is attached. While a few others include a full cavalry brigade, a regiment of transport or an anti-aircraft regiment. Eight ammunition columns (4 infantry and 4 artillery), 6 field hospitals, and 1 remount depot accompany each division on service. The number is about 10,000 on peace standing. Divisional commanders hold the rank of Lieutenant-General, brigade commanders that of Major-General.

The Regiment An infantry regiment consists of 3 battalions and a machine-gun corps, and an infantry battalion of 3 companies of 150 men each, and a machine gun section. A company is subdivided into three sections.

A cavalry regiment, of which Japan has 25 at present, consists of 2 or 3 squadrons. Eight of these regiments are organized into four independent cavalry brigades, while the remaining seventeen are attached one to each of the divisions.

Japan has 30 artillery regiments and 10 battalions, namely 15 regiments of field artillery, 1 battalion of horse artillery, 4 regiments and 1 battalion of mountain artillery, and 8 regiments of heavy field artillery. A field artillery regiment is divided into 3 battalions, and a battalion into 3 companies. On peace strength a field artillery regiment consists of only 6 batteries each equipped with four guns. In addition there are 3 regiments and 8 battalions of heavy artillery, which are responsible for the defence of fortified zones.

In peace time 1 regiment and 1 battery of anti-aircraft artillery are maintained.

Air Force Japan's air force is divided into units attached to the Army and Navy respectively. The Army air force consists at present of 11 reconnoitering squadrons, 11 fighting squadrons, 4 bombing companies, and 2 balloon companies, consisting of approximately 1,000 planes.

The Peace Strength

A full statistical classification of the peace strength of the Army, with the total number of soldiers nearly 250,000, in 1936, is given below. In addition to the units listed, a force of gendarmerie 2,220 strong and a medical corps, about 1,500 strong are maintained.

Units	No. of Complete Regiments	No. of Additional Battalions
Infantry	70	6
Cavalry	25	—
Field Artillery	14	—
Mountain Artillery	5	1
Mounted Artillery	—	1
Heavy Field Artillery	8	—
Heavy Artillery	3	8
Engineers	—	17
Railway Corps	2	—
Telegraph Corps	2	—
Air Force	9	—
		(corps)
Balloon Corps		1
Commissariat		15

Units	No. of Complete Regiments	No. of Additional Battalions
Tank Corps		2 (corps)
Anti-Aircraft Artillery	1	1

This force is divided into 17 divisions and 34 brigades and was stationed in December, 1935 as follows :

Imperial Guard Division

Divisional headquarters	Tokyo
Headquarters of 1st Infantry Guard Brigade	Tokyo

The Headquarters of special units are distributed as follows :

Tokyo Garrison Head quarters	Tokyo
Headquarters of Chosen Army	Keijo
Headquarters of Taiwan Army	Taihoku
Headquarters of Taiwan Garrison	Taihoku
1st Taiwan Infantry Regiment 1	Taihoku
2nd Taiwan Infantry Regiment 2	Taihoku
Taiwan Mountain Artillery Battalion	Taihoku
Kiirun Heavy Artillery Battalion	Kiirun
Mako Heavy Artillery Battalion	Mako
Heito 8th Flight Regiment	Heito
Headquarters of Kwantung Army	Ryojun
Headquarters of Independent Garrison	Koshurei
1st Infantry Battalion Independent Garrison	Koshurei
2nd Infantry Battalion Independent Garrison	Mukden
3rd Infantry Battalion Independent Garrison	Tashihchiao
4th Infantry Battalion Independent Garrison	Lienshan-kwan
5th Infantry Battalion Independent Garrison	Ssupinkai
6th Infantry Battalion Independent Garrison	Antung
Ryojun Heavy Artillery Battalion	Ryojun
Headquarters of Japanese Force in China	Tientsin
Japanese Infantry Garrison in Tientsin	Tientsin
Japanese Infantry Garrison in Peiping	Peiping

Fortresses

The Army has 17 fortresses at places of strategic importance in different parts of Japan proper and its dependencies. At each of these fortresses, a heavy artillery regiment or battalion is stationed, and in some cases an air force detachment. Their sites and divisional attachments are as follows :

	Site	Division
(1)	Yokosuka	1st
(2)	Chichijima (Bonin Is.)	,,
(3)	Yura	4th
(4)	Amamioshima	6th
(5)	Hoyo	,,
(6)	Tsugaru	7th
(7)	Shimonoseki	12th
(8)	Tsushima	,,
(9)	Sasebo	,,
(10)	Nagasaki	,,
(11)	Iki	12th
(12)	Maizuru	16th
(13)	Chinkaiwan	Chosen Army
(14)	Eikowan	Chosen Army
(15)	Kiirun	Taiwan Army
(16)	Bokoto	,,
(17)	Ryojun (Port Arthur)	Kwantung Army

OCCUPATION OF SENIOR COMMANDS

(April 1, 1937)

Name and Rank	Command
Lieut.-General Tsuneichi Iwakoshi	Tokyo Garrison
Lieut.-General Toshizo Nishio	Guard Division
Lieut.-General Kyosuké Kawamura	1st Division
Lieut.-General Yasuji Okamura	2nd Division
Lieut.-General Masayoshi Itō	3rd Division
Lieut.-General Mei Matsui	4th Division
Lieut.-General Seishiro Itagaki	5th Division
Lieut.-General Toshio Tani	6th Division
Lieut.-General Kazuo Miké	7th Division
Lieut.-General Kumaya Shimomoto	8th Division
Lieut.-General Ban Hasunuma	9th Division
Lieut.-General Rensuké Isogai	10th Division
Lieut.-General Hayao Tada	11th Division
Lieut.-General Otozo Yamada	12th Division
Lieut.-General Kenji Dohihara	14th Division
Lieut.-General Tomoo Kodama	16th Division
Lieut.-General Kameki Otaka	19th Division
Lieut.-General Bunzaburo Kawagishi	20th Division

OVERSEAS COMMANDS

Name and Rank	Command
General Kenkichi Uéda	Kwantung Army
Lieut.-General Kuniaki Koiso	Chosen Army
Lieut.-General Shunroku Hata	Taiwan Army
Lieut.-General Kanichiro Tashiro	Japanese Garrison in China

Promotion and Age Limit

Army officers in service are promoted to higher ranks by selection in accordance with the following rules in time of peace, the time limit being reduced by one-half in war time :

One year from Sub-Lieutenant to Lieutenant, 2 years from Lieutenant to Captain, 4 years to Major, 2 years to Lieutenant-Colonel, 2 years to Colonel, 2 years to Major-General, 3 years to Lieutenant-General. Promotion to full General and then to Marshal is subject only to the Emperor's will.

The age limit for officers on the active list varies according to rank as follows :

General	65
Lieutenant-General	62
Major-General	58
Colonel	55
Lieutenant-Colonel	53
Major	50
Captain	48
Lieutenant and Sub-Lieutenant	45

There is no age limit for Marshals.

Army Education

Schools providing instruction in military affairs are of three categories as follows :

(1) Those under the authority of the Department of Military Education, of which a full list is given below :

Name	Place
Artillery and Engineering School	Tokyo
Infantry School	Chiba prefecture
Cavalry School	,, ,,
Field Artillery School	,, ,,
Heavy Field Artillery School	Kanagawa prefecture
Engineers' School	Chiba ,,
Signallers' School	Tokyo ,,
Mechanical Transport School	,, ,,
Narashino Military School	Chiba ,,
Toyama School	Tokyo city
Military Academy	,, ,,
Military Preparatory School	,, ,,
5 Non-Commissioned Officers' Schools	Tokyo, Sendai, Toyohashi, Kumamoto

Toyama School teaches fencing, gymnastics and military music to both officers and men.

(2) The Staff College (Tokyo City) under the direct control of the General Staff.

(3) Those under the control of various bureaux of the Ministry of War, of which a full list is given below :

Name	Place
Intendance School	Tokyo City
Army Medical School	Toyko City
Army Veterinary School	Tokyo City
Gendarmerie Training School	Tokyo City

Name	Place
Tokorozawa Flying School	Saitama prefecture
Akeno Flying School	Miyé profecture
Hamamatsu Flying School	Shizuoka profecture
Shimoshizu Flying School	Chiba profecture
Engineering School	Tokyo City

The Flying School at Tokorozawa is to give necessary training to military fliers as to how to handle and repair a plane and its engine, and meteorogical observation, besides a knowledge of the materials of which planes and engines are constructed. This school is opened to civilian students. The Flying School at Shimoshizu is to teach aerial photography, aerial communications and reconnoitering. The Akeno Flying

School gives courses to army pilots on the aerial tactics, air navigation, handling of machine-guns on a plane and also on the construction of aerial weapons.

To raise the level of educational capacity and general efficiency among officers, certain special courses and facilities are arranged. Graduates from universities in science or engineering are now entitled to the position of engineer of artillery lieutenants after six months' cadetship, while those from the medical and agricultural colleges are qualified to become surgeon and veterinary lieutenants respectively after three months' cadetship. Non-commissioned officers of ability may be promoted to the rank of lieutenant in virtue of a system adopted in 1930, after a short period of special training. Posts still higher, even to the supreme Marshalship, are open to non-commissioned officers of exceptional ability.

The Navy

Outline History As a result of the policy of seclusion strictly followed by the Shogunate Government of the Tokugawas, Japan was without anything worthy of the name of a navy, when Commodore Perry's fleet entered Uraga Bay in the 6th year of Kaei (1853) with a view to inducing the Shogun's Government to open Japanese ports to the world. By the 4th year of Ansei (1857), however, Japan was in possession of a few warships given her by Holland and England. They formed the first squadron of the Western type that the nation ever had. By the efforts of the Meiji Government, this squadron developed into an efficient fleet of 28 fighting craft and 24 torpedo-boats, with a total tonnage of over 50,000 tons by 1894, when Japan declared war on China. After the Sino-Japanese War, Japan's navy grew very rapidly and in 1902, just before the outbreak of Russo-Japanese War in possession of 78 ships with a total tonnage of 256,816 tons.

The Naval Policy Japan's naval policy was, and is, to maintain a fleet powerful enough to defend the country against any naval force which could be dispatched to the western Pacific by any naval Power of the world. This policy was embodied first in the expansion plan adopted in 1907, including the construction of 8 battleships, 8 battle-cruisers, 21 light cruisers, 64 destroyers, and 32 submarines. As a preliminary to carrying out the plan, it was decided to build 8 battleships, 4 battle-cruisers, 11 light cruisers and a number of destroyers and submarines at a total expenditure of ¥254,000,000. In 1916, the Diet passed the programme to be carried out in the seven years ending 1923. In 1917, the programme was enlarged by a project covering the construction of 2 more battle-cruisers and a number of auxiliary ships in the six years ending 1923. In 1919, this programme was enlarged by a new project covering the construction of 8 capital ships and 85 auxiliary ships at a total expenditure of ¥750,000,000 to be appropriated in the eight years ending 1927. Thus, in 1921, Japan's naval expenditure amounted to about ¥500,000,000 or about one-third of the total amount of the budget.

The 1919 Programme The number and kind of ships to be constructed by the 1919 plan were 8 battleships armed with 16-inch guns (Nagato, Mutsu, Tosa, Kaga, etc.) and 8 battle-cruisers (Amagi, Akagi, etc., etc.) 26 light cruisers, 94 destroyers, and 93 submarines. As a result of the Washington Conference, the construction of these ships was abandoned, the Mutsu and the Nagato being retained on the list, while the Akagi and the Amagi were retained for conversion into plane carriers. (The great earthquake of 1923 made the Amagi unfit for service, and she was replaced by the Kaga).

After the Conference every effort was made to build up a powerful fleet of auxiliary ships to compensate for the deficiency in capital ships, of which Japan was allowed only 9 as against the 15 each of America and Britain. This effort resulted in the establishment of a well balanced fleet of auxiliary ships. The Naval Treaty signed in London in 1930, however, again gave Japan a low ratio in the number and tonnage of eight-inch gun cruisers, and allowed her only 52,700 tons of submarines, in spite of her demand for a minimum of 78,000 tons. This made it necessary further to reinforce the auxiliary fleet.

The 1931 Plan In 1931, the First Naval Replenishment Plan was referred to the Diet which passed it almost unanimously. The plan covers the construction of 4 light cruisers of 8,500 tons each, 12 first class destroyers of 1,400 tons each, 9 first class submarines, 1 large mine-layer, 3 smaller mine-layers, 4 torpedo-boats, and 6 mine-sweepers, at a total expenditure of ¥247,080,000 to be

appropriated in the 6 years.

The 1932 Plan The replenishment plan is accompanied by two other plans, the first of which covers the establishment of 12 naval flying corps on land and an aeronautic arsenal, the improvement and reinforcement of other ships, and the improvement of arms to be mounted on naval planes. planes carried on plane-carriers and The total expenditure for this, amounting to ¥81,970,000, is to be voted by 1936. On its completion, the plan is to be followed by another expansion plan covering the establishment of 2 more flying corps on land at a total expenditure of ¥50,000,000. The second plan supplementary to the 1931 Replenishment Plan covers a total expenditure of ¥44,950,000 to be appropriated for the modernization of capital and auxiliary ships, plane-carriers, submarines, and the replacement of guns, etc. When these replenishment programmes are completed, Japan will have 12 Treaty cruisers, 23 light cruisers, 4 plane-carriers, 4 submarine tenders, 6 minelayers, 8 coast defence ships, 13 gunboats, 79 first class destroyers, 34 second class destroyers, 33 first class submarines, 38 second class submarines, 4 torpedo-boats, 14 mine-sweepers, 3 training-ships, 1 target ship, 2 surveying ships, 17 transports, and 1 ice-breaker.

The naval authorities referred a second naval replenishment plan to the Ministry of Finance for study on October 31, 1932. The plan calls for a total expenditure of ¥460,000,000 covering the construction of one plane-carrier of 8,000 tons, two 8,500 ton cruisers with 6-inch guns, 14 first class destroyers of 1,400 tons each, six submarines, one mine-layer of 5,000 tons type, a number of torpedo-boats and mine-sweepers, and the establishment of 8 flying corps on land, all for completion in the 4 years ending 1936.

Improvement In 1935 the Second Air Force Squadron was added to the Second Fleet which was composed of the Akagi, aircraft carrier, and 9th destroyer flotilla.

Naval defence on Chinese seas was formerly divided into three sections, i.e. north China defended by boats under the Ryojun Minor Naval Station, central China defended by the Third Fleet and south China by boats under the Bako Minor Naval Station. These three were united into one in 1935 and is now defended by the Third Fleet which was composed of the 10th and 11th Squardrons and the 5th Destroyer Squadron.

In addition to the naval barrack which had been instituted in 1933 defence corps were organized in 1935 to reinforce the coastal defence (see "The Three Districts", this Chapter).

An air force enlargement plan has been carried out according to the first and second programmes. Kuré and Saéki air corps were completed, and the four corps at Kisarazu, Maizuru, Tomioka (Yokohama) and Shikaya (Kagoshima prefecture) are to be completed by the end of 1936.

In educational line improvements were made by prolonging school years in Naval College, Naval Engineering College and Naval Paymasters' College from 3 years 8 months to 4 years, and a greater number of freshmen were taken into these colleges.

Naval Expenditure

The naval expenditure from 1893–94 down to 1937–38 have been as follows (As to the minutes of the 1937–38 budget, see Chapter VIII, Public Finance, Budget for 1937–38.)

Year	Running Expenses	Extraordinary Expenses	Total
1893–94 (Just before Sino-Japanese War)	¥ 5,141,000	¥ 2,960,000	¥ 8,101,000
1896–97 (Just after Sino-Japanese War)	7,351,000	12,655,000	20,006,000
1903–04 (Just before Russo-Japanese War)	21,530,000	14,588,000	36,118,000
1906–07 (Just after Russo-Japanese War)	27,991,000	33,885,000	61,876,000
1912–13	41,534,000	53,952,000	95,486,000
1917–18	48,528,000	113,906,000	162,434,000
1925–26	122,242,000	106,761,000	229,003,000
1926–27	127,428,000	109,879,000	237,307,000
1927–28	136,545,000	136,992,000	273,537,000
1928–29	143,026,000	125,106,000	268,132,000
1929–30	147,648,000	120,016,000	267,664,000
1930–31	146,888,000	95,147,000	242,035,000
1931–32	138,914,000	88,215,000	227,129,000
1932–33	140,740,000	172,069,000	312,809,000
1933–34	179,027,000	230,948,000	409,975,000

Year	Running Expenses	Extraordinary Expenses	Total
1934-35 (budget)	199,909,000	289,237,000	489,147,000
1935-36 (,,)	215,917,000	313,765,900	529,683,000
1936-37 (,,)	236,750,000	313,640,000	550,390,000
1937-38 (,,)	273,953,380	407,700,236	681,653,616

Administrative Organization

Warships and other vessels organized into fleets and squadrons actually represent what is called the Japanese Navy, and all the organs under the jurisdiction of the Ministry of Marine are intended for the construction, maintenance, control and successful utilization of these vessels. Each naval station and fleet is placed in the charge of a Commander-in-chief, who is responsible for the discipline and education of his men.

The Minister The Minister of Marine is in charge of the administration of the Navy, while the Chief of the Naval Staff is directly responsible to the Emperor for operation, mobilization and intelligence. The administrative departments under the supervision of the Minister of Marine are the following :

(1) Ministerial Secretariat
(2) Bureau of Military Affairs
(3) Personnel Bureau
(4) Education Bureau
(5) Bureau of Stores
(6) Medical Bureau
(7) Bureau of Accounts and Supplies
(8) Bureau of Civil Engineering
(9) Bureau of Judicial Affairs
(10) Library
(11) Telegraphy Division

The schools under the supervision of the Minister are :

(1) Naval War College (Tokyo). This school is intended for the training of advanced students selected from among naval officers.

(2) Naval College (Etajima). This school is intended for the education of intending naval officers. Warrant officers are also educated here before they are promoted to the rank of special service officer.

(3) Naval Engineering College (Maizuru). This school is intended for the education of intending engineering officers. Warrant engineering officers are received under the same conditions as at the Naval College.

(4) Naval Medical College. This school is to train surgeons and pharmacists and to conduct research in the field of surgery, medicine and naval sanitation. Warrant Ward masters are educated here before they are qualified for the rank of Wardmaster Lieutenant.

(5) Naval Paymasters' College. This school is intended for the education of intending naval paymasters. Warrant Writers are educated here before they are qualified for the rank of Accountant Lieutenants.

Under the Commander-in-Chief The following schools are under the direct supervision of the Commanders-in-Chief of the Naval Stations.

(1) Naval Gunnery School (Yokosuka). Officers, special service officers, warrant officers and seamen of special-ratings are admitted.

(2) Torpedo School (Yokosuka). Officers, warrant officers and seamen specially selected are admitted.

(3) Naval Communication School (Yokosuka). Officers, warrant officers and seamen specially selected are admitted.

(4) Navigation School (Yokosuka). Officers, warrant officers and seamen specially selected are admitted.

(5) Submarine School (Kure). Officers, warrant officers and seamen specially selected are trained here for submarine warfare. Researches on submarine construction and operation are also conducted.

(6) Naval Machinists' School (Yokosuka). This school is for the training of warrant officers and seamen aspiring to the rank of engineering officer, or special service engineering officer, or shipwright.

Active Service Organization

The Three Districts The coasts of Japan and the seas surrounding the country are divided into three Naval Districts, and these districts are placed in the charge of naval stations as follows :

1st Naval District, consisting of the coasts of Aomori, Iwaté, Miyagi, Fukushima, Ibaraki, Chiba Tokyo, Kanagawa, Shidzuoka, Aichi, Miyé, Hokkaido and Karafuto, and the adjacent seas, is in the charge of the Yokosuka Naval Station.

2nd Naval District, consisting of the coasts of Wakayama, Osaka, Hyogo, Okayama, Hiroshima, Yamaguchi, Shimané, Tottori, Kyoto, Fukui, Ishikawa, Toyama, Niigata, Yamagata, Akita, Tokushima, Kochi, Ehimé, Kagawa, Oita,, Miyazaki, and the eastern part of Fukuoka prefecture, and the adjacent

seas, is in the charge of the Kuré Naval Station.

3rd Naval District, consisting of the coasts of the remainder of Fukuoka prefecture, Saga, Nagasaki, Kumamoto, Kagoshima, Okinawa, Taiwan and Chosen and the adjacent seas, is in the charge of the Sasebo Naval Station.

The coasts and adjacent seas of the South Sea Islands, now under mandate to Japan, are in the charge of the Yokosuka Naval Station. There are also minor naval Stations at Maizuru in Kyoto prefecture, Ohminato in Aomori prefecture, Chinkai in Chosen, Bako in the Boko Islands (Pescadores) and Ryojun (Port Arthur) in Kwantosyu (Kwantung).

The naval district have each a naval barrack, which is responsible for the defence of the naval port where it is posted, besides being required to protect the neighbouring district from attack. In addition to the naval barrack, each naval station or minor naval station has a defence corps, which is responsible for the defence of the neighbouring seas. Where there is no naval barrack, the defence corps is required to take care of the port where it is stationed and to protect the neighbouring district from attack. The naval ports and minor naval ports have respectively one or more air force detachments, which are required to protect the port and neighbouring district from naval and aerial raids.

Naval Office in Manchoukuo

Japan's recognition of Manchoukuo and provisions of the Japan-Manchoukuo Protocol necessitated military and naval actions in that country on the part of Japan and to meet the emergency the Naval Department of Japan issued a law in March, 1933, for the establishment of the Naval Department in Manchoukuo to be located in Hsinking.

The Office takes charge of the watch and protection of the rivers and the coast lines of Manchoukuo. The commander is directly under the Emperor, and as to the administration he acts in accordance with the order of the Minister of the Navy of Japan. At present a provisional Naval Defence Brigade is quartered at Harbin and is guarding the banks of the Sungari.

Ryojun (Port Arthur) Naval Station The Imperial Naval Station at Port Arthur was abolished in November, 1922, according to the Naval disarmament programme. But the newly created situation in Manchuria made it a matter of necessity to revive it and it was re-established in April, 1933. The station is under a special regulation independent of the Naval stations in home land. It has a specific duties in the Kwantung Leased Territory and is engaged in the protection of the coasts of Kwantung Province, Manchoukuo and the North China above the Yangtze.

The Standing Fleets

The standing fleets as reorganized on November 3,1936, are as follows :

Combined Fleet

The Combined Fleet is organized with the 1st, 2nd fleets and the 12th Squadron, Mamiya and Naruto appended.

Ist Fleet

1st Squadron—Nagato, Mutsu, Hyuga.
3rd Squadron—Haruna, Kirishima.
8th Squadron—Kinu, Natori, Yura.
1st Destroyer Squadron—Kawachi, 9th and 21st destroyer flotillas.
1st Submarine Squadron—Isuzu, 7th and 8th submarine flotillas.
1st Air Force Squadron—Hosho, Ryujo, and 30th destroyer flotilla.

2nd Fleet

4th Squadron—Takao, Maya.
5th Squadron—Nachi, Haguro, Ashikaga.
2nd Destroyer Squadron—Jintsu, 7th, 8th and 19th destroyer flotillas.
2nd Submarine Squadron—Jingei, 12th, 29th and 30th submarine flotillas.
2nd Air Force Squadron—Kaga, 22nd destroyer flotilla.
12th Squadron—Okishima, Kamoi, 28th destroyer flotilla.

3rd Fleet

10th Squadron—Izumo, Tenryu, Tatsuta.
11th Squadron—Ataka, Toba, Seta, Katada, Hira, Hotzu, Atami, Futami, Kuri, Tsuga and Hasu.
5th Destroyer Squadron—Yubari, 13th and 16th destroyer flotillas.
Saga is appended.

Training Squadron

Yakumo and Iwate.

The Naval Air Force

The Naval Air Force consists of :

(1) 7½ aeroplane corps at Kasumigaura, 5 aeroplane corps at Yokosuka, 5½ aeroplane corps at Tateyama, 1½ aeroplane corps at Sasebo, 2½ corps at Omura, 1½ corps at Kuré, 1½ Corpse at Saheki and 1½ Corps at Ominato, the number of planes belonging to these air corps are unavailable ; and (2) the aircraft-carriers proper, Kaga, Akagi, Hosho, Notoro, Ryujo, Kamoi and several other ships, the number of planes

carried are unavailable. Flying officers and men number over 10,000.

The Personnel

Classified according to ranks, naval officers on the active list were as follows at the end of 1934 :

Admirals to Rear-Admirals and non-executive officers	148
Captains to Lieut.-Commanders and non-executive officers	2,395
Lieutenants to 2nd Sub-Lieutenants, non-executive officers, midshipmen and special service officers	3,958
Warrant officers	1,953
Cadets at school	348
Total	8,802

Equipment Each naval station is equipped with a shipbuilding yard, and one or more dry docks for accomodating warships. The Yokosuka and Kuré arsenals are capable of taking in superdreadnoughts of over 40,000 tons, but those of Sasebo and Maizuru are only fit for building cruisers and smaller ships. There are a number of up-to-date private establishments, such as the Mitsubishi shipyard at Nagasaki, Kawasaki shipyard at Kobé, Fujinagata shipyard at Osaka, and Ishikawajima shipyard at Tokyo. Of these the Mitsubishi and Kawasaki shipyards are capable of building superdreadnoughts.

Warship Building

The first warship built in Japan was the Seiki (870 tons) launched at Yokosuka in 1875. She played an important part in the civil war of 1877. The Hashidaté (4,228 tons), launched just before the Sino-Japanese War of 1894–5, remained the largest warship built at home until 1903. Soon after the Russo-Japanese War, Japan succeeded in building the battle-cruisers Tsukuba (13,800 tons), Ikoma, and Kurama (14,600 tons each), the battleships Satsuma (19,300 tons), Aki (19,250 tons), Kawachi and Settsu (20,800 tons each). The two last named were the first dreadnoughts planned and constructed at home and marked a new stage in the progress of naval architecture in Japan.

The Tsukuba and Kawachi sank 18 and 17 years ago respectively as a result of an explosion of their magazines, the former at Yokosuka and the latter at Tokuyama, while the Satsuma and Aki were removed from the list and sunk in target practice. The Settsu has been converted into a target ship of 16,130 tons and is still in service.

Independent of Foreign Material Up to recent years, Japan was dependent on foreign countries as regards war material, but is now almost independent in this connection. She has ample supplies of coal, iron, copper and zinc as long as she controls the mines in Manchuria. At present 95 per cent of warship building materials is of home production and in case of international competitive building of warships Japan will lose little out of the competition in international payments. The supply of crude oil as still insufficient, but the rapid progress in the oil-shale industry of Manchuria, and the remarkable development of the oil industry in North Saghalien, Formosa, etc., show that the empire will shortly be self-sufficing in this respect also. The Imperial Iron Works at Yawata (Kyushu) has an annual output of about 200,000 tons armour plates, rails, etc., while the Muroran Steel Works of Hokkaido is turning out an ample quantity of steel for use by the Army and Navy. In the chemical industry also, Japan is now almost independent and prepared for any form of chemical warfare.

List of Ships

The Navy consisted on September 30, 1936 of the following ships, classified by types with the total tonnage in each :

Type	No.	Tonnage
Battleships	9	272,070
Training Battleship	1	19,500
1st Class Cruisers	12	107,800
2nd Class Cruisers	25	107,255
Aircraft Carriers	6	68,370
Seaplane Carriers	3	31,050
Submarine Tenders	5	31,015
Mine Layers	6	19,630
Coast Defence Vessels	7	55,450
Gun Boats	11	5,045
1st Class Destroyers	80	95,479
2nd Class Destroyers	30	23,390
1st Class Submarines	37	49,157
2nd Class Submarines	25	20,927
Torpedo Boats	12	2,108
Mine Sweepers	12	6,642
Special Service Ships	21	219,935
Total	302	1,134,823

(Tonnage of ships under construction is not included.)

The full individual list of warships at the same date was :

BATTLESHIPS

Name	Displacement (ton)	When Completed	Nominal Speed (knot)	Main Armaments (centimetre)		High Angle guns (centimetre)	Torpedo Tubes

The Planes

The battle planes in use in the Naval Air Force are of type 3 and type 90. The bombers and torpedo planes in use are of type 13, type 89 and type 92. Some of these machines played an important part in the Sino-Japanese conflict in Shanghai, but some of them are not suitable for an aerial war in the future.

The reconnoitering planes in use are of type 14. They are equipped with a 450 h.p. motor and can cover nearly 200 kilometres an hour. They are armed with a machine-gun mounted behind the seat of the reconnoitering officer, so that he can defend the machine against enemy fire from behind. Their speed is considered too slow for satisfactory service in the future. There are also in use type 15 and type 90.

There are also a few large patrol planes of type 90. No. 1 of these is of metallic material, 21 metres long, 30 metres wide, 12 tons in weight, and is equipped with a number of motors producing 2,100 h.p. in all. Its maximum speed is 220 kilometres an hour. The No. 2 of type 90 is 20 metres long, 30 metres wide, 13 tons in weight, and equipped with motors producing 2,400 h.p. in all. Both of them are superior in capacity to the PN-12 of the American Navy, which has a speed of less than 200 kilometres.

OCCUPANTS OF SENIOR COMMANDS

(May 1, 1937)

Name and Rank		Command
(1) FLEETS AND SQUADRONS:		
Admiral	Sankichi Takahashi	Combined Fleet and 1st Fleet
Vice-Admiral	Takayoshi Kato	2nd Fleet
Vice-Admiral	Koshiro Oikawa	3rd Fleet
(2) YOKOSUKA NAVAL STATION:		
Admiral	Gengo Hyakutaké	Naval Station
Vice-Admiral	Tatsuo Furuichi	Naval Dockyard
Rear-Admiral	Goro Hara	Naval Aeronautical Arsenal
(3) KURÉ NAVAL STATION:		
Vice-Admiral	Takayoshi Kato	Naval Station
Vice-Admiral	Teijiro Toyoda	Naval Dockyard
(4) SASEBO NAVAL STATION:		
Vice-Admiral	Koichi Shiozawa	Naval Station

Name and Rank	Command
Vice-Admiral Shigeru Kikuno	Naval Dockyard
(5) MINOR NAVAL STATIONS:	
Vice-Admiral Kamesaburo Nakamura	Maizuru Minor Station
Rear-Admiral Haruma Izawa	Ominato Minor Station
Rear-Admiral Kotozo Wada	Bako Minor Station
Vice-Admiral Keitaro Hara	Chinkai Minor Station
Rear-Admiral Masaichi Maeda	Ryojun Minor Station
Vice-Admiral Kichijiro Hamada	Manchoukuo Naval Office
Rear-Admiral Denshichi Ogochi	Landing Party at Shanghai

Presidents of Naval Schools

Vice-Admiral Saburo Sato	Naval War College
Vice-Admiral Manbei Demitsu	Naval College
Vice-Admiral Ichiro Kaneda	Naval Engineering College
Surgeon Rear-Admiral Yoshihiro Mukoyama	Naval Medical College
Paymaster Rear-Admiral Juzo Sasaki	Naval Paymasters' College
Rear-Admiral Ninichi Kusaka	Naval Gunnery School
Rear-Admiral Taichi Miki	Torpedo School
Rear-Admiral Boshiro Hosokaya	Naval Communications School
Rear-Admiral Hidehiko Ukita	Submarine School
Rear-Admirol Shiro Koiké	Navigation School
Rear-Admiral Hikohichi Asakuma	Naval Mechanists' School

Naval Promotion

Officers are promoted by selection, and candidates for special promotion are selected at the conference of the Admirals' Council.

The regular course of promotion for them is : Midshipmen, over one year's service on a training ship ; 2nd Sub-Lieutenants, over one year's service ; 1st Sub-Lieutenants, over 18 months' service including 6 months' service in Torpedo or Gunnery School. Lieutenants of over 4 years' service are promoted to Lieutenant-Commander.

Special service 1st Sub-Lieutenants, over two years' service ; Special service 2nd Sub-Lieutenants, over three years' service. Special service Lieutenants (combatants, engineers and paymasters) may be promoted to Lieutenant-Commander by special appointment.

The qualifications for subsequent promotion are as follows :

Promotion	Minimum Service in Lower Rank
Commanders—Lieutenant-Commanders	2 years
Captains—Commanders	2 ,,
Rear-Admirals—Captains	2 ,,
Vice-Admirals—Rear-Admirals	2 ,,
Admirals—Vice-Admirals	Period determined by Imperial order subject to special merit

N. B. 1st class warrant or ranking officer of over 6 years in the service may be promoted to 1st Lieutenant or ranking officer.

CHAPTER VIII

PUBLIC FINANCE

General Outline

The total revenue and expenditure of the Japanese Government at the beginning of the Meiji Era were maintained around the ¥30,000,000 mark, but in recent years they have reached as high as from ¥1,800,000,000 to ¥2,000,000,000 each for general accounts only.[1]

Sources of Income Early in the Meiji Era the land tax constituted the chief financial source of revenue for the State, consequently the farmers provided by far the greater part of the revenue, and the burden business men and industrialists had to bear for the State was very small. The tax revenue in the first year of Meiji amounted to ¥3,150,000, of which the land tax yielded more than 60 per cent. A tax revision was carried out in 1875 and, in consequence, the Government established various new taxes as direct sources of State income.

The Sino-Japanese and Russo-Japanese wars also brought about noteworthy changes in the State finances, because the necessary funds were raised by the issuance of bonds and the imposition of heavy taxes on people. As the Taisho Era coincided with the World War and postwar prosperity periods it was marked by phenomenal business and industrial expansion and increase in State revenue. During this time it became more than apparent that a thorough readjustment of the tax system was necessary, if the burden of taxation was to be equitably distributed. A thorough investigation was made, and after much forethought and drawing on experiences of the past the present system was evolved. The yearly tax revenue in recent years has been around ¥800,000,000, which is 36 per cent of the total State revenue. The customs tariff, because of its international aspect was harder to arrange and the adoption of a national tariff by Japan instead of a conventional one was only realized after difficult diplomatic negotiations.

Japan has a monopoly system of its own, and though a monopoly differs from a tax in principle it is the same in substance. In Japan proper there is a government monopoly in tobacco, salt and camphor and in the colonies one is enforced in saké, opium, ginseng and other special products. The tobacco monopoly is not different in nature from the excise tax on saké distillation and the revenue accruing from it occupies an important position in government finance.

Bonds form an integral part of the country's finance as well as the State revenue and taxes. Bonds were first issued in Japan in 1870 in the form of foreign loans. The first domestic bonds were issued in 1873 by the Meiji Government for the purpose of raising funds to take over the entire amount of debts of the feudal clans. Subsequent issues of bonds followed the outbreak of the Sino-Japanese and Russo-Japanese wars. The nationalization of the railway caused a further increase in the bond issue and at the end of 1912, the closing year of the Meiji Era, the total debts of the Central Government amounted to ¥2,500,000,000. During and immediately after the Great War, there was great activity in financial circles and the Government made large issues of bonds for the purpose of obtaining funds for starting or subsidizing various new industries. The expenses of the Siberian Expedition and Japan's participation in the World War on the Allies' side were met by bond issues as emergency funds and later, the money necessary for the reconstruction of Tokyo and other Kwanto districts devastated by the great earthquake and fire of 1923 was also raised by means of domestic and foreign bonds. The Government also had to issue a great number of bonds for readjustment of the so-called Earthquake Bills and for special loan accommodation to banks after the banking crisis of 1927. Japan's national debts have thus mounted to more than ¥6,000,000,000. (See "Public Debts" for a fuller statement.)

Local Finance Provincial government finance has moved in line with the Central Government finance. The feudal clans were abolished and replaced by prefectural governments in July, 1871, and the total prefectural finance was only ¥16,000,000 in 1873. The promulga-

1 For a detailed historical account of public finances see The Japan Year Book, 1933, Chapter IX.

tion of the city, town and village administration system in 1888 and that of the prefectural administrative system in 1890 were great events marking the establishment of self-government. Provincial expenditure which amounted to ¥43,000,000 in 1891, had increased to ¥336,000,000 by 1926, the largest increase being in the Taisho Era, when, benefiting from the effects of the war-boom on domestic finance and economy and following the lead and encouragement of the Central Government, the prefectural and other self-governing bodies launched all kinds of enterprises, issuing bonds and increasing local taxes to obtain the necessary funds. In the fiscal year 1927–28 the total revenue of all self-governing bodies amounted to ¥2,247,827,513, although it dwindled in subsequent years, the fiscal year 1932–1933, showing a figure of ¥1,473,451,698. (See "Local Expenditure" for the status of recent years.)

Accounts System

In the second year of Meiji, 1869, Shigenobu Okuma (later Marquis Okuma) submitted to the Government a plan calling for the establishment of an accounts system to prevent a reckless disbursement of administrative expenses. In due course, and as a result of this plan, a Ministry of Finance and a fiscal year starting with October and ending with September were instituted. When Hirobumi Ito (later Prince Ito) came home from his inspecting trip to America in 1873, he offered valuable advice to the Government on a financial system and this caused the Government to announce its estimates of accounts. This marked an important point in the accounts system of Japan as it was the prototype of the Government budget, but because of the lack of system, the budget of each Ministry was subject to change by the administrative chief. The fiscal year was changed to from April to March in 1886, and has been so observed since. The opening of the Imperial Diet in 1890 brought about a great improvement in the accounts system of Japan, for each budget has since been subject to approval, and Government income and expenditure has thus come under supervision. The Board of Audit under direct control of the Emperor was also established and to it is assigned the duty of inspecting the Government accounts. These perfected the constitutional accounts system of the Government and at the same time the Accounts Law was promulgated in 1889 and has been enforced since April 1, 1890. This law laid the foundation of the accounts system of Japan and in 1921 it was revised from the so-called "safe" system to the "deposit" system, i.e. the depositing of Government funds in the Bank of Japan.

Special Accounts

Special accounts for the Government's enterprises existed independently of general accounts, before the promulgation of the Accounts Law in 1889. Railway funds, readjustment loans, enterprise funds, hypothec funds and others were included among the special accounts, which were unified by a law issued in 1889. The number of special accounts for the 1890–91 fiscal year was 33, which increased to 61 in 1908. Mr. Yuko Hamaguchi, Finance Minister of the Kato (Takaaki) Cabinet, made a substantial readjustment of special accounts in 1925 and reduced the number to 31. Subsequently, the health insurance special accounts, the postal annuity special accounts and live-stock reinsurance special accounts were established. In 1934 government steel works was omitted and communication enterprises was put into the list instead. The present number of special accounts is 34 and is as follows: (1) China Cultural Enterprise, (2) Health Insurance, (3) Government Mint, (4) Printing Bureau, (5) Monopoly Bureau, (6) Deposits Bureau, (7) Education Funds, (8) National Loan Readjustment Funds, (9) Public Loans, (10) Indemnity, (11) National Property Readjustment Funds, (12) Education Improvement and Agricultural Village Promotion Funds, (13) Korean Government-General, (14) Korean Railway Stores Funds, (15) Formosan Government-General, (16) Formosan Railway Stores Funds, (17) Kwantung Government, (18) Karafuto Government, (19) South Seas Government, (20) Army Arsenals, (21) Senju Military Cloth Manufactory, (22) Naval Arsenals, (23) Naval Gunpowder Magazines, (24) Naval Fuel Factories, (25) Imperial Universities, (26) Government Colleges, (27) Government Schools and Libraries, (28) Rice Demand and Supply Regulation, (29) Live-Stock Reinsurance, (30) Post Office Life Insurance, (31) Korean Post Office Life Insurance, (32) Postal Annuity Service, (33) Imperial Government Railways, and (34) Communication Enterprises.

Finance of Sino-Japanese War

The Sino-Japanese War imparted a great impetus to Japanese finance. The war started in June, 1894, and ended in March, 1895. The enormous amount of ¥200,000,000 was needed to pay for it.

Japan got 200,000,000 taels of war indemnity from China as the result of the Shimonoseki Peace Treaty and also 35,000,000 taels as recompense for the retrocession of Liaotung Peninsula. This amount made good the war expenses Japan paid, but immediately after it State finance increased tremendously. The Government appropriated ¥190,000,000 into the general budget for the 1896–97 fiscal year, being double that of the year before. The increase was caused through armament expansion, the management of Formosa (which was the territory ceded by China), expansion of traffic and communications and sundry other enterprises necessary for national development. The Government appropriated for 32 kinds of continuation enterprises ¥180,000,000 in 1896 and of this amount ¥48,000,000 was apportioned for that year only. The majority of continuation enterprises were armament expansion such as ¥47,000,000 for warship construction, ¥33,000,000 for naval ordnance, ¥17,000,000 for army expenses, and ¥14,000,000 for naval construction. These enterprises spread over from two to nine years. It is necessary to explain the war indemnity special accounts to know the financial expansion. Converted into the Japanese currency, the indemnity totalled ¥372,599,488. Excluding the maintenance funds for the Weihaiwei guard, the indemnity of ¥364,599,656 was used for the following purposes :

All supplementary funds to extraordinary war funds	¥78,957,164
Army expansion funds	56,798,638
Navy expansion funds	139,259,387
Establishment of Government Steel Works	579,762
Transferred to general accounts for 1897–98 fiscal year	3,214,484
Transferred to general accounts for 1898–99 fiscal year	12,000,000
Transferred to Imperial Household accounts	20,000,000
Warship and torpedo funds	30,000,000
Educational funds	10,000,000
Balance at the end of 1902–3 fiscal year	3,700,218

Russo-Japanese War and Post-War Finance

The Russo-Japanese War began in February of 1904 and ended in September of 1905 with the conclusion of the Portsmouth Treaty. Japan spent ¥1,716,000,000 in war expenses (extraordinary war funds special accounts during the period of one year and four months. In addition, extraordinary expenses spent by various Ministries in connection with the War amounted to ¥238,000,000, thus making an aggregate of ¥1,954,000,000. The war funds were raised by means of taxes to the amount of ¥215,000,000, surplus funds totalling ¥147,000,000, special funds of ¥670,000,000 (an aggregate of ¥430,000,000), and the remainder by floating public loans and obtaining temporary advances totalling ¥1,559,000,000. The Government increased taxes on all the principal items on the tax list and also expanded the spheres of the oil consumption tax and the tobacco monopoly system, thereby raising ¥62,000,000. It also established the textile consumption tax and transit tax and introduced the salt monopoly, thereby realizing an income of ¥74,000,000. During the time the War was in progress, four new Divisions were formed with the approval of the Diet. In the 1906–7 fiscal year two more Divisions were established. In consequence, six Divisions were added to the existing 18 Divisions and these constituted the standing army. In the Navy, two warships, the Nisshin and Kasuga, were purchased during the War, and after the War naval expansion was carried out, resulting in the increase of total warship tonnage from 260,000 tons before the War to 513,000 tons in 1908. The railway nationalization bill was approved in the 22nd session of the Imperial Diet and was enforced in 1907. The Government issued ¥476,000,000 bonds for the purpose of nationalization. A considerable increase was made in State expenditure after the War. The 1904–5 fiscal year's expenditure of the general accounts totalling ¥277,000,000 increased to ¥600,000,000 in 1907 and those of the special accounts made a remarkable increase from ¥130,000,000 to ¥678,000,000 during the same period. In tax revenue, the amount of ¥190,000,000 for 1904 doubled by 1907. Cries for financial retrenchment began to be heard. The Saionji Cabinet and the second Katsura Cabinet tried to retrench but without success.

Finance during the Taisho Era

A financial retrenchment policy was adopted by the Government early in the Taisho Era. Japan's foreign trade

witnessed a marked increase in the excess of imports and its national debts increased heavily. The specie reserve quickly dwindled. How to bring about an equilibrium in the international debit and credit relations formed a source of great concern. A great change was made in Japan's financial and economic conditions by the outbreak of the World War in July,1914. Japan participated in the War on the Allies' side and sent its expeditionary force to Shantung. The Okuma Cabinet was responsible for Japan's participation. Prior to this, a two-Division increase controversy formed the cause of the downfall of the Saionji Cabinet, but the outbreak of the War solved the problem. Two army divisions were established in Korea. The army readjustment plan, the eight-four squadron programme, naval construction and other wartime expenses contributed to a financial expansion. The Government expenditure for the 1918–19 fiscal year totalled more than ¥1,000,000,000, showing a 40 per cent gain over the year before. The continuation expenses commencing with the 1918–19 fiscal year totalled more than ¥1,000,000,000. The Government revised taxes, raised the income tax by 15 per cent, alcholic drink tax by 14 per cent and beer tax by 20 per cent and established a wartime profit tax, the result being an increased revenue of ¥63,000,000.

The World War Japanese economic prosperity attained its high-water mark during the World War. A considerable increase was made in the country's visible and invisible foreign trade. An excess of exports over imports in the visible trade for 1915, 1916, 1917 and 1918 recorded an aggregate of ¥1,400,000,000 and that in the invisible trade reached nearly the same amount. This resulted in a remarkable increase of specie. The amount of specie holdings at the end of 1914 was only ¥340,000,000, but this had increased to as much as ¥2,180,000,000 by the end of 1920. The Hara Cabinet which replaced the Terauchi Cabinet in September, 1918, took advantage of the war-time boom to carry out an inflation policy, funds being specially allotted to armament replenishment and to the perfecting of traffic and communication arrangements. In connection with the completion of the eight-eight battle squadron programme, sponsored by the navy, the continuation expenses of ¥408,000,000 for warship construction were increased by ¥750,000,000. National defence expenses involving the army and navy totalled ¥620,000,000, of which ¥242,000,000 was for the army and the rest for the navy. A new appropriation of ¥225,000,000 was added to the existing appropriation of ¥292,000,000 for the telephone enterprise, to be disbursed over eight years commencing 1920 ; and in the telegraphic enterprises ¥74,000,000 was to be spent in the following seven years. The enormous amount of ¥1,420,000,000 was set aside for railway enterprises, spread over 10 years. The Government expenditure for the 1922–23 fiscal year totalled ¥1,491,000,000. To raise this amount bonds were issued, the sinking fund was suspended and taxes increased. The great financial reaction that overtook Japan in 1920 and the great Kwanto earthquake and fire of 1923 precipitated Japanese finance and economy into a miserable plight. These incidents virtually formed the causes of the difficulties in national finance and economy which now faced the country.

Financial Readjustment The Katō (Tomosaburo) Cabinet carried out a great financial readjustment. The Washington Treaty was ratified in Japan in August, 1922. According to the 1923–24 fiscal year's budget formulated by this Cabinet the basic naval plan was so changed that the Government reduced naval continuation expenses by ¥200,000,000 and was also able to make a cut of ¥70,000,000 in other enterprises. Substantial cuts were made in the income, business, stamp and drug taxes and the oil consumption tax was abolished. The reduction totalled ¥14,000,000. The sinking fund system was restored and ¥42,000,000 was devoted to it. Immediately after the death of Premier Viscount Katō in August, 1923, the great Kwanto earthquake took place. The disbursement of ¥572,000,000 on a six-year programme for earthquake reconstruction work was fixed by the Yamamoto Cabinet that succeeded the Kato Cabinet, and all these expenses were to be raised by bonds. The Yamamoto Cabinet was in existence for only four months and the Kiyoura Cabinet, which succeeded it, had to enforce the plan. The Government raised a £25,000,000 loan in London and a $150,000,000 loan in New York. These foreign loans totalled ¥550,000,000, and of this ¥350,000,000 was devoted to the con-

version of sterling bonds, which matured in February and July, 1925, and the remaining amount was used for earthquake and fire reconstruction. A financial retrenchment policy was adopted by the Coalition Cabinet headed by Premier Count Takaaki Kato of the Kenseikai. The Cabinet was inducted in June, 1924, and a no-loan policy was adopted by the Cabinet and taxation readjustment was also enforced. An independent Kenseikai Cabinet took the place of the Coalition Cabinet in March, 1925. Thoroughgoing revision was introduced into the income, land, business, inheritance, saké, textile consumption and hemp taxes. The transit, soy sauce, and drug taxes were revised and the capital interest and soft drink taxes were created. A reduction of ¥37,000,000 in taxes was realized for the 1926–27 fiscal year.

Finance of the Showa Era

For the first six years of Showa, 1926–32, two Seiyukai and two Minseito (incarnation of Kenseikai) Cabinets came into power in turn. The former stands for a traditional inflation policy, while the latter for deflation policy. Financial retrenchment was carried out by the Minseito Cabinet and the gold embargo was lifted by the Hamaguchi Cabinet (Minseito) on January 11, 1930. Mr. Junnosuké Inouyé, Finance Minister of that Cabinet, adopted a no-loan policy. A noteworthy financial retrenchment was carried out by Mr. Inouyé in the 1930–31 fiscal year's budget and, in spite of a strenuous protest of the army and navy against the retrenchment, he was successful in effecting a saving of ¥35,063,000, of which ¥26,733,000 was the result of reduction of administrative expenses and ¥8,330,000 by the postponement of different enterprises.

The Inukai Cabinet that succeeded the Wakatsuki Cabinet on December 16, 1931, decided to adopt the budget drafted by the preceding Cabinet, due to lack of time to formulate a new one. However, the new Cabinet determined not to abolish the Overseas Ministry and other administrative organizations, which were decided on by the Wakatsuki Cabinet, but decided to carry out administrative readjustment. The sinking fund system was temporarily suspended and the deficient income was to be met by loans.

Expansion of National Budget

The first expansion of Japanese finance had come with the World War when it had passed the ¥1,000,000,000 mark and the next one came with the Manchurian incident, and in 1932 it approached the ¥2,000,000,000 mark. The increase of the national ways and means has continued since and the budget for 1937–38 reaches ¥2,815,000,000, an increase of ¥510,000,000 or 18 per cent as compared with the previous year.

The exchange rate of the yen has greatly fluctuated in these years. But even when the lowered value of the yen is taken into consideration the real increase in the national finance cannot be denied, while the rate of its per capita increase far exceeds that of population.

The per capita national wealth, national revenue and national expenditure has all increased greatly since 1912, the index numbers on the base of that year taken as 100 being 290.2 for national wealth in 1930, 289.7 for national revenue in 1934 and 293.3 for national expenditure in 1936, or the rate of their increase is almost on a par with each other.

Among the resources of national revenue the rate of increase of loans is much more ahead of those of taxes and others. The outstanding national loans which amounted to ¥2,570,000,000 at the end of 1912 increased to ¥9,850,000,000 at the end of 1935, or the per capita debt increased from ¥50 for Japan proper and ¥37 for the Empire in 1912 to ¥145 for Japan proper and ¥102 for the Empire in 1935. The amount of national revenue from taxes increased, but its proportion to the total revenue decreased and the per capita amount of taxes also decreased as compared with 1926 as given in the following table.

As to the finance of local governments its increase is still more rapid than that of the central government, its index number in 1935 being 555.65 against 371.71 for the latter as compared with 1912.

Budget for the Fiscal Year 1936–37

General Features The Budget for the General Account for the fiscal year 1936–37, as compiled by the Okada Government, was submitted to the Diet in the 68th Session (December 1935 to January 1936), but failed to pass on account of the dissolution of the House of Representatives in January, 1936. Whereupon, the Government, pursuant to Article 71 of the Imperial Constitution, was to adopt the Budget of the preceding fiscal year and to compile a Working Budget. Before the compilation of such Working Budget, however, there was so sudden a change of Government that the Hirota Government which, on coming into power, had no time to embody its new policies in the Budget, decided to compile a Working Budget generally on the basis of the principles on which the Budget that failed to pass the Diet was compiled. The Working Budget was thus compiled within the limits of the Formal Budget (Budget of the preceding fiscal year) with its provisions for ¥2,215,413,809 of revenue and ¥2,045,010,641 of expenditure, and

(1) with respect to the items not covered by the appropriations made in the Formal Budget, requirements were made in the first, second and third Supplementary Budgets approved by the Diet in the 69th Session, specially held;

(2) with regard to the amounts made available, only upon the passing of the Supplementary Budget, within the limits of the Formal Budget, such were added to the Working Budget.

Following the sequence of the Working Budget and the Supplementary Budgets, we find that,

1. The Working Budget, as first compiled within the limits of the Formal Budget, was as follows:

Revenue	¥
Ordinary	1,427,539,814
Extraordinary	126,249,091
Normal revenue	115,836,263
Receipts from the issue of public loans	10,412,828
Total	1,553,788,905
Expenditure	
Ordinary	1,290,513,044
Extraordinary	513,647,441
Total	1,804,160,485

2. The first Supplementary Budget was as follows:

Revenue	¥
Ordinary	22,254,075
Extraordinary	340,088,187
Normal revenue	33,691,291
Receipts from the issue of public loans	306,396,896
Total	362,342,262
Expenditure	
Ordinary	61,519,108
Extraordinary	300,823,154
Total	362,342,262

3. Amounts added, upon the passing of the first Supplementary Budget, to the Working Budget within the limits of the Formal Budget were as follows :

Revenue	¥
Ordinary	265,147
Extraordinary	386,923,572
Normal revenue	1,162,044
Receipts from the issue of public loans	385,761,528
Total	387,188,719
Expenditure	
Ordinary	8,712,872
Extraordinary	128,104,267
Total	136,817,139

4. The second Supplementary Budget was as follows :

Revenue	¥
Ordinary	0
Extraordinary	1,266,309
Normal revenue	0
Receipts from the issue of public loans	1,266,309
Total	1,266,309
Expenditure	
Ordinary	515,039
Extraordinary	2,584,467
Total	3,099,506

5. Amounts added, upon the passing of the second Supplementary Budget, to the Working Budget within the limits of the Formal Budget were as follows :

Revenue	¥
Ordinary	0
Extraordinary	0
Total	0
Expenditure	
Ordinary	30,106
Extraordinary	4,079,789
Total	4,109,895

6. The third Supplementary Budget was as follows :

Revenue	¥
Ordinary	0
Extraordinary	988,000
Normal revenue	988,000
Receipts from the issue of public loans	0
Total	988,000
Expenditure	
Ordinary	0
Extraordinary	988,000
Total	988,000

Including these amounts, the total figures of the Working Budget for the fiscal year 1936–37 were as follows :

Revenue	
Ordinary	1,450,059,036
Extraordinary	855,515,159
Normal revenue	151,677,598
Receipts from the issue of public loans	703,837,561
Total	2,305,574,195
Expenditure	¥
Ordinary	1,361,290,169
Extraordinary	950,227,118
Total	2,311,517,287
Excess of expenditure	5,943,092

Note:—The above excess of expenditure will be defrayed out of the revenue excess to be realised in the operation of the Budget by a reduction in the appropriations for interest payments of the national debt resulting from its conversion.

An examination of the expenditure for new undertakings as appropriated in the above Working Budget reveals the following figures as branches of the newly increased expenditure :

	Ordinary	Extraordinary (In yen)	Total
Expenditure defrayed out of special sources	10,500	17,255,001	17,265,501
Expenditure to be defrayed out of the first Treasury funds in reserve	17,839,049	783,887	18,622,936
Expenditure for interest payments of national loans	11,494,921	0	11,494,921
Expenditure for armaments improvement	16,264,820	194,427,046	210,691,866
Expenditure in connection with the Manchurian incident	0	198,415,475	198,415,475
Expenditure for compensation payments resulting from the decline in the yen exchange	66,683,415	6,642,654	73,326,069
Expenditure for repair works following disasters	0	33,399,346	33,399,346
Expenditure for the development of the north-eastern districts of Japan proper	69,155	8,873,667	8,942,822
Increase in Treasury funds in reserve	15,000,000	—	15,000,000
Other expenditure	24,365,676	110,369,763	134,735,439
Total	151,727,536	570,166,839	721,894,375

When dividing this newly increased amount of ¥721,894,375 into the Working Budget as first compiled, amounts added, upon the passing of the Supplementary Budgets, to the Working Budget within the limits of the Formal Budget, and the Supplementary Budget, the following figures will be given :

	¥
Working Budget as first compiled and amounts added, upon the passing of the Supplementary Budgets, to the Working Budget within the limits of the Formal Budget	370,086,464
Supplementary Budgets	351,807,911
First	347,720,405
Second	3,099,506
Third	988,000

Comparison of the Budget for 1936-37 with the Budget for 1935-36

General Account The following are the comparisons of the Working Budget for 1936-37 with the Budget for 1935-36 :

	Working Budget 1936-37	Budget 1935-36 (In yen)	Increase(+) or Decrease(−) compared with 1935-36
Reveuue			
Ordinary	1,450,059,036	1,335,540,914	(+) 114,518,122
Extraordinary	855,515,159	879,872,895	(−) 24,357,736
Normal revenue	151,677,598	101,221,695	(+) 50,455,903
Receipts from the issue of public loans	703,837,561	771,651,200	(−) 67,813,639
Transfer of surplus from the preceding year	—	7,000,000	(−) 7,000,000
Total	2,305,574,195	2,215,413,809	(+) 90,160,386
Expenditure			
Ordinary	1,361,290,169	1,310,302,528	(+) 50,987,641
Extraordinary	950,227,118	905,111,281	(+) 45,115,837
Total	2,311,517,287	2,215,413,809	(+) 96,103,478

Note:—For comparison with the Working Budget for 1936-37, certain adjustments were made in the figures of the Budget for 1935-36.

Special Accounts The working Budget for the most important Special Accounts for 1936-37, and comparison with the Budget for 1936-36 are as follows :

(a) Imperial Government Railways' Special Account.

	1936-37	1935-36 (In yen)	Increase (+) or Decrease (−) compared with 1935-36
Capital Account			
Revenue	148,828,097	144,787,532	(+) 4,040,565
Expenditure	163,631,550	164,611,532	(−) 979,982
Stores Account			
Revenue	209,680,551	204,723,000	(+) 4,957,551
Expenditure	209,680,551	204,723,000	(+) 4,957,551
Profit and Loss Account			
Revenue	778,995,190	749,159,887	(+) 29,835,303
Expenditure	669,667,093	647,872,355	(+) 21,794,738

(b) Special Account for Postal, Telegraph and Telephone Services.

Capital Account			
Revenue	53,971,594	51,368,320	(+) 2,603,274
Expenditure	60,657,605	51,368,320	(+) 9,289,285
Stores Account			
Revenue	47,204,154	43,033,007	(+) 4,171,147
Expenditure	47,204,154	43,033,007	(+) 4,171,147

	1936–37	1935–36	Increase (+) or Decrease (−) compared with 1935–36
		(In yen)	
Working Account			
Revenue	319,498,159	296,010,162	(+) 23,487,997
Expenditure	293,746,639	274,599,780	(+) 19,146,859
(c) Special Accounts for Special Regions.			
(1) Chōsen (Korea)			
Revenue	329,003,042	290,267,414	(+) 38,735,628
Expenditure	329,003,042	290,267,414	(+) 38,735,628
(2) Taiwan (Formosa)			
Revenue	133,536,344	120,136,081	(+) 13,400,263
Expenditure	133,536,344	120,136,081	(+) 13,400,263
(3) Kwantung			
Revenue	28,789,983	24,830,053	(+) 3,959,740
Expenditure	28,789,793	24,830,053	(+) 3,859,740
(4) Karafuto (Japanese Saghalien)			
Revenue	33,333,586	28,703,053	(+) 4,630,533
Expenditure	33,333,586	28,703,053	(+) 4,630,533
(5) Nanyō (Mandated Territory in the Pacific)			
Revenue	7,388,058	5,977,696	(+) 1,410,362
Expenditure	7,388,058	5,977,696	(+) 1,410,362

Public Loan Programme

The issue of public loans for financing expenditure for the General Account and Special Accounts amounts during the current year to ¥787,457,561, representing a decline of ¥64,193,639 as compared with that in the Budget for 1935–36. The public loan programme for the fiscal year 1936–37 and comparisons with that of the preceding year are as follows :

GENERAL ACCOUNT

Items	1936–37	1935–36	Increase (+) or Decrease (−) compared with 1935–36
		(In yen)	
Loans for reconstruction works necessitated by the earthquake of 1923	7,006,996	7,454,339	(−) 447,343
Loans for the improvement of roads	9,990,438	5,574,943	(+) 4,415,495
Loans for expenditure in connection with the Manchurian incident	173,905,475	170,754,797	(+) 3,150,678
Loans for the covering of revenue deficits	512,934,652	587,867,121	(−) 74,932,469
Total	703,837,561	771,651,200	(−) 67,813,639

SPECIAL ACCOUNTS

Loans for postal, telegraph and telephone services and for reconstruction works necessitated by the earthquake of 1923	14,000,000	14,500,000	(−) 500,000
Loans for the construction and improvement of Government railways	38,000,000	41,500,000	(−) 3,500,000
Loans for public undertakings in Chōsen	31,620,000	24,000,000	(+) 7,620,000
Total	83,620,000	80,000,000	(+) 3,620,900
Grand Total	787,457,561	851,651,200	(−) 64,193,639

Note:—(1) The financial year begins on April 1st and ends on March 31st.

(2) The figures for 1934-35 and the years preceding it represent the settled accounts.

(3) * Represent the actual account on July 31st, 1936.

(4) ᵍ Represent the budget.

(5) The Gross Surplus indicates the balance of revenue over expenditure for each financial year. Under the Budget and Account Act the surplus actually created in each financial year is transferred to the Budget of the succeeding year, and this Gross Surplus includes not only the accumulation brought forward from preceding financial years, but the Net Surplus actually created in that year. Accordingly, the balance of the Gross and the Net Surplus represents a part or a total of the surplus created in the preceding year. Part of the Gross Surplus is applied to disbursements and deferred expenditures during the succeeding year and the balance is carried forward as a surplus to be used in succeeding financial years.

The National Loan Redemption Act as amended in 1915 required redemption of the national debt up to 1.16% of the amount outstanding at the commencement of the preceding financial year. The same Act was further amended in 1927 to require an additional appropriation for the same purpose of not less than 25% of the surplus actually created in the year before the preceding one. The same Act as amended in 1932, however, provides that the amount to be applied to redemption of the national debt shall, for the time being, be over one-third of 1.16% of the total debts outstanding at the commencement of the preceding financial year, and that the additional appropriation for the same purpose of not less than 25% of the surplus actually created in the year before the preceding one may be suspended.

(6) As fractions not exceeding 1 yen are omitted, the totals of the figures and the grand total do not correspond. This explanation is applicable to the following tables.

STATE REVENUE

Taxes and Duties

The income tax, our primary direct national tax, is supplemented by other direct taxes, namely, the land tax, the business profits tax and the capital interest tax. There are, in addition, other kinds of taxes such as the succession tax, the tax on liquors (the tax on saké, tax on alcoholic liquors and beer tax), the table water tax, the sugar excise, the textiles consumption tax, the tax on bourses, the registration tax, stamp duties, customs duties, etc.

The receipts from taxes during the fiscal year 1934-35 were as follows :

Items	Receipts	Ratio to total receipts
	¥	%
Income tax	196,381,569	21.32
Land tax	57,646,105	6.26
Business profits tax	48,647,690	5.28
Capital interest tax	14,872,771	1.61
Succession tax	27,172,695	2.95
Mining tax	4,246,981	0.46
Tax on liquors	218,434,780	23.71
Table water tax	3,484,197	0.38
Sugar excise	74,967,309	8.04
Textiles consumption tax	35,696,416	3.87
Tax on bourses	14,547,878	1.58
Customs duties	144,433,229	15.68
Tonnage dues	2,649,734	0.29
Stamp duties	78,026,780	8.47
Miscellaneous	2,142	0.00
Total	921,210,276	100.00

As to the regulation on taxes and duties see the Japan Year Book, 1936, pp. 280-301.

Department of Marine

XIV	Expenses for the Manchurian Incident	1,786,116
	Sum total of extraordinary expenditure	1,824,441
	Grand total of the Supplementary Budget	6,207,142

National Debts

Internal Loans .Five per cent Loan. This loan was issued mainly for the construction and improvement of the Imperial Railways, the compensation for and purchase of private railways, the colonization of Chōsen, Taiwan, Karafuto and Kwantung Province, the relief of Japanese subjects suffering war losses, rewards for distinguished services during the war in 1914–15, retiring allowances in connection with both the administrative readjustment and the reduction of armaments, compensation payments resulting from the reduction of the Army and Navy, the reconstruction works in Tokyo and Yokohama necessitated by the Earthquake disaster, compensation for loss sustained by the Bank of Japan in discounting Earthquake Bills, compensation for losses sustained in the accommodation extended to banking institutions in Taiwan and other undertakings and various grants. The total issue amounted to ¥2,239,463,575, of which ¥387,872,100 has already been redeemed, and ¥1,851,591,475 was still unredeemed at the end of March, 1936.

Five per cent Loan ("Kō"). This loan was issued during 1908–09 for the purpose of meeting the purchase price of railways owned by seventeen private companies. The total issue amounted to ¥476,318,800, of which part has been redeemed, and ¥396,698,300 left unredeemed. The principal private railways in our country were purchased outright through the proceeds of this loan and were then unified into one State system.

Five per cent Loan (Special). This loan was issued in 1906 to the amount of ¥199,671,600 for the purpose of meeting a part of the supplementary war expenditures of the war of 1904-05 These loan bonds were marked "O." There were also other loan bonds specially issued in the same year in lieu of cash as rewards for distinguished services during that war. These bonds, amounting to ¥110,735,400, were marked "Wa." It should, however, be noted that the outstanding amount of this loan, ¥120,816,750, which had to be redeemed by the end of 1935, was entirely repaid on November 30 by means of conversion into 4 per cent. Exchequer bonds of ¥122,656,000.

Five per cent Loan ("Onshi") This loan, amounting to ¥30,000,000, was created at the time of the annexation of Chōsen by Imperial Ordinance No.327 of 1910, and the bonds were specially granted to the Korean peers and to public corporations of the Peninsula to provide funds for promoting industries and education and for famine relief.

Four per cent Loan (1st and 2nd Series). In order to consolidate the national debt, the Government planned the conversion into low-interest loans of the outstanding five per cent domestic loans issued before 1905, and with this end in view issued in the home market with better results than had been anticipated two series of four per cent loans amounting to ¥100,000,000 each. As all the five per cent loan bonds previously issued were accepted in place of cash in subscriptions for the four per cent loans, such receipts amounted to ¥64,-467,500 in the first issue of the four per cent loans and to ¥86,612,920 in the second. In addition to the total issue of ¥200,000,000 mentioned above, there was a loan of the first issue amounting to ¥76,220,500 which was delivered in place of cash to the bondholders of various five per cent loans.

Four per cent Loan. In accordance with the provisions of Law No. 16 of 1933, the Government issued in December, 1933, a 4 per cent Loan with a total face-value of ¥8,145,550. The object of the Loan was to deliver to the Industrial Bank of Japan those loan bonds to be appropriated for the increase, arising out of the decline in the yen exchange, in the principal and interest charges of the Industrial Bank of Japan 5 per cent Sterling Debentures which were issued in 1908 for the purpose of making advances to the Korean Government for the development of enterprises in that country. Further issues were made to the amount of ¥59,026,150 in 1934 and ¥9,332,100 in 1935 for such purposes as the purchase of raw silk given as security in the case of accommodation of funds made by banks, the purchase of private railways, compensation payments to private railways and tramways, the purchase of private camphor manufacturing factories in Taiwan, and rewards for distinguished services in the Manchurian incident. The total issues from 1933 to 1935 thus amounted to ¥76,-503,800, of which ¥450 was redeemed, and ¥76,503,350 remained outstanding at the end of the fiscal year 1935–36.

Five per cent Exchequer Bonds. These bonds were issued in order to enable the Government to consolidate and redeem foreign loans, meet extraordinary war expenditure, create and expand higher institutions of learning, construct and improve railways, improve roads, encourage various undertakings in Chōsen, Taiwan and Karafuto, consolidate the short-term bonds issued under the

Special Exchequer Notes Law for financing export bills and giving financial assistance to the Allied Powers during 1914–15, finance reconstruction works in districts damaged by the Great Earthquake and to make loans to banks holding Earthquake Bills. The aggregate amount of existing bonds issued from 1916 to March 1933 reached ¥4,842,258,450, of which ¥2,706,145,225 has been redeemed, the balance, ¥2,136,113,-225, remaining unsettled.

Four and a Half per cent Exchequer Bonds. These bonds were issued in order to enable the Government to meet expenditures in connection with the Manchurian incident, the extension of the telegraph and telephone system, improvement of roads, reconstruction works necessitated by the Earthquake of 1923, construction and improvement of railways, various public undertakings in Chōsen, Taiwan, Kwantung Province and Karafuto, and the covering of revenue deficits in the General Account. The total issues from 1932 to March 1933 reached ¥715,000,000.

Four per cent Exchecquer Bonds. These bonds were issued for the first time in 1933 for the same purpose as that of the Four and a Half per cent Exchequer Bonds mentioned above. The total amount of issue reached ¥3,070,-424,000 during the fiscal years 1933–34 to 1935–36.

External Loans Four per cent Sterling Loan of 1899 (1st Series). For the purpose of meeting the expenditures required for the construction of railways, improvement of the existing Government railways, construction of railways in the Hokkaido, steel manufacture, and extension of the telephone system, and in accordance with the provisions of the Railway Construction Law (Law No. 4, 1892), the Public Undertakings Loan Regulations (Law No. 59, 1896), the Hokkaido Railway Construction Law (Law No. 93, 1896), and Law No. 101, 1899, the Government issued in London in June, 1899, a loan of £10,000,000 at an issue-price of £90 per £100 face-value, the principal of which is, after being left unpaid for ten years from January, 1899, to be redeemed at the option of the Government by means of drawings in forty-five years.

Five per cent Sterling Loan of 1907. For the purpose of consolidating and redeeming the six per cent Sterling Loan of £22,000,000 issued in 1904, the Government raised in March, 1907, a five per cent Loan of £23,000,000 in London and Paris in accordance with the provisions of Law No. 1 of 1904, Law No. 12 of 1905, and Imperial Ordinance No. 23 of 1907. Its issue-price was £99 10s. per £100 face-value, and the principal is to be left unpaid until March 11th, 1922 and thereafter to be redeemed at the option of the Government by means of drawings by March 12th, 1947. The proceeds of this loan were applied to the redemption of the six per cent Sterling Loan of £22,000,-000.

Four per cent Franc Loan of 1910. The four per cent Loan was issued in Paris in 1910 with the same object as the four per cent Loan issued at home; a portion of its proceeds was appropriated for use as fund for the redemption of domestic loan bonds which were exported abroad, and another portion for use as fund for the redemption of the five per cent loan bonds in circulation at home. The amount of issue was 450,000,000 francs, the rate of interest four per cent, payable on the 15th of May and of November every year; the issue-price was 95 francs 50 centimes, and the loan to remain unredeemed for ten years, after which it is to be redeemed within fifty years.

Four per cent Sterling Loan of 1910 (3rd Series). The four per cent Sterling Loan of 1910 was raised for the same purpose as the four per cent Loan raised at home and the four per cent Franc Loan of 1910 raised in France, and was employed as fund for the redemption of the indorsed War and five per cent Loans in circulation in London. The amount of issue was £11,000,000, the rate of interest four per cent, payable on the 1st of June and December, the issue-price was £95, and the loan to remain unredeemed for ten years, after which it is to be redeemed within fifty years; and as the object of the loan was the redemption of the indorsed loans above referred to, the latter loan bonds were accepted in place of cash when the former loan was subscribed for.

South Manchuria Railway Sterling Debentures. The South Manchuria Railway Sterling Debentures of 1911 with a total face-value of £6,000,000, the liability for the service of which had been assumed by the Government, fell due on January 1, 1936, and consequently, the greater part of the Debentures was redeemed in cash, while a part was repaid by conversion into domestic loan. The Government has been further authorised by Law No. 34 of 1933 to subscribe to the shares of the Company, and instead of paying cash for the shares, to assume liability for the service of the Sterling Debentures with a total face-value of £4,000,000 issued in

1933 by the Company. Thus, the amount outstanding at the end of March, 1936 was £4,000,000.

Six and a Half per cent Gold Bonds of 1924. Partly, for the purpose of redeeming the outstanding Imperial Japanese Government 4½% Sterling Loan of the first and second series, which fell due January 15, 1925, and July 10, 1925, respectively and, partly for the purpose of purchasing materials and supplies for reconstruction necessitated by the earthquake and fire of September, 1923, loans with a total face value of 150,000,000 dollars were issued in New York in February, 1924, in accordance with Art. 1 of law No. 56, 1923 and Art. V of Law No. 6, 1906. The issue-price was 92½ dollars per 100 dollars face value and the loan is to remain unredeemed for fifteen years, after which it is to be redeemed within fifteen years, namely, by February 1, 1954.

Six per cent Sterling Loan of 1924. Loans with a total face-value of £25,000,000 were issued in London in February, 1924, in accordance with Art. 1 of Law No. 56 promulgated in 1923 and Art. V Law No. 6, in 1906, for the same purpose as the 6½% Loan of 1924 issued in the United States of America. The issue-price was £87½ per £100 face-value and the loan is to remain unredeemed for fifteen years, after which it is to be redeemed within twenty years, namely, by July 10, 1959.

Five and a Half per cent Sterling Loan of 1930. For the conversion of the 4% Sterling Loan of 1905, the Government issued a 5½ per cent Sterling Loan of £12,500,000 in London in May, 1930 in accordance with the provisions of Law No. 6 of 1906. The issue-price was £90 per £100 face-value. The principal is to be left unpaid for ten years, after which it is to be redeemed by May 1, 1965.

Five and a Half per cent Gold Bonds of 1930. For the conversion of the 4% Sterling Loan of 1905, loans with a total face-value of $71,000,000, were issued in New York in May, 1930 in accordance with Law No. 6 of 1906. The issue-price was $90 per $100 face-value. The loan is to remain unredeemed for ten years, after which it is to be redeemd by May 1, 1965.

Staté Property

(1) The Legal Definition and Categories of State Property.

State Property mentioned above is defined under Article 1 of the State Property Law, promulgated by Law No. 43 in April, 1921 as follows :

" The State Property under this Law includes all the State-owned real estate and such movable estate and rights belonging to the State as provided in the Imperial Ordinance."

Article 1 of the Imperial Ordinance No. 15 concerning the State Property Law defines, however, State movable estate and rights that are State Property in the following manner :

" The following State-owned movable estate and rights are to be State Property as provided in Article 1 of the State Property Law :

(a) Ships, floats, floating piers and floating docks.

(b) Appendages of real estate or movable estate given in (a).

(c) Machine and important equipment in Government factories such as iron works, shipbuilding yards, arsenals, the mint, tobacco mills and railways.

(d) Surface rights, servitudes, mining rights, alluvial mineral rights and other rights similar to these rights.

(e) Rights relating to stocks and investments.

The scope of the term " factory " under (c) above is to be determined by the respective Ministers after consultation with the Minister of Finance."

State-owned movable estate and rights, such as, cash, deposits, loans, common fixtures and books, for instance, not mentioned in the above provisions are therefore State Property in substance, but do not come under the provisions of this Law.

Article 2 of the State Property Law divides State Property into four classes, namely, Public Property, Official Property, Property used for Forestry Management and Miscellaneous Property. Public Property is that directly used or to be used for public service by the State; Official Property is that used or to be used, by the State, for Shinto Shrines, or for State service and enterprises or for residences of officials and other personnel ; Property used for Forestry Management is that used or to be used, by the State, for the management of forests, while Miscellaneous Property is that not belonging to these three categories.

(2) The Legal Limitation of the Content of the " State Property Account " and its Categories.

Article 26 of the State Property Law requires the Government to make a yearly statement of the increase or decrease in the State Property, and, every fifth year, to issue a comprehensive report covering the entire property for the period ; and both these statements are to undergo examination by the Auditing Board and then are to be presented to the Imperial Diet.

The following are, however, excluded from the statements :—

(a) Movable estate and rights owned by the State ; but not subject to the provisions of the Imperial Ordinance, that is, State Property in reality if not in law (Art. 1, State Property Law ; Art. 1, Imperial Ordinance concerning the State Property Law).

(b) State Property belonging to the Governments of Chōsen, Taiwan, Karafuto, Kwantung, and Nanyo (Mandated Territories in the South Pacific) in which the State Property Law has not yet been put into effect.

(c) Public Property (Art. 28, State Property Law).

(d) The value of lands used for religious purposes by Buddhist temples, the public land of public corporations and of sites of Shinto shrines (Art. 2 and 5, Ordinance No. 14, Department of Finance).

The figures given in the following table are based on these official statements of State Property, and accordingly, the total value of the property owned by the Imperial Japanese Government including State Property mentioned in (a)—(d) above will be much higher than the figures given in this table. With respect to the property mentioned in (b), however, we have stated the value on March 31, 1933 for purposes of reference. Recognizing that it is expedient to apply the State Property Law to these colonies, the Government is now making preparations therefor, and when this law is put into effect, the property in these regions will be included in the statements. Further, as there prevails an opinion that the value and volume of property mentioned in (c) and (d) should be given in the statements, they will in-

cluded therein in the near future.

(3) Administration of State Property.

The administrative service over State Property includes both direct management and general administration, the former under the direction of the respective Departments, the latter under the Minister of Finance. Each Minister administers the State Property of his Department; but the Minister of Finance also undertakes, as the competent Minister, the general management of all the Property and, thus, unifies the direct management by each Minister, keeping one in touch with the other, so as to secure the full use of the Property.

(4) The Increase or Decrease in State Property.

The increase in the total value of State Property is attributed to such factors as the purchase, expropriation and contribution of property, construction of buildings and ships, and the acquisition of rights (acquisition of real estate without owner, acquisition of stocks and of rights due to investment, establishment of surface rights, etc.), while the decrease in property is due to the sale, conveyance without compensation, exchange and collapse of property, and extinction of rights (extinctive prescription, reduction of capital, etc.). Moreover, the re-valuation of property made every fifth year causes an increase or decrease in the total value of State Property.

(5) The Funds from the Adjustment of State Property.

With the exception of receipts coming under other special accounts and those from the disposition of State forests and plains or of uncultivated places in the Hokkaidō, the receipts from the adjustment and disposition of State Property and other miscellaneous receipts constitute the Funds from the Adjustment of State Property and the revenue and expenditure are segregated in a Special Account.

These funds are transferred to the General Account and then, in addition to being used for building and repair and other expenditure necessary for the adjustment of State Property, are, in case of necessity, used for purposes other than those mentioned above in accordance with the Budget Estimates (Articles 1—4, Special Account Law for Funds from the Adjustment of State Property by Law No. 6, 1922; Exceptions in the Special Account Law for Funds from the Adjustment of State Property by Law No. 15, 1927).

The following are the statistics of revenue and expenditure in the Funds from the Adjustment of State Property for the financial years 1926–27 to 1936–37 :—

Financial Years	Revenue	Expenditure
	(In yen)	
1926–27	8,302,504	2,566,297
1927–28	12,904,110	15,228,282
1928–29	11,373,386	15,913,470
1929–30	9,349,573	9,102,751
1930–31	6,439,664	6,237,805
1931–32	4,870,211	5,963,898
1932–33	4,755,566	5,823,635
1933–34	5,973,512	6,198,998
1934–35	7,523,004	6,786,056
1935–36	5,629,495	5,629,267
1936–37	7,777,856	7,777,769

Note :—The figures for the financial years 1926–27 to 1934–35 represent the settled accounts, but those for 1935–36 and 1936–37 the budget estimates.

Note:—

(1) The figures for 1926 were computed by adding the increase in the value of State property in each financial year to the appraised value of 1927; those for 1928 to 1931, by adding the increase in each financial year to the appraised value of 1927; and those for 1933 and 1934, by adding the increase in each financial year to the appraised value of 1932.

(2) The following are excluded from this table: (a) State movable estate and rights not provided in the Imperial Ordinance, (b) Public Property, (c) State property belonging to our colonial Governments, (d) lands used for religious purposes by Buddhist temples and sites of Shinto shrines, and (e) public land of public corporations.

Appendix—The value of State Property under the jurisdiction of our colonial Governments on March 31, 1935 is as follows:

	¥
Government of Chōsen	632,353,017
Government of Taiwan	303,091,213
Government of Karafuto	49,886,037
Government of Kwantung	158,677,055
Government of Nanyo (Mandated Territory in the North Pacific)	17,723,189
Total	1,161,730,512

Note:—This table indicates only the value of State-owned real estate and ships and their equipment, but excludes the value of Public Property.

Deposits Bureau of the Department of Finance

Organization Although the Deposits Bureau of the Department of Finance has been in existence since 1877, it was only after many changes that the present system was established in 1925. The chief of this Bureau is under the control and supervision of the Minister of Finance and he is responsible for its activities and efficiency. Its finances are segregated in a Special Account and the Bureau is given control over the expenditure of its entire revenue. The chief business of the Bureau is not merely confined to the control of deposits, but also includes the investment and management of other funds. The deposits, which are made according to laws and ordinances, consist, for the most part, of postal savings deposits received by the Government; but the funds of the Deposits Bureau also include other deposits, reserves in the Special Account of the Deposits Bureau and surpluses. All business connected with receipt and payment of cash is transacted on behalf of the Bureau by the Bank of Japan in accordance with instructions from the Minister of Finance.

Investment of the Funds It is laid down by law that the funds of the Deposits Bureau are to be invested solely for the benefit of the State and the public in a profitable and safe manner, and that such investments are to be made only after investigation of their purposes and methods in consultation with the Committee on Investments of the Deposits Bureau. The following is an explanation of the nature of the Committee and the methods it employs.

This Committee consists of the following members: The Minister of Finance, as the chairman, the Parliamentary Vice-Minister of Finance, high officials of the Government Offices concerned, one of the Chief Auditors of the Auditing Board, the Governor of the Bank of Japan and other learned and experienced persons. The number of full members is not to exceed fifteen; but in order to meet special needs, temporary members may be appointed. The Committee is placed under the supervision of the Minister of Finance, and its function is to answer the questions of the Minister, after both investigation and study of matters relating to the investment of the funds of the Deposits Bureau. At the beginning of every fiscal year, the Minister of Finance is to draw up the necessary plan to govern the investment of the funds to submit it to this Committee, and the same process is to be undertaken should there be any occasion to supplement or to change this plan. In addition to answering the question of the Minister of Finance the Committee may send him proposals concerning the investment of the funds of the Deposits Bureau. The Minister should present to the Committee, after every fiscal year, a report stating particulars of important matters concerning conditions of investment of the funds of the Deposits Bureau and changes in the funds invested.

As mentioned above, the funds of the Deposits Bureau are to be invested for the benefit of the State and the public welfare in a profitable and safe manner. Consequently, in conformity with this principle, the investment of funds is to be limited to the following items:

(a) The subscription to, underwriting or purchasing of national loans or making of loans to the General or Special Accounts of the Government.

(b) The subscription to, underwriting or purchasing of local loans or health insurance association's loans or making of loans to local public corporations or health insurance associations.

(c) The subscription to, underwriting or purchasing of bonds issued by corporations organized under special laws or making of loans redeemable within a period not exceeding three years to these corporations.

(d) Loans to banks organized under special laws but not authorized to issue debentures.

(e) The subscription to and purchasing of foreign Government bonds.

(f) Deposits with the Bank of Japan to be held abroad for designated purposes.

These items only indicate the method of the investment of the funds and the question whether any particular investment is for the promotion of the benefit of the State or public welfare or whether it is profitable and safe is left to the joint consideration and decision of the Minister of Finance and this Committee.

The investment of the funds of the Deposits Bureau is determined, within the limits mentioned above, at the beginning of every fiscal year. The Deposits Bureau gives, at the end of March, 1936, the following figures of investment, classified according to purposes:

Items	(In thousands, of yen)	%
National loans	1,790,128	41.09
Loans to the General and Special Accounts	88,759	2.04
Local funds invested	1,917,794	44.02
Special advances	213,734	4.91
Funds held abroad	254	0
Cash	202,238	4.64
Others	143,597	3.30
Total	4,356,504	100.00

Local funds representing the funds to be invested for the benefit of local districts to local public corporations, various associations and individuals are advanced from the Deposits Bureau to the borrowers either directly or through special banks and similar institutions. These funds are allotted for the following purposes :—

A. Advances to be generally made every year for :

(a) Public utility undertakings of public corporations such as water supply works, prevention of disasters, sanitary arrangements, improvement of roads, rivers and harbours, road making and construction of bridges, reclamation works, construction of school-houses and teachers' dwelling-houses, electric and gas enterprises, and tramway, local railway and car enterprises.

(b) Social works such as housing reform and the establishment of public markets, public pawnshops, day nurseries and intelligence offices and others.

(c) Enterprises by various associations such as land adjustment associations, industrial associations, forestry associations, fishery associations, live-stock breeding associations, manufacturers' associations and commercial associations and those by federations of these associations.

B. Advances to be made for urgent needs :

Repair works of disasters, reconstruction works necessitated by the earthquake, accommodation to the silk-raising industry, the relief of the unemployed, and accommodation to middle and lower class merchants, manufacturers and farmers.

C. Advances to be made for :

Such institutions as public corporations and various associations in our colonies.

As to the rate of interest paid on the deposits, it is to be noted that the rate was reduced to 3 per cent per annum for the greater part of postal savings. The postal savings amount to about 73 per cent of the total amount of the funds of the Deposits Bureau and details are given in the Balance Sheet of the Deposits Bureau (Table No. 91). Other deposits are divided into two classes, namely, fixed deposits and ordinary deposits. The rate of interest on fixed deposits is in principle 3 per cent per annum, but the rate on deposits of such character that the depositing of cash is confined by laws and ordinances to the Deposits Bureau is 3.5 per cent. The rate on ordinary deposits is in principle 1.5 per cent per annum, while that on deposits of corporations other than public corporations is 1 per cent. These rates have been effective since October 1, 1932. On the other hand, the rate for the greater part of the local funds advanced before October 1, 1932 remains 4 1/5 per cent and that for the new advances made after that time is 3 1/5 per cent ; but when advances are made through banks and similar institutions, these intermediate institutions gain 7/10 per cent and the actual borrowers must pay at the rate of 4 4/5 per cent for the advances made before October 1, 1932 and 3 9/10 per cent for those after that time.

3. Plans approved in 1935.

Plans for the investment of funds to the amount of ¥555,100,000 were made in the fiscal year 1935. Of these, items involving more than 5 million yen each are as follows :

	¥
(a) Loans to public corporations and various associations	65,500,000
(b) Loans for repair works following disasters of 1934 (repair works for which Treasury grants have been made)	51,200,000
(c) Loans for repair works following disasters of 1934 (repair works for which no Treasury grants have been made)	8,000,000
(d) Loans for repair works following disasters of 1935	46,000,000
(e) Loans to public corporations and various associations for the conversion of high-interest loans	17,000,000
(f) Emergency loans for the relief of unemployment	22,000,000
(g) Loans for city planning	7,000,000
(h) Emergency loans for the silk-raising industry	20,000,000
(i) Loans for the purchase of fertilizers	10,000,000
(j) Loans to industrial associations as guaranteed by the Government	25,000,000

	¥
(k) Long-term investments of the funds carried forward, without being advanced, from the preceding years	64,000,000
(l) Loans for reconstruction works in Taiwan necessitated by the earthquake	6,130,000
(m) Emergency loans for the storage of rice in Chōsen	30,000,000
(n) Funds for underwriting national loans to be issued in 1935 and for purchases of loan bonds	150,000,000
(o) Funds for the purchase of national bonds of Manchoukuo	9,600,000

Japan's National Wealth

The national wealth of Japan proper of for 1930, the most recent date for this kind of investigation, was estimated at ¥110,188,000,000, according to the Cabinet Statistics Bureau. This included the following :

	(Estimates in Thousands of Yen)
Land	41,091,348
Mines	6,499,651
Ports, harbours and canals	343,143
Bridges	483,000
Trees	6,706,815
Live-stock and poultry	346,356
Buildings	22,843,300
Industrial machines and apparatus	1,809,381
Railways and tramways (street cars)	3,598,138
Vehicles and aeroplanes	660,294
Shipping	2,060,236
Electric and gas supply equipment	1,905,044
Telegraph and telephone equipment	196,102

	(Estimates in Thousands of Yen)
Waterworks equipment	352,779
Property in store:	18,847,310
Household property	12,473,201
Manufactures	5,457,466
Coins and gold and silver bullion	916,643
Miscellaneous	2,250,515
Balance of Japan's foreign credit and debt	191,592
Total	110,188,004

The total is classified into Government property 12 per cent, public property 4 per cent and private property 84 per cent. Land, buildings, trees and mines combined make a total of 81 per cent in all. Manufactured goods, railways and tramways, shipping, electric and gas equipment and industrial machines and tools combined make a total of 13 per cent. The remainder is 6 per cent. The national wealth for 1930 per household was ¥8,672 and per capita was ¥1,710. The change of national wealth, investigated by Mr. Hideomi Takahashi, a statistical authority in Japan, follows :

Time of	Year	National wealth (in millions of yen)
Arrival of "Black Ships"	1851	5,085
Sakuradamon Murder Incident	1860	5,769
Meiji Restoration	1868	6,818
Abolition of feudal clans and establishment of prefectural government	1873	7,317
Satsuma Rebellion	1877	8,571
Promulgation of Imperial Constitution	1889	13,043
Sino-Japanese War	1894	16,667
Russo-Japanese War	1904	22,742
First Year of Taisho Era	1912	37,524
	1921	93,026
June,	1924	101,978
March,	1925	105,742

A Survey on the Formation of the 1937–38 National Budget and Local Finance

1937–38 National Budget

Quasi-war Time System The Hirota Cabinet decided and announced seven national policies containing 14 items on August 25, 1936. These included (1) perfection of national defence, (2) renovation and improvement of the educational system, (3) adjustment of the central and local taxation systems, (4) stabilization of national livelihood, (5) promotion of industry and expansion of trade, (6) establishment of major policies toward Manchuria, and (7) adjustment and improvement of the administrative system.

For the stabilization of national livelihood, mention was made of measures to prevent natural calamities, expand public sanitary facilities, effect an economic rehabilitation of the agricultural, mountain and fishing villages and promote medium-size and small-scale industry and commerce. In connection with the promotion of industry and the expansion of trade, six items were enumerated including (a) strengthening of the control of the electricity industry, (b) attainment of self-sufficiency in liquid fuel, iron and steel, (c) securing of fibrous resources, (d) encouragement and control of trade, (e) promotion of air and maritime transportation business, and (f) facilitation of the overseas expansion of Japanese. With reference to the establishment of major policies towards Manchuria, special mention was made of emigration and investments.

Budget Estimates New demands of the various sections of the Government in connection with the budget estimates for the 1937–38 fiscal year were naturally made in line with the aforementioned policies. All the new demands were presented to the Department of Finance by the end of September. They totalled ¥1,570,000,000, including ¥480,000,000 for the Army and ¥340,000,000 for the Navy, besides ¥223,000,000 as grants for adjusting local finances. As the basic budget amounted to ¥1,860,000,000, the total estimates reached upwards of ¥3,400,000,000.

The Department of Finance immediately commenced its task of examining and revising the estimates, first dealing with the demands of the administrative sections of the Government and then with those of the defence services. The attitude taken by the Department was more generous than usual and on November 27 the Cabinet Council approved of the budget estimates as revised by the Finance Department amounting to some ¥3,040,000,000.

As regards receipts, the budget estimates included ¥417,500,000 as increased income available from the execution of the proposed taxation reform, ¥35,200,000 as increased customs revenue available from a tariff revision, ¥8,400,000 as receipts available from the imposition of the proposed trade statistics tax and export control tax, ¥25,400,000 as increased income available from raising the prices of tobacco, ¥61,800,000 as an amount transferable from the Special Accounts, and ¥10,000,000 as an amount transferable from the fund of the Deposits Bureau through lowering the interest rates on postal savings. In addition, it was decided to issue a total amount of ¥800,000,000 worth of deficit-covering public loan bonds.

Policy Followed In Compiling Budget In compiling the budget estimates for the 1937–38 fiscal year, the Government laid stress upon its cognizance of the necessity of making various important establishments in order to promote the national prosperity of the Japanese Empire and to stabilize the living of the people at large, in view of the prevailing conditions both at home and abroad, and with the consummation of the Government's policies as mentioned in paragraph 1 above, as the basis.

The Government further announced that a decision was reached to concentrate the appropriations for the 1937–38 fiscal year as much as possible upon the execution of the various major national policies as enumerated above and at the same time to seek for as many sources of more ordinary revenue as possible, thus consolidating the financial foundation of the nation. Further details of the policy followed in the compilation of the budget estimates were given as follows :

1. To adjust the central and local taxation systems and to raise the prices of tobacco, besides reforming the tariff system.

2. To give greater consideration to adjustment of the mutual relations of the ordinary and special accounts.

3. To calculate expenses urgently needed for the perfection of national defence.

4. To calculate grants for adjustment of local finances.

5. To calculate expenses required for necessary preparations for effecting the proposed extension of the term of compulsory education to 8 years in the 1938–39 fiscal year.

6. To include expenses for the establishment of various facilities aiming at the economic rehabilitation of the agricultural, mountain and fishing villages, besides effecting an improvement of the system concerning liquidation of the debts of the rural community. Among such facilities were mentioned those for improvement of the farm land system, stabilization of prices of silk, storing of ammonium sulphate, fishing boats insurance and forest fire insurance.

7. To include expenses for encouragement of medium-size and small-scale commerce and industry. Diversification of the locations of factories and enlargement of old facilities and establishment of new ones for facilitating the development of medium-size and small-scale industry and commerce were mentioned.

8. To include expenses for river improvement works and other facilities aiming at the prevention of floods.

9. To calculate expenses for the establishment of public health stations, creation of a public health insurance system, establishment of medical facilities in villages hitherto without doctors, enlargement of facilities for the prevention of tuberculosis, spread of relief as provided for in the Relief Law and expansion of military relief facilities.

10. To calculate expenses for extending financial facilities to the mass of the people, as a means of assisting in the stabilization of national livelihood together with the various facilities mentioned in the foregoing four paragraphs.

11. To place the electricity industry under State control, create an Imperial Fuel Industrial Company, exploit oil resources both at home and abroad, encourage the production of synthetic petroleum, encourage the utilization of inferior ores and iron sands, attain self-sufficiency in wool, establish laboratories related to the fibrous and machinery industries, expand the scope of the export compensation system, grant subsidies for compensation for imports, create an aeronautical research institute, encourage shipping services along foreign routes and encourage the construction of superior ships. In addition, a fundamental revision of the system of extending subsidies relative to loans for shipbuilding was mentioned.

12. To calculate expenses for making payments on the South Manchuria Railway Company's shares in the hands of the Government, besides establishment of a definite policy concerning the emigration of Japanese nationals to Manchuria.

Expenses for Execution of National Policies Of the estimates newly calculated in the budget for the 1937–38 fiscal year, a total amount of ¥1,068,091,000 was earmarked for the execution of national policies. Details follow :

For perfection of national defence	¥692,197,000
For renovating educational system	1,453,000
For adjusting central and local taxation systems	237,192,000
For promoting industry and trade	57,745,000
For strengthening control of electricity industry	1,143,000
For attaining self-sufficiency in liquid fuel	23,395,000
For stabilization of national livelihood	54,602,000
For prevention of natural calamities	20,125,000
For expanding public health and relief facilities	10,167,000
For rehabilitating agricultural, mountain and fishing villages and promoting medium-size and small-scale commerce and industry	24,310,000
For establishing important policies toward Manchuria	24,900,000
For encouraging emigration and overseas investments	24,900,000
For attaining self-sufficiency in iron and steel	¥1,003,000
For securing fibrous resources	2,822,000
For encouragement and control of trade as well as revision of tariffs	12,006,000
For promotion of aviation enterprises	9,429,000
For promotion of maritime transportation enterprises	3,973,000
For encouraging overseas expansion of Japanese	4,970,000
Total	1,068,091,000

Note: The figures for the perfection of national defence in the above table are based on the presumption that the newly increased estimates for both the War and Navy Ministries are to be used for perfecting the national defence.

Revenue and Expenditure in General Accounts Details of the general accounts of the budget estimates for the 1937–38 fiscal year are tabulated as follows :

REVENUE

		Increase over Preceding Year
Ordinary items	¥2,014,997,000	¥564,938,000
Extraordinary items	1,023,584,000	168,069,000
Receipts from ordinary sources	221,131,000	69,454,000
Receipts from issue of public loan bonds	802,452,000	98,614,000
Total	3,038,581,000	733,007,000

EXPENDITURE

		Increase over Preceding Year
Ordinary items	¥1,700,910,000	¥340,178,000
Extraordinary items	1,337,671,000	386,886,000
Total	3,038,581,000	727,064,000

ORDINARY ITEMS OF REVENUE

		Increase over Preceding Year
Taxes	¥1,420,077,000	¥496,775,000
Income tax	525,901,000	294,445,000
Land tax	58,398,000	110,000 (dec.)
Business profits tax	71,164,000	9,314,000
Tax on capital interest	31,361,000	16,722,000
Property tax	20,000,000	20,000,000

		Increase over Preceding Year
Inheritance tax	¥33,297,000	¥690,000
Mining tax	6,904,000	2,626,000
Special tax on foreign currency loan bonds	5,352,000	5,352,000
Liquors tax	223,270,000	13,750,000
Tax on table waters	4,139,000	429,000
Sugar excise	121,411,000	34,116,000
Textile excise	49,234,000	6,483,000
Tax on volatile oils	14,913,000	14,913,000
Tax on bourses	20,210,000	5,368,000
Exchange proceeds tax	30,250,000	30,250,000
Customs duties	196,038,000	38,026,000
Tonnage dues	2,948,000	115,000
Trade statistics tax	4,280,000	4,280,000
Stamp revenue	99,061,000	19,451,000
Receipts from public undertakings and Government property	342,796,000	50,391,000
Profits of monopoly bureau	252,141,000	50,245,000
Dividend receipts	28,958,000	345,000 (dec.)
Receipts from forests	45,480,000	927,000 (dec.)
Prisons' receipts	11,249,000	1,398,000
Other miscellaneous receipts	4,966,000	21,000
Receipts from Special Account for Communications	81,000,000	—
Receipts from the Bank of Japan	13,087,000	7,672,000 (dec.)
Miscellaneous receipts	51,478,000	5,146,000
Total	2,007,499,000	544,640,000
Transferred from Special Account of funds for educational improvement and agrarian development	7,495.000	846,000

EXTRAORDINARY ITEMS OF REVENUE

		Increase over Preceding Year
Proceeds of sale of Government property	¥6,495,000	¥10,148,000 (dec.)
Miscellaneous receipts	41,936,000	25,389,000
Receipts from public bodies on public works	7,550,000	142,000
Allotment of public bodies for enterprises	11,396,000	755,000
Receipts for encouragement of scientific researches	26,000	7,000,000
Transferred from Special Accounts	10,816,000	1,181,000 (dec.)
Payments by insurance companies	3,162,000	358,000 (dec.)
Receipts for export compensations	1,202,000	406,000
Contribution by Manchoukuo to national defence funds	19,500,000	5,000,000 (dec.)
Tax on extraordinary profits	43,173,000	1,085,000
Export control tax	3,983,000	3,983,000
Receipts from Special Accounts for ordinary revenue	71,890,000	54,390,000
Total	221,131,000	69,454,000
Receipts from issue of public loan bonds	802,452,000	98,614,000

The following is a table showing the shares of the various Departments in the budget estimates for the 1937–38 fiscal year, the figures being given in units of ¥1,000 :

Departments	Ordinary Expenses 1937–38 Fiscal Year	Ordinary Expenses Compared with Preceding Year's Working Budget	Extraordinary Expenses 1937–38 Fiscal Year	Extraordinary Expenses Compared with Preceding Year's Working Budget
Imperial Household	4,500	—	—	—
Foreign Affairs	18,255	976	18,013	3,390
Home Affairs	283,322	226,310	139,770	12,253(dec.)
Finance	490,782	23,216	79,345	51,003
War	217,804	26,896	510,161	192,752
Navy	273,953	37,201	407,700	92,621
Justice	39,445	2,772	3,561	840
Education	133,421	2,144	13,333	1,804
Agriculture and Forestry	43,792	10,680	81,731	18,422
Commerce and Industry	6,766	825	35,645	22,640
Communications	185,588	4,074	25,709	10,684
Overseas Affairs	2,277	85	22,198	3,958
Total	1,700,910	340,178	1,337,671	386,886

Details of the Manchurian Incident expenses and the exchange losses are tabulated below :

Manchurian Incident Expenditure	¥285,092,000
Share of Foreign Office	3,088,000
Share of Finance Office (appropriated from 1st reserve)	2,000,000
Share of War Office	269,613,000
Share of Navy Office	10,389,000
Exchange Losses	71,258,000
Exchange loss in international payments on principal and interest of national loans	55,583,000
Exchange loss arising from increase in foreign service allowances and in cost of supplies, etc.	11,752,000
Other exchange losses	3,822,000

Adjustment of General and Special Accounts Various special accounts have in recent years been showing more than satisfactory conditions. This, coupled with the decrease in the payments on interest of national bonds brought about by the conversion of bonds bearing high interest into bonds bearing low interest—payments which are made out of special accounts, combines with the anticipated increase in the receipts for the special accounts following the realization of the proposals to raise the postal charges and to reform the taxation system in giving rise to an expectation that there will be surplus funds in the special accounts. Accordingly, the Government decided to adjust the relations between the general and special accounts by assigning a considerable amount of such surplus funds in the special accounts to the sources of revenue for the general accounts and increasing the share of the special accounts in the sinking fund so as to reduce a similar share of the general accounts. Further, the Government decided to transfer an annual amount of ¥10,000,000 from the special account of the Deposits Bureau to the general accounts for establishing facilities for promoting social welfare.

The following is a table showing details of the amounts transferable from the various special accounts to the general accounts, the figures being given in units of ¥1,000 :

Special Accounts	For Increasing Revenue for General Accounts	For Reducing Outlays from General Accounts Contribution to Sinking Fund		Total Amount Transferred
Deposits Bureau	10,000	—	—	10,000
Kwantung Bureau	1,500	102	—	1,602
Communications	12,640	2,544	—	15,184
Railways	30,000	15,020	—	45,020
Chosen	9,450	3,956	—	13,386
Taiwan	5,250	991	—	6,241
Karafuto	1,950	290	1,000	3,240
South Seas	1,100	—	—	1,100
Total	71,890	26,886	1,000	95,776

Substance of Budget

Concern over Digestion of Budget The rapid increase in the budget has been accelerating financial inflation. The increase in the estimates of the defence services to the enormous figure of ¥1,400,000,000 has stimulated the munitions boom, and has given rise to the question as to whether the productive capacity of the nation, as it now stands, will be able to digest the tremendous military budget smoothly or not.

It is generally considered unavoidable that the imports of materials and manufactures related to munitions will increase, thereby aggravating the balance of the nation's foreign trade while the accelerated financial inflation will send the prices of commodities soaring. At the same time, the proposed taxation reform and other projected laws concerning industrial circles, if realized, will cause violent changes in business circles, and accounts for the adverse criticism of the plans form interested quarters.

Under these circumstances, it is feared that a further increase in taxes and the issue of additional public loan bonds will become inevitable in course of time. This fear is so strong that all the interested quarters appeared to put no confidence at all in the statement issued by Finance Minister Eiichi Baba that there would be no further increase in taxes and that the limit of public loan bonds to ¥1,000,000,000 would be strictly observed.

Rapid Increase in Military Budget The estimates for the Department of War for the 1937–38 fiscal year amounted to ¥720,000,000, which represented an increase of ¥210,000,000 over similar figures for the preceding fiscal year.

Details of the estimates for the Department of War for the 1937–38 fiscal year are tabulated below, the figures being given in units of ¥1,000 :

	Ordinary Items	Extraordinary Items	Manchurian Incident Expenses	Total
Amount fixed previously	216,399	119,639	—	336,038
Balance of new items	1,404	120,908	269,613	391,926
Increased amount	18,170	122,111	269,613	409,894
For strengthening military establishments in Manchuria	—	—	234,728	234,728
For perfecting air forces	9,216	58,087	34,885	102,188
For improving military equipment	5,530	19,210	—	24,741
For augmenting war materials	—	40,000	—	40,000
Decreased Amount	16,765	1,202	—	17,968
Due to strengthening of military establishments in Manchuria	16,443	941	—	17,385
Due to averaging actual expenses during preceding three years	25	18	—	44
Due to other factors	296	242	—	538
Total	217,804	240,547	269,613	727,965

The estimates for the Department of the Navy amounted to ¥680,000,000, gaining by ¥130,000,000 over similar figures in the working budget for the preceding 1936–37 fiscal year. Of this amount, ¥430,000,000 formed the basic expenditure of the Department while ¥180,000,000 was the final portion of the continuation expenditure required by the second naval replenishment programme. The remainder included ¥250,000,000 as new demands, of which ¥150,000,000 formed the first portion of the continuation expenditure required by the third naval replenishment programme calling for the construction of capital ships for replacements as well as the contruction of auxiliary vessels and augmentation of naval air forces.

In this connection, it is to be noted that the construction of capital ships is undertaken for the first time since the Washington Conference, to mark the first year of the non-treaty era arising from the expiration of the Washington and London Naval Treaties. The authrities of the Navy Department, however, made it known that in effecting the construction of capital ships, special care will be taken lest this nation should be involved in a naval building race with the United States and Great Britain.

Change to Yuki Policy The Hirota Government resigned en bloc shortly after the resumption of the 70th session of the Imperial Diet following the New Year's recess and was succeeded by the

Hayashi Cabinet on February 2, 1937. This political change also meant a change from the policy of Finance Minister Eiichi Baba to the policy of Mr. Toyotaro Yuki who assumed the Finance portfolio of the new cabinet. The new Finance Minister undertook to revise those points of the Baba policy which aimed at radical changes and withdrew the budget estimates from the Diet. By extending the period of prorogation of the Diet until February 15, the new Government examined the estimates and decided to postpone the appropriation of a certain amount in the estimates because a fundamental revision was technically impossible.

Simultaneously, Finance Minister Yuki liquidated the Baba plan for a reform of the taxation system and instead drafted a proposal to increase certain taxes preliminary to the formulation of a basic reform plan based on his advocacy for a gradual advance. Accordingly, the grants for adjusting local finances, as calculated in the budget estimates compiled by the Hirota Cabinet, were dropped in favour of the inclusion of an extraordinary item of similar nature amounting ¥70,000,000.

The postponement of appropriations, which was decided in the form of an understanding among the Cabinet Ministers, is explained by the following figures :

Items	Original Estimates	Amount Not To Be Appropriated	Balance
Civil List	¥4,500,000	—	¥4,500,000
Foreign Affairs	36,000,000	¥2,600,000	33,400,000
Home Affairs	423,000,000	162,000,000	261,000,000
Finance	570,000,000	25,600,000	544,400,000
War	727,000,000	23,000,000	704,000,000
Navy	681,000,000	23,000,000	658,000,000
Justice	43,000,000	800,000	42,000,000
Education	146,000,000	1,700,000	144,300,000
Agriculture and Forestry	126,000,000	10,800,000	115,200,000
Commerce and Industry	42,000,000	15,500,000	26,500,000
Communications	211,000,000	2,900,000	208,100,000
Overseas Affairs	24,000,000	700,000	23,300,000
Total	3,038,000,000	269,100,000	2,769,400,000

The understanding among the Cabinet Ministers also concerned a reduction of the revenue estimates as follows :

	Original Estimates	Amount of Reduction	Balance
Receipts from Issue of Public Loan Bonds	¥802,400,000	¥77,000,000	¥725,400,000
General Receipts	2,236,100,000	192,100,000	2,044,000,000
Total	3,038,500,000	269,100,000	2,769,400,000

As a result of the revision effected by the new Finance Minister and the understanding reached among the members of the new Cabinet, the budget estimates for the 1937-38 fiscal year were reduced by ¥269,100,000 to ¥2,769,400,000, as shown in the foregoing table. The reduced amount in the expenses included ¥150,000,000 in the grants to local finances and ¥119,000,000 in the various items for all sections of the Government, except the Departments of the Navy and War which agreed to postpone appropriations totalling ¥23,000,000.

In connection with the revenue estimates, the extraordinary taxation increase plan of Finance Minister Yuki provided a total amount of ¥292,000,000, compared with ¥475,000,000 as provided by his predecessor's taxation reform formula, and included ¥230,300,000 as increased taxes, ¥39,200,000 as new taxes and ¥22,500,000 as increased customs duties. At the same time, Minister Yuki changed the percentage of reduction to be effected in the interest rates for postal savings from the original 0.36 to 0.24 per cent, which meant a reduction in the amount of transfer from the Special Accounts of between ¥4,000,000 and ¥6,000,000. The receipts calculated as available from the issue of public loan bonds were also reduced by ¥77,000,000 to ¥726,000,000 or to ¥869,000,000 when the Special Accounts are taken into consideration.

From the standpoint of actuality, the reduction in the Special Accounts total-

led ¥18,000,000 in expenditure, including ¥4,000,000 for Chōsen, ¥2,000,000 for Taiwan, ¥200,000 for the Kwantung Bureau, ¥400,000 for Karafuto, ¥100,000 for the South Seas, ¥3,300,000 for railways and ¥6,800,000 for communications. The reduction in the amount of loan issue for the Special Accounts totalled ¥12,000,000, including ¥5,000,000 for railways and ¥7,000,000 for communications.

Conversion of Loans Immediately following his assumption of the post of Finance Minister, Mr. Eiichi Baba announced that he would abandon the policy of his predecessors, Messrs. Fujii and the late Takahashi, for a gradual reduction of public loan bonds and would adopt a policy for low money rates. This announcement broke the stagnation which had existed in the money market since the last days of the Takahashi policy and the various banks in Tokyo resumed their activities in purchasing public loan bonds in the hands of the Bank of Japan.

On March 19, 1936 the Department of Finance announced the terms for the fiscal-year-end issue of public bonds, raising the issue prices and shortening the terms, and at the same time caused the Bank of Japan to suspend its sale of bonds bearing an interest of 4 per cent. In spite of the suspension of such sale, speculative buying characterized the dealings in newly issued bonds with the result that the Bank of Japan was ordered to discontinue selling newly issued bonds as well. This, of course, is attributable to the anticipation for the conversion of high-interest bonds into low-interest bonds.

Availing himself of the opportunity provided by the new developments, Finance Minister Eiichi Baba on April 17, the same day that the Banks of Japan decided to reduce its discount rates and the various banks resolved to lower their interest rates for deposits, announced his decision to convert the public loan bonds bearing an interest of 5 per cent. The first batch of bonds thus converted amounted to ¥380,000,000. The interest rate for the new bonds was 3.5 per cent, the issue price and term being ¥98 and 12 years respectively.

The following is a table showing details of the conversion of bonds effected by Finance Minister Baba :

Date of Conversion	Amount Converted	Amount Newly Issued	Percentage of Conversion
May 1, 1936	¥373,439,000	¥381,000,000	90
June 1 ,,	407,590,000	413,000,000	91
July 15 ,,	352,251,000	361,000,000	96
August 15 ,,	582,252,000	597,000,000	95
September 15 ,,	422,279,000	400,000,000	100

Note: A total sum of ¥32,000,000 was appropriated out of the sinking fund for the redemption of a portion of the bonds offered to conversion on September 15, 1936.

Thus, the long outstanding question of converting the bonds bearing an interest of 5 per cent was settled with ease by Finance Minister Baba under the favourable influence of the low-interest policy. Through the conversion, the burden of the National Treasury for paying interest on bonds was reduced by ¥29,000,000, as shown in the following table :

	Interest on Old Bonds	Interest on New Bonds	Decrease
General Accounts	¥45,661,000	¥32,666,000	¥12,994,000
Special Accounts	59,486,000	42,673,000	16,812,000
Chosen	10,318,000	7,403,000	2,913,000
Taiwan	2,321,000	1,666,000	655,000
Kwantung Bureau	7,000	5,000	2,000
Karafuto	739,000	531,000	208,000
Railways	36,741,000	26,349,000	10,391,000
Communications	9,356,000	6,716,000	2,640,000
Total	105,147,000	75,340,000	29,806,000

The national loan bonds remaining unredeemed at the end of the 1936–37 fiscal year, totalled ¥10,395,205,000 which represented an increase of ¥814,314,000 over similar figures recorded at the end of the preceding year. The amount of national bonds to be issued for the 1937–38 fiscal year is just below the ¥1,000,000,000 level at ¥961,000,000. In the course of a Cabinet meeting, Finance

Minister Baba was quoted as stating that the Department of Finance expected to follow a policy of limiting the annual amount of loan issues to ¥1,000,000,000 at the most during the following five fiscal years and reducing the amount to the ¥800,000,000 level for the 1942–43 fiscal year and to the ¥700,000,000 level for the 1943–44 fiscal year. The Minister was further quoted as stating that there would be no further increase in taxes following the 1937–38 fiscal year. In spite of the Minister's statement, however, the prevailing conditions were such that there existed a strong fear of further taxation increases and a rapid increase in loan issues.

Details of the loan issues scheduled for the 1937–38 fiscal year are shown in the following table :

GENERAL ACCOUNTS

Reconstruction works loan	¥7,000,000
Roads construction loan	11,000,000
Manchurian Incident loan	265,000,000
Deficit-covering loan	521,000,000
Total	806,000,000

SPECIAL ACCOUNTS

Communications loan	43,000,000
Railways loan	47,000,000
Chosen loan	65,000,000
Total	155,000,000
Grand Total	961,000,000

Settlement of Accounts The accounts for the 1935–36 fiscal year, which were closed at the end of July, 1936, show that the total expenditure amounted to ¥2,206,000,000 and the total revenue to ¥2,259,000,000. In the revenue, receipts in taxes and stamp duties totalled ¥970,000,000 which represented an all-time high in the financial history of the nation, with a particularly remarkable increase being recorded for income tax and customs duties. A decrease was recorded by the liquors tax as compared with similar figures for the preceding fiscal year. Those items of the taxation revenue which failed to reach the estimated figures included liquors tax (short of ¥3,000,000), tax or bourses (short of ¥1,700,000) and excess profits tax (short of ¥4,000,000). The payment by the Bank of Japan also decreased on account of a decrease in the bank's profits from the sale of public loan bonds.

The closed accounts further show that the amount of loans issued was ¥678,000,000 or ¥93,000,000 less than scheduled, which was attributed to an advance of the natural increase in revenue. The net surplus for the 1935–36 fiscal year amounted to ¥1,900,000 as compared with ¥4,400,000 for the preceding year, while the expenditure also fell ¥98,000,000 short of the estimated amount. Detailed figures are tabulated as follows :

	Settled Accounts for 1935–36 Fiscal Year
Revenue	¥2,259,321,000
Ordinary items	1,405,426,000
Extraordinary items	853,894,000
General receipts	91,546,000
Proceeds of public Bonds	678,370,000
Transfer from surplus carried over from preceding year	83,977,000
Expenditure	2,206,477,000
Ordinary items	1,268,992,000
Extraordinary items	937,485,000
Balance	52,843,000

1936–37 Local Finances

Statistics for the local finances during the 1936–37 fiscal year showed a total amount of ¥1,918,269,000 in expenditure and of ¥1,919,000,000 in revenue. The expenditure increased by ¥59,760,000 and the revenue by ¥59,570,000 as compared with the estimates at the beginning of the fiscal year.

The increase in expenditure was particularly notable in the case of public works, the expenses of which were ¥24,590,000 greater than estimated. Next came the educational expenses with an increase of ¥22,240,000 enterprise encouragement expenses with ¥7,650,000 city planning expenses with ¥6,480,000, public office expenses with ¥6,120,000 and electric and gas enterprise expenses with ¥5,130,000. The amount of local bonds issued during the year showed a remarkable decrease by ¥43,480,000 under the influence of the conditions brought about by the conversion of high-interest bonds into low-interest bonds in the preceding year.

The increase in revenue included ¥35,940,000 for taxation receipts and ¥23,620,000 for other incomes. This is generally regarded as reflecting the increased economic activities. Principal items of the increased revenue were the household tax which increased by ¥11,240,000, the business profits surtax by ¥7,340,000, the surtax on income tax by ¥5,790,000, and miscellaneous taxes and their surtaxes by ¥5,740,000. Rents and commissions also increased together with

public donations as well as government grants, etc.

Details of the local finances during the 1936–37 fiscal years are tabulated as follows :

	1936–37	1935–36	Increase
Expenditure	¥1,918,269,000	¥1,858,594,000	¥59,675,000
Revenue	1,919,050,000	1,859,481,000	59,569,000
Taxation receipts	664,918,000	628,972,000	35,946,000

		Rents and commissions	310,309,000

Taxation Reform and Grants 1. Decision on Grants for Adjustment of Local Finances.

Since the tenure of the Saito Cabinet, the Department of Home Affairs had cherished the desire to give grants for adjusting local finances in order to relieve the local bodies of their financial difficulties but could not realize the desire until the assumption of the Finance portfolio by Mr. Eiichi Baba, who decided to reform the central and local taxation systems. His reform plan called for the abolition of the household tax and the transfer of the house tax to the Central Government and instead provided for an annual grant to local finances. The grant was fixed at ¥220,000,000 for the 1937–38 fiscal year and at ¥300,000,000 for a normal year.

At the same time, the Baba plan called for the payment by prefectural governments of the expenses for compulsory education which had been borne by the National Treasury. This measure was intended to ensure the independence of primary school teachers and to strengthen the control of prefectural governments over primary schools. The estimated grants to local finances were to be divided into ¥110,000,000 for prefectures and ¥110,000,000 for cities, towns and villages.

Grants to Prefectures 1. The taxation revenue of the prefectures, hitherto amounting to approximately ¥270,000,000, would be reduced to ¥210,000,000 following the execution of the Baba reform plan which also called upon the prefectures to pay ¥85,000,000, hitherto disbursed out of the National Treasury, as expenses for compulsory education. This would require a new source of income to the amount of ¥145,000,000 and the Baba plan provided for a grant of that amount.

2. For the purpose of giving the aforementioned grant, the Baba plan called for the earmarking of a part of the income tax and the whole of the tax on capital interest.

3. The salaries of primary school teachers, amounting to ¥85,000,000, will be paid out of the grants to the prefectural governments.

Grant to Cities, Towns and Villages 1. The taxation revenue of the cities, towns and villages, hitherto amounting to approximately ¥390,000,000, would be reduced to about ¥150,000,000 following the execution of the Baba reform plan. As the expenses for compulsory education, hitherto borne by the cities, towns and villages, would be paid by the prefectures under the Baba plan, the cities, towns and villages would

require a new source of revenue to the amount of ¥155,000,000 only. A grant of equal amount was provided for in the Baba plan.

2. The aforementioned grant would be obtained from land tax, house tax and business profits tax.

3. Appropriations out of business profits tax would be purely for assisting in the adjustment of local finances while those out of other taxes would be for supplementing the sources of revenue of the cities, towns and villages.

Extraordinary Grants to Cities, Towns and Villages Finance Minister Toyotaro Yuki of the Hirota Cabinet, however, abandoned his predecessor's taxation reform plan and accordingly gave up the proposed grants for adjusting local finances. Instead, he decided to provide a grant to local finances as an extraordinary measure, increasing the amount of grant from ¥20,000,000 for the 1936–37 fiscal year to ¥70,000,000 for the 1937–38 fiscal year. The Yuki plan was severely criticized as being too favourable to the urban districts at the expense of the rural districts, with the result that the grant had to be increased by ¥30,000,000 to ¥100,000,000 to meet the demand presented jointly by the Minseito and the Seiyukai in the course of the 70th session of the Imperial Diet.

Of the grant, ¥30,000,000 was decided to be given to prefectures and ¥70,000,000 to cities, towns and villages. Those cities, towns and villages receiving shares of the grant are required to reduce the household tax and miscellaneous taxes. A special grant amounting to ¥5,000,000 was decided to be given to particularly impoverished towns and villages.

Taxation Reform and Local Finances

1. Opposition to Transfer of House Tax

The financial authorities of local governments were surprised at the news that the Department of Finance intended to reform the central and local taxation systems, realizing a grant for adjusting local finances and transferring the house tax to the Central Government. When the conference of prefectural governors was convened in June, 1936, the local governors expressed various views on the question and following the conclusion of the conference, Governor Tanaka of Nagasaki Prefecture, a recognized authority on local taxation questions, called on Finance Minister Eiichi Baba and representing his colleagues, voiced their opposition to the proposed transfer of the house tax.

2. Opposition to Abolition of Household Tax.

It has long been urged that the household tax should be abolished on the ground that it is attended by the evils of a capitation tax and serves to accelerate the flight of wealth from villages to cities. On the other hand, there has also been a strong opposition to the abolition of the household tax on the ground that the abolition of the household tax, which is the most elastic among all local taxes, would undermine the independence of the self-governing local bodies because a government grant would then have to be relied upon.

3. Taxation Burden of Farmers.

The Baba plan for a reform of the central and local taxation systems was purported to be aimed at a reduction of the taxation burden of farmers. The Imperial Agricultural Association, however, announced that its investigation revealed that the difference between the percentage of reduction for a landowner having an income of about ¥5,000 and that for a tenant earning only about ¥300 would be no more than 5 per cent. Details of the returns of the investigation are tabulated as follows :

BURDEN OF LANDLORDS

	For an Income of about ¥500		For an Income of about ¥5,000	
	Present Rate	Proposed Revised Rate	Present Rate	Proposed Revised Rate
Land tax	¥104.71	¥61.41	¥1,092.54	¥612.58
House tax	11.06	8.86	56.59	45.27
Special land tax	0.07	0.04	11.84	9.47
Miscellaneous taxes	5.34	4.27	—	—
Household tax	41.09	—	446.44	—
Others	3.72	3.72	296.44	296.44
Total	165.99	78.29	1,903.85	963.76
Ratio	100	47	100	51

BURDEN OF INDEPENDENT FARMERS

	For an Income of about ¥300		For an Income of about ¥2,000	
	Present Rate	Proposed Revised Rate	Present Rate	Proposed Revised Rate
Land tax	¥48.42	¥27.74	¥355.72	¥206.22
House tax	7.93	6.34	36.41	29.13

House tax	5.13	4.10	Others	0.23	0.23
Special land tax	1.96	0·96	Total	27.53	12.56
Miscellaneous taxes	5.93	4.74	Ratio	100	46

Local Bonds No considerable change occurred in the conditions of local bonds throughout the year 1936. The total amount of local bonds, which was ¥2,510,000,000 at the beginning of the year, increased by merely ¥30,000,000 to ¥2,540,000,000 by the end of the year. What is to be noted in this connection is that considerable activities were displayed during the year for the conversion of high-interest bonds into low-interest ones under the influence of the low-interest tendency brought about by the Baba policy. Such conversion was made most actively during June, July and August but when the taxation reform plan was announced in September, the loan market suffered a setback and the activities for the issuance of new bonds or conversion of old ones were halted.

The following is a table showing further details of the conditions of local bonds from January until December, 1936; the figures being given in units of ¥1,000:

	Bonds Issued	Converted Bonds	Amount Redeemed	Amount of Outstanding Bonds
January	4,085	1,552	3,373	2,511,863
February	22,530	22,396	21,062	2,513,331

December	—	—	30,009	2,541,200
Total	543,323	360,479	513,274	—

CHAPTER IX

BANKING AND THE MONEY MARKET

Development The Japanese National Bank Act was promulgated in November of the 5th year of Meiji (1872) and this formed the cornerstone of the banking business in Japan. The banks established in accordance with this Act were the First National Bank, Tokyo; the Second National Bank, Yokohama; the Fourth National Bank, Niigata; and the Fifth National Bank, Kagoshima. The First National Bank, founded by Eiichi Shibusawa (the late Viscount), was invested in jointly by the Mitsui-Gumi and Ono-Gumi to the amount of ¥2,000,000 out of the total capitalization of ¥3,000,000. The remaining amount of ¥1,000,000 was offered for public subscription. Due to the lack of knowledge of the people regarding the nature of public subscriptions to shares there is little wonder that only ¥448,000 was subscribed. The bank was opened on August 1, 1873. H. E. Shand, a clerk of the Oriental Bank, a British institution in Yokohama, was engaged by the bank to teach Japanese clerks banking business. With the revision of the National Bank Act in 1876, the number of banks in Japan greatly increased. There were, at the end of 1879, 153 banks with a total capitalization of ¥37,000,000 and with authority to issue notes. The National Bank Act provided for conversion of the national bank notes into specie. An amendment was made in the Act in 1883, by which the privilege of issuing notes was taken away from the national banks and granted exclusively to the newly-created central banking institution, the Bank of Japan. Meanwhile, private banks and bank-like business companies, which did not come within the purview of the National Bank Act had increased in number, until their total number reached 954 in 1884, and there were no general provisions to control such banks and companies. To bring them under one efficient control the Ordinary Bank Act and the Savings Bank Act were promulgated in 1890 and put into force three years later. Side by side with the private banks the national banks had acted from the first as financial institutions of general trade, so when the terms of their respective charters expired most of them continued in business as ordinary banks, and by February, 1899 when national banks ceased to exist, there was no longer any difference between the economic functions and legal nature of the former national banks and other ordinary banks, all of which were controlled by general banking law. Ordinary banks were placed under the control of the Minister of Finance, whose licence was required for the establishment of a new bank or the amalgamation of existing banks; he was also empowered to order at any time investigation into the business condition and property of a bank. Every bank was compelled to prepare and present to the Minister of Finance a balance-sheet and other business reports every half-year, the former to be published in newspapers or by some other means. Provisions were also made in the Act regarding business hours and holidays.

Bank Act of 1927 Though a few amendments were made in it from time to time the Bank Act of 1890 became obsolete and inadequate on account of the rapid progress in the financial and economic conditions of the country. On March 29, 1927, therefore, a new Act was promulgated to come into effect on January 1, 1928. This Act can be summarized as follows :—

(1) Banks as defined in the Bank Act are in principle institutions which carry on the operations of giving as well as receiving credits.

(2) Participation in banking business is confined to joint stock companies having at least the minimum capital[1] prescribed by the Act.

(3) The use of the word "Bank" (Ginko) in the trade name is made compulsory for every bank, and the use of the word is prohibited to businesses not being banks.

(4) Banks are strictly prohibited from engaging in business activities other than those prescribed in the Act.

(5) A bank shall, until the full amount

---

1 The minimum paid-up capital for a bank in Tokyo and Osaka must be not less than ¥2,000,000; for towns of more than 10,000 population not less than ¥1,000,000; and for smaller communities not less than ¥500,000.

of its capitalization is reached, set aside each time that a dividend is paid on profits 10 per cent of such profits as a reserve fund.

(6) A strict audit system is established.

(7) Managers or managing-directors while actively engaged as such are not permitted to participate in the management of other companies without sanction of the Minister of Finance.

(8) The Court of Justice shall exercise closer supervision over the liquidation of banks.

(9) The Minister of Finance is empowered to make necessary provisions respecting banks with head offices outside the area, desirous of doing banking business within the area in which the Act is in force.

(10) The power of the Minister of Finance respecting the cancellation of business licences and the giving of various sanctions to banks is greatly increased and the penalties for illegal acts by banks shall be made heavier.

Special Banks The Bank of Japan, Yokohama Specie Bank, Hypothec Bank of Japan, Agricultural and Industrial Banks, Industrial Bank of Japan, Hokkaido Colonial Bank, Bank of Taiwan, Bank of Chosen, and the Industrial Bank of Chosen are called special banks because they were established in accordance with ordinances issued especially for their organization. They have their own missions and unique functions, as are mentioned in the following pages, and the Government enforces a strict control over them with a view to the satisfactory fulfilment of their missions. Supervisors are appointed by the Central Government to examine into the conditions of these banks from time to time. In the case, however, of the agricultural and industrial banks and the branches of the Hypothec Bank of Japan in such prefectures as have no Agricultural and Industrial Banks, the supervision is entrusted to the directors of the economic departments of prefectural governments, while the Governor-General of Korea exercises control over the Industrial Bank of Chosen.

Mention must be made of the fact that the Oriental Colonization Company (Toyo Takushoku Kaisha) also accepts fixed deposits. The primary aim of this company is to provide financial facilities for colonization enterprises in Korea and foreign countries. For similar purposes, the Government has given permission for the establishment of the Taiwan Takushoku Kaisha (Colonization Company of Formosa) and the Nanyo Takushoku Kaisha (Colonization Company of the South Sea Islands). The privilege of the former of accepting deposits, however, is limited while the latter two are not expected to be authorized to conduct such business.

The deposits of the aforementioned special banks, not including the Bank of Japan, totalled approximately ¥1,000,000,000, and their advances reached ¥2,600,000,000 at the end of October, 1936.

Ordinary Banks Ordinary banks are institutions which not only provide financial facilities for commerce but also furnish funds for enterprises and make loans on mortgage of immovable property.

The number of ordinary banks in the country once reached more than 1,800, but when the country experienced in 1927, an unprecedented financial panic a new Bank Act was enacted, whereby control over banks was greatly strengthened and amalgamations brought about to fit in with the capital and other requirements of the Act. At present, there are 435 ordinary banks in the country, only one-fourth of the previous figures.

Statistics show that the authorized capital of the ordinary banks, some of which maintain overseas offices, at the end of June, 1936, amounted to ¥1,748,000,000. According to the latest returns, compiled at the end of September, 1936, the deposits of these banks totalled more than ¥10,527,000,000 and their advances exceeded ¥6,749,000,000. The securities in their possession at that time were valued at ¥4,952,000,000, including ¥2,640,000,000 in national bonds.

The principal ordinary banks are the Daiichi, Mitsui, Mitsubishi, Sumitomo, Yasuda, Sanwa and Daihyaku Banks, each having deposits ranging from ¥700,000,000 to ¥1,100,000,000, which, when put together, from more than 60 per cent of the total deposits of all the ordinary banks in the country. Besides the above seven institutions, there are 8 ordinary banks each with deposits totalling more than ¥100,000,000, including the Nomura, Jugo, Aichi, Nagoya, Nihon Chuya, Showa and Chugoku Banks. On the other hand, there are not a few which have less than ¥1,000,000 in deposits.

Hyogo, Fukuoka, Shizuoka and Osaka Prefectures have more than 20 ordinary banks each and the number of those prefectures which have more than 10 institutions of the kind is 21. The Government is encouraging the merger of these banks on the principle of one ordinary bank for each prefecture. Through the promotion of such mergers the Government expects to strengthen

the foundation and rationalize the management of the banks, protect the interests of depositors, and prevent indiscriminate competition.

Savings Banks The most popular and best utilized of the savings organs in the country is the postal savings deposits system, which was established in 1875 for the purpose of encouraging thrift and saving among the people. The service has made such marvellous development that at present the total savings deposits reach the prodigious figure of ¥3,300,000,000, forming 74 per cent of the entire funds of the Deposits Bureau of the Ministry of Finance. The savings deposits are playing an important part in the digestion of public bonds, and as a part of the money is returned to the country districts in the form of local funds, they contribute much toward the improvement of financial conditions in the provinces.

The savings deposits handled by the savings banks throughout the country totalled ¥500,000,000 in 1922; five years later the figures increased to ¥1,000,000,000. At the end of 1931 they further rose to ¥1,600,000,000 and the ¥2,000,000,000 mark was finally passed at the end of 1935. The present number of savings banks in the country is 74, with authorized capitals totalling more than ¥77,000,000, and with reserves exceeding their paid-up capitals. They have 2,000,000 contracts of fixed monthly deposits for ¥1,700,000,000 with the standing amount of savings thereof reaching ¥740,000,000 at the end of 1935.

In view of the importance of the relations between the savings banks and public interests, the Government enforces an especially strict control over the banks. Besides placing the use of the banks' funds under rigid restrictions, the Government orders the banks to deposit national bonds with the Government to the amount of over one-third of their deposits and enforces a law calling upon the directors of the banks to bear joint and unlimited responsibility for the repayment of the deposits.

Of late, pessimism has been expressed by some people over the future of the savings banks on account of the Government's policy for low interest rates, the question regarding taxation and because of the annexation of two savings banks in Tokyo to ordinary banks. The Government, however, is determined to continue its efforts for the development of the business, although, as in the case of ordinary banks, it disapproves an increase in their number.

Banking World in 1936

Increased Bank Loans Banking conditions were extremely complicated in 1936 as a result of the violent changes in the economic conditions of the country. The conversion of the 5 per cent national bonds by Finance Minister Baba of the Hirota Government together with the adoption of the principle of "one prefecture, one bank" were serious events in the banking world.

Deposits during 1936 showed a remarkable increase, those with the ordinary banks increased by ¥709,000,000 compared with ¥520,000,000 for 1935 and ¥620,000,000 for 1934. There were, however, some differences in the constitution of the deposits when compared with the preceding year, the principal difference being that in 1936, the increasing rate of savings deposits, such as fixed deposits slackened, while current accounts increased remarkably. Accordingly, it became difficult for the banks to follow their previous policy toward the utilization of deposits, although the deposits as a whole continued to increase.

Up to 1935 loans made by the various banks throughout the country either decreased or increased but slightly, during 1936, however, there was a sudden change, and a rapid increase was recorded in the amount of such loans, The ordinary banks alone recorded a total increase amounting to ¥475,000,000, the increase being especially noticeable in the latter half of the year, and in the amount of bills discounted.

The increase being due to the increased volume of transactions in general, resulting from the activities of governmental enterprises under the munitions boom, the large rice crops in the provinces and the improved conditions of the prices of cocoons. The increase in foreign trade also played its part.

Disturbances Caused by the Banking Policy of Finance Minister Baba The banking policy of Finance Minister Eiichi Baba of the Hirota Government dealt a great blow to the banking world. National bonds in the hands of the various banks at the end of 1935 amounted to ¥4,000,000,000, and it may not be amiss to suppose that the greater part of these were bonds bearing interest at five per cent when there were converted into bonds bearing interest at 3½ per cent, it is not difficult imagine that the profits of the various banks suffered greatly. Simultaneously with the conversion of the bonds, money rates

had to be lowered.

Reduction of Money Rates Finance Minister Baba announced a reduction of the Bank rate on April 6, 1936, and on the following day the decision to convert the national bonds bearing interest at five per cent was made public. Other banks immediately lowered their interest rates for deposits, that of the A-class banks for fixed deposits being reduced to 3.3 per cent from April 10, other rates being lowered in proportion. The lowering of interest rates reacted on deposits and fixed deposits, by causing a falling off in the rate of increase.

In consonance, the interest rates for loans also declined. Details of the decline in the interest rates for loans made by the member banks of the Tokyo Shukwaisho (Bankers' Club) are shown in the following table, figures being given in units of ¥0.01 on the basis of 1 day :

	1934	1935	1936
January	1.71	1.62	1.58
February	1.73	1.58	1.56
March	1.70	1.59	1.56
April	1.67	1.59	1.54
May	1.67	1.59	1.52
June	1.67	1.58	1.49
July	1.63	1.59	1.47
August	1.61	1.57	1.45
September	1.64	1.59	1.46
October	1.61	1.57	1.45
November	1.61	1.56	1.45
December	1.62	1.56	1.45

In spite of the decline in the interest rates, the interest receipts of the various banks throughout the country did not decrease to any considerable extent because of the demand for industrial capital, while receipts from discounting showed a remarkable rise during the latter half of the year. Further, the leading banks which underwrite securities acquired an increased income as commission for handling public bonds and debentures, the issues of which had received a great impetus under the low-interest policy of the Government after June.

Control of the Banking Business Of the events which occurred in the banking world during 1936, special mention must be made of the policy of Finance Minister Baba for controlling the banking business. First of all, the unification of banking facilities for immovable property was urged in the form of the merger of all agricultural and industrial banks into the Hypothec Bank. The first to be thus merged was the Agricultural and Industrial Bank of Tokyo Prefecture, followed by the merger of the Kagoshima, Awa, Oita, Ehime, Nohi, Miyagi, Miye, Osaka, Hyogo, and Hiroshima agricultural and industrial banks. Only six failed to be merged, those in Fukushima, Kanagawa, Ibaragi, Aichi, Shiga and Okayama.

Furthermore, the Ministry of Finance followed a policy of urging the amalgamation of ordinary banks in conformity with the principle of "one prefecture, one bank." The number of ordinary banks throughout the country was 545 at the end of 1935 including 466 ordinary banks and 79 savings banks, but these were reduced by 50 by amalgamations, so with three new banks coming into existence in the meantime there were 489 ordinary banks at the end of 1936, including 424 ordinary banks and 74 savings banks.

Although known as the principle of "one prefecture, one bank," the policy actually aimed at reducing the number of ordinary banks to one or two in one economic district in conformity with the economic power of the districts. Minister Baba also intended to make a further effort towards bank consolidation through a readjustment of the medium and small-scale banks and to proceed as far as the enforcement of a strong control of the banking business and the adoption of a compulsory system for the possession of public bonds by banks. This intention, however, failed to be realized because the Hirota Government collapsed.

Prospects The changing tendency in the policy of the banks accelerated during 1936 with the continued increase in the amount of deposits with the various banking organs and the upward trend of the amount of loans made by these organs, which during the previous year had replaced the declining movement that had existed for some time. Present conditions are such that further increases in the amount of loans may be expected in view of the plans for increased expenditure on national defence, the increase in taxes, the increasing demand for the investment of Japanese capital in Manchuria and North China, and the scheduled issuance of additional deficit-covering public bonds.

Increasing Deposits New funds in the way of deposits received by the principal organs of the banking world, banks, post offices, trust companies and life insurance companies, amounted to ¥20,442,000,000 at the end of 1936. Detailed figures follow :

	Deposits
Ordinary Banks	¥10,932,000,000
Savings Banks	1,842,000,000
Post Offices	3,352,000,000
Trust Companies	1,840,000,000
Life Insurance Companies	2,475,000,000
Total	20,442,000,000

This amount represents an increase of ¥1,472,000,000 or 7.7 per cent over the figures for the end of the preceding year. Similar increases recorded during the preceding few years amounted to ¥238,000,000 in 1932, ¥1,141,000,000 in 1933, ¥1,233,000,000 in 1934 and ¥1,240,000,000 in 1935. The rate of increase for 1936 is the highest record for all times, being ¥232,000,000 more than the increased amount for 1935 as compared with the figures for 1934. The rates for the various banking organs during 1936 are shown in the following table :

	Increased Amount	%
Ordinary Banks	¥1,059,000,000	10.7
Savings Banks	201,000,000 (decrease)	9.8
Post Offices	240,000,000	7.7
Trust Companies	103,000,000	5.9
Life Insurance Companies	243,000,000	11.0

It is but natural that the rate of such increase for ordinary banks should be higher than the rates for other organs. In this respect, however, mention must be made of the fact that the Dai-Hyaku (Hundredth) Bank annexed the Kawasaki Savings Bank and the Tokyo Savings Bank during the period under review, and this resulted in a total sum of ¥350,000,000 being transferred from the item of 'savings banks' to that of 'ordinary banks'.

The decrease in the amount of deposits with the savings banks during 1936 was thus brought about by the changes in items due to the annexation of the two savings banks by the Hundredth Bank. If the changes had not taken place, the increase for the ordinary banks would have been only ¥709,000,000 or 7.2 per cent, while the share of the savings banks would have shown an increase of ¥149,000,000 or 7.3 per cent. This would have placed the ordinary banks, the savings banks and the post offices on approximately the same level, above the trust companies but below the life insurance companies. Judged from this point of view, deposits in the savings banks were just as satisfactory as in the other branches.

Increasing Trend of Loans. Along with the increase in the amount of deposits with the various banking organs, the amount of loans made by these organs also increased, the total amount at the end of 1936 being ¥9,297,000,000 representing an increase of ¥750,000,000 or 8.8 per cent compared with ¥421,000,000 at the end of the preceding year.

Details of loans made by the life insurance companies still remain to be ascertained though it is presumed that there does not exist any considerable difference when compared with the preceding year. Under this presumption, loans made by the ordinary banks must have been larger than that of the other organs, but this was to be expected because of their increased deposits. The share of the Deposits Bureau in the increased loans also reached a considerable amount.

The loans made by savings banks show a slight decrease even if the changes in items, above mentioned, be taken into account. The loans made by trust companies increased to some extent. All things considered, therefore, it may be said that the general tendency during the year was for increased lending.

As the increase in the amount of deposits is accompanied by an increase in loans, cash-in-hand of the various organs of the banking world was comparatively small as compared with the preceding year. Details are shown in the following table :

BALANCE ON HAND AT YEAR-END

(In units of one million yen)

	Deposits	Loans	Balance
1931	15,118	9,134	5,984
1932	15,356	8,772	6,584
1933	16,497	8,304	8,197
1934	17,730	8,125	9,605
1935	18,970	8,547	10,423
1936	20,442	9,297	11,145

The balance on hand has increased every year but it is to be noted that the increasing tendency was much weaker in 1935 and 1936. This point will be clarified by a glance at the following table of new surplus funds :

NEW SURPLUS FUNDS

(In yen)

1932	600,000,000
1933	1,610,000,000
1934	1,411,000,000
1935	818,000,000
1936	722,000,000

The new surplus funds have decreased since 1933 with the continued increase in loans, but mention must be made of the fact that though the new surplus funds are decreasing, the various organs still have considerable balances on hand are with the result that low-interest rates still continuing.

New Enterprises Plans for new enterprises increased rapidly during 1936, a total amount of ¥2,000,000,000 being involved as compared with ¥1,300,000,000 in 1934 and ¥1,500,000,000 in 1935. Though it cannot be said that all the plans will be carried out, it still remains a fact that the amount involved shows a rapid increase, attributable to the boom in the munitions industry.

Deficit-covering Bonds A total amount of ¥780,000,000 of deficit-covering public bonds was calculated in the budget for the 1936–37 fiscal year and while a part of the amount was still outstanding, the digestion of already issued bonds became difficult. During the early part of 1937, the public bonds in the hands of the Bank of Japan amounted to ¥829,000,000 as compared with ¥689,000,000 recorded one year before. Furthermore, the public bonds absorbed during the early part of 1937 amounted to only ¥263,000,000 as compared with ¥325,000,000 for the corresponding period of the preceding year, a decrease of ¥62,000,000.

Since 1934, there has been a tightness of money in the autumn. In the fall of 1935, it was difficult for the South Manchuria Railway Company to issue its debentures, in 1936 the situation was still worse. The aggravated situation was tided over only after the Government had recourse to the funds of the Deposits Bureau and caused the Industrial Bank to make call loans by borrowing from the funds. It is to be noted in this connection that toward the end of 1935 the 5% public bonds were redeemed as a means of distributing funds.

Interest rates have apparently reached the bottom, but as no scarcity of funds is being felt, there is as yet no reactionary advance. Efforts are being made to encourage saving as one of the major points of the so-called quasi-war time economic system. If savings do not increase nothing but difficulties can be expected for the banking world.

Remarks: The figures do not include accounts of the banks located outside of Japan proper, Taiwan and Karafuto.

Various loans made by savings banks are collectively included in the item of loans on bonds.

The Bank of Japan

(Nippon Ginko)

The Bank of Japan is the central bank of the Empire and has an authorized capital of ¥60,000,000 and various reserves totalling upwards of ¥110,000,000. In point of capital it is far smaller than the Yasuda Bank (¥150,000,000), the Sanwa Bank (¥107,000,000), the Yokohama Specie Bank (¥100,000,000), the Mitsui Bank (¥100,000,000) and the Mitsubishi Bank (¥100,000,000), nevertheless it forms the centre of the nation's banking business on the strength of its privilege of issuing convertible bank notes and its management of Treasury receipts and disbursements as well as the important part it plays in adjusting the money market through the execution of its money rate policies and its conduct of open market operations (See pp. 325–327, Japan Year Book, 1936).

According to the survey of the Banking Bureau of the Ministry of Finance, the convertible bank notes issued by the Bank of Japan by December 8, 1936, amounted to ¥1,395,000,000. Special mention should be made of the bank's increased digestion of public loans as a result of the repeated issue of deficit-covering loans by the Government.

Yokohama Specie Bank

(Yokohama Shokin Ginko)

The Yokohama Specie Bank is an organ charged with the special task of affording financial facilities for foreign trade through its conduct of the foreign exchange business (See pp. 328, 329, Japan Year Book, 1936). The importance of its functions cannot be over-emphasized in view of the fact that Japan, being rather poor in natural resources, has to import from foreign countries such materials for her major industries as raw cotton, wool, crude oil and iron on the one hand and on the other, export her manufactures such as piece-goods, rayon textiles and raw silk in order to support her rapidly growing population.

The clash over the issue of banknotes between it and the Bank of Chosen, which had been issuing gold notes in Manchuria, was settled on October 1, 1936, through the withdrawal of the Chao-piao in Manchoukuo including the Kwantung Leased Territory.

The Hypothec Bank of Japan

(Nippon Kwangyo Ginko)

With an authorized capital standing at upwards of ¥110,000,000 and advances reaching the neighbourhood of ¥1,000,000,000, the Hypothec Bank of Japan is now, in fact as well as in name, the central organ of the nation in making loans on mortgage of immovable property. Since 1921, when a law governing the amalgamations was promulgated, it has annexed the greater part of the Agricultural and Industrial Banks (Noko Ginko), which were established as prefectural financial institutions for accommodating provincials with loans on security of immovable property.

The tendency toward such mergers was further promoted following the formation of the Hirota Cabinet, the Agricultural and Industrial Bank of Tokyo Prefecture being annexed to the Hypothec Bank. There are at present only 16 Agricultural and Industrial Banks as compared with 46 in 1900. By thus increasing its capital and enlarging its structure, the Hypothec Bank is becoming more and more positive in improving the financial conditions of cities and agricultural districts (See pp. 330–332, Japan Year Book, 1936)

Agricultural and Industrial Banks

(Noko Ginko)

The Agricultural and Industrial Banks are prefectural financial institutions for accommodating provincials with long-term loans at a low rate of interest on security of immovable property and, being established in every prefecture, are most useful through their connection with their central institution, the Hypothec Bank of Japan. But with a view to affording further financial facilities to local districts, the law concerning the amalgamation of the Hypothec Bank and the Agricultural and Industrial Banks was enacted in 1921. By virtue of this law the former was allowed to take over the business of the latter on condition that it establish its branches in places where head offices and branches of the latter were in existence. The Agricultural and Industrial Banks are joint-stock companies, each having a capital of not less than ¥200,000. Each of these banks has, as a general rule, for its exclusive business district a prefecture. The business of the Agricultural and Industrial Banks is principally the same as that of the Hypothec Bank of Japan. These banks may become agents for the Hypothec Bank or other Agricultural and Industrial Banks.

When acting as agents for loans made by the Hypothec Bank, Agricultural and Industrial Banks may guarantee to the bank the solvency of the debtors. They may take charge of the receipt and disbursement of the funds of prefectures or cities. They are authorized, when at least one-fourth of the nominal capital has been paid up, to issue agricultural and industrial debentures to an amount not exceeding fifteen times the paid-up capital. Such debentures, however, must not exceed the amount remaining after the deduction of the amount of pledges given for money borrowed from the Hypothec Bank from the total amount of outstanding loans redeemable by annual instalments and at a fixed time. The face-value of agricultural and industrial debentures which was originally not less than twenty yen has been reduced to ten yen and upward; and when debentures of not more than twenty yen face value are to be issued, such issue may be effected by sale. For this purpose a term must be fixed for the sale, and the amount sold within that term is taken as the amount of issue. These agricultural and industrial debentures must be redeemed by means of drawings at least twice a year in amounts proportionate to the amount to be redeemed in the same year of the loans redeemable by annual instalments except that part thereof given as security to the Hypothec Bank as mentioned above. There were 16 of these banks in existence throughout the country at the end of 1936.

The Industrial Bank of Japan

(Nippon Kogyo Ginko)

The primary function of the Industrial Bank of Japan is to underwrite national and prefectural bonds and company debentures and make loans on security of foundations created as prescribed by law. Its leadership among the underwriters is attracting a great deal of public attention, particularly because of its efforts to purify the underwriting world and rationalize the terms for underwriting. In addition to its endeavours for promoting financial facilities for medium-sized and small-scale industry, this bank is now being called upon to become more active in the furtherance of the shipbuilding industry along the lines of the national policy on shipping (See pp. 333, 334, Japan Year Book, 1936).

The Hokkaido Colonial Bank (Hokkaido Takushoku Ginko)

The Hokkaido Colonial Bank was established with the object of supplying capital for enterprises for colonizing and developing Hokkaido and Karafuto (the Japanese half of Saghalien), and especially for the purpose of facilitating the supply of capital by making loans on security of agricultural products and company shares and debentures as well as making long-term loans at low interest rate on immovable property. The bank had at first a capital of ¥3,000,000 but on April 23, 1922 it was increased to ¥20,000,000, of which ¥12,500,000 has been paid up. The business scope is very much similar to that of the Hypothec Bank of Japan and the Agricultural and Industrial Banks. The bank is authorized to issue debentures of not less than ten yen face value to an amount not exceeding 15 times its paid-up capital. Such debentures, however, must not exceed the total amount outstanding of the loans which are redeemable by annal instalments or at a fixed date, and when debentures of not more than twenty yen face value are to be issued by the bank such issue may be effected by sale. These debentures must be redeemed by means of drawings at least twice a year in amounts proportionate to the amount of the said loans to be redeemed in the same year.

The Bank of Taiwan (Taiwan Ginko)

The Bank of Taiwan was founded in September, 1889, four years after Japan's occupation of Formosa, as the result of the Sino-Japanese War.

It is a joint-stock company with an authorized capital of ¥15,000,000, of which ¥13,125,000 has been paid up.

The Bank is privileged to issue banknotes of denomination of one yen and upward, which are at any time convertible into gold yen. It is required to hold as conversion reserve gold and silver coins and bullion of the same amount as the notes issued; the amount of notes not covered by this specie reserve is limited to ¥20,000,000; they may be issued on security of Government paper money and securities, notes of the Bank of Japan, and other bonds and commercial bills of a reliable nature. Notes issued beyond this limit are subject to a tax of not less than three per cent, per annum.

The Bank of Taiwan has its head office in Taihoku and has thirty-two branches. Mr. Jiro Yasuda is its president.

The Bank of Chosen (Chosen Ginko)

The Bank of Korea was established in October, 1909, its name being changed to the Bank of Chosen in 1911 by virtue of the Bank of Chosen Act issued by the Government following Korea's annexation to Japan in April, 1910. The bank took over the assets and liabilities of the Bank of Korea, following the transfer of the assets and liabilities of the Dai-Ichi (First) Bank, which had been established in Korea since 1879, and which had received its right of issuing notes in that country in 1901, and which had acted as the central Japanese banking institution since the close of the Russo-Japanese War. The bank is authorized to issue bank notes. In 1917 the bank's notes were given sole right of legal tender in the Kwantung Leased Territory and along the South Manchuria Railway, and the limit of its guaranteed note issue was increased to ¥50,000,000. The bank greatly increased its activities during the World War extending to Japan proper, where it commenced foreign exchange transactions. The financial reaction following the World War caused it to narrow its business activities. It wrote off frozen assets to the amount of ¥36,000,000 for the first half of 1925 and halved its capital to ¥40,000,000. The bank borrowed a large amount of money from the Bank of Japan after 1920 on 10 years' repayment. Through revision of the Bank of Chosen Act in 1924 the right of control of the bank was transferred from the Governor-General of Korea to the Minister of Finance.

Trust Business

In 1935 there were in this country 31 trust companies, the authorized capitals of which total ¥259,000,000. Special mention must be made of the fact that most of the leading institutions of this kind in the country are under the

management of the nation's foremost financiers and are enjoying great confidence as the trustees because of their firm foundations. The assets of the trusts amounted to as much as ¥2,200,000,000 compared with less than ¥600,000,000 recorded at the end of 1926. Of this amount, ¥1,800,000,000 was money in trust. With these funds, the trust companies are contributing a great deal to the industrial development of the country by making loans to the amount of ¥970,000,000 and investing in securities to the amount of ¥1,100,000,000.

A decree of the Ministry of Finance forbids the trust companies to accept in trust less than ¥500 in one sum and to be entrusted with money for a period of less than two years (although there are specified exceptions), thereby defining the spheres of activities of the trust companies and differentiating their work from that of the ordinary banks. The greater part of the money entrusted to the trusts is on comparatively short term contracts while over 60 per cent of the deposits with the ordinary banks are on fixed accounts, but the leading trust companies are now joining in the adoption of a policy of encouraging long term trusts by affording high dividend rates to trusts of longer terms, and are apparently working to clarify the significance of their existence as a service different from that of the ordinary banks.

1936 Trust Business The conditions of the trust business world during 1936 were very different from the past when they were characterized by a remarkable increase in the amount of money held in trust and by a difficulty in profitably utilizing the funds because of lowered rates of interest. In the first place, the amount of money held in trust during 1936 only recorded an increase of slightly over 60 per cent of the increase for the preceding year which was ¥160,000,000 for all the trust companies in the country, and possibilities of operating the funds improved. Though the interest for advances, or public bonds and debentures could not avoid a decline under the low-interest policy of Finance Minister Baba, actual receipts from interest did not fall because of actual business conditions. And not only did receipts from interest increase but the return from trust fees and the profits yielded by the proper accounts also showed profitable advances. The increase in the profits yielded by the proper accounts is attributable to the congestion of the issuance of public bonds and debentures during the five months beginning with June. In view of the improvement in the conditions of the banking world, the business conditions of the trust companies during this year (1937) are expected to continue favourable.

Increase in Trusts The trust estates, which are the principal sources of profit to the trust companies, continued to increase remarkably during 1936 but the rate of increase was much slower than that of the preceding year. To cite trust money alone, which it may be more pertinent to consider than trust estates as a whole, the increase in 1934 amounted to ¥187,000,000 and that in 1935 to ¥164,000,000 while the increase in 1936 was only ¥103,000,000, an increase of only 63 per cent over the figures for the preceding year. Further, it is to be noted that the increase was much slacker during the latter half of the year when the amount was ¥26,000,000 than during the first half when the amount was ¥38,000,000. Details are shown in the following table :

TRUST ESTATES THROUGHOUT THE COUNTRY

(In units of one million yen)

Items	End of 1932	End of 1933	End of 1934	End of 1935	End of 1st Half of 1936	End of 2nd Half of 1936
Money in Trust	1,220	1,387	1,574	1,737	1,815	1,841
Special Trust Money	10	12	8	9	9	7
Securities in Trust	181	187	209	255	293	356
Credits in Trust	11	9	9	6	6	4
Immovable Property in Trust	29	32	32	32	34	35
Total	1,453	1,628	1,834	2,041	2,159	2,245

Changes in Operation Though not conspicuous outwardly, considerable changes have taken place in the operation of the trust estates. In the consideration of this point, let us first examine the following figures which are illustrative of the conditions of the operation of the trust estates as a whole:

OPERATION OF TRUST ESTATES

(In units of one million yen)

Items	End of 1932	End of 1933	End of 1934	End of 1935	End of 1st Half, 1936	End of 2nd Half, 1936
Securities	476	578	805	944	1,071	1,135
Loans	877	928	899	965	969	985
Security Loans	20	23	24	36	21	26
Immovable Property	36	40	40	42	44	44
Life Insurance Credits	1	1	2	2	3	3
Cash Deposits	38	53	58	46	45	47
Others	3	3	3	3	3	2
Total	1,453	1,629	1,831	2,040	2,160	2,245

The security investments increased by ¥191,000,000, which should be considered together with the fact that the securities received in trust during the year reached the ¥100,000,000 mark. The increased investments included ¥82,000,000 in national bonds, ¥47,000,000 in local bonds, ¥37,000,000 in debentures and ¥15,000,000 in stocks. On the other hand, the total increase in loans throughout the year amounted to only ¥20,000,000 or approximately 10 per cent of the increased amount of securities. It is, however, interesting to note that the loans was characterized by a decrease in security investments and a rapid increase in the mortgages of fixed assets, loans on security and advances to public organizations.

Needless to say, the increase in the aforementioned items is to be attributed to the fact that on account of the extremely depressed conditions of the underwriting world during the latter half of 1936, the industrial concerns and local public organizations confronted with financial difficulties had to turn to banks and trust companies for loans. It must be added that the funds used for making the loans were secured from the calling in of previous advances guaranteed by securities, which are much of the nature of loans at call and as such the interest charged on them is at lower rates. It follows that although there was no remarkable change in the total amount of loans made, the changes in the substance of the loans as referred to above would naturally bring about an increase in the profits yielded by the trust accounts. The fact that the total receipts in interest during 1935 and 1936 did not increase was due to the low level of money rates.

Reduced Dividend The dividend to the beneficiaries of the large trust companies as the Mitsui, Mitsubishi, Sumitomo, Yasuda, Kyodo and Kwansai was at the rate of 4.2 per cent. That the dividend rate was kept unaltered during that year was an extraordinary phenomenon in the light of the low-interest tendency which was then prevailing and for this, the circumstances surrounding the increased dividend for the shareholders of the Sumitomo were responsible.

The Sumitomo had been intending to raise the dividend for its shareholders from 5 to 6 per cent and had applied to the Ministry of Finance for the necessary permission. In view of its policy for an improvement in the basis of banks and trust companies, however, the Finance Ministry declined to grant the permit. Nevertheless, on account of the application it had filed with the Finance Ministry, the Sumitomo found it necessary to avoid lowering the dividend on the trust accounts in order to save dividend for 1935 at the sam level as the latter half of 1934. The large profits yielded by the operation of its trust property rendered it easy for the Sumitomo to do so but some of those which were forced to follow suit found it more or less difficult.

The rates of dividend given by the leading trust companies of the country during the past three years are shown in the following table :

RATES OF DIVIDEND FOR BENEFICIARIES

	1st Half of 1934	2nd Half of 1934	1st Half of 1935	2nd Half of 1935	1st Half of 1939	2nd Half of 1932
Mitsui	{4.5 3.2	4.3 4.0	4.2 4.0	4.2 4.0	4.1 3.9	3.9 3.7
Mitsubishi	4.4	4.2	4.2	4.2	4.0	3.8
Sumitomo	4.4	4.2	4.2	4.2	4.0	3.8
Yasuda	4.4	4.2	4.2	4.2	4.0	3.8
Kyodo	4.4	4.3	4.2	4.2	4.0	3.8
Kwansai	4.4	4.3	4.2	4.2	4.0	3.8
Osaka	4.4	4.3	4.3	4.2	4.0	3.8

It is to be noted that the dividend was lowered in the first half of 1936 when the Sumitomo finally secured its long desired permission of the Ministry of Finance to increase the dividend to its shareholders. A further decrease took place in the second half of the year. Apart from the impression created by such action on the part of the Sumitomo that the trust companies were a little too calculating, there were external circumstances which to a large extent necessitated the lowering of the dividend to the beneficiaries of trusts.

Two-term System The previous Minister of Finance, Dr. Eiichi Baba, upon his assumption of the portfolio, began to carry out his policy for low interest rates and at the same time hastened to bring about an improvement in the conditions of banking institutions on the lines of the principle of "One bank for one district." The bankers, being distressed at this prnciple and the low-interest policy, soon started criticising the trust companies for their dividends to beneficiaries. As a result, the Ministry of Finance resolved to revise the Trust Business Law and prolong the term of trust for money from two years.

Under these circumstances, the trust businessmen held a series of meetings among themselves to discuss a spontaneous adjustment of the relations between their dividends to beneficiaries and the interest rates of banks for deposits. During the discussion it was proposed to fix the rates of dividend to beneficiaries according to an agreement among the trust companies and to draw a line between the rate of dividend for long-term trusts (over five years) and that for short-term trusts (less than five years), following the example set in 1931 by the Mitsui Trust Company, reducing the rate of dividend for short-term trusts to come more in line with the interest rates of banks for fixed deposits.

It was decided to enforce the two-term system from December, 1936. While the 3.8 per cent dividend may be left unaltered for long-term trusts, the short-term trusts are expected to declare a dividend of 3.6 per cent against he 3.3 per cent interest for fixed deposits with banks.

Business Conditions The profits of the trust companies throughout the country in 1936 showed an increase over the figures for the preceding year. Even in the absence of an increase in the profits derived from the operation of trust property, the receipts of the trust companies swelled because the dividend for the beneficiaries was lowered.

In addition to the increase in the trust fees, there was an increase in the profits derived from the proper accounts, which was more remarkable in the latter half of the year than in the first half. The principal cause of this increase was to be found in the increased activities in the under-writing world. Under the impetus of the low-interest policy of Finance Minister Baba, the underwriting world, which had long been in a depressed condition, began in June to display considerable activity, which was continued until September. This enabled the trust companies to underwrite more public bonds and debentures and thus get more commission.

To sum up, the business profits of the trust companies as well as the percentage of profits are showing an upward trend.

Details of the business conditions of the leading trust companies of the country during 1936 are shown in the following table with a comparison with the preceding three years: (In units of one thousand yen)

1936	Trust Fees	Yields of Proper Accounts	Total Profits	Total Expenditure	Net Profit	Percentage of Profit	Percentage of Dividend

Mutual Loan Companies (Mujin Kaisha)

In addition to the banking institutions there are mutual loan companies (Mujin Kaisha), which are credit establishments peculiar to Japan and are based on mutual credit among the middle and lower classes of people. Mutual credit societies have existed in Japan since olden times. The Mutual Loan Society Law was promulgated in June, 1915, whereby the mutual loan societies acquired a legal standing. But in order to enable these societies to perform the function of financial institutions for lower classes and to extend their business operations, fundamental amendments were made in the law in 1931. According to the provisions of the Mutual Loan Company Law, put into effect on and after July 1, 1931, the business of the companies is to make the subscribers pay money in instalments during a fixed period and then to distribute it, in lots, among the subscribers, by drawings, biddings or some similar means, the number of such lots and the sum of money to be thus distributed being previously fixed. Each company must have a nominal capital of more than ¥30,000 and a paid-up capital of more than ¥15,000. No company is allowed to carry on this kind of business without permission of the Minister of Finance. Those so engaged are prohibited from carrying on any other business at the same time and are under obligation to present business reports to the Government. Restrictions also are put on the use of business funds.

The total amount handled by these mutual credit societies throughout the country is given as between ¥3,000,000,000 and ¥4,000,000,000 and members of the societies are said to number some 4,000,000 persons. Many prefectural governments have issued decrees controlling the societies with a view to preventing evil practices.

According to the latest figures, there are at present 254 mutual loan companies throughout the country and their authorized capitals total ¥39,000,000. The number of groups of subscriptions to all these companies is given as more than 72,000 divided into 2,170,000 lots. The total contracts amount to ¥1,380,000, and loans to over ¥610,000,000.

Co-operative Credit Associations

Credit Associations acquired a legal standing under a new system as defined by the so-called Co-operative Association Law, promulgated in March, 1900. The business of these associations is to lend money to their members in order to better their economic conditions and to employ their savings. By virtue of the revision of the law in July, 1917, the business of the Credit Associations has been expanded and they may use the savings of the families of their members, public corporations or legal persons who do not aim at profit. Especially, the Credit Associations in cities or city areas designated by the competent Minister of State may, besides the business above described, discount bills for their members and handle savings of persons who are not their members but reside inside the same boundary. Therefore, they may be called the People's Banks in city areas, and are placed under the control of the Minister of Finance and Minister of Agriculture and Forestry. The actual number of these associations was 271 at the end of December, 1935.

Central Chest for Co-operative Associations

(Sangyo Kumiai Chuo Kinko)

As an institution for regulating the movement of funds of the Federations of Co-operative Associations and of individual Co-operative Associations and for bringing them into close touch with the central money market, the Central Chest for Co-operative Associations was established by law on April 5, 1923, Its capital at present amounts to ¥30,700,000, of which ¥15,000,000 is invested by the Government and the remainder, ¥15,-700,000, by the Co-operative Associations throughout the country. The Associations that participate in the investment amount to more than 80 per cent of the total number existing. The principal business of the Central Chest for Co-operative Associations is at follows :

(1) To make without security loans redeemable at a fixed time within a period of not more than five years to Federations of Co-operative Associations or Co-operative Associations ;

(2) To make loans without security, redeemable by annual instalments within a period not exceeding thirty years to the Federations of Co-operative Associations or Co-operative Associations, provided that the total amount of such loans does not exceed one-half of the paid-up capital and debentures issued ;

(3) To discount bills for, or allow overdrafts to, Federations of Co-operative Associations or Co-operative Associations ;

(4) To undertake exchange business for Federations of Co-operative Associations or Co-operative Associations ;

(5) To receive money as deposits from Federations of Co-operative Associations, public corporations, or legal persons not engaged in business aiming at profit ;

(6) To take securities for safe custody for Federations of Co-operative Associations or Co-operative Associations ; and

(7) To buy and sell on a consignment basis securities for Federations of Co-operative Associations or Co-operative Associations.

The Central Chest is authorized to issue debentures and is subject to control both of the Minister of Agriculture and Forestry and Minister of Finance. The assets and liabilities of these associations follow :

Clearing Houses

The establishment of the first clearing house in Japan took place in Osaka in 1879, preceding by eight years that in Tokyo, where one was established in 1887. Cash transactions marked the commercial society of this country early in the Meiji era and no transactions in bills or cheques were then conducted. Viscount Shibusawa and other business leaders encouraged paper transactions among business men at large and the time soon came when it was necessary for Tokyo to establish a clearing house, one being eventually brought into existence by the Bankers' Association in 1887. The first president of the institution was the late Viscount Shibusawa and the present holder of that office is Mr. Hirozo Mori, Vice-president of Yasuda Bank. At the end of 1936, there were 45 clearing houses in Japan. The total of bills cleared at the clearing-houses throughout the country in the year 1936 reached 42,945,000 bills and ¥69,856,000,000. As compared with the preceding year the number of bills increased by 2,219,000 (5.4%), while the amount gained was ¥5,998,000,000 (9.3%). The amount of clearings in Tokyo and Osaka and All-Japan were as follows :

BILLS CLEARED AT THE CLEARING-HOUSES THROUGHOUT THE COUNTRY

(000's omitted)

Year	Tokyo		Osaka		(All Japan)

Postal Savings Deposits

The postal savings deposits system of Japan was adopted from the Post Office Savings Act of Great Britain. It was established by an Imperial Ordinance of August, 1874, and was enfored in May of the following year at 22 post offices in the country. The history of this service in Japan is one of the oldest in the world, older than that of Germany or France and 36 years older than that of America. At first the annual interest rate was 3 per cent, the same as at present, which has been enforced since October 1, 1932. The

maximum amount one could deposit was at first ¥500. In the first year of enforcement the amount totalled ¥51,224 for 1,843 depositors. In 1882 the Mail Act was passed and the deposit business became jointly controlled by the Minister of Finance and the Minister of Agriculture and Commerce. The service was looked after by 4,000 post offices in the country. In 1890 the Postal Savings Deposit Act was issued. In 1920 the Exchange Deposit Bureau was established and was later replaced by the Deposits Bureau in the Ministry of Communications. (See Chapter VIII.)

The number of depositors and amount of savings since 1925 have been as follows :

March 31,	Number	Total Amount
1925	30,386,806	¥1,131,250,271
1926	31,549,989	1,166,998,703
1927	32,410,752	1,253,539,935
1928	34,425,812	1,636,255,042
1929	36,485,875	1,863,703,742
1930	37,968,850	2,201,245,552
1931	38,257,981	2,497,154,253
1932	39,066,040	2,815,868,019
1933	39,838,438	2,772,004,751
1934	41,625,306	2,919,345,286
1935	43,908,510	3,062,750,943
1936	46,568,533	3,232,947,127
1937	49,564,766	3,485,835,081

Currency System

Coinage The present coinage system is based on the Coinage Law issued in 1897, which established the gold monometalic system. Its principal points are summarized as follows :

(1) The coinage unit is 2 fun (0.75 grammes) of pure gold, that is, one-half of the former gold unit, and is to be denominated one yen.

(2) The standard gold coins are of three denominations, namely, five yen, ten yen and twenty yen ; the former gold coins pass for double their nominal value.

(3) The subsidiary silver coins are of two denominations, namely, twenty sen and fifty sen ; the former five-sen, ten-sen, twenty-sen and fifty-sen silver pieces are allowed to circulate.

(4) The other subsidiary coins are the nickel five-sen and ten-sen pieces and the bronze one-sen and five-rin pieces ; the former five-sen nickel as well as two-sen, one-sen, five-rin and one-rin copper pieces are allowed to circulate.

(5) The fineness and weights of the coins prescribed in the Coinage Law are as follows :

(a) Fineness

Gold coin pure gold 900 copper 100
Silver coins
pure silver 720 copper 280
Nickel coins
pure nickel 1000
Bronze coins copper 950 tin 40 zinc 10

(b) Weights

Gold coins:

Denominations	Weights Grammes
20-yen pieces	16.6666
10-yen pieces	8.3333
5-yen pieces	4.1666

Subsidiary coins:

Denominations	Weights Grammes
50-sen silver	4.95
20-sen silver	1.98
10-sen nickel	4.00
5-sen nickel	2.80
1-sen bronze	3.75
5-rin bronze	2.10

Paper Notes of Small Denominations In order to make good the deficiency of subsidiary silver coins caused by the war, paper notes of small denominations, namely, fifty-sen, twenty-sen and ten-sen, were issued as a substitute in accordance with the Imperial Ordinance No. 202 promulgated on October 29, 1917. The issue of these petty notes went on increasing in volume till at the end of February, 1922, it reached 218 million yen, the largest on record. After that time the volume gradually dwindled in consequence of the minting of new subsidiary coins to displace the notes, the latter coming down, by the end of December, 1934, to ¥11,160,000, consisting of ¥5,482,000 50-sen notes, ¥1,111,500 20-sen ntoes and ¥4,566,500 10-sen notes.

Convertible Bank Notes In May, 1884, there was promulgated the Convertible Bank-notes Law providing for the issue by the Bank of Japan of bank-notes which were to be converted into silver, but on the adoption of the gold standard in 1897 these notes became convertible into gold. Certain amendments were made in the law in June, 1932, and put into effect on and after July 1. The principal points may be summarized as follows :

The Bank of Japan is required to hold as a conversion reserve against the issue of notes gold and silver coins and bullion to the same amount as that of the notes issued ; and the total value of silver coins and bullion must not exceed one-fourth of the entire con-

version reserve. The Bank of Japan may, in addition to the notes specified in the preceding paragraph, issue bank-notes to the amount of ¥1,000,000,000 against Government bonds, Treasury notes and other reliable securities or commercial bills. The Bank may also be allowed to issue notes against such securities beyond the maximum mentioned above. In case the issue in excess of this limit lasts more than 15 days the approval of the Minister of Finance is required, and such issues outstanding after a period of 15 days are subject to a tax of at least 3 per cent per annum of the amount so issued. The bank-notes are of 7 denominations, namely, one yen, 5 yen, 10 yen, 20 yen, 50 yen, 100 yen and 200 yen.

Currency System of Formosa and Korea As regards the currency system of Formosa, up to October, 1908, recognition was given to the circulation at the market price in gold of the silver yen, similar to that in circuration in Japan proper until the revision of the Coinage Law in 1897; but the exchange of silver was brought to a conclusion at the end of April, 1909. In April, 1911, the Coinage Law of the Empire was brought into operation in the island, so that the system in Formosa is now absolutely identical with that in force in Japan proper. The Bank of Taiwan issued, at first, bank-notes convertible into silver yen, but these notes were, upon the reform of the currency system, withdrawn from circulation by April, 1909. In June, 1904, the bank was allowed to issue bank-notes convertible into gold coins, holding as conversion reserve gold and silver coins and bullion to the same amount as that of notes issued. It may further issue notes to the amount of ¥20,000,000 on security of reliable securities. Should it be necessary to issue notes over and above the amounts just mentioned, the permission of the Government must be obtained and an issue-tax of not less than five per cent must be paid in respect of the excess issue.

The currency system of Korea had fallen into such a state of disorder and confusion that confidence in legal tender was entirely gone, and consequently commodity prices perpetually fluctuated. In 1905, at the time of the protectorate régime of Japan, a radical reform of the system was started, the coinage regulations were revised and new coins equal in quality and weight to those of Japan were minted. At the same time, the use of the old nickel coins was prohibited on and after December 31, 1909. After the annexation (1910), with the object of unifying the coinage of Korea with that of the Empire, the minting of coins under the Coinage Regulation was suspended and the circulation of Japanese coins was encouraged; the old Korean coins in circulation steadily diminished. The Imperial Coinage Law was put in force in April, 1918 in Korea and the use of the old Korean coins as legal tenders was permitted till the end of 1919 only, the Government undertaking to exchange them during the five subsequent years. The use of "Yo-sen" (bronze pieces), however, was left free for the time being in consideration of economic conditions in Korea. Bank-notes issued by the Bank of Chosen are convertible notes. Besides issuing under the Charter of the Bank of Chosen against the security of gold specie, gold and silver bullion and Bank of Japan's convertible notes, the Bank is authorized to issue notes up to the limit ¥50,000,000 on the security of excheqer bills and other reliable bills or trade bills.

The figures up to 1931 represent the quotations of the Yokohama Specie Bank and those for 1936 represent the market rates of telegraphic transfers of the Bank of Japan.

Foreign Exchange Control Law

It was after the coming into operation on July 1, 1932 of the Capital Flight Prevention Law enacted with the object of controlling movements of capital in and out of the country that the flight of capital through purchases and sales of exchange, remittances to foreign countries, or investments in securities in foreign currencies was prevented almost completely. Subsequently, however, the world economic situation developed so adversely that it seemed impossible to protect the economic life of the nation by resorting to control under the Capital Flight Prevention Law only. In view of this fact and in order to enlarge the scope of control over the flight of capital and to prohibit speculative dealings in foreign exchange, the Government submitted to the Diet in the 64th session a bill for the control of foreign exchange. With the coming into operation on May 1, 1933 of the Foreign Exchange Control Law that had thus passed the Diet, the Capital Flight Prevention Law was abrogated.

The Foreign Exchange Control Law, the principal object of which is to prevent completely the flight of capital and speculative dealings in foreign exchange and to check abnormal fluctuations in the yen exchange, vests the Government with the following authority to control, in case of necessity, such transactions or acts as will be mentioned below through the Ordinance of the Department of Finance.

(1) Authority to prohibit or restrict the export of gold and gold manufactures, the purchase and sale of foreign exchange, remittances to foreign countries, the acquisition or disposal of claims and obligations expressed in foreign currencies, the export and import of securities, the export of merchandise unaccompanied by exchange transactions, and other transactions or acts. (The provisions of the Ordinance of the Department of Finance relating to the Gold Embargo, promulgated in December, 1931, are in accord with this Law).

(2) Authority to require reports or to make examinations in respect of the matters relating to the above prohibitions or restrictions.

(3) Authority to limit transactions in foreign exchange to cases in which one of the parties to the transactions is the Bank of Japan or such other person as the Government may designate.

(4) Authority to require persons in possession of gold bullion and assets expressed in foreign currencies to sell them to the Bank of Japan or such other person as the Government may designate.

As in the case of the Capital Flight Prevention Law, the principle of severe punishment has been adopted in applying penal provisions to acts of violation specified in the Ordinance of the Department of Finance issued under such authority. Thus, persons contravening the prohibitions or restrictions of transactions or acts as prescribed in the Ordinance are liable to punishment by penal servitude or imprisonment for a term not exceeding 3 years or to a fine not exceeding 10 thousand yen (or not exceeding three times the value involved in the transaction in question in case three times the value of said transactions exceeds 10 thousand yen), and persons not presenting reports or obstructing the examination of books and other documents are liable to imprisonment for not more than 6 months or a fine of not more than 5 thousand yen.

The Government has newly established the Foreign Exchange Control Bureau in the Department of Finance as an executive organ of the Foreign Exchange Control Law. It has also created two such committees as the Foreign Currency Valuation Committee and the Foreign Exchange Control Committee, the former being authorised to fix the sale price in cases where the Government may, in accordance with the provisions of this Law, require the sale of gold bullion and assets expressed in foreign currencies and the latter acting in consultation with the competent Minister on important matters relating to the enforcement of this Law.

Such authority as has been vested in the Government under the Foreign Exchange Control Law does not operate in all cases. The scope of transactions or acts to be prohibited or restricted and the manner of control are, therefore, provided for in detail in the Ordinance of the Department of Finance issued in accordance with this Law (The Ordinance was put into operation as from May 1, 1933, the date of the coming into operation of the Foreign Exchange Control Law). The contents of the Ordinance may be summarized as follows :—

(A) Matters to be prohibited or restricted.

(1) Permission of the Minister of Finance is required for the export of gold currency, gold bullion, gold alloys, or gold manufactures. The melting down or mutilation of gold coins is prohibited.

(2) Except as necessary for commercial transactions or other actual demand, speculative transactions in foreign currencies or foreign exchange are prohibited.

(3) Except as necessary for foreign trade and other regular transactions, permission of the Minister of Finance is required for the purchase of foreign currencies, foreign exchange, or yen exchange drawn on Kwantung Province and the South Manchuria Railway's leased districts against Japanese currency as counter-value, the sale of foreign exchange against Japanese currency as counter-value to persons other than foreign exchange banks, the purchase and sale of yen exchange against foreign currencies as counter-value, remittances to foreign countries, and payments in Japan by order from a foreign country.

(4) Permission of the Minister of Finance is required for the acquisition of foreign currency securities for value, except in the case of the acquisition of foreign currency securities which were in Japan on July 1, 1932 and those imported subsequently under license or in the case of the acquisition of the securities by foreigners with funds which they hold in foreign countries.

(5) Permission of the Minister of Finance is required for the acquisition of claims expressed in foreign currencies against Japanese currency as counter-value.

(6) Permission of the Minister of Finance is required for the conclusion of contracts of deposits, loans for consumption, trust, and insurance, expressed in foreign currencies.

(7) Permission of the Minister of Finance is required for the issue of company debentures expressed in foreign currencies or the making in foreign countries of loans expressed in foreign currencies on the security of property in Japan.

(8) Permission of the Minister of Finance is required for the acquisition in Japan of letters of credit not relating to the import of merchandise into Japan or Kwantung Province and the South Manchuria Railway's leased districts.

(9) Permission of the Minister of Finance is required in principle for the export and import of securities, whether expressed in Japanese currency or foreign currencies.

(10) For the purpose of controlling the flight of capital in the form of goods, permission of the Minister of Finance is required in principle for the export of merchandise for the value of which drafts have not been sold to foreign exchange banks.

(11) Persons, who have received in foreign countries payments for exported merchandise for the value of which drafts have not been sold to foreign exchange banks, are required to take procedure to have them transferred to Japan within two months.

(12) Persons, who hold in Japan or in foreign countries foreign currency securities of which the date of payment has arrived, are required either to sell them or to obtain payment within three months after the due date. When foreign currency securities held in foreign countries have been sold, or payment has been received, procedure must be taken to have the proceeds transferred to Japan within two months.

(13) Banks which have notified the Government of their intention of carrying on the business of foreign exchange are known as foreign exchange banks, and the freedom of their exchange transactions is, contrary to the case of individuals, allowed in principle.

(B) Reports and examinations in respect of matters to be prohibited or restricted.

Foreign exchange banks, dealers in securities, and other persons are under obligation to submit various reports to the Government in respect of matters to be prohibited or restricted. The Government may, in case of necessity, make examinations of their books and other documents.

(1) Foreign exchange banks are required to submit, not later than the fifteenth day of the following month, detailed statements for each month of purchases and sales of foreign exchange, purchases and sales of yen exchange drawn on Kwantung Province and the South Manchuria Railway's leased districts, exchange collections handled, letters of credit issued, and the like. These banks are also required to report, within three days, the amount of their daily purchases and sales of foreign exchange and the amounts of their positions over-sold or over-bought.

(2) Dealers in securities are required to submit, not later than the fifteenth day of the following month, detailed statements for each month of purchases and sales of foreign currency securities or of their brokerage transactions.

(3) Persons who have done such transactions or acts as the acquisition or disposal of foreign currencies or foreign exchange, remittance to foreign countries, the acquisition or disposal of foreign currency securities, the issue or acquisition of letters of credit, and

other transactions or acts to be restricted by this Ordinance, are required to submit reports for each month of such transactions or acts not later than the fifteenth day of the following month.

(4) Persons who at the time this Ordinance comes into operation have contracts of trust or insurance expressed in foreign currencies are required to submit reports within one month of the coming into operation of this Ordinance.

(5) When persons in possession of foreign currencies, foreign exchange, foreign currency securities, and other claims and obligations expressed in foreign currencies have acquired domicile in Japan, such persons are required to make notification thereof.

(6) Persons who have imported securities under license are required to submit reports within two weeks.

(7) Persons who export merchandise for the value of which drafts have not been sold to foreign exchange banks are required to submit, in making reports of export to the custom house or in the event of despatch by mail, reports relating thereto through the custom house or the post office of despatch.

(8) The Government may designate matters or persons and require reports other than those provided for in this Ordinance. (In accordance with this provision the Government instructed foreign exchange banks on May 4, 1933 to submit daily reports of interbank exchange transactions and on August 18 reports for the ten days period of purchases and sales of foreign exchange in their branch offices abroad. On October 29, 1934, it also required gold producers and dealers in gold bullion to submit monthly reports of sales of gold produced and purchases and sales of gold bullion).

(C) Compulsory disposal of assets expressed in foreign currencies.

The Government may at any time require persons in possession of gold bullion and assets expressed in foreign currencies such as foreign exchange and foreign currency securities to sell them to the Bank of Japan or such other person as the Government may designate.

(D) Impress of stamp on foreign curreucy securities.

Foreign currency securities, the purchase and sale of which have been exceptionally sanctioned, such as foreign currency securities which were in this country on July 1, 1932 and those imported subsequently under license from the Minister of Finance, may, as was provided for in the Ordinance of the Department of Finance issued under the Capital Flight Prevention Law, be presented to the Bank of Japan and impressed with a stamp.

CHAPTER X

HOME TRADE AND COMMERCE

Development of Business Houses

Origin of Tokyo Chamber of Commerce The Yedo (Tokyo) City Assembly was the predecessor of the present Tokyo Chamber of Commerce and Industry, and dates back 133 years. It was Lord Etchu-no-Kami Matsudaira, the then Vice-Premier (Roju) of the Shogunate Government, that advanced a plan to organize a public business body to accommodate merchants with funds and to carry out relief work in cases of calamity, and for this the Assembly was organized. It lasted till the end of the Shogunate régime, when the reserve funds it then held were turned over to the Meiji Government. The work was renewed by the Tokyo Chamber of Commerce which was organized in 1871 and is now known as the Tokyo Chamber of Commerce and Industry.

International Chamber of Commerce Japan first attended the plenary conference of the International Chamber in 1923 in London, when Mr. Raita Fujiyama, then president of the Tokyo Chamber and All-Japan Chamber, was the representative.

Business Companies The Mitsui-Gumi, Ono-Gumi, Shimada-Gumi and several other business concerns were founded early in the Meiji Era, but the system and management of these concerns were primitive and the companies were quite different from business companies in the modern sense of the term. The Meiji Government encouraged the development of the country's foreign trade and this resulted in an accumulation of capital and growth of modern businesses in large cities and ports. So-called trading companies and exchange companies were established under Government encouragement and financial help in such cities and towns as Tokyo, Saikyo (Kyoto), Osaka, Yokohama, Kobé, Niigata, Tsuruga and Otsu. These institutions were the precursors of the joint-stock companies of later years though for a time, with the abolition of the post of Trade and Commerce Commissioner in July, 1871, they ceased to exist. After this the Government tried to disseminate a knowledge of commerce and industry by distributing books written by Mr. Genichiro Fukuchi and the late Viscount Shibusawa. As a result of the establishment of national banks following the revision of the National Bank Act in 1876 and also stimulated by the situation following the Satsuma Rebellion of 1877, joint-stock companies of various natures were established. The Tokyo Marine Insurance Company, Tokyo Horse Tramcar Company, Japan Railway Company, Osaka Spinning Company, Yokohama Specie Bank and other concerns were created one after the other. At the end of 1882 the number of trading concerns in the country was 968, but at the end of 1886 it decreased to 315, owing to business depression. After the establishment of the convertible note system in 1896 business concerns began to increase once more and a great many, such as shipbuilding, machine manufacturing, weaving, mining, electricity, gas, paper milling, and oil refining companies, were founded. With the promulgation of the Commercial Code in 1889 these acquired a legal standing and in 1892 a revision was made in the laws concerning companies, bills and bankruptcy. A thorough-going revision was introduced into the Code in 1899. Regulations concerning debenture flotations were issued at the same time.

Business was greatly stimulated by the Sino-Japanese War, Russo-Japanese War and the World War. Before the World War, the fostering of new businesses was a feature of this country but business expansion and enlargement by merger characterized the situation during the World War. Large concerns absorbed small ones until joint-stock companies with capitalization of ¥5,000,000 each accounted for 65 per cent of the total number of these companies after the War. This increase in size and concentration of capital gave rise to the monopolistic tendency of a limited number of large business concerns wielding great power.

Number of Companies

There were a total of 84,146 companies throughout the country at the end of 1935, which showed an increase of 5,948 or 7.1 per cent over similar

figures recorded one year before. The increasing tendency of companies during the past 10 years is illustrated by the following figures :

	Number of Companies	Index No.	Increase Over Preceding Year	Percentage of Increase
1925	43,345	100	778	2.3
1926	36,068	105	1,723	5.0
1927	38,516	112	2,448	6.8
1928	41,702	121	3,186	8.3
1929	46,692	136	4,990	12.0
1930	51,910	151	5,218	11.2
1931	57,226	167	5,316	10.2
1932	65,041	189	7,815	13.7
1933	71,196	207	6,155	9.5
1934	78,198	228	7,002	9.8
1935	84,146	245	5,948	7.1

Kinds of Companies

Of the 84,146 companies, 16,449 (19.5%) were Gomei Kaisha (unlimited partnerships), 44,388 (52.8%) were Goshi Kaisha (limited partnerships), 23,264 (27.6%) were Kabushiki Kaisha (joint stock companies), 41 were Kabushiki Goshi Kaisha (joint-stock limited partnerships) and 4 were Sogo Kaisha (mutual companies). The number of Gomei Kaisha increased by 2,92 or 14.6 per cent as compared with that recorded a year ago while the number of Goshi Kaisha rose by 2,566 or 6.1 per cent, that of Kabushiki Kaisha by 1,287 or 5.9 per cent and that of Kabushiki Goshi Kaisha by 3.

During the past 10 years, the number of Kabushiki Goshi Kaisha has remained practically unchanged while the number of Sogo Kaisha has been reduced by half owing to the merger of five companies. On the other hand, the other three kinds of firms have been on the increase, particularly the Goshi Kaisha. Details of the increasing tendency of these firms are tabulated below :

GOSHI KAISHA

	Number of Companies	Index No.	Increase Over Preceding Year	Percentage of Increase
1925	5,203	100	75	1.5
1926	5,502	106	299	5.7
1927	5,961	115	459	8.3
1928	6,458	124	497	8.3
1929	7,379	142	921	14.3
1930	8,525	164	1,146	15.5
1931	9,673	186	1,148	13.5
1932	10,925	210	1,252	12.9
1933	12,344	237	1,419	13.0
1934	14,357	276	2,013	16.3
1935	16,449	316	2,092	14.6

GOSHI KAISHA

	Number of Companies	Index No.	Increase Over Preceding Year	Percentage of Increase
1925	11,539	100	900	8.5
1926	12,824	111	1,285	11.1
1927	14,530	126	1,706	13.3
1928	16,971	147	2,441	16.8
1929	20,318	176	3,347	19.7
1930	23,995	208	3,677	18.1
1931	27,855	241	3,860	16.1
1932	34,059	295	6,204	22.3
1933	38,038	330	3,979	11.7
1934	41,822	362	3,784	9.9
1935	44,388	385	2,566	6.1

KABUSHIKI KAISHA

	Number of Companies	Index No.	Increase Over Preceding Year	Percentage of Increase
1925	17,556	100	191	1.1
1926	17,696	101	140	0.8
1927	17,981	102	285	1.6
1928	18,230	104	249	1.4
1929	18,950	108	720	3.9
1930	19,341	110	391	2.1
1931	19,649	112	308	1.6
1932	20,010	114	361	1.8
1933	20,767	118	757	3.8
1934	21,977	125	1,210	5.8
1935	23,364	133	1,287	5.9

(Note The underlined figures denote decrease.)

Capitalization of Companies

Among these companies there were only 350 with an authorized capital of more than ¥5,000,000 and less than ¥10,000,000 each. The number of those with an authorized capital of less than ¥5,000,000 each was 60,496 which counted 71.9 per cent of the total. Details are tabulated as follows :

Authorized Capital	Number of Companies	%
Less than ¥50,000	60,496	71.9
More than ¥100,000 and less than ¥500,000	10,356	12.3
More than ¥50,000 and less than ¥100,000	7,941	9.5
More than ¥1,000,000 and less than ¥5,000,000	2,387	2.8
More than ¥5,000,000 and less than ¥10,000,000	2,180	2.6
More than ¥10,000,000	430	0.5
More than ¥5,000,000 and less than ¥10,000,000	356	0.4
Total	84,149	100.0

Those with an authorized capital of less than ¥500,000 increased from 73,114 at the end of 1934 to 78,793 at the end of 1935, gaining by 5,679 or 7.8 per cent while those with an authorized capital of more than ¥500,000 merely increased by 269 or 5.3 per cent, rising from 5,084 to 5,353. Further details in this connection are given in index number as follows :

	Less Than ¥50,000	Over ¥50,000 and Less than ¥100,000	Over ¥100,000 and less than ¥500,000	Over ¥500,000 and less than ¥1,000,000	Over ¥1,000,000 and less than ¥5,000,000	More than ¥5,000,000 and less than ¥10,000,000	Over ¥10,000,000
1925	100	100	100	100	100	100	100
1926	108	103	102	102	100	106	109
1927	120	110	103	101	101	104	117
1928	137	115	104	98	100	106	123
1929	162	123	108	99	102	108	129
1930	189	130	110	98	101	108	128
1931	220	135	110	95	99	106	128
1932	264	140	111	92	100	103	127
1933	295	148	116	95	100	102	128
1934	328	161	123	99	104	109	133
1935	353	178	132	104	109	118	136

Kinds of Enterprises

The greater part of the companies are engaged in commerce as shown by the figures recorded at the end of 1935 which placed the commercial firms at 45,852 or 54.5 per cent of the total. Those engaged in manufacturing industry numbered 29,312 (34.8%) ; those in transport business, 6,082 (7.2%) ; those in agriculture, 1,957 ; those in mining, 611 ; and those in fishery, 332. It is to be noted in this respect that those classified under the heading of commerce include those dealing in merchandise, in warehouse business, in banking and in insurance business as well.

The following is a table showing the increasing tendency of the various companies during the past 10 years in index number :

	Agriculture	Fishery	Mining	Manufacturing Industry	Commerce	Transport
1925	100	100	100	100	100	100
1926	99	112	107	104	106	107

Stock and Produce Exchanges

Tokyo Stock Exchange The exchange system in Japan dates back to an early period of the Tokugawa Era, but it was then confined mostly to deals in rice. Exchange houses in this country are of three kinds, namely, stocks, rice and other commodities. There are 29 exchange houses devoted to dealings in securities, either exclusively or in combination with other commodities. The exchanges here are more on the European continental plan than on those of either England or America, and are subject to strict control by the Ministry of Commerce and Industry or other supervising authorities of the Govern-

ment. Such control may be exercised to regulate the business of an exchange when it is considered that the exchange is abusing its privileges or acting in an irregular way.

The Tokyo Stock Exchange was established in 1878 after the Satsuma Rebellion, when the issue of public bonds was rapidly increasing and the country's business was stimulated by the successive establishment of national banks and concerns conducting business analogous to banking business. Under the auspices of Viscount Eiichi Shibusawa and other influential business men of the day the Tokyo Stock Exchange was established at Kabuto-cho, Nihombashi-ku. Kabuto-cho has become a synonymous term for exchange, as Wall Street is for the New York Stock Exchange. The initial capital was ¥200,000. The Osaka Stock Exchange was founded in July in 1878, two months later than the Tokyo Stock Exchange. After 1882 the Government adopted a policy of restricting speculative transactions and the stock exchange business was hard hit, but in later years a more generous policy regarding the establishment of bourses was adopted and, consequently, the number of rice and produce exchanges, which was only 13 at the end of 1892, had increased to 83 by the end of 1894. There were three stock exchanges only at the end of 1892, but 37 at the end of 1896. With a rapid increase in business prosperity after the Sino-Japanese War enthusiasm for speculation increased and many exchanges were opened with small capitalization. The same was observed after the Russo-Japanese War and during the World War boom. The great World War stock boom lasted till about the middle of March, 1920, when a financial reaction took place in Japan. Before the World War, 12,588,000 shares valued at ¥1,340,-000,000, in 1907 was the largest number dealt in, but in 1915 the deals amounted to 19,560,000 shares with an aggregate of ¥1,670,000,000, and a further gain to 40,870,000 shares totalling ¥6,185,000,000 was made in 1919. The March deals in 1920 amounted to 6,570,000 shares with an aggregate of ¥1,150,000,000.

Bonds and Debentures in 1936 As factors affecting the market of public bonds and debentures during 1936 may be enumerated (1) the low-interest policy followed by Finance Minister, Dr. Eiichi Baba, (2) the announcement of the epoch-making taxation reform plan and (3) the increased demand for funds, and active monetary conditions, counteracting the low-interest policy.

The enforcement of the low-interest policy after April of that year brought about considerable activity in the market for public bonds and debentures, advancing their quotations and increasing the activity of the underwriting interests. During the latter part of September when the taxation reform plan of Finance Minister, Dr. Baba, was announced, however, a turning point was reached and also owing to the busy monetary conditions, the underwriting world sustained a heavy blow and the quotations of bonds and debentures began to slump.

The assumption of the post of Finance Minister by Mr. Toyotaro Yuki early in 1937 was followed by a sudden recovery of the market for bonds and debentures, because the new Minister took steps for a revision of the Baba plan for taxation increase and for the enlargement of the scope of securities for the Bank of Japan. This gave rise to anticipation that the conditions of loan flotation would not become worse and that there would be successive issues of bonds. Such a situation, however, would also mean that there would be an active demand for funds and interest rates might advance in the future. Consequently, a fall in interest rates can hardly be expected and it follows that there will be no hasty disposal of funds in anticipation of lower interest rates. Hence, no over-excitement in the market of bonds and debentures is foreseen.

Advance of Low-Interest Policy The market for public bonds and debentures in this country underwent violent changes throughout the year 1936, with favourable and unfavourable factors occuring in rapid succession. The low-interest policy of Finance Minister Baba must be mentioned first as one of the former. On April 6, 1936, Dr. Baba, advocating a low-interest policy, announced the lowering of interest rates of the Bank of Japan, and undertook to convert the 5% loans into 3½% loans.

The ordinary banks followed suit and on April 10 announced a lowering of their interest rates for deposits. The lowering of the interest rates for national bonds, which form the standard of general interest rates, from 4 per cent to the unprecedentedly low level of 3½ per cent constituted a splendid factor for the market of public bonds and debentures, and the yields of bonds and debentures gradually declined from April to August, as shown in the following table which was compiled on the basis of a survey of the Hypothec Bank of Japan.

Yields of Bonds and Debentures

in 1936

	National Bonds	Local Bands	Debentures
January	4.32	4.50	4.72
February	4.32	4.47	4.62
March	4.36	4.47	4.64
April	4.50	4.47	4.59
May	3.92	4.33	4.39
June	3.94	4.26	4.35
July	3.89	4.20	4.35
August	3.87	4.16	4.34
September	3.89	4.18	4.35
October	3.94	4.18	4.35
November	3.98	4.19	4.35
December	3.97	4.25	4.38

Impetus of Taxation Plan On September 23 Finance Minister Dr. Baba announced his plans for thorough-going taxation reforms, with the aim of increasing revenue and also equalizing the distribution of tax burdens. This came as a shock to the market for public bonds and debentures. Those points of the Baba plan which affected that market may be enumerated as follows :

1. Abolition of the Second Class Income Tax and inclusion of the interest on public bonds and debentures (deposits to be included in the same category) in the First and Third Class Income Taxes.

2. Increase of the Capital Interest Tax, hitherto fixed at 2 per cent whether in the case of bonds or debentures, to 4 per cent for the interest of local bonds and 5 per cent for the interest of others except national bonds for which alone the 2 per cent interest tax is to be retained.

3. Allowance of a deduction of 25 per cent from the amount of interest of national bonds in the case of the First Class Income Tax.

4. Allowance of a deduction of 50 per cent from the amount of interest of national bonds and 30 per cent from the amount of interest of local bonds and debentures in the case of the Third Class Income Tax.

5. Imposition of a tax on origin at the application of tax-payers in the case of interest on national bonds alone, with a fixed rate of tax at 40 per cent.

6. Creation of a tax on the transfer of securities fixed at 5/10,000 for national bonds and 1/1,000 for other securities.

7. Creation of a special tax on bonds in foreign currency and fix the rate of such tax at the amount exceeding 4.2 per cent in interest of national bonds for bonds in foreign currency bearing an interest of 5 per cent or more and at the amount exceeding 4.7 per cent for other bonds in foreign currency.

Of these points, the first and the seventh will affect the market of bonds and debentures most because the rates of tax on the interest of bonds and debentures would vary according to the amount of income of the juridical persons or individuals when included in the First and Third Class Income taxes and as such cannot be estimated, as hitherto, in the case of the yields of bonds and debentures. The result was to depress the market of bonds and debentures. In the case of bonds in foreign currency, the quotations slumped heavily because bonds in foreign currency had hitherto been specially regarded on account of their favourable conditions.

Active Monetary Conditions While these two factors which most affect the market for bonds and debentures were due to the proposed policy of the Government, the monetary conditions became active, thereby bringing about a firm tone in interest rates and thus depressing the market for bonds and debentures, because of the changes in economic circles themselves. In the latter part of 1936, the economic world began to witness an active demand for funds and subsequent monetary stringency. A survey of the ordinary banks throughout the country shows that the total amount of loans which was ¥6,210-000,000 in July, rose to ¥6,500,000,000 in October and further increased to ¥6,-600,000,000 at the end of December.

Although the excessive sale of public bonds by the Bank of Japan which was conducted in March in anticipation of lower interest rates may be regarded as a remote cause, the unusual stringency of the monetary situation as recorded during the latter part of 1936 is to be attributed to the generally active demand for funds. This led to the deadlock in the low-interest policy.

Quotations of National Bonds The changes in the quotations of national bonds throughout the year 1936, under the impetus of the aforementioned factors, are shown in the following table in comparison with the preceding year :

AVERAGE QUOTATIONS OF NATIONAL BONDS

In 1935 and 1936 (In yen)

	Bonds bearing 5% interest		Bonds bearing 4% interest		Bonds bearing 3½% interest	Bonds in American currency and bearing 6½% interest	
	1935	1936	1935	1936	1936	1935	1936
January	102.69	105.43	99.02	98.65	—	383.23	412.88
February	103.09	105.54	98.97	98.66	—	387.97	415.17
March	103.66	102.20	98.89	99.37	—	391.04	410.49
April	103.70	101.14	98.73	102.51	—	387.80	394.50
May	103.85	100.83	98.67	102.88	98.40	390.33	389.44
June	104.09	101.22	98.68	102.56	98.54	393.93	394.18
July	104.29	101.59	98.75	102.64	99.10	396.77	405.84
August	104.26	101.33	98.85	102.46	98.94	399.55	410,77
September	104.29	100.86	98.84	102.14	98.45	401.73	409.27
October	104.15	100.48	98.82	101.40	98.17	396.92	390.02
November	104.36	100.25	98.68	101.06	98.08	400.05	366.90
December	104.97	100.20	98.65	101.40	98.11	406.66	350.54

Note:—The above tabie is based on a survey of the Tokyo Stock Exchange.

The quotations of the 4% national bonds which were unlikely to be converted, became stationary in November, 1935, centering around ¥98.65, but began to advance in March 1936 under the impetus of the low-interest tendency and finally exceeded their face value and reached ¥103.30 in April when the conversion of the 5%bonds was announced and the interest rates for the Bank of Japan were lowered. These quotations, however, became stationary later centering around ¥102.50 as there was a disadvantage in premium for the 4% bonds to advance as far as the 3½% bonds in yield.

In the autumn when the taxation-reform plan was announced, the quotations of the 4% bonds dropped to the ¥101 level. This decline may be attributed to the deadlock in the low-interest policy of Finance Minister Baba. The conversion of the 5% bonds was discontinued in September, but contrary to the expectations of interested circles, the deficit-covering bonds for the 1936-37 fiscal year, which were then issued, showed no material difference from the 3½% bonds. As a result of the stringent monetary conditions, the quotations of the 4% bonds fell to ¥100.-85 toward the end of October, which represented a decline of more than ¥2.70 from the spring quotations.

The 3½% bonds were once quoted at ¥99.50 when the issue of 3% bonds was rumoured, and the Bank of Japan discontinued their sale of bonds; but the price soon dropped to ¥98, the issue price, as the Bank of Japan resumed selling bonds and monetary conditions hardened. This greatly affected the market for bonds and debentures and the Ministry of Finance soon began making desperate efforts for the maintenance of the quotations of national bonds. The Deposits Bureau, Finance Ministry, and the Bank of Japan were instructed to deal with the national bonds market.

The influence of the taxation reform plan upon the bonds in foreign currency was well illustrated by the fact that the 6½% bonds in the American currency, which were quoted at ¥418 during February, slumped to ¥345 during the latter part of November.

The conversion of the 5% national bonds into 3½% bonds was one of the outstanding events of 1936. On the day after the announcement of the lowering of interest rates of the Bank of Japan, Finance Minister Dr. Baba announced that the 5% bonds which were scheduled to be redeemed either in 1936 or 1937 and which amounted to ¥373,000,000 would be converted on May 1. Altogether, five conversions were effected between May 1 and September 15, involving a total amount of ¥2,-134,000,000 in the 5% bonds being converted into 3½% bonds totalling ¥2,-152,000,000. The percentage of continuations was higher than expected, as shown in the following table:

	Amount of New 3½% Bonds	Amount of Old 5% Bonds Converted	Percentage of Continuations
May 1	¥381,000,000	¥373,000,000	92.1
June 1	413,000,000	405,000,000	90.6
July 15	361,000,000	352,000,000	96.8
Aug. 15	597,000,000	582,000,000	95.3
Sept. 15	400,000,000	422,000.000	102.5

The outstanding amount of the 5% bonds was ¥2,265,000,000, all of which is expected to be converted during the course of the 1937–38 fiscal year or later. In this connection, it must be noted that the quotations of the 4½% bonds were lower than those of the 4% bonds because the former are liable to conversion.

Quotations of Local Bonds and Debentures Quotations of local bonds and debentures advanced in August but when the taxation reform plan was announced in the autumn, they suffered to a greater extent than the national bonds. This is attributable to the fact that Finance Minister, Dr. Baba's plan provided for an extreme discrimination against the local bonds and debentures.

These abnormal conditions were brought about by the impossibility of finding a sound basis for investments under the Baba taxation reform plan. There were sellers but no buyers with the result that even those bearing a high interest were pulled down to the level of their face-value. Details of the movements of quotations of the local bonds and debentures during 1936 in comparison with the second half of the preceding year are tabulated as follows :

Movements of Quotations of Local Bonds and Debentures

		Tokyo Municipal Electric Bonds (4.5%)	Tokyo Municipal Electric Bonds (4.3%)	Tokyo Municipal Bonds (4.1%)	Industrial Bonds (4.1%)

Underwriting World Conditions in underwriting circles, which had been by no means satisfactory at the beginning of the year 1936, became worse as a result of the occurrence of the February 26 incident and subsequent political unrest. When Finance Minister, Dr. Baba strengthened the low-interest policy during the early part of April, however, the underwriting world began to recover from its depression and arrangements for the issuance of bonds and debentures were conducted in succession. Payments on bonds and debentures were also made actively between June and October.

Needless to say, the successive issuance of bonds and debentures increased the amount of payments made on bonds and debentures, which, coupled with the increase in the amount of loans made by the various banking organs, brought about unusual activity in the money market. Details of the bonds and debentures issued during 1936 are shown in the following table :

BONDS AND DEBENTURES ISSUED DURING 1936

	Local Bonds	Debentures of Banks	Other Debentures
January	¥ 4,000,000	¥15,000,000	¥10,000,000
February	22,500,000	11,700,000	62,500,000
March	25,300,000	29,300,000	45,500,000
April	700,000	15,600,000	34,800,000
May	36,000,000	13,400,000	73,000,000
June	60,600,000	46,300,000	118,500,000
July	141,000,000	73,600,000	99,300,000
August	84,200,000	69,500,000	46,000,000
Sept.	51,400,000	89,600,000	136,000,000
October	2,500,000	60,200,000	185,000,000
November	2,500,000	20,500,000	22,500,000
December	—	300,000	100,000

Influenced by the low-interest tendency, conditions for the issuance of bonds and debentures improved to such an extent that local bonds were issued with an interest of 4 per cent and debentures with an interest of 4.1 per cen. The announcement of the taxation reform plan, which called for great sacrifices, and the subsequent busy monetary conditions, however, made the issuance of bonds and debentures more difficult. The blow thus dealt to the underwriting world proved so severe that, during the month of December, underwriting activities almost completely ceased until February, 1937. The issuance of national bonds which were underwritten by the Bank of Japan is not considered here.

Novertheless, the total amount of bonds and debentures issued during 1936 was by no means small. Those for the first half of the year amounted to only ¥620,000,000 but for the second half they reached as much as ¥1,180,000,000. It is also to be noted that the greater part of the total amount was shared by the five months between June and December.

Prospects of the Market The depression in the market of bonds and debentures which started toward the end of 1936 continued until the early part of 1937. On January 23 the downfall of the Hirota Cabinet occurred, which involved a tense political situation resulting in the formation of the Hayashi Cabinet following the abortive efforts of General Kazushigé Ugaki to form a Cabinet under his Premiership. The appointment of Mr. Toyotaro Yuki as the Finance Minister of the Hayashi Cabinet enabled the market of bonds and debentures to recover from the depression because the new Finance Minister revised the taxation plan of his predecessor.

Among the principal points covered by the revision effected by Finance Minister Yuki were the revival of the Second Class Income Tax, a 50 per cent increase in the rates, the imposition of a 2 per cent tax on the interest of national bonds, a 100 per cent increase in the tax on the interest of capital, the imposition of a special tax on bonds in foreign currencies at rates of 70 per cent of the amount of interest exceeding 5 per cent for national bonds and 70 per cent on the amount of interest exceeding 5.5 per cent for other bonds and a reduction of the rates fixed by the previous Minister for the transfer of securities.

The renewed activity of the market of bonds and debentures was marked by the issuance of debentures of the Keisei Electric Railway Company which was followed by the announcement of the conversion of the debentures of the Toho Electric Company. The new Finance Minister soon became very popular in bond and debenture circles, but it is to be noted that since the advance of the low-interest policy is difficult under present monetary conditions, it is equally difficult to expect a further improvement in conditions for the issuance of bonds and debentures. Greater activity may be expected in the bond and debenture market during May and June, but it is unlikely that the interest rates will become much lower than today. A considerable increase in the amount of bond and debenture issues, however, is probable.

Production of Minor Factories There are in Japan great numbers of minor factories engaged in various industries where less than 5 persons are employed and which do not come under the control of the Factory Law. Accordingly, most of the industrial statistics given in the following chapters on industrial subjects are of factories where more than 5 persons are employed. The Ministry of Commerce and Industry gives statistics on more than 20 kinds of industries in which the largest numbers of such minor factories are engaged. The following table includes most of them, the production of which alone reaches nearly 9 per cent of the total production of the factories where more than 5 operatives are employed given above.

VALUE OF INDUSTRIAL PRODUCTION IN FACTORIES WHERE LESS THAN 5 PERSONS ARE EMPLOYED IN 1935

(In Yen)

	Production of the factories where more than 5 persons are employed	Production of all factories	Production of the factories where less than 5 persons are employed

Prices of Commodities

The prices of commodities in Japan fell during the first half of 1936 on account of the February 26 incident and also as a reaction to the high levels reached on the strength of the Italo-Ethiopian conflict; but during the second half they manifested considerable activity and toward the end of the year they suddenly commenced to soar. This rising tendency featured all commodites but it was particularly notable in the case of fibrous goods and munitions.

The immediate cause of the sudden rise is to be found in the increased demand brought about by the enormous expansion in finances. As general factors actuating the rise may be mentioned the higher commodity prices abroad, the economic recovery of the agricultural community, the improvement in the relations of supply and demand resulting from the strengthened control of production and the shortage of materials.

The present conditions of commodity prices show a remarkable recovery but the high prices in January this year were still below the level of the prepanic period, 1927. This is because the prices of domestic products and exports were comparatively low. In the case of imports, however, the level of the early years of the Showa Era was already reached. This is to be attributed to the boom in the munitions industry abroad and the higher prices of agricultural products.

As regards the future of commodity

prices, it may be said that this rising tendency will keep step with the higher prices of commodities abroad and the inflation of Government finances, no matter what measures the Government may adopt in an attempt to check the rise.

Movements of Prices in 1936 The movements of commodity prices in this country during the post-panic period were characterized by the fact that prices touched bottom in 1931 immediately before the re-imposition of the gold embargo. As the value of the yen was lowest during the last part of 1932 and the early months of 1933, commodity prices soared then to their highest level. Later, prices became stationary in spite of the inflation of finances because the control of currency was successfully enforced; this being aided by an expansion of general production.

The aggravation of the Italo-Ethiopian conflict during the autumn of 1935, the advance of the boom in the United States and the economic recovery of the agricultural community combined again to raise prices, but not for long and toward the end of the same year a reactionary decline set in.

Commodity prices during the first half of 1936 were low on account of various factors including the February 26 incident as already mentioned, the subsequent unrest prevailing among the people at large, the repeated issuance of important statements by the Hirota Government, and the resultant slackness of commercial transactions. A rising tendency, however, developed during the second half of the year as the question of renovating the administrative system came to be gradually clarified, thus reassuring financial circles.

It was expected that commodity prices would remain stationary until this year (1937) at the least, but toward the end of 1934 they began to soar, especially in the case of fibrous goods and munitions. The index number for December, 1936, was 92.72 which set the highest record since November, 1929. The average index number for 1936 came to 86.54 as a result, which represents an increase of 34 per cent over the low level (64.41) of the panic year, 1931.

Reasons for Sudden Rise Needless to say, the rise in the prices of commodities toward the end of 1936 is attributable to the economic recovery of the agricultural community, increase in the purchasing power of the general public, expansion of the export trade, higher prices of commodities abroad and stabilization of the yen at a low level. As the immediate cause of the rise, however, the sudden inflation of finances must be mentioned. The budget estimates for the 1937-38 fiscal year, compiled by Finance Minister Eiichi Baba of the Hirota Government, amounted to more than ¥3,000,000,000, about 50 per cent of which goes to military expenditure.

The announcement of these enormous budget estimates toward the end of the year brought about a provisional demand in anticipation of further inflation. This phenomenon was particularly remarkable in the fibrous goods market with cotton yarn as the nucleus. This was due to the fact that the spinning and rayon industries had been curtailing production on account of their past experiences with over-production, which resulted in the possibility of such products running short at any time.

On the other hand, the products of heavy industry also advanced in price on the strength of the provisional demand and not because of production curtailment. As indicated by the dearth of iron and steel, the development of the munitions inflation exposed a lack of productive power in the heavy industry. Further, owing to the difficulty of importing munitions a result of the world-wide armament race, the shortage of materials became greater and greater.

In other words, the enormous budget estimates compiled by the Hirota Government for the 1937-38 fiscal year on the basis of the so-called quasi-war situation, and the shortage of materials, are to be held responsible for the sudden rise in commodity prices toward the end of 1936.

Prices and International Relations As shown in table No. 2, the higher prices recorded toward the end of 1936 were more affected by import and export conditions than by those of domestic products. This is clear from the fact that the prices of domestic products rose in December by only 1.5 per cent when compared with the low level of March while an increase of 16 per cent was recorded for exports and an increase of 12 per cent for imports. The remarkable rise in the prices of exports, while resulting from the advance of the export trade, is to be attributed particularly to the provisional demand brought about by the forcible operation of enormous finances at a time when the relations of supply and demand showed an improvement as a result of the production curtailment involving such important goods as cotton yarn, rayon and raw silk.

In this respect, it is to be noted that exports, although advancing in price, still remain at a low level when compared with imports and the domestic products marketed at home. The average index number of prices during 1936 was 89.1 for the domestic products marketed at home and 97.7 for imports against 75 for exports. It is this cheapness of Japan's exports that forms the key to the expansion of the export trade of this country and at the same time constitutes a menace to her competitors. In view of this fact, considerable interest attaches to the recent rise in the price of exports in its relations with the future of the export trade of this nation.

While the prices of exports still remained at a low level, the prices of imports reached the index number of 106.5 during December, 1936, which is even above the level of the pre-panic period. Although at first thought the depreciation of the yen may be considered as responsible for the rise in the prices of imports, it is not necessarily so because the yen showed a firmer tone during 1936 than in 1935 as shown in the following table :

INDEX NUMBER OF YEN

1931	126.9
1932	80.9
1933	64.4
1934	62.5
1935	55.6
1936	58.4

Note:—The index number for the pre-war period forms the basis of the above figures.

It is clear from the above table that the index number of the exchange rates of the yen during 1936 was 5 per cent higher than that recorded during 1935. This rise is not due to any favourable factors on the part of the yen but is to be attributed to the fact that the yen was linked with the pound sterling and as such rose in the exchange rates when the dollar declined in its exchange rates with the pound sterling under the circumstances surrounding the devaluation of the franc.

Thus, it is also clear that the rise in the prices of imports was not influenced by the exchange rates of the yen but was brought about by the advance of commodity prices abroad. According to a survey of the Bank of Japan, the index number of prices in the principal cities of the world during last year (1936) and the preceding five years, the figures for the pre-war period being taken as 100, is as follows :

INDEX NUMBER OF WHOLESALE PRICES

	Tokyo	London	New York	Paris
1931	121.7	98.0	98.9	462
1932	128.1	94.8	80.6	407
1933	142.7	95.1	92.2	388
1934	141.3	99.1	106.5	366
1935	147.5	103.5	114.8	348
1936	157.0	109.7	116.7	403

The greatest advance in the commodity prices during 1936 was recorded in Paris, the index number increasing by 16 per cent as shown in the foregoing table. This, of course, resulted from the devaluation of the franc which was necessitated by the continued efflux of gold from France and the depression in that country during September. The commodity prices also rose in the United States and Great Britain. The rise in prices in the United States during 1936 was less than 2 per cent but it still represented an increase of 45 per cent when compared with the low level of 1932, recording a wider margin than in either Great Britain or Japan.

The world-wide rise in the prices of commodities, although attributable to the measures adopted by the various countries for the improvement of business to some extent, has mainly been brought about by the rise in price of munitions as a result of the armament race and the advance of the quotations of agricultural products due to unfavourable weather conditions. Particularly the world-wide armament race which is becoming increasingly keen has increased the demand for munitions and even prevented export of some materials, thus stimulating the upward trend of the prices of munitions. This forms one of the important factors which have been sending the prices of iron and steel soaring in this country.

In the meantime the advance in price of raw cotton, wheat and rubber brought about the rise in the prices of imports in this country during 1936. It goes without saying that the advance of the prices of agricultural products also served to push up the prices of commodities in general.

Financial Policy and Commodity Prices In succession to Dr. Eiichi Baba, Mr. Toyotaro Yuki was appointed Minister of Finance. The new Minister effected a sweeping revision of

the budget estimates compiled by his predecessor, reducing them by ¥270,000,000 to ¥2,770,000,000 with a view to checking the rising tendency of commodity prices. At the same time the new Minister dropped the Baba plan for a taxation reform and instead formulated a scheme for raising ¥290,000,000 by increased taxation which is more favourable for urban than for rural districts. By this means Minister Yuki expected that productive power would be increased.

Thus, confronted with a sharp upward trend of commodity prices, the financial policy of Minister Yuki laid great stress on measures to cope with this tendency. It is however difficult to check the rising tendency of commodity prices merely by reducing the Government expenditure by ¥270,000,000 and curtailing the deficit-covering loan issue by ¥77,000,000. For the estimates for the defence services remained practically the same and the revised budget estimates for the 1937–38 fiscal year still showed an increase of about ¥500,000,000 over the budget for the preceding fiscal year, besides an increase of ¥22,000,000 in loan issues.

In order to promote the productive power of the nation, it is said that chartered banks will be mobilized. This means that while domestic consumption is to be reduced, the demand of civilian organizations for materials will be encouraged. Unless taken at a time when the productive power of the nation has already been expanded, it is difficult to see how such measures can effectively check the rising tendency of commodity prices.

By their policy of shipping gold abroad for the stabilization of the exchange rates of the yen the Government may be able to keep the prices of commodities down to some extent for a time. The prices abroad, however, are likely to continue to rise around munitions while at home the economic recovery of the agricultural community and the inflation of munitions will progress further. Under these conditions, there may be no remarkable rise in the prices of commodities during the first half of 1937 but when the period of financial inflation sets in during the second half of the year, it is likely that the upward trend of commodity prices will be accelerated.

Commercial and Industrial Bodies

Important Commodities Guilds At the end of 1935 there were 787 important Commodities Guilds representing 115 kinds of enterprises in Japan, a loss of 18 in number and a gain of 2 in kind as compared with the previous year. Those which headed the list were textiles with 102, rice and cereals 65, lumber 49, soy and "miso" 36. Federations of these guilds numbered 27.

Industrial Guilds At the end of 1935 the number of Industrial Guilds was 662 representing 69 kinds of enterprises, a gain of 181 in number and 9 in kind as compared with the previous year. Cotton textiles head the list with 112, silk textiles come next with 67 followed by ceramics with 40 and wood manufactures with 40, etc. There were 36 federations of these guilds.

Commercial Guilds In the same year the Commercial Guilds numbered 882, representing 40 kinds of commodities, a gain of 292 in number and 5 in kind, as compared with the previous year. Cereals and flour lead the rest with 103, followed by foodstuff with 71, and clothings with 69.

Export Guilds In the same period, the number of Export Guilds was 81 representing 12 kinds of commodities, a again of 11 in number, while the

number of kinds remained stationary.

Chambers of Commerce and Industry At the end of 1935 there were 103 Chambers of Commerce and Industry in Japan, with the total membership of 3,627 elected by 145,922 voters, an increase of 4 in the number of chambers, 69 in members and 19,572 in votes.

An Outline of Economic Conditions in 1936

The economic conditions of this country, following the re-imposition of the gold embargo in 1931, have had their key-note in the promotion of the heavy industries under the impetus of two factors, one being found in the active export trade through the fall in the exchange rates of the yen and the other in the increased domestic consumption brought about by inflation of the currency.

The collapse of the gold standard caused the principle of free trade to be abandoned throughout the world and the extreme business depression gave rise to a high degree of economic nationalism in various countries, finally leading to the erection of a succession of trade barriers, and retarding the expansion of Japan's export trade, which, coupled with the failure of the restoration of the national finances to normal, occasioned a temporary economic stagnation from the latter half of 1934 till early in 1935.

The continued advance of the products of the Japanese heavy industries in overseas markets, however, enabled Japan proper to record a favourable balance amounting to approximately ¥27,000,000 in its foreign trade during 1935, despite the fact that such a staple export as cotton cloth appeared to be suffering a setback on account of the restrictions placed on the importation of Japanese goods by various nations. The excess of exports over imports for Japan proper greatly improved the conditions of the nation's foreign trade as a whole, and reduced the unfavourable balance to about ¥17,000,000 as against ¥142,000,000 in the preceding year. At the same time, the withdrawal from the London naval conference in January, 1936, in addition to the parting from the League of Nations, rendered it necessary for the nation to perfect defence arrangements as a means of coping with the non-treaty situation, and presaged a further increase in national consumption.

According to factory statistics, the value of goods produced during 1935 totalled ¥10,840,000,000, heavy industries' share being 47.5 per cent against 31 per cent for the spinning industry and 21.5 per cent for others. The one-sidedness of production that had been so manifestly in favour of light industry, mostly through the efforts of the spinning industry, was thus rectified.

Generally speaking, the economic system of this nation has been consummated on the basis of Capitalism and the time has come when the nation is to concentrate its efforts upon enlarging the economic system with a view to further expanding national strength and enhancing national prosperity. At this juncture, it is fortunate that Japan has entered into inseparable relations with Manchoukuo, for it has enabled an expansion of the semi-domestic market, which coupled with the progress of the operations in North China for the realization of closer Sino-Japanese economic relations has greatly contributed toward the breaking of the economic stagnation which existed in the latter half of 1934 and in the early part of 1935. Thus, renewed economic activity was brought about in the latter half of 1935 and continued into 1936.

The following table shows industrial productivity during 1934 and 1935.

INDUSTRIAL PRODUCTS

(In 1,000 yen)

	Production			Percentage	
	1934	1935	Increased Percentage	1934	1935
Textile	3,167,755	3,365,579	6.2	33.7	31.0

Timber and wood-works	238,800	248,699	8.7	2.5	2.3
Printing and book-binding	203,843	222,963	9.4	2.2	2.1

	Production			Percentage	
	1934	1935	Increased Percentage	1934	1935
Foodstuff	1,046,340	1,168,479	11.7	11.1	10.8
Electricity and gas	19,539	21,079	7.9	0.2	0.2
Miscellaneous	335,074	381,783	13.9	3.6	3.5
Total	9,390,060	10,846,275	15.5	100.0	100.0

(Note: The figures for the electricity and gas industry only cover by-products.)

Changes There was no change in the key-note of economic conditions during 1936 although some friction was occasioned by the various important incidents which occurred during the year. Under the influence of improved business conditions in Great Britain and the United States, which are both in close economic relations with this country, economic activities continued to increase but the rate of expansion was somewhaat slower.

As the general election resulted in a victory for the Minseito, the renewed economic activities which had commenced in the latter half of 1935 gave great hope to financial circles early in 1936. The untoward incident which occurred on February 26, however, was of such nature as to shock financial circles to such an extent that the stock exchanges were forced to be suspended until the inauguration of the succeeding Cabinet. The commodity exchanges were also upset, but as no substantial change took place in economic conditions, they continued holding their sessions.

According to the daily index numbers of stock quotations prepared by the Tokyo Keizai Shimpo (Oriental Economic News), industrial shares slumped by 6.7 per cent by March 10 as compared with February 25, but they soon regained their pre-incident level. In spite of the comparatively mild curving of the major economic index, the potential influence was great, as indicated by the fact that the seasonal decline in wages in the first half of 1936 was 0.6 per cent against 0.2 per cent in the corresponding period of the preceding year. Further, the Yokohama Specie Bank was compelled to operate against those who were anticipating lower exchange rates of the yen, thereby losing a considerable amount in its foreign currency fund.

ECONOMIC INDEX

	Wholesale Commodity Prices		Value of Export		Quantity of Imports		Industrial Production	
	1935	1936	1935	1936	1935	1936	1935	1936

Note: 1. The figures for wholesale commodity prices are based on a survey of the Tokyo Asahi Shimbun with the pre-war figures represented as 100.
2. The figures for industrial production are based on a survey of the Ministry of Commerce and Industry with the monthly average during 1931, 1932 and 1933 represented as 100.
3. The figures for exports and imports are based on a survey by the Yokohama Specie Bank with figures for the corresponding months of 1928 represented as 100.
4. The figures for railway freights, bank clearings and note issues are based on a survey by the Mitsubishi Economic Research Institute with the average for 1921–25 represented as 100.
5. The figures for stock quotations are based on a survey by the Tokyo Stock Exchange with the figures for January 1921 represented as 100.

The inauguration of the Hirota Cabinet on March 9 in succession to the Okada Cabinet, which had resigned by way of assuming the responsibility for the February 26 incident, manifested a remarkable tendency toward a reform of the administrative system. Finance Minister Eiichi Baba of the Hirota Cabinet announced his intention of operating quasi-war time finances by liquidating the policy of the late Finance Minister Korekiyo Takahashi. Although the working budget for the 1936–37 fiscal year was, generally speaking, based on the estimates compiled by the Okada Cabinet, the discount rate of the Bank of Japan was lowered on April 6 in preparation for the formulation of a financial programme on the basis of the Baba policy. At the same time, Minister Baba caried out the conversion of the public loan bonds bearing an interest of 5 per cent into bonds bearing an interest of 3½ per cent, thus creating an epoch-making low level for money rates. As the ordinary banks followed the example of the Bank of Japan in lowering money rates, economic circles were placed in a favourable condition.

Needless to say, the quasi-war time finances operated by the Hirota Cabinet were based on the necessity of strengthening national defence in order to cope with the changed international situation in general. It is to be noted, however, that the direct stimulus to the operation of such finances was given by the rapid increase in the military expenditure of the Soviet Union from 1,700,000,000 rubles in 1934 to 6,500,000,000 in 1935 and to 14,800,000,000 in 1936. It may be presumed that the Japanese Government came to consider it urgent to strengthen the country's defences because the abnormal Soviet armament expansion created a great menace to Manchuria and Mongolia, the life line of the Japanese Empire both in national defence and in economic activity.

In consideration of the fact that the efforts to ensure the said life line had failed to produce satisfactory results, and stimulated by the strained international situation due to the intensified economic nationalism in various countries in the world, the Japanese nation was resolved to bear additional expenses for national defence. The raising of the import duty on Japanese cotton cloth in the United States and the imposition of a prohibitive duty on Japanese goods by Australia were followed by the launching of a movement in Japan for the expansion of the productive equipment of the munitions industry prior to the compilation of the budget estimates for the 1937–38 fiscal year. According to a survey of the Bank of Japan, the total paid-up capital of the industrial companies during the year amounted to ¥758,000,000 which represented an increase of ¥332,000,000 or 78 per cent over similar figures for the preceding year. Calls for payments on shares were made in quick sucession, particularly during the latter half of the year, but these were to some extent also intended to provide against the projected taxation reform.

The rapid increase in the demand for defence funds by the government served

to accelerate the demand for industrial funds. The announcement on the taxation reform plan toward the end of September, however, caused underwriting circles to suspend activities following the issuance of ¥30,000,000 worth of debentures by the Kyoto-Osaka Electric Railway Company, because the reform plan provided for the incorporation of the Second Class Income Tax into the First and Third Class Income Tax, and this would affect securities. The result was that industrial companies had to resort to the abnormal method of obtaining short-term loans from banks to meet their long-term needs.

In the meantime, speculative purchase of public loan bonds bearing an interest of 4 per cent was actively indulged in shortly after the inauguration of the Hirota Cabinet by those anticipating a conversion of bonds, and this, combined with the changed policy of management on the part of the bankers since the enforcement of the low-interest policy of the Government, brought about a tightness in the short-term loan market. The Bank of Japan suspended selling the public bonds in its possession as a means of dealing with the situation, but to no avail. Towards the end of the year, the Deposits Bureau operated its fund in the short-term loan market through the Industrial Bank of Japan in an attempt to check the rising of interest for short-term loans above the agreed rates. The interest rates for long-term loans, however, moved downwards in line with the Government's low-interest policy. When the policy of Finance Minister Toyotaro Yuki of the Hayashi Cabinet, made its appearance, the open market operation policy of the Bank of Japan was revised to include purchasing operations in addition to selling operations with a view to a smooth execution of the loan policy of the Government.

The circumstances were such that a further swelling of the national finances came to be considered as inevitable and as days went by, signs of inflation increased. On account of the operation of the national defence budget under the specific conditions of the country brought about by the lack of natural resources, the balance of the nation's foreign trade became very unfavourable and caused the exchange rates of the yen to break below the level of one shilling and twopence in September despite the fact that the month of September usually represents a season for an excess of exports over imports. As it was the key-note of the exchange policy of the Government to maintain the exchange rates of the yen at the level of one shilling and twopence because a further depreciation of the yen was regarded as being liable to jeopardise the economic structure of the nation, the Yokohama Specie Bank worked to improve the situation, and was markedly successful. At the same time, the Government strengthened its exchange control and in January, 1937, enforced a licensing system for import exchange on the plea of checking imports based on an anticipation of revised tariffs.

The policy of the Hirota Cabinet for reforming the administrative system caused far-reaching economic friction. The stock exchanges were characterized by the cautious but profitable buying under the impetus of the low-interest tendency. Particularly noticeable were the buying operations of the life insurance companies. The budget estimates for the 1937–38 fiscal year, as revised by the Ministry of Finance, amounted to ¥3,040,000,000 and while indications were that the estimates would be approved by the Diet with some changes, the Cabinet resigned as a result of the wordy battle fought between the then Minister of War, General Count Hisaichi Terauchi, and a member of the House of Representatives when the Diet session was resumed following the New Year recess in January, 1937.

Finance Minister Toyotaro Yuki of the Hayashi Cabinet which was thus brought into being reduced the budget estimates to ¥2,770,000,000 so as to bring them within the economic capacity of the nation and revised those points of the financial policy of his predecessor which were responsible for the greater part of the economic friction which was then evident. At the same time, he announced a policy of facilitating the smooth execution of the national defence programme by mobilizing the banks and expanding the productive equipment of the nation. As a result, the low pressure heavily affecting financial circles cleared away and conditions in the economic world brightened.

Quasi-War Time System The French gold standard bloc fell in September, 1936, and in connection with the devaluation of the franc, a gentlemen's agreement was concluded among Great Britain, the United States and France concerning the international exchange situation, whereby a free exchange of gold among the three countries succeeded in checking an imminent confusion of the international currency situation. There appeared signs of a

tendency towards more friendly international economic relations and the adjustment of outstanding differences on a basis of reciprocity. Conditions in agricultural countries showed a great improvement, and the commercial outlook throughout the world considerably brightened. In parallel with this bright tendency, however, there was a gloomy trend evident in international politics.

The disclosure of the inability of the League of Nations to bring about a settlement of the Italo-Ethiopian conflict impaired the sense of mutural security among European nations and the rearmament of Germany and the advance of German troops into the Rhineland caused France to feel menaced. In addition, the civil strife in Spain served to intensify the antagonism which existed between the Rightist and Leftist nations. Under these circumstances, an armament expansion race was started which plunged the whole of Europe into conditions reminding one of the state of affairs immediately before the Great European War. The demand for all sorts of munitions increased rapidly and caused international commodity prices to assume a war-time aspect.

It was but natural that Japan should be unable to free herself from the effect of the changed international conditions, particularly because of the high degree of her dependence upon foreign countries for metal supplies. The prices of metals within Japan soon soared to an abnormal height, and the failure of the bureaucratic control over the iron and steel industry to cope with the situation finally brought about such a shortage of iron and steel that the rise in commodity prices was further accelerated during the latter half of the year.

Rise in Economic Index While the financial circles were deeply affected by political factors, the major economic index continued the upward movement which had commenced during the latter half of the preceding year. The export trade of the nation was retarded in its expansion by the trade barriers erected in various foreign countries against Japanese goods, but nevertheless the volume of exports swelled by 7.6 per cent when compared with the preceding year. Industrial production and industrial employment gained by 6 per cent and 5.6 per cent respectively. The volume of imports taken delivery of also increased by 6.3 per cent. All these indicate that the economic activities were of a positive nature though it might be mentioned that they rather tended towards an improvement in the heavy industries.

The volume of goods carried by rail mounted by 7.3 per cent, and wholesale commodity prices rose by 5.2 per cent. It is comparatively marked that the amount of bank clearings increased by 9.5 per cent. This reflects the increased commercial activity and at the same time may be attributed to some extent to the 13.8 per cent rise in the price of stocks. The amount of notes issued merely swelled by 6.7 per cent but bank loans increased considerably.

Improvements in Agricultural Economy During 1936 there was a great improvement in the economic conditions of the agricultural villages due to the increased yields of rice, amounting to 66,390,000 koku, a gain of 890,000 koku over the figures for the preceding year. In value, the rice crops are estimated to have increased by ¥143,000,000 because prices advanced by around ¥2, in spite of the abundant supply, owing to the strengthened governmental control. Cocoon production was comparatively small but it also is estimated to have mounted by ¥38,000,000 on the strength of high quotations brought about by the business boom in the United States. The prices of other agricultural products, too, advanced under the impetus of inflation. The increased income of the farmers, together with the decline in the prices of fertilizers owing to governmental control, brought about a great improvement in the economic conditions of the agricultural villages and increased the purchasing power of the farmers, thus contributing to the business prosperity in the country.

Past Depression and Red Ink Finances In 1936 the second stage of inflation was commenced. From 1931 till 1935, economic activities were principally based on the exchange inflation arising from the re-imposition of the gold embargo and the financial inflation brought about by the huge expenditure made in an effort to overcome the trade depression and expenses increased through the Manchurian Incident. The favourable effect of the low yen exchange rate was, however, exhausted during 1933 and ever since it has been the policy of the Japanese Government to stabilize the yen at the level of one shilling and twopence and the economic activities of the nation have been continued on the basis of such stabilization.

From the 1931–32 fiscal year till that of 1935–36, inclusive, the ordinary accounts of the Government had a total sum of ¥2,741,000,000 transferred to the extraordinary accounts, including ¥903,-

000,000 as the Manchurian Incident expenses, ¥805,000,000 as the expenditure required for improving armaments, ¥825,000,000 as the fund for ameliorating economic conditions and ¥208,000,000 as the fund for dealing with natural calamities. According to the announcement of the Government, the expenses for improving armaments for the 1933–34 and 1934–35 fiscal years included a total sum of ¥463,000,000 which was connected with the remedying of the extraordinary economic situation. This means that the total amount transferred from the ordinary accounts may be divided into ¥1,753,000,000 for national defence expenditure and ¥1,238,000,000 for the anti-business depression fund.

The disbursement of the extraordinary national defence expenditure, which amounted to 64 per cent of the total extraordinary outlay, combined with the favourable effect of the low exchange rate of the yen succeeded in improving conditions in the nation's heavy industries which had been oppressed by the competition of English and American manufactures, and enabled an enormous amount of capital which had been lying idle to be put into active use again. There were great expansions of works and the effects of the economic depression were shaken off.

Economic Effect of the Defence Budget

The necessity of expanding the establishments for national defence resulted in a further inflation of State finances in the 1937–38 fiscal year, and consummated the second stage of inflation which had commenced in 1936. The crying need for an early perfection of the national defences of Japan is well illustrated by the rapid increase in the military expenditure of the various countries as shown in the following table which is based on a survey of the Foreign Policy Association of America :

MILITARY EXPENDITURE OF LEADING NATIONS

(In One Million Dollars)

	1934		1936		
	Amount	Comparison	Amount	Comparison	Increased Percentage
Soviet Russia	1,000	20.0%	2,964	62.9%	196.3
United States	710	14.2	964	8.8	35.8
Great Britain	582	11.7	846	7.7	45.4
Germany	381	7.6	2,600	23.6	582.4
Italy	273	5.5	870	7.9	218.7
Japan	271	5.4	307	2.8	13.3
Others	1,783	35.6	2,450	22.3	37.4
Total	5,000	100.0	11,000	100.0	120.0

The question that arises here is centred on whether the productive equipment of the nation is capable of digesting the national defence expenditure or not. According to a survey of the Hypothec Bank of Japan, the paid-up capital of the industrial companies in the country increased by 31 per cent in 1936 over the figures for 1931. The increase was particularly remarkable in the case of the munitions companies as shown in the following table :

PAID-UP CAPITAL OF INDUSTRIAL COMPANIES

(In One Million Yen)

	At End of 1931		At End of 1936		
	Amount	Comparison	Amount	Comparison	Increased Percentage
Dyeing and weaving	916.8	13.6%	989.6	11.2%	7.9
Chemical	1,021.4	15.1	1,492.7	16.9	46.1
Machinery	734.1	10.9	1,201.1	13.6	63.6
Foodstuff	702.1	10.4	705.2	8.0	0.4
Miscellaneous	198.6	3.0	207.9	2.3	4.6
Total	3,573.0	53.0	4,596.5	52.0	28.6
Mining and refining	430.2	6.4	1,065.9	12.1	147.8
Coal Mining	441.8	6.5	433.6	4.9	1.9

	At end of 1931		At end of 1931		
	Amount	Comparison	Amount	Comparison	Increased Percentage
Oil	142.9	2.1	156.2	1.8	9.3
Electricity	1.914.4	28.4	2,305.6	26.1	20.4
Miscellaneous	198.0	3.6	243.2	3.1	22.9
Total	3,127.3	47.0	4,240.5	48.0	35.6
Grand Total	6,745.6	100.0	8,837.1	100.0	31.0

Note: 1. The underlined figures denote decrease.
2. The above table is based on survey of the Hypothec Bank of Japan and only covers joint stock companies.

It may be noted in the foregoing table that the mining and refining industry heads the list in regard to increased paid-up capital with an increase of 147.8 per cent and is followed by the machinery industry with 63.3 per cent and the chemical industry with 46.1 per cent increases. In spite of the rapid increase in the paid-up capital and despite the fact that all the heavy industrial companies are operating at full capacity, the demand for machinery is far from being satisfied.

Varying estimates have been put forward as to the extent the munitions industry should be enlarged, but as it is generally accepted that construction costs amount to from ¥1,000,000 to ¥1,500,000 per 10,000 tons of iron or steel and as the economic basis is 700,000 tons, a vast amount of capital would be required to reach this basis, and as the iron and steel industry as well as the coal mining industry would also have to be perfected, requiring an augmentation of their funds, capital as well as labour would have to be mobilized in the direction of the heavy industries. This, however, is liable to cause the entire industrial structure to lean toward the heavy industries and raises a grave fear that the nation may experience an unprecedentedly severe business depression in the future.

Furthermore, the mobilization of both capital and labour in the heavy industries would result in a shortage of productive capacity in the light industries, justifiably gives rise to the fear that prices of the products of the light industries, which constitute consumption goods, would rise, and inflation would take place in real earnest.

Shortage of Materials Special attention should be paid to the fact that Japan depends upon foreign countries for the supply of many kinds of important materials for her domestic industry although she is able to export raw silk, sugar and sulphur. The dependence of the nation upon foreign lands is particularly notable for the supply of metals and fuels, both of which are important items in the manufacture of munitions, as shown in the following table :

JAPAN'S DEPENDENCE ON FOREIGN COUNTRIES FOR MATERIALS SHOWN AS PERCENTAGES

Pig iron	9.8
Copper	36.3
Aluminium	54.5
Tin	52.9
Coal	8.0
Chloride of potash	93.1
Raw rubber	100.0
Raw cotton	99.9
Iron ore	52.3
Platinum	85.9
Lead	93.2
Quicksilver	97.8
Heavy oil	80.1
Nitrate	2.5
Hides & skins	48.1
Wool	99.8
Steel	0.2
Nickel	96.0
Zinc	52.8
Manganese ore	72.5
Salt	63.0
Phosphorus ore	87.7
Timber	19.8
Oil seeds	52.2
Rice	1.2
Wheat	12.2
Soy bean	50.7

Note: The above figures are based on the domestic demand in normal times.

This fact, combined with the still undeveloped conditions of the domestic production of machine tools and internal combustion engines, is causing the foreign trade of the nation to lean toward an increasing excess of imports over exports, and gives rise to a doubt as to whether the nation will be able

to balance her foreign trade in the face of increasing imports at a time like this when the expanding rate of its export trade has greatly slackened on account of the trade barriers erected in various foreign lands. It was due to these circumstances that the exchange rate of the yen fell below the level of one shilling and twopence when the outline of the budget estimates for the 1937–38 fiscal year was announced.

As the aggravation of the foreign trade balance and the resultant depreciation of the yen together with the issuance of additional deficit-covering public loan bonds threatened to bring about an exceedingly evil inflation, Finance Minister Eiichi Baba of the Hirota Cabinet decided to strengthen the Government's control over economic affairs in line with the operation of the so-called quasi-war time system as a means of preventing the economic structure of the nation from being destroyed. For this purpose, the Finance Minister enforced the licensing system for import exchange. When the Hayashi Cabinet succeeded the Hirota Cabinet, its Finance Minister, Mr. Toyotaro Yuki, adopted a policy of mobilizing the financial factors, which gave rise to an expectation that the economic control would be further strengthened.

Financial Policy of Minister Yuki Ever since the outbreak of the Manchurian Incident, the finances of this nation have been based on the national defence appropriations. The policy of the late Finance Minister Korekiyo Takahashi aimed to deal with the situation principally by means of taxation revenue while the policy of Finance Minister Baba tended towards the adoption of measures of State Capitalism or National Socialism for fear that Japan might otherwise become bankrupt as a debtor nation. Finance Minister Yuki assumed an attitude showing his intention of rectifying what were considered the extreme points of the Baba policy, on the basis of the actualities of a debtor nation.

Finance Minister Yuki reduced the budget estimates compiled by his predecessor for the 1937–38 fiscal year to ¥2,760,000,000 for the declared purpose of checking the rising tendency of the prices of commodities. As the reduction practically did not touch the national defence estimates, the steps taken were considered by some circles as a mere political gesture hinting at an attempt at curbing the upward trend of commodity prices in connection with the enforcement of the urgent national defence budget by dropping the proposed proceeds tax and reducing the grants for the adjustment of local finances. The grants to local finances were calculated by Minister Baba apparently with a view to increasing the taxation burden of the urban district to 75 per cent and reducing that of the suburban district to 25 per cent. His successor, Minister Yuki, however reduced the grants on the ground that a radical increase in the burden of the urban district would cause commodity prices to soar still higher and bring about labour agitations.

It is considered probable that in taking the aforementioned steps, Minister Yuki took into account the fact that the estimates for the Ministry of Agriculture and Forestry, including the special rice accounts, amounted to seven times as much as in the 1930–31 fiscal year and showed an increasing rate which was greater than that of the national defence estimates. This coupled with the fact that the extraordinary taxation increase was centered around income taxes, showed that the Yuki policy called upon the people to bear the taxation burden within their means in order to tide over the extraordinary situation.

Noteworthy is the fact that the proposed capital tax on individuals was dropped. It was maintained that the abandonment of the proposed tax freed the family system of this nation from the danger of collapsing and that such an action on the part of Minister Yuki had the political significance of clarifying the national policy from the economic angle, besides reaffirming the position of Capitalism. There were indications, however, that as the extraordinary situation required such a control an intensified tendency towards planned economy was inevitable.

"One Prefecture, One Bank" Policy Banking circles in the country were greatly disturbed by policy of Finance Minister Eiichi Baba during 1936. There was his bank merger policy, an abnormally strained short-term money market and suspended animation in the long-term money market. It has been a traditional policy of the Ministry of Finance to attempt to adjust the banking organs of the nation, Mr. Baba's contribution being "one prefecture, one bank." In the field of special banks, the strengthened policy took the form of a plan for the annexation of the Agricultural and Industrial Banks by the Hypothec Bank of Japan, while the number of ordinary banks was reduced by 42 to 424. The first to be annexed by the Hypothec Bank was the Tokyo Agricultural and Industrial Bank and at present only 5 or 6 such banks are re-

maining independent.

The policy for "one prefecture, one bank" was aimed at promoting the smooth digestion of the deficit-covering loan bonds and cultivating a power to deal with emergencies. It has, however, brought about conditions under which some of the prefectural banks, though they are rated below the second-rate banks in the leading cities, are operating their funds like the big banks, concentrating upon investing in securities. In some cases, the proportion of investments in securities to the total amount of deposits is threatening to exceed that of the big banks. These conditions have given rise to a doubt as to whether the operation of the policy of "one prefecture, one bank" will enable local industries to obtain the funds they need for their sound development. Already, there are in evidence signs of a tendency to urge a re-examination of the policy.

Short-term Money Market and the Deposits Bureau Upon the inauguration of the Hirota Cabinet, the discount rate of the Bank of Japan for commercial bills was reduced from one sen to 9 rin and new bonds bearing an interest of 3.5 per cent were issued for converting the old bonds bearing a higher percentage of interest, thus creating a new low level for money rates. This exercised a far-reaching influence upon the bankers because the investments in public bonds had already become an important item of the accounts of the banks, consisting of more than 20 per cent of the total amount of deposits, and the lowering of the interest rates for public bonds would reduce the profits of the banks and aggravate their business conditions. As a result, speculative buying of public bonds bearing an interest of 4 per cent was actively conducted, and a tightness in the short-term money market was caused, as shown in the following table :

ACCOUNTS OF ORDINARY BANKS

(In one million yen)

		Fixed Deposits	Other Deposits	Total Deposits	Loans	Call Loans
December,	1934	5,417.4	3,936.2	9,353.6	5,871.8	367.1
June,	1935	5,680.3	3,864.8	9,545.1	5,885.6	432.4
December,	1935	5,929.2	3,944.4	9,873.6	6,121.1	389.5
June,	1936	6,217.2	4,037.5	10,254.7	6,244.5	348.9
December,	1936	6,301.1	4,531.0	10,932.1	6,660.1	338.0

Thus not only was the call rate tightened but there was also a possibility of the discount rate for commercial bills being affected, both the Government and the Bank of Japan recognized the gravity of the situation and took steps accordingly. The latter suspended the sale of the public bonds in its possession and at the same time hurriedly strengthened the control of the short-term money with the cooperation of the Yokohama Specie Bank. Further, when the exchange rates of the yen broke below the level of one shilling and two-pence at the end the summer and beginning of autumn, the Deposits Bureau which had hitherto remained aloof from the short-term money market, displayed considerable activity, operating through the Industrial Bank of Japan.

All these activities, however, could not effect a complete solution of the question. The decisively increased demand for industrial funds meant a decrease in the demand for the deficit-covering public bonds, and constituted a problem carried over to the year 1937.

Changes in Deposits Deposits with the ordinary banks increased by 7.2 per cent in 1934 as compared with the preceding year but the increasing rate slackened to 5.6 per cent in 1935. The year 1937 witnessed a sudden increase by 10.7 per cent but this was regarded as being attributable to an abnormal cause instead of reflecting an actual tendency, for there was a sudden change in the substance of the deposits. During the first half of the year fixed deposits increased by ¥288,000,000 and other deposits by ¥93,000,000 but the increase in the latter half of the year amounted to only ¥83,000,000 for fixed deposits against ¥594,000,000 for other deposits. This change was considered to be brought about by the various industrial companies putting in the banks the funds which they had raised by calls on shares in addition to those which they had obtained in the form of loans from banks because it was impossible for them to issue debentures on account of the suspended operations of the underwriters.

The increasing rate of fixed deposits suddenly slackened from 9.4 per cent in 1935 to 6.3 per cent in 1936 and that of money in trust from 10.4 per cent in 1935 to 6 per cent in 1936. All these changes reflected the effect of the taxation reform plan. Because the plan provided for the incorporation of the Second Class Income Tax into the First and Third Class Income Tax and also called for an increase in the capital tax, it became a general view that long-term deposits with banks would yield less profit than investments in public bonds, with the result that long-term deposits were withdrawn in large sums. There were even individuals who offered to purchase public bonds from the Bank of Japan. This tendency was partly attributable to the preferential treatment given to holders of public bonds and partly to the anticipation of the entry of inflation upon its second stage.

Conversion of Long-term Loans Long-term loans during 1936 totalled approximately ¥4,920,000,000. The amount of newly issued debentures of industrial companies decreased by 2.6 per cent as compared with 1935 and renewed debentures decreased by 6.3 per cent; both the newly issued and renewed debentures of banks declined by 6.4 per cent. Details are shown in the following table:

ISSUED AMOUNT OF LONG-TERM LOANS

(In one million yen)

	1935			1936		
	Newly Issued	Converted Amount	Total	Newly Issued	Converted Amount	Total
Public bonds	924.6	161.6	1,086.2	838.7	2,248.4	3,087.1
Local bonds	310.6	115.6	426.2	182.8	360.5	543.3
Bank debentures	228.5	216.4	444.9	256.0	196.2	452.1
Company debentures	402.1	474.9	877.0	391.6	444.7	836.3
Total	1,865.8	968.5	2,834.3	1,669.1	3,249.8	4,918.8

Note: The above figures are based on a survey by the Industrial Bank of Japan.

Gold Shipments Following the outbreak of the February 26 incident, it was foreseen that the national defence expenditure would make an epoch-making increase. At the same time, the opinion prevailed that the year 1937 would prove a critical year for the foreign exchange policy of the nation. Accordingly, great endeavours were made to maintain the exchange rate of the yen at the level of one shilling and twopence through making gold shipments to foreign countries or creating an exchange stabilization fund by reassessing the gold reserves of the Bank of Japan. In March, 1937, the first shipment of gold took place.

The gold shipments will not disturb the foundation of the monetary system of the nation nor exercise any evil influence upon the money market because the free movement of capital out of Japanese territory is already prohibited by the enforcement of a controlled monetary system aided by exchange control and the Capital Flight Prevention Law.

Judging from the international payments during 1936, it is opined that the maintenance of the exchange rate of the yen at the level of one shilling and two pence will be possible when the funds abroad are augmented by gold shipments totalling ¥300,000,000 in value at the most. Some quarters, however, point out that inasmuch as armaments are relative and Japan seems to have already become involved in the prevailing armament race, it is necessary that the existence of a limit to the effect of gold shipments should be clearly recognized in advance. In passing, it is to be noted that the gold purchases conducted by the Bank of Japan during 1936 totalled ¥112,590,000 (market price) and the gold reserves of the same bank at the end of the year amounted to ¥548,000,000 (par).

According to a survey of the Federal Reserve Bureau of America, the gold reserves of Japan at the end of October, 1936, amounted to 453,000,000 dollars (¥540,000,000 par) or 2.1 per cent of the total gold reserves of the central banks of the principal nations. The reserve of the United States was the highest with 11,000,000,000 dollars or 55 per cent of the total, France followed with 3,200,000,000 dollars or 14.6 per cent and Great Britain with 2,000,000,000 dollars or 9.4 per cent. Japan was placed seventh and the Netherlands came ninth with 388,000,000 dollars or 1.8 per cent, which shows that the reserves of Ja-

pan were not necessarily small.

Slackened Rate of Increase in Production Although the rate of its expansion slackened on account of the trade barriers built up by various countries, the export trade of Japan has continued on the increase. Business conditions in the country improved on the strength of the increased activities in the munitions industry, which, coupled with the improvement in the economic conditions of the agricultural villages, served to enhance the purchasing power of the people. While the level of production has been phenomenally raised, the increasing rate of production as a whole has greatly slackened :

1. INDEX OF INDUSTRIAL PRODUCTION

(Annual Average)

	1934	1935	1936
Manufacturing	129.1	143.3	151.9
Increase over preceding year	13.9%	11.0	6.0
Mining	115.4	124.1	138.0
Increase over preceding year	8.2%	7.5	11.2
Average	127.4	141.0	150.2
Increase over preceding year	13.2%	10.7	6.5

Note: The above table is based on a survey of the Ministry of Commerce and Industry, with the average figures for June, July and August, 1931, being represented as 100.)

2. INCREASED PERCENTAGE OF PRINCIPAL INDUSTRIAL PRODUCTS

	1935	1936
Cotton yarn	2.5	1.3
Rayon yarn	45.9	30.3
Cotton textile	3.4	5.1
Rayon textile	42.3	44.3
Pig iron	9.0	5.1
Machinery & implements	17.7	14.1
Ammonium sulphate	19.8	32.1
Caustic soda	29.4	23.4
Silk	1.8	9.3
Woollen yarn	2.2	5.6
Silk textiles	5.2	21.5
Woollen textiles	10.1	20.3
Steel bars	16.6	15.4
Cement	10.6	2.0
Superphosphate	18.6	13.2
Foreign-style paper	8.0	6.2

Note: The above table is based on a survey of the Ministry of Commerce and Industry and prepared according to the index of industrial production.

It is generally believed that the goods produced during 1936 valued more than ¥11,000,000,000. The continued increase in the production of rayon yarn and rayon textile, as shown in the above table, was because of large orders from abroad and an increased domestic demand caused by the substitution of rayon textiles for woollen ones on the strength of the improvement in the quality of rayon. The trade dispute with Australia helped to account for the increased rayon production as also did the establishment of the national policy on materials.

Reflecting the advance of the chemical industry, caustic soda got out of the state of over-production. Steel materials were produced in larger quantities than ever before but the demand could still not be fully satisfied. The production of pig iron increased by 21.2 per cent in 1934, by 9 per cent in 1935 and by 5.1 per cent in 1936 while the production of steel bars increased by 25.3 per cent in 1934, by 16.6 per cent in 1935 and by 15.4 per cent in 1936 and that of machinery and implements increased by 30.8 per cent in 1934, by 17.7 per cent in 1935 and by 14.1 per cent in 1936, all of which show that the increasing rate of production has been steadily slackening.

Various factors may be enumerated as the causes of the slackened rate of the increase in the production of pig iron, steel materials and machinery. In the first place, in regard to pig iron there was the influence of the specific structure of the nation's industry which had been largely controlled by medium-size and small-scale industrialists. Secondly, there was the failure of the control of production, which had been based on the supposition that the demand would be doubled in 10 years. With reference to the production of steel bars, it may be pointed out that in addition to the shortage of supply in pig iron, there was considerable difficulty attending the importation of scrap iron. The insufficient production of steel materials largely accounted for the slackened rate of the increase in the production of machinery and implements.

As a fundamental remedy, a plan for increased production has been formulated, while the import duty on iron and steel has been provisionally abolished. Nevertheless, the nation is still embarrassed by the high prices of steel materials abroad. To make the matter worse, while Japan largely depends on foreign countries for the supply of metals, the International Cartel has suspended the sale of nickel and light

silver, and the Soviet Union has suspended the export of its manganese ores. This is causing great concern over the execution of the national defence programme in face of the world-wide tendency towards armament expansion.

In spite of the slackened rate in the increase of production in the manufacturing industries, the mining industries continued to display quite phenomenal activity. The production of gold showed a slackened rate of increase in 1936 when the percentage of increase was 18.4 per cent against 22.7 per cent for the preceding year but the signs of a "gold rush" still remain. The production of copper increased by 11.9 per cent in 1936 against 3.5 per cent in the preceding year and the production of heavy oil swelled by 30.2 per cent against 26.6 per cent, but the production of the latter was merely sufficient to meet around 20 per cent of the domestic demand. In view of the important bearing of fuel upon national defence, coal liquefaction has been started but will not enter into concrete relations with the coal mining industry until 1938.

The consumption of coal in Japan Proper during 1936 amounted to about 36,400,000 tons, which represented an increase of 4,000,000 tons over similar figures for the preceding year. The increase in production over the preceding year was 9.1 per cent against 5.7 per cent in 1935. The increased consumption of coal clearly illustrates the advance of the heavy industries.

Labour and Wages Reflecting the rise in production, the demand for labour has been steadily increasing in all parts of the country, chiefly due to the increased activity in the machinery manufacturing industry, the metal industry and the chemical industry. According to statistics compiled by the Bank of Japan, the percentage of increase in the demand for labour over the preceding year was 7.3 per cent in 1936 against 5.9 per cent in 1935. Detailed figures are shown in the following table :

INDEX OF EMPLOYED LABOUR ACCORDING TO DISTRICTS

	At End of		
	1934	1935	1936
Tokyo-Yokohama	97.6	106.3	117.6
Osaka-Kobe	86 3	89.7	95.5
Nagoya	57.0	101 4	108.2
North Kyushu	93.1	101.3	104.1
Others	103.5	110.2	117.8
Total	95.5	101.1	108.5

Note: The above table is based on a survey by the Bank of Japan, with the figures for 1926 being represented as 100.

It is to be noted that the increased demand for labour in 1935, was greatest in the Tokyo-Yokohama district, followed by North Kyushu, "others," Nagoya and the Osaka-Kobe district in the order named while in 1936 the order was the Tokyo-Yokohama district, "others" Nagoya, the Osaka-Kobe district and North Kyushu, with the last named falling from second place to the last and the Osaka-Kobe district rising from the last to fourth place. That the Tokyo-Yokohama district continued heading the list is well illustrative of the continued activity in the heavy industries in that district. North Kyushu fell from second place because of the slackened rate of increase in the activity of the metal industry. The rise of the Osaka-Kobe district to fourth place showed the importance of that district in the heavy industries besides being the centre of the light industries, the increased demand of labour in other localities is taken to indicate the tendency towards the diversifying of the location factories.

According to a survey by the Bank of Japan, the declining rate of fixed wages has been greatly reduced while actual earnings have begun to increase. This is taken to indicate a decisive increasing tendency of wages. Figures compiled by the Tokyo Asahi Shimbun show that the index number of nominal wages, which was 258 in 1935 with the figures for the pre-war period being represented as 100, increased to 258.2 in 1936. Details follow :

INDEX OF WAGES
(Annual Average)

	1935	1936
Fixed wages	81.3	80.7
Decrease from preceding year	1.9	0.7
Actual earnings	91.1	91.8
Decrease from preceding year	0.1	0.8 (Increase)

Note: The above figures are based on a survey by the Bank of Japan, with similar figures for 1926 being represented as 100.

When the outline of the budget estimates for the 1937-38 fiscal year was made known, the prices of commodities began to rise rapidly and some Capitalists forestalled the anticipated labour agitation by increasing the wages of their employees. According to announcements made by the Capitalists concerned, increases of from 15 to 16

per cent were effected. In this connection, it is to be noted that while past increases in wages were not based on any scientific reckoning the latest increase was based on the index number of living cost prepared by the Tokyo Asahi Shimbun and the index number of retail prices of commodities compiled by the Bank of Japan, with the index number of wholesale prices of commodities also being taken into account. This is a notable fact in the history of wages in this country. Mention also must be made of the fact that in effecting the wage increase, employers also paid attention to the level of wages which existed before the re-imposition of the gold embargo.

Equipment Expansion and Fund A survey conducted by the Bank of Japan shows that the total amount of planned capital during 1936 amounted to ¥1,743,000,000, not including debentures, which was greater by ¥553,000,000 or 46.4 per cent greater than similar figures for the preceding year. That of the manufacturing and mining companies, which form the nucleus of industrial activity, merely increased by ¥24,000,000 or 4.1 per cent and ¥2,000,000 or 1.9 per cent, respectively, the principal amount being necessitated by the Government's plan to place the privately-owned electricity industry under State management, the amont being ¥348,000,000, which shows a tendency running counter to the industrial activity.

According to a survey of the Hypothec Bank of Japan, the increase in paid-up capital during 1936 over similar figures for the preceding year was ¥144,000,000 or 76.8 per cent for the manufacturing industry and ¥98,000,000 or 111.5 per cent for the electricity and gas industry.

Further details of the increase in planned and paid-up capital are shown in the following table :

PLANNED (New) AND PAID-UP CAPITAL

(In 1,000 yen)

	Planned (New) Capital			Paid-up Capital		
	1935	1936	Increase	1935	1936	Increase
Banking	1,000	1,000	—	5,758	500	5,258*
Manufacturing	587,192	62,500	24,308*	187,528	331,638	144,110
Mining	108,165	110,245	2,080	27,798	32,683	4,885
Electricity	84,765	432,510	347,835	87,615	185,277	97.662
Traffic	24,390	119,088	94,698	59,027	66,577	7,500
Others	385,040	1,017,838	632,798	81,028	121,922	40,894
Total	1,190,462	1,743,181	552,719	448,753	738,097	289,344

Note: 1. *Denotes decrease.
2. The figures for planned capital are based on a survey by the Bank of Japan.
3. The figures for paid-up capital are based on a survey by the Hypothec Bank of Japan.
4. The paid-up capital of the electricity industry also covers the gas industry.

The antipodal phenomenon presented by the figures for planned capital and those for paid-up capital is due primarily to the difference of statistics. Judging from the fact, however, that there is not much difference between the figures for paid-up capital based on the survey of the Bank of Japan and those based on the survey conducted by the Hypothec Bank of Japan, it may be said that the enterprisers hesitated in operating new plans because the Government did not show its intention of guaranteeing the security of the munitions industry in the future, and they should again undergo their bitter experience of what followed the conclusion of the now expired London Naval Treaty. In other words, the antipodal phenomenon presented by the two categories of figures is believed to have been brought about because these companies which were ordered by the Government to participate in the expansion of the productive facilities of the nation raised the necessary funds for the purpose by increasing their capitalization and collecting payments on the outstanding portion of their shares while in ordinary cases they should have resorted to the raising of capital.

Statistics prepared by the Bank of Japan show that the payments on shares during 1936 totalled ¥758,000,000 against ¥426,000,000 in 1935. Of this amount, ¥218,000,000 was collected in the first half of the year and ¥540,000,000 in the latter half. It was reported that payments on shares were collected one after another in the latter half of the

year as a means of coping with the taxation reform plan whereas there was otherwise no necessity of doing so, but the exact amount of such payments could not be ascertained. According to a survey conducted by the same bank, the commercial register shows that the ratio of new funds to the paid-up stock fund increased from 63.7 per cent in September, 1935, to 67.7 per cent in the corresponding month of 1936, which may be regarded as hinting at the nature of the question.

Increased Volume of Commercial Transactions The foreign trade of Japan as a whole during 1936 amounted to ¥2,798,000,000 in exports and ¥2,928,000,000 in imports, the former increasing by 7.5 per cent and the latter by 11.8 per cent when compared with the figures for the preceding year. The excess of imports over exports rose from ¥15,000,000 in 1935 to ¥130,000,000 in 1936.

FOREIGN TRADE OF JAPAN PROPER

(In one million yen)

	Value of Exports	Increase Over Preceding Year	Percentage of Increase	Value of Imports	Increase Over Preceding Year	Percentage of Increase
1932	1,409.9	263.3	22.9	1.431.4	195.8	15.8
1933	1,861.0	451.1	32.0	1,917.2	485.8	33.9
1934	2,171.9	310.9	16.7	2,282.6	375.4	19.1
1935	2,499.0	327.1	15.1	2,472.2	189.6	8.3
1936	2,692.9	193.9	7.8	2,763.6	291.4	11.8

Note: The above figures are based on the monthly trade returns.

The movement launched for the development of new markets as a means of breaking down the trade barriers set up in various lands against Japanese goods has been halted and the importance of the old markets has come to be recognized anew. This fact, coupled with the policy for compensation or reciprocity, means that the trade volume will remain fairly stationary, both in quantity and in value, and the necessity of unifying the control hitherto enforced separately by the various exporters' union has arisen. The formulation of the plans for an export tax and for a trade statistics tax by the Hirota Cabinet was partly for this purpose and even the enforcement of the import exchange control may, in a sense. be associated with the movement for unifying the control over the foreign trade as a whole.

According to the revised trade statistics which added 12 new items to the 8 important ones, the declining tendency of the 8 old items of the nation's exports has been quite remarkable and the upward trend of the export trade as a whole has been barely maintained by the advance of the 12 new items and other miscellaneous goods. This shows that Japan's export trade has already passed the era of major items and is now entering into an era of miscellaneous goods. The percentage of the increase in the export volume of each of the 20 items included in the trade statistics over the preceding year is given in the following table:

Cotton textiles	2.5
Cotton yarn	6.8
Pottery	1.1
Refined sugar	19.3
Silk textiles	12.2
Woollen textiles	41.8
Paper	19.3
Tinned provisions	24.4
Machinery	28.5
Rayon yarn	71.4
Raw silk	1.5
Wheat flour	47.7
Iron manufactures	7.5
Hats	21.2
Rayon textiles	16.3
Iron	16.1
Toys	7.7
Knitted goods	0.6
Oils and fats	12.9
Timber	6.6

Note: The underlined figures denote decreases.

The export volume of wheat flour was reduced almost by half on account of the dumping of Australian goods in the Manchurian market while the decrease in the exports of cotton textiles, silk textiles and knitted goods was due to the fact that these articles were the principal aim of the restrictive measures adopted by various nations against

Japanese exports. In order to mitigate the suffering of the export trade from such obstacles, cotton yarn and rayon yarn were exported in large quantities.

The volume of the import trade during 1936 recorded a phenomenal increase in spite of the slackened rate of increase in exports, chiefly due to the importation of various kinds of raw materials. The general conditions of the important items of imports showed a continued uptrend. Ammonium Sulphate mounted because the production in Japan proper was considered unable to meet the domestic demand and sugar increased on the strength of the negotiations conducted between Japan and the Netherlands. The imports of wheat, however, decreased because of the invocation of the Trade Protection law by the Japanese Government against Australia. The imports of bean cake also dwindled because of the prices being higher than ammonium sulphate fertilizer and because of the advance achieved by the oils and fats industry in this country.

The imports of copper decreased partly because of the increased production in Japan proper and partly because of a reaction to the remarkable increase recorded in the preceding year. The imports of iron and machinery declined in the annual total but it is to be noted that during the latter half of the year, they were on an upward trend as a result of the activities in connection with the expansion of the productive equipment of the munitions industry.

Details of the changes in the volume of imports are shown in the following table :

Raw cotton	19.1
Timber	11.6
Machinery	3.4
Iron	7.3
Rubber	41.3
Ammonium sulphate	61.0
Hemp	34.2
Oil seeds	4.1
Sugar	64.8
Automobiles	13.6
Heavy oil	21.4
Wool	4.8
Wheat	22.1
Beans	15.3
Pulp	21.8
Bean cakes	7.5
Coal	3.9
Volatile oil	22.0
Ores	14.8
Copper	9.8

Note: All figures denote percentage of increase, except those underlined which denote decrease.

As already mentioned, the important economic index recorded a continued rise reflecting the positive economic activities in the country, but it is to be noted that the strengthened rice control exercised some influence upon the movements of freight. Although no change in the conditions of railway freight has yet taken place, the rice held in the warehouses throughout the country recorded a rapid decline, as shown below :

RICE STOCKS IN TRUST WITH WAREHOUSE COMPANIES THROUGHOUT THE COUNTRY

At End of	The Whole Country		4 Principal Cities		Other Localities	
	1,000 Koku	Value in 1,000 Yen	1,000 Koku	Value in 1,000 Yen	1,000 Koku	Value in 1,000 Yen
1934	18,630	198,277	10,272	113,261	8,368	85.016
1935	9,715	108,789	4,384	52,117	5,331	56,672
1936	6,520	75,196	2,790	34,569	3,730	40,528

Note: The above figures are based on statistics released by the Bank of Japan.

The volume of rice taken out of the warehouses in the four principal cities also recorded a remarkable decrease as shown in the following table :

WAREHOUSED GOODS IN 4 PRINCIPAL CITIES

	Amount Put In Storage		
	1935	1936	Percentage of Increase
Total volume	53,036	46,620	21.8
Total value	¥1,681,738	¥2,109,482	6.4
Volume of rice	9,769	11,715	19.9

	Amount Put in Storage		
	1935	1936	Percentage of Increase
Value of rice	¥ 181,819	¥ 123,166	1.1
Volume of balance	43,267	52,905	22.3
Value of balance	¥1,859,919	¥1,986,316	6.8

Note: The figures for volume are givens in 1,000 units.

	Amount Taken Out			Monthly Average of Amount in Storage		
	1935	1936	Percentage of Increase	1935	1936	Percentage of Increase
Total volume	57,782	63,857	10.5	17,333	16,439	5.2
Total value	¥2,107,502	¥2,104,525	0.1	¥483,425	¥434,450	10.1
Volume of rice	15,659	11,460	26.8	7,742	4,136	46.6
Value of rice	¥ 183,013	¥ 140,794	23.1	¥ 87,638	¥ 48,949	44.1
Volume of balance	42,123	52,397	24.4	11,258	12,303	9.3
Value of balance	¥1,934,489	¥1,963,731	2.0	¥395,787	¥429,555	8.5

Note: The underlined figures denot decreases. All figures are based on statistics compiled by the Bank of Japan.

Shipments of goods by rail declined during the early part of the year on account of snow obstruction but soon began to increase. The total volume of the shipments during the year reached 86,590,000 tons which represented an increase of 5,880,000 tons or 7.2 per cent as compared with similar figures for the preceding year. This reflected the increased business prosperity. The following is a table showing the increase in the volume of railway freight and ships cargoes :

RAILWAY FREIGHT AND SHIPS' CARGOES

(In 1,000 tons)

	1935	1936	Increase	Percentage of Increase
Railway freight forwarded	80,716	86,593	5,877	7.2
Export freight loaded	9,045	9,464	419	4.6
Import freight received	26,256	27,901	1,645	6.3
Total tonnage of trading ships put in port	73,804	76,645	2,839	12.8
Japanese shipping	43,932	45,573	1,641	3.7
Foreign shipping	19,872	31,070	11,198	56.3

Note: 1. The above figures are based on the railway and trade returns.

Railway Freight The percentage of the increase in each item of the freight over similar figures for the preceding year is shown below :

Agricultural products	3.2
Rice	5.0
Others	1.7
Forestry products	2.4
Mineral products	10.2
Marine products	6.9
Manufactured provisions	1.9
Table-luxuries	3.2
Fodder	5.8
Textiles & manufactures	1.8
Ceramics and cement	4.0
Industrial products	11.2
Dairy products	4.5
Miscellaneous merchandise	1.7
Total	7.0
Others	9.1
Grand Total	7.2

The phenomenal increase in industrial products is well illustrative of the keynote of economic activity. The volume of rice shipments, which recorded a decrease by 13.9 per cent in 1935, mounted by 5 per cent on account of the bumper crop. The decrease in ceramics and cement was brought about by the decline in cement and that in textiles and manufactures thereof was attributable to the setback suffered by cotton textiles on account of the advance achieved by rayon textiles.

Improvement in Local Business Condition Bank clearings mounted every month as compared with the preceding year, reflecting economic activities and the higher quotations of stocks. The annual total of bank clearings during 1936 reached ¥69,895,000,000 which represented an increase of ¥6,000,000,000 or 9.5 per cent over similar figures for the preceding year. Although not comparable with Tokyo and Osaka, other parts of the country also recorded a remarkable rise in the amount of bank clearings as a result of the economic development enabled by the policy of diversifying the locations of factories and the improvement in the economic conditions of the agricultural villages brought about by the higher prices of agricultural products. Details of the increase in bank clearings are shown below :

BANK CLEARINGS THROUGHOUT THE COUNTRY

(In One Million Yen)

	1935		1936			
	Amount	%	Amount	%	Increase	Percentage of Increase
Tokyo and Osaka	48,280	75.7	52,379	75.0	4,099	8.5
4 Principal cities	11,640	18.2	13,379	18.6	1,421	12.2
Other localities	3,881	6.1	4,419	6.4	538	13.9
Total	63,801	100.0	69,859	100.0	6,058	9.5

Marked Rise In Commodity Prices The prices of commodities rose from 157.3 to 159.1 during the first half of the year, which was a comparatively mild rise. With the advent of the second half of the year, however, the rising tendency was remarkably accelerated, with the index number reaching as high as 173.5 in December. The average index number for the year was 153.3 which represented a rise by 8.3 per cent as compared with similar figures for the preceding year.

The weak tone recorded in the first half of the year may be attributed, to some extent, to the influence of the outbreak of the February 26 incident, but the principal cause, is to be found in the fact that the foreign trade of this nature is usually characterized by an excess of imports over exports during the first half of the year and by an excess of exports over imports during the second half.

The rapid rise in the prices of commodities during the second half of the year, although attributable to some extent to the seasonal tendency and the specific conditions brought about by the anticipation of further inflation in view of the enormous budget estimates for the 1937–38 fiscal year, was rather abnormal. This abnormal phenomenon, however, was seen not only in this country but in other nations of the world as well, as is clear from the following table :

PERCENTAGE OF RICE IN COMMODITY PRICES

	Index of Commodity Prices			Percentage of Rise		
	Japan	England	America	Japan	England	America
June, 1935	148.0	102.8	113.0	1.7*	3.6	3.7
December, 1935	156.3	107.8	119.0	5.6	4.9	5.3
June, 1936	159.1	105.4	113.1	1.8	2.2*	5.0*
December, 1936	173.5	119.7	127.9	9.1	13.6	13.1
Compared with the end of the preceding year	—	—	—	11.0	11.0	7.5

Note: 1. *Denotes decrease.
2. The figures for Japan are based on a survey by the Tokyo Asahi Shimbun and those for other countries on a survey by the Bank of Japan. The index number for the pre-war period is represented as 100.

The rapid rise in commodity prices reflects the enforcement of a quasi-war time system throughout the world in connection with the prevailing armament race. The fact that the percentage of increase as compared with the preceding year was the same for both Japan and England reflects the relation

between the yen and the pound sterling.

Substance of Price Rise The general conditions of the rise in the prices of commodities are common to the whole world, but with reference to the substance of the rise, it is to be noted that Japan is in a specific condition because of her dependence upon foreign countries for the supply of materials. Japan, England and America all succeeded in executing a policy of inflation and the present is, so to speak, a harvest time for them. In spite of the fact that both England and America are engaged in re-arming the rise in commodity prices there was most remarkable in cereals, textiles and metal articles in the order named. In Japan the order was reversed, for she has to depend on foreign lands for the supply of such materials as fibres and metals, while England, for instance, has to import mostly cereals and fibres. Details are shown below :

INDEX NUMBER OF WHOLESALE PRICES OF COMMODITIES

	Annual Average of Index			Year-end Index		
	1935	1936	Percentage of Increase	1935	1936	Percentage of Increase
Total index	153.3	161.5	8.3	156.3	173.9	11.0
Cereals	170.7	185.2	8.5	174.7	190.7	9.2
Provisions	200.4	206.7	3.1	204.7	212.0	5.5
Textiles	125.1	131.6	6.0	129.2	148.3	14.8
Metals	128.8	138.3	7.4	127.6	177.7	39.3
Fuel	156.4	161.8	3.5	155.3	179.5	15.6
Fertilizer	94.1	96.4	2.4	96.7	96.0	0.8*
Building materials	193.7	192.3	0.7*	190.5	207.3	8.8
Miscellaneous	125.8	123.1	2.1*	125.6	127.6	1.6

Note: *Denotes decrease.

That the rising rate of the prices of cereals was greater than that of the prices of metal articles is attributable to the fact that while the latter was merely a phenomenon in the second half of the year, the former characterized the whole of 1936 under the impetus of the Government policy for higher prices of rice as well as the influence of the active purchases of sugar and wheat by Continental countries for storing to meet the extraordinary situation in Europe. As regards the declining tendency in the prices of fertilizers, there is no need to emphasize that the tendency reflected the strengthened fertilizer policy of the Government centering on measures to cope with the situation in the agricultural villages.

It may be enlightening to make a further consideration of the conditions in the light of the index numbers prepared by the Mitsubishi Economic Research Institute. According to these index numbers, productive goods advanced in prices by 16.7 per cent in 1936 against 4.9 per cent in the preceding year and consumptive goods by 5 per cent against 1.8 per cent, with the average for the period from 1903 to 1928 being represented as 100. In other words, both production and consumption goods rose in prices by 10.5 per cent on the average in 1936 against 3.2 per cent in 1935. The same index numbers also show that with the figures for December 10, 1931, being represented as 100, domestic merchandise mounted by 8.2 per cent in 1936 against 3.5 per cent in the preceding year and the articles of foreign trade by 12.9 per cent against 6.7 per cent while the average rise for both categories was by 12.2 per cent in 1936 against 5.6 per cent in 1935. This is indicative of the one-sidedness of our economic conditions, that is to say the dependence of this nation upon foreign countries for the supply of raw materials which resulted in the higher prices of materials in comparison with the quotations for manufactured goods.

Recovery of Industrial Companies The conditions of the industrial companies as a whole showed a stagnation during the first half of 1936 when the percentage of dividend was forced to be lowered, but an improvement was recorded during the second half of the year when the percentage of profits was restored to the same level as that for the second half of 1935. Details follows :

		Paid-up Capital	Profits	Dividends	Percentage of Profits	Percentage of Dividends
Primary industries	2nd Half of 1935	¥1,284	¥150	¥ 69	23.7	10.9
	1st Half of 1936	1,322	152	69	23.2	10.6
	2nd Half of 1936	1,382	161	70	23.6	10.3
Secondary industries	2nd Half of 1935	1,803	126	64	14.0	7.1
	1st Half of 1936	1,974	135	69	13.7	7.0
	2nd Half of 1936	2,045	138	71	13.7	7.1
Total	2nd Half of 1935	3,088	277	133	18.0	8.7
	1st Half of 1936	3,296	286	138	17.5	8.4
	2nd Half of 1936	3,428	299	141	17.7	8.4

Note: 1. The figures for paid-up capital, profits and dividend are all in units of one million yen.
2. All figures are based on a survey conducted by the Tokyo Asahi Shimbun.

The conditions of the various branches of the industry and business are shown below :

PERCENTAGE OF PROFITS OF PRIMARY INDUSTRIES

	2nd Half of 1935	1st Half of 1936	2nd Half of 1931
Cotton spinning	28.8	27.1	28.2
Miscellaneous fibrous	26.1	23.2	2.5
Ceramic and cement	20.4	17.6	15.6
Chemical	21.7	22.4	20.2
Shipbuilding and machinery manufacturing	12.5	13.1	13.3
Mining and refining	25.1	23.6	25.2
Petroleum and coal	15.7	17.9	18.6
Provisions	33.3	34.6	36.0

PERCENTAGE OF PROFITS OF SECONDARY ENTERPRISES

	2nd Half of 1935	1st Half of 1936	2nd Half of 1936
Electricity industry	13.9	13.7	13.3
Railways	9.8	9.9	16.3
Trust business	20.4	16.9	18.0
Shipping business, etc.	29.3	26.8	30.1
Commerce, etc.	15.5	16.1	16.0
Land and building	9.0	9.6	9.4
Exchanges	11.0	9.7	9.5

It may be noted that the mining industry and the metal industry showed a tendency to change places in the matter of profits on account of the higher prices of materials as compared with the quotations for manufactured goods. In the spinning industry, the recovery of the first-rate companies was more remarkable than that of the second- and third-rate companies, apparently because the latter, which had been lagging behind in scientific management, made vigorous efforts toward rationalization as a means of coping with the taxation reform plan of the Government. The decreased percentage of profits of the electricity industrial companies, as indicated in the above table, is due to the rapid increase in the paid-up capital. As a matter of fact, the business conditions of these companies were quite satisfactory, reflecting the growing demand for motive power in industrial circles.

Disturbance in Stock Market The stock market was violently disturbed under the influence of the reformist tendency originating in the February 26 incident. Although the index numbers show a decline by 6.7 per cent, there was a decrease of as much as ¥311,000,000 in the total amount in market prices of stocks throughout the country, which fell from ¥20,972,000,000 to ¥20,661,000,000. As there was no fundamental change in economic conditions, however, the stock market was soon restored to normal. Later, the Government's plan to place the privately-owned electricity industry under State management in line with the strengthened economic control, the proposal to enlarge the scope of government monopoly, the projected reform of the exchanges and the taxation reform plan involving increased taxes became known, and again caused violent fluctuations in stock quotations.

Generally speaking, the key-note of the stock market during 1936 was a firm one being characterized by speculative buying motivated by the strengthened low-interest policy of the Government. The annual average of stock quotations, according to statistics compiled by the Tokyo Stock Exchange, was 132.6 in 1936 as compared with 115.7 in 1935, which represented a rise by 13.8 per cent. Apart from the improvement in general economic conditions, the rise

in stock quotations may be attributed to the increased investing power brought about by the year-end increase in the total premium on stocks throughout the country by ¥838,000,000 compared with similar figures for the preceding year, and the active change from money to goods in anticipation of the entry of inflation upon its second stage.

The speculative buying concerned miscellaneous stocks, a tendency which continued into the year 1937. Statistics show that the premium on those not placed on the Tokyo Stock Exchange increased to 34.2 per cent in 1936 from 29.9 per cent in 1935 while that on those placed on the Tokyo Stock Exchange declined from 49.1 per cent. When considered as a whole, the premium on stocks in 1936 was greater by 7.3 per cent than similar figures for the preceding year, rising from 35.5 per cent to 38.1 per cent. Details follow:

STOCK QUOTATIONS (In One Million Yen)

	At End of 1935	At End of 1936	Increased Amount	Percentage of Increase
Stocks placed on the Tokyo Stock Exchange:				
Paid-up capital	4,468	4,716	248	5.6
Stock market price	6,664	6,975	311	4.7
Premium	2,176	2,259	83	3.8
Stocks not placed on Tokyo Exchange:				
Paid-up capital	10,782	11,674	892	8.3
Stock market price	14,004	15,665	1,661	11.9
Premium	3,242	3,991	749	23.1
Total:				
Paid-up capital	15,250	16,390	1,140	7.5
Stock market price	20,668	22,640	1,972	9.5
Premium	5,418	6,250	838	15.4

Note: The above figures are based on a survey conducted by the Tokyo Stock Exchange, with the statistics compiled in October by the Bank of Japan being adopted for the figures for the market prices of securities.

Stocks at Reduced Prices As stated above, the quotations of stock as a whole recorded an advance but when individual stocks are considered separately, fluctuations are noted. The year-end index numbers for 1936 show that four categories decreased in market prices while five categories increased. Details are given below:

STOCKS AT REDUCED PRICES

(Index Number)

	At End of 1935	At End of 1936	Percentage of Decrease
Public utility enterprises	156.9	153.5	2.2
Banking and insurance	173.9	171.8	1.2
Commercial	38.9	29.6	23.9
Exchange	130.6	108.1	17.2

STOCKS AT RAISED PRICES

(Index Number)

	At End of 1935	At End of 1936	Percentage of Increase
Mining	122.5	138.1	12.7
Fibrous industry	77.6	82.6	13.8
Manufacturing, etc.	74.3	85.1	14.5
Shipping, etc.	59.1	76.0	28.6
Miscellaneous	148.9	179.2	20.3

With reference to the public utility stocks, it may be mentioned that the electricity and gas stocks suffered a decline in the market prices on account of the strengthened economic control while the railway stocks achieved an advance because of improved business conditions. The decline in the quotations of the banking and insurance stocks taken as a whole is due to the fall of those other than the banking stocks, which rose though very slightly. Among the commercial stocks, those of department stores and land and building companies showed a firm tone although a decline in market value was recorded for the commercial stocks as a whole. As regards the fall of the exchange stocks, it is a matter of common knowledge that the exchanges were affected by the question of a reform of all exchanges being undertaken.

Under the heading of mining stocks are included those of petroleum, coal, mining and refining, and iron manufacturing companies. The advance in price of petroleum stocks was the most remarkable of all. The fibrous industry stocks are subdivided into four categories comprising those of the cotton spinning companies, of the woollen industry companies, the rayon yarns com-

panies and other reeling companies. The last named two categories suffered a decline, particularly the reeling stocks. Those included under the heading of manufacturing industry are the stocks of the sugar manufacturing, provisions, machinery, paper, fertilizer, chemical, ceramic, cement and brewery companies, of which the beer brewery and paper manufacturing stocks declined.

The rise in the market prices of the stocks classified under the heading "shipping, etc." which comprise the stocks of shipping, shipbuilding, dock and various transportation companies was particularly remarkable in the case of shipbuilding stocks. The heading "miscellaneous" covers the stocks of fishery, rubber and colonization companies and the advance in market prices for the last named was not so striking as that for the others.

To sum up, the various stocks experienced vicissitudes but as the conditions in the market brightened during the latter half of the year and the low-interest tendency advanced, those which suffered a decline began to recover from the loss of popularity. The only exceptions were the electricity and exchange stocks which failed to show any signs of improvement even towards the end of the year.

Capitalization The total capitalization of the companies recorded at the end of 1935 amounted to ¥22,352,402,224 which represented an increase of ¥1,225,423,815 or 5.8 per cent over the figures for the previous year. Of this increased capitalization, companies with a capital of less than ¥500,000 each, which numbered 5,679, accounted for ¥213,166,483 and those capitalized at more than ¥500,000 each, which numbered 269, for ¥1,012,257,332.

It may be noted in this connection that up to 1929 almost all companies had increased their capitalization every year, but that from 1930 to 1932 inclusive a gradual though small decrease was recorded. From 1933 onwards the increasing tendency was resumed, and was greatly accelerated in 1934 and 1935. Details are tabulated below :

	Capital		Variation from Preceding Year	Percentage of Increase or Decrease
	Amount	Index Number		
1925	¥16,464,200	100	+¥ 323,362	+2.0
1926	17,633,526	107	+ 1,169,326	+7.1
1927	18,386,355	112	+ 752,829	+4.3
1928	18,968,865	115	+ 582,510	+3.2
1929	19,666,107	119	+ 697,242	+3.7
1930	19,633,761	119	- 32,346	-0.2
1931	19,551,544	119	- 82,217	-0.4
1932	19,484,540	118	- 67,004	-0.3
1933	19,960,318	121	+ 475,778	+2.4
1934	21,126,978	128	+ 1,166,660	+5.8
1935	22,352,402	132	+ 1,225,424	+5.8

Note: All figures for amount are in units of ¥1,000.

The average capital of each of the companies at the end of 1935 was ¥265,638, a decrease of ¥4,535 or 1.7 per cent from similar figures for the end of 1934 and a decrease of ¥213,739 or 44.6 per cent from those for the end of 1925. Of the total capital, Gomei Kaisha accounted for ¥1,306,235,862 or 5.8 per cent, Goshi Kaisha for ¥1,150,161,537 or 5.1 per cent, Kabushiki Kaisha for ¥19,885,777,795 or 89 per cent, Kabushiki Goshi Kaisha for ¥7,377,030 and Sogo Kaisha for ¥2,850,000. Compared with the preceding year, the capital of Gomei Kaisha increased by ¥72,690,993 or 5.9 per cent, that of Goshi Kaisha by ¥55,980,449 or 4.9 per cent and that of Kabushiki Kaisha by ¥1,097,522,723 or 5.8 per cent while that of Kabushiki Goshi Kaisha decreased by ¥420,350 or 5.7 per cent and that of Sogo Kaisha by ¥350,000 or 1.2 per cent.

During the past 10 years, the increase in capital was particularly notable in the case of Goshi Kaisha which recorded an increase of 1.6 per cent, followed by Gomei Kaisha with 1.5 per cent and Kabushiki Kaisha with 1.3 per cent. Details are shown below :

	Gomei Kaisha	Goshi Kaisha	Kabushiki Kaisha
1925	100	100	100
1926	120	105	106
1927	122	108	111
1928	126	114	115
1929	129	120	119
1930	133	124	118
1931	130	128	118
1932	132	133	117
1933	131	141	120
1934	139	149	127
1935	147	157	134

At the end of 1935 the average capital per company amounted to ¥854,787 for Kabushiki Kaisha, ¥712,500 for Sogo Kaisha, ¥179,928 for Kabushiki Goshi Kaisha, ¥79,411 for Gomei Kaisha and ¥25,911 for Goshi Kaisha. In the following table the average capital of each kind of company at the end of 1935 is compared with similar figures for the end of 1934 and 1925 (in thousands) :

	Compared with 1934		Compared with 1925	
	Amount	%	Amount	%
Gomei Kaisea	−¥ 6,508	− 7.6	+¥91,685	+53.6
Goshi Kaisha	− 249	− 1.0	− 37,577	−59.2
Kabushiki Kaisha	− 122	—	+ 10,257	+ 1.2
Kabushiki Goshi Kaisha	+ 25,266	+12.3	− 67,352	−27.2
Sogo Kaisha	− 87,500	−10.9	1,071	0.2

It is clear from the above table that when compared with similar figures for the end of 1934, the average capital per company in each classification showed a decrease in each case except that of Kabushiki Goshi Kaisha. A decrease was also recorded when compared with similar figures for the end of 1925, except in the case of Kabushiki Kaisha and Sogo Kaisha.

Manufacturing industry headed the list of capital at the end of 1935, with ¥9,456,415,605, followed by commerce, transportation business, mining, agriculture and fishery. Details are tabulated as follows :

	Amount of Capital	Proportion to Total	Compared with 1934	Compared with 1925
Manufacturing industry	¥9,456,415,605	42.3%	+ 7.2%	+ 53.2%
Commerce	8,065,151,295	40.1	+ 4.1	+ 22.7
Transportation business	2,332,268,289	10.4	+ 1.4	+ 38.8
Mining	1,269,098,458	5.7	+18.9	+ 2.2
Agriculture	178,378,964	0.8	− 0.8	− 6.8
Fishery	151,089,613	0.7	+ 5.8	+108.5

The list of average capital per company was headed by mining with ¥2,077,084. Agriculture brought up the rear with ¥91,149. The figures for the end of 1935 compared with those for 1934 and 1925 are as follows :

	Average Capital per Company	Compared with 1934	Compared with 1925
Agriculture	¥ 91,149	−7.1%	−65.5%
Fishery	455,089	+4.6	+23.1
Mining	2,077,084	+0.3	34.9
Manufacturing industry	322,612	−1.1	−30.9
Commerce	195,524	−3.1	−53.7
Transportation business	383,471	−4.4	−41.5

Paid-up Capital The total paid-up capital of all the companies throughout the country at the end of 1935 amounted to ¥16,660,176,338 which showed an increase of ¥885,015,362 or 5.6 per cent over the figures for the previous year. Of this sum, Kabushiki Kaisha accounted for ¥14,197,243,247 or 85.2 per cent, Gomei Kaisha for ¥1,306,235,862 or 7.8 per cent, and Goshi Kaisha for ¥1,150,161,537 or 6.9 per cent. Only 0.1 per cent of the total was divided between Kabushiki Goshi Kaisha and Sogo Kaisha, the former taking ¥5,485,742 and the latter ¥1,050,000.

The total paid-up capital of Kabushiki Kaisha amounted to 71.4 per cent of the total authorized capital while the percentage for Kabushiki Goshi Kaisha was 74.4 per cent. The percentages of paid-up capital during the past 10 years is tabulated as follows :

	Kabushiki Kaisha	Kabushiki Goshi Kaisha
1925	64.2%	67.9%
1926	64.8	70.7
1927	65.2	76.2
1928	65.9	76.1
1929	66.7	68.0
1930	67.6	69.1
1931	68.0	68.4
1932	68.6	72.0
1933	69.5	73.7
1934	71.5	70.6
1935	71.4	74.4

The following is a table showing the percentage of paid-up capital in the case of Kabushiki Kaisha and the average paid-up capital per company in each class :

	Percentage of Paid-up Capital			Average Paid-up Capital per Company	Average Authorized Capttal per Company
	19351	934	193		
Agriculture	78.8	72.2	58.8	¥ 332,260	¥ 444,332
Fishery	83.4	76.4	70.2	792,776	950,100
Mining	76.8	78.1	66.8	2,134,872	2,780,290
Manufacturing industry	74.9	75.6	67.4	808,049	1,078,290
Commerce	66.5	66.6	61.0	438,250	659,365
Transportation business	68.9	68.0	64.1	485,204	704,379

Reserves The total reserves of all the companies throughout the country at the end of 1935 amounted to ¥3,606,008,-133 which represented an increase of ¥291,455,511 or 8.8 per cent over the figures for the end of 1934 and an increase of ¥1,113,569,375 or 44.7 per cent over those for 1925. The proportion of the reserves was 16.1 per cent at the total authorized capital and 21.6 per cent of the total paid-up capital.

Of this total the reserves of Gomei Kaisha amounted to ¥158,310,669 (4.4 per cent), those of Goshi Kaisha to ¥126,-917,778 (3.5 per cent), of Kabushiki Kaisha to ¥3,242,049,469 (89.9 per cent), of Kabushiki Goshi Kaisha to ¥485,395, and of Sogo Kaisha to ¥78,242,822 (2.2 per cent). Compared with the preceding year, the reserves of Gomei Kaisha increased by ¥5,665,412 or 3.7 per cent, those of Goshi Kaisha by ¥8,405,204 or 7.1 per cent, those of Kabushiki Kaisha by ¥268,-920,903 or 9 per cent, and those of Sogo Kaisha by ¥3,500,183 or 12.2 per cent. The reserves of Kabushiki Goshi Kaisha, however, showed a decrease of ¥36,191 or 6.9 per cent when compared with similar figures for the preceding year. Details follow :

	Proportion to Total Authorized Capital	Proportion to Total Paid-up Capital	Average Reserves per Company
Gomei Kaisha	12.1%	—	¥ 9,624
Goshi Kaisha	11.0	—	2,859
Kabushiki Kaisha	16.3	22.8%	139,359
Kabushiki Goshi Kaisha	6.6	8.8	11,839
Sogo Kaisha	2,745.4	7,451.7	19,560,706

The following is a table showing the reserves of the various companies classified according to their enterprises :

	Amount of Reserves	Proportion to Total Reserves	Increase Over Preceding Year
Commerce	2,038,149,114	56.5%	3.9%
Manufacturing industry	1,202,110,825	33.3	16.2
Transportation business	196,798,809	5.5	11.2
Mining	141,984,183	3.9	18.2
Fishery	13,911,080	0.4	48.8
Agriculture	13,054,122	0.4	14.4

The proportion of reserves to capital and the average amount of reserves per company according to enterprises are tabulated as follows :

	Proportion to Authorized Capital	Proportion to Paid-up Capital	Average Reserves per Company
Commerce	22.7%	31.0%	¥ 44,451
Manufacturing industry	12.7	16.7	41,011
Mining	11.2	14.5	232,380
Fishery	9.2	11.0	41,901
Transportation business	8.4	12.2	32.358
Agriculture	7.3	9.4	6,670

Profits and Losses The total net profits of the various companies throughout the country for 1935 amounted to ¥1,510,291,705, showing an increase of ¥181,238,033 or 13.6 per cent over the figures for the preceding year. The average amount of net profits per company of those that showed a profit was ¥17,948 or ¥952 or 5.6 per cent greater than for the preceding year. The total net losses of other companies amounted to ¥109,388,955, representing a decrease of ¥39,321,437 or 26.4 per cent from similar figures for the preceding year. The average amount of net losses for one company was ¥1,300 which showed a decrease of ¥602 or 31.7 per cent as compared with similar figures for the preceding year.

All the companies throughout the country taken together made net profits of ¥1,400,902,750 for the year 1935, which showed an increase of ¥220,559,470 or 18.7 per cent over the preceding year. The average amount of profits per company was ¥16,648, which was ¥1,554 or 10.3 per cent higher than for the preceding year.

The following is a table showing the net profits and net losses respectively of the various companies as well as the business conditions of all the companies throughout the country taken together during the past 10 years :

	Net Profits		Net Losses		Balance	
	Amount	Index No.	Amount	Index No.	Amount	Index No.
1925	¥1,101,911	100	¥232,132	100	¥ 869,779	100
1926	1,095,341	99	262,735	113	832,606	96
1927	1,102,885	100	333,331	144	769,554	88
1928	1,153,767	105	261,938	113	891,829	103
1929	1,140,082	103	263,040	113	877,042	101
1930	919,419	83	311,667	134	607,752	70
1931	743,675	67	272,978	118	470,697	54
1932	830,322	75	201,617	87	628,705	72
1933	1,092,034	99	138,608	60	953,426	110
1934	1,329,054	121	148,710	64	1,180,343	136
1935	1,510,294	137	109,389	47	1,400,905	161

Note: All amounts given in units of ¥1,000.

The average net profits or losses per company in each case as well as the average net profits per company with all the organizations concerned throughout the country being considered as a whole are given below :

	Net Profits		Net Losses		Net Profits With All Companies Taken Together	
	Amount	Index No.	Amount	Index No.	Amount	Index No.
1925	¥32,084	100	¥6,759	100	¥25,325	100
1926	30,369	95	7,284	108	23,085	91
1927	28,634	89	8,654	128	19,980	79
1928	27,667	86	6,281	93	21,386	84
1929	24,417	76	5,634	83	18,783	74
1930	17,712	55	6,004	89	11,708	46
1931	12,995	41	4,770	71	8,225	32
1932	12,766	40	3,100	46	9,666	38
1933	15,338	48	1,947	29	13,391	53
1934	16,996	53	1,902	28	15,094	60
1935	17,948	56	1,300	19	16,648	66

The net profits of the various companies which showed a profit amounted to 9.1 per cent of their paid-up capital while the net losses of other companies amounted to 0.7 per cent of their paid-up capital. Taking all the companies throughout the country together, their net profits amounted to 8.4 per cent of the paid-up capital. The highest percentage of net profits during the past 10 years was 9.9, which was recorded in 1925. After declining gradually from then, the percentage began to rise in 1933. A declining tendency has been shown by the percentage of net losses ever since 1925, which has been particularly notable following 1933. It follows that the net profits of all the companies throughout the country taken together has been increasing in percentage. Details follow :

	Percentage of Net Profits	Percentage of Net Losses	Percentage of Net Profits With All Companies Taken Together
1925	9.5	2.1	7.8
1926	9.1	2.2	6.9
1927	8.7	2.6	6.1
1928	8.8	2.0	6.8
1929	8.3	1.9	6.4
1930	6.6	2.2	4.4
1931	5.3	2.0	3.3
1932	5.9	1.4	4.5
1933	7.5	1.0	6.5
1934	8.6	0.9	7.7
1935	9.1	0.8	8.4

The net profits or net losses of the various companies classified according to their organizations and the net profits of all the companies in each class taken together are given below :

	Net Profits	Net Losses	Balance
Gomei Kaisha	¥ 55,848,061	¥ 13,682,656	¥ 42,165,405
Goshi Kaisha	55,170,729	23,237,443	31,933,286
Kabushiki Kaisha	1,369,868,313	72,372,576	1,297,495,737
Kabushiki Goshi Kaisha	168,101	96,280	71,821
Sogo Kaisha	29,238,976	—	29,238,976
Total	1,510,294,180	109,388,955	1,400,905,225

The following is a table showing the proportion of net profits, net losses and balance to the paid-up capital, together with the average share per company in the balance :

	Net Profits	Net Losses	Balance	Average share
Gomei Kaisha	4.3%	1.0%	3.2%	¥ 2,563
Goshi Kaisha	4.8	2.0	2.8	710
Kabushiki Kaisha	9.6	0.5	9.1	55,773
Kabushiki Goshi Kaisha	3.1	1.8	1.3	1,752
Sogo Kaisha	2,784,7	—	2,784.7	7,309,744

The proportion of net profits, net losses and balance to paid-up capital of the various companies classified according to their enterprises is shown in the following table :

	1925	1926	1927	1928	1929	1930	1931	1932	1933	1934	1935
	(In Percentage)										
Agriculture											
Net profits	6.9	6.9	4.6	3.7	3.2	2.3	0.9	1.0	1.7	3.3	4.2
Net losses	1.7	2.1	3.0	5.2	5.5	3.6	4.0	2.9	1.8	1.9	2.1
Balance	5.2	4.8	1.6	1.5	2.3	1.3	3.1	1.9	0.1	1.4	2.1

Transportation business											
Net profits	7.2	7.3	7.0	6.8	6.5	4.5	3.8	3.3	3.7	4.4	5.9
Net losses	2.9	3.1	1.6	1.3	2.6	2.0	1.3	1.2	1.0	0.5	0.4
Blance	4.3	4.2	5.4	5.5	3.9	2.5	2.5	2.1	2.7	3.9	5.5

Note: All figures under the heading of balance denote favourable balances except those underlined which denote unfavourable balances.

Dividend The total dividends paid by all the companies throughout the country in 1935 amounted to ¥903,013,099 which represented an increase of ¥125,315,213 or 16.1 per cent over the figure for the preceding year. The proportion of dividends to the paid-up capital and net profits during the past 10 years is shown in the following table :

	Proportion to Paid-up Capital	Proportion to Net Profits
1925	6.2%	62.8%
1926	6.1	67.1
1927	5.6	64.3
1928	5.8	66.2
1929	5.7	68.9
1930	4.7	70.8
1931	3.9	73.9
1932	3.9	65.7
1933	4.4	58.5
1934	4.9	57.0
1935	5.4	59.8

The total amount of dividends paid by the various companies classified according to their organization, and the proportion of dividends to the paid-up capital and net profits, are tabulated as follows :

	Total Dividends	Proportion to Paid-up Capital	Proportion to Net Profits
Gomei Kaisha	¥ 35,756,344	2.7%	64.0%
Goshi Kaisha	32,015,608	2.8	58.0
Kabushiki Kaisha	835,020,117	5.9	61.0
Kabushiki Goshi Kaisha	101,030	1.8	60.1
Sogo Kaisha	120,000	11.4	0.4
Total	903,013,099	5.4	59.8

Classified by the varieties of business of these companies, the figures are as follows :

	Total Dividends	Proportion of Paid-up Capital	Proportion to Net Profits
Manufacturing industry	¥480,508,664	6.7%	63.8%
Commerce	286,177,248	4.3	52.8
Mining	63,862,501	6.5	65.1
Transportion business	58,090,209	3.6	60.9
Fishery	10,136,150	8.0	62.1
Agriculture	4,238,327	3.0	72.8

Debentures The total debentures issued by the Kabushiki Kaisha throughout the country, as outstanding in 1935, amounted to ¥4,180,602,061 which showed a decrease of ¥79,134,710 or 1.9 per cent from similar figures for the preceding year. The proportion of the outstanding debentures in 1935 to the authorized capital and paid-up capital was 21 and 29.4 per cent respectively. Up to 1933, the amount of debentures had been showing a tendency to increase but a slight decrease was recorded later on. Details follow :

	Index Number of Debentures	Proportion to Authorized Capital	Proportion to Paid-up Capital
1925	100	17.9%	27.8%
1926	107	17.9	27.6
1927	118	18.9	29.0
1928	140	21.8	33.1
1929	155	23.3	35.0
1930	163	24.7	36.5
1931	170	25.7	37.9
1932	170	26.1	38.0
1933	164	24.4	35.1
1934	161	22.7	31.7
1935	158	21.0	29.4

The list of debentures of the various companies classified according to enterprises in 1935 was headed by commerce which accounted for ¥1,881,696,264 or 45 per cent of the total amount. Next came the manufacturing industry with ¥1,758,953,481 or 42.1 per cent, which was followed by the transportation business with ¥510,985,216 or 12.2 per cent, the mining industry with ¥23,967,100 or 0.6 per cent and fishery with ¥5,000,000 or 0.1 per cent in the order named. It may be noted in this connection that agriculture did not share in the debentures.

According to a survey which covered a total of 139 classes of enterprises, the outstanding debentures in 1935 involved 53 classes of enterprises. Banking business took the lion's share, accounting for ¥1,640,602,459, which was followed by electrical industries with ¥1,260,708,592. These two items took 69.4 per cent of the total amount of debentures. The following is a table showing the proportionate amounts of the various enterprises which accounted for more than ¥50,000,000 out of the total debentures :

	Amount of Debentures	Proportional percentage
Banking	¥1,640,602,459	39.2
Electricity	1,260,708,592	30.2
Railways	473,727,716	11.3
Commerce	191,551,505	4.6
Spinning	93,700,000	2.2
Fertilizer manufacturing	92,635,000	2.2
Rayon manufacturing	67,000,000	1.6
Paper manufacturing	60,352,314	1.4

CHAPTER XI

FOREIGN TRADE

History of Development

Four Periods Japan's foreign trade for the last 70 years can be divided into four periods, the first, before the Sino-Japanese War; the second, after the Sino-Japanese War to the outbreak of the Russo-Japanese War; the third, after the Russo-Japanese War to the outbreak of the World War; and the fourth, the period following the World War. In the early part of the Meiji Era the little foreign trade that was done was mostly done through foreign firms, but soon several Japanese trading concerns were founded, among them being the Mitsui Bussan Kaisha, established in 1876, the Osaka Gumi, Morimura Gumi, Kwansai Boyeki Shokwai and others. The Yokohama Specie Bank was founded in 1880 to serve as a monetary organ for traders engaged in foreign trade. The Nippon Yusen Kaisha and Osaka Shosen Kaisha were established in 1875 and 1874 respectively to carry on overseas marine transportation. The Tokyo Marine Insurance Company was founded in 1878. Thus important organizations for foreign trade were brought into being. During this first period Japan's economic conditions were primitive and her pursuits mostly agricultural. Her export volume between the first year of Meiji, 1868, and the 18th year was small —an average of one yen of exports per head of population. The import value was about the same. Even in 1893 the export and import totals were not more than ¥80,000,000 each. The Sino-Japanese War was an epoch in the national destiny of Japan. Foreign trade received a great fillip and considerable development was made. In 1894, when the war broke out between Japan and China, exports and imports were each more than ¥100,000,000, and in 1903, the end of the second period, exports amounted to ¥289,000,000 and imports ¥317,000,000.

The Navigation Law The navigation encouragement law which was promulgated in 1896 accelerated the inauguration of overseas navigation by Japanese shipping companies. In connection with a revised tariff policy export duties were abolished and import duties on industrial materials were either abolished or reduced. Bar silver (Japan did not become a gold standard country until 1897) experienced a sharp drop before and after the War and the export trade was greatly stimulated thereby. In 1899, as a result of repeated efforts of the Government over many years, the existing trade conventions with foreign Powers were revised and the foreign settlement system for foreigners was replaced by one of mixed residence. Until 1887, about 87 per cent of Japan's export trade and 88 per cent of her import trade was handled by foreign merchants. In 1900, the foreigners' transactions in exports were 63 per cent and Japanese transactions 37 per cent, the former's import transactions had decreased to 61 per cent and Japanese transaction increased to 39 per cent. There was an excess of imports for every year of the period (1894–1903). The Russo-Japanese War imparted a far greater impetus to the country's foreign trade than the Sino-Japanese War had done, and foreign capital flowed into the country. Exports attained the ¥300,000,000 mark in 1904, and in 1913 they reached ¥632,000,000 and imports amounted to ¥729,000,000. One of the noteworthy events during the period was that the treaty revision of 1899 was carried still further in 1901, the result being that Japan acquired perfect tariff autonomy and was able to establish the foundation of a protective tariff policy. Industrial development resulted. In 1901, exports that went through foreign merchants were only 48 per cent, while those through Japanese merchants were 52 per cent, and imports handled by the former in the same year were 36 per cent, while those by Japanese were 64 per cent—a complete reversal of the conditions that had existed during the early part of the reign of Meiji.

The World War The greatest effects on economic circles of Japan, qualitatively and quantitatively, resulted from the World War. Between 1914 and 1918, when the War was going on, Japanese economy and finance went through a sweeping change for the better and the unprecedented business boom lasted until March, 1920, when a great reaction took place. The suspension of imports

into Japan by the War prompted the country to become self-sufficient in various lines of industry. Heavy demands for stores came in rapid succession from European countries. Japan became one of the principal countries of export to China, the South Seas and India, taking the place of Europe and America. The export activities and trade markets for Japanese commodities were considerably enlarged, increasing in proportion to the length of the war. Exports which totalled only ¥600,000,000 in 1914, the first year of the fourth period of the trade development of Japan, went above ¥1,100,000,000 in 1916, and in 1919 the amount exceeded ¥2,098,000,000, setting an all-time record. Imports which in 1914 were less than ¥600,000,000, increased to more than ¥1,000,000,000, in 1917 and finally reached ¥2,336,000,000 in 1920. Special mention must be made that for four years from 1915 to 1918, Japan witnessed a great excess of exports the combined export excess for the period totalling ¥1,408,000,000. This trade prosperity naturally stimulated the shipping business. With the continued favourable trade balance, an influx of gold into Japan took place. For the seven years from 1915 to 1922 the influx of gold amounted to ¥1,180,000,000, and in addition Japan came to hold an enormous amount of specie abroad. The amount held by the Government and the Bank of Japan at the end of 1920 was ¥2,178,000,000, a record high amount for Japan. When the armistice was concluded in 1918, the heavy demand for munitions came to an end, and with the gradual restoration of European industries to their former conditions, the collapse of the Russian market through the Revolution, the exhaustion of European countries and the consequent sinking purchasing power, Japan's export trade turned for the worse during the latter half of 1920. The 1920 reaction threw Japanese economy into a great panic. Exports in 1921 made a sudden and substantial decrease to the ¥1,000,000,000 mark from the record level of ¥2,098,000,000 for 1919. Imports also went off remarkably. To make matters worse, trade reverted to the adverse balance of import excess after 1919, the largest adverse balance being in 1924 and 1925 consequent on the great Kanto earthquake and fire of 1923. Imports for 1924 totalled ¥2,400,000,000 going above the previous record of ¥2,336,000,000 for 1920, and in 1925 the amount attained the considerable height of ¥2,500,000,000. This remarkable gain was due to heavy imports of materials needed for reconstruction work after the earthquake and fire. The Government exempted these imports from tariff duties. Due to the adverse trade balance, specie accumulated by Japan during the War boom was taken back by foreign countries. During the years from 1868, the first year of Meiji, to 1936 only 21 years have seen an excess of exports over imports and the remaining 47 years have experienced an excess of imports over exports.

The Trade Returns The annual foreign trade figures from 1897 to 1936, taken from the Ministry of Finance reports and excluding the foreign trade of Korea and Formosa, follow. It may be added that the values of exports prior to 1904 represent the price at ports of destination, and those for that year and subsequent years, the price and packing charges. The values of imports prior to 1899 represent the original price only and those for that year and subsequent years, the cost, packing charges, freight, insurance and all other incidental expenses incurred up to the time of the arrival at the port of destination.

Foreign Trade in 1936 and 1937

Foreign trade of Japan in 1936 amounted to ¥5,726,000,000, the highest in Japan's history. Exports increased 7.5 per cent while imports increased 11.8 per cent as compared with the previous year, and the excess of imports over exports amounted to ¥130,000,000, in 1936, against ¥14,700,000 in 1935, the increases being due not to the advance of unit prices but to the quantitative swelling in both imports and exports.

The exports of rayon cloth, woollen textiles, canned and bottled provisions, and machinery and iron, all increased greetly, particularly remarkable were the shipments to Great Britain, the United States, Manchoukuo and the Kwantung Leased Territory. The most outstanding item among the increased imports was raw cotton. Other principal items included crude petroleum, heavy oil, raw rubber, ammonium sulphate, and pulp. British India, China, the Dutch Indies, Canada, British Malay and the Philippines were the leading origins of the increased imports.

It is anticipated that the export trade will further increase during 1937 because of the better economic conditions prevailing in the United States, China and other agricultural nations. Imports will expand because of increased exports and armament expansion. There is a possibility, however, of imports being further restricted by the strengthened licensing system for import exchange.

Issues of 1936 Defeating to some extent the pressure brought to bear upon their expansion by various countries Japanese exports, because of their cheapness, continued to increase in 1936, but there were two problems to be faced at home, one concerning the decrease in export profits and the other the aggravation of labour conditions in the export industry. In connection with imports, there existed a serious question of how to deal with the inconsistencies of the situation arising from the upward trend of the excess of imports over exports on account of the growing demand for munitions and the aggravating balance of international payments in the face of the necessity of a rapid accumulation of capital.

The pressure brought to bear upon the expansion of this nation,s export trade during 1936 was characterized by the greatly increased customs duty which Australia imposed on Japanese cotton and rayon cloths on May 22. In retaliation, Japan invoked the trade protection law against Australia on June 25. The enforcement of the trade protection law was discontinued on January 1, 1937, in accordance with a compromise reached with Australia toward the end of 1936.

Further, special mention must be made of the fact, from the standpoint of the quasi-war time system in force here, that the Hirota Government intended to enact various laws, in compliance with a resolution adopted by the Tariff Inquiry Commission on December 22, 1936, for the adoption of a double tariff system, a revision of the tariffs in general and the imposition of a trade control tax and a trade statistic tax. This intention, however, failed to be realized because the Hirota Government resigned during the 70th session of the Imperial Diet to be succeeded by the Hayashi Cabinet.

Increase of Exports Japan's exports during 1936 amounted to ¥2,693,000,000, which represents an increase of ¥194,000,000 over the figures for the preceding year. The amount of increase would remain over ¥181,000,000 if re-exported goods were excluded. Detailed figures for the 1936 exports of Japan proper are tabulated in comparison with similar figures for the overseas territories of the nation as follows :

Exports of Japan Proper

(In yen)

	1936	1935	Increase
First Six Months	1,218,000,000	1,173,400,000	44,900,000
Second Six Months	1,475,000,000	1,325,700,000	149,300,000
Total	2,693,000,000	2,499,000,000	193,900,000

Exports of Overseas Territories

(In yen)

	1936	1935	Comparison
First Six Months	45,700,000	47,900,000	2,200,000
Second Six Months	59,100,000	56,100.000	3,000,000
Total	104,800,000	104,000,000	800,000

Note:—The underlined figures under the item "Comparison" represent a decrease and those not underlined, increase.

It is clear from the above table that the increase in the exports of Japan proper was particularly remarkable during the latter half of 1936. This increase is attributable to the improved business conditions in the old market for Japanese exports, which centres around the United States and Great Britain.

Increase of Imports The total amount of the imports of Japan proper during 1936 was ¥2,764,000,000, showing an increase of ¥291,000,000 as compared with similar figures for the preceding year. Even with re-imports excluded from the figures, there was still an increase of ¥288,000,000. It is to be noted that the increase in the imports during the year was more remarkable than that in the exports. Detailed figures are given in the following table with the figures for overseas Japanese territories also tabulated for reference :

Imports of Japan Proper

(In yen)

	1936	1935	Increase
First Half-Year	1,489,700,000	1,344,200,000	145,500,000
Second Half-Year	1,274,000,000	1,128,000,000	146,000,000
Total	2,763,700,000	2,472,200,000	291,500,000

Imports of Overseas Territories

	1936	1935	Increase
First Half-Year	88,300,000	71,500,000	16,800,000
Second Half-Year	76,000,000	74,200,000	1,800,000
Total	164,300,000	145,700,000	18,600,000

As is clear from the above table, the imports of overseas Japanese territories also showed a slight increase during 1936 but it is to be mentioned specially that the increase in the imports of Japan proper amounted to upwards of ¥140,000,000 for each half of the year. That the imports of Japan proper during the second half of 1935 amounted to only ¥1,128,000,000 rising only ¥4,000,000 over the figures for the corresponding period of the preceding year was a rather exceptional phenomenon, though some explanation can be sought in a difference in the method of computation. In connection with the imports during the first half of 1936, there was a great deal of laying off buying because of an anticipated weakening in the prices of merchandise.

The factors accountable for the increase in the imports during the second half of 1936 were the increased demand for munitions and the hastened purchases motivated by signs of an upward trend in prices of commodities in general.

Excess of Imports The balance of foreign trade, which became favourable in 1935 for the first time in 17 years, again proved unfavourable in 1936, as shown in the following table :

Balance of Trade

(In yen)

	1936	1935
Japan proper:		
First Half-Year	271,700,000	170,800,000
Second Half-Year	201,000,000	197,600,000
Total	70,700,000	26,800,000
Overseas Territories:		
First Half-Year	42,600,000	23,600,000
Second Half-Year	16,900,000	18,000,000
Total	59,500,000	41,600,000

Note:—All the above figures represent an increase of imports over exports except those underlined which show an increase of exports over imports.

While the unfavourable balance for the overseas territories during 1936 amounted to only ¥59,500,000 or an increase of ¥17,900,000 over the unfavourable balance for the preceding year, the conditions of the foreign trade of Japan proper were so aggravated during 1936 that the favourable balance amounting to ¥26,800,000 for the preceding year was replaced with an unfavourable balance amounting to ¥70,700,000

Destinations of Exports When considered from the standpoint of destinations, the increase in the exports of Japan during 1936 was especially notable in regard to the Asiatic Continent, Northern American Continent and Europe. This means that the greater part of the increased exports went to the old markets where business conditions improved, notably on account of the abnormal munitions boom.

Origins of Imports The Asiatic Continent heads the list of origins of the increased imports of Japan during 1936 and is followed with a wide margin by South America, North America and Africa in the order named. The increase in the imports is to be attributed chiefly to purchase of raw materials. In this respect, mention must be made of the fact that the imports from South America and Africa increased on the strength of the Japanese policy of buying similar goods from several places of origin as well as the necessity of meeting the demand for a regulation of one-sided trade.

Further, the Japanese-Australian trade war arising from the raising of the import duty on Japanese goods by the Australian Government caused a decrease in the imports of wool from Australia, which is also reflected in the increase in this nation's imports from South America and Africa as well as in the decrease in the imports from Oceania.

To go into details, the United States of America took the lion's share in the

increased exports of Japan during 1936, the share amounting to ¥59,000,000, and was followed by the Kwantung Leased Territory with ¥47,000,000. Next came Britain with ¥28,000,000, Manchoukuo with ¥25,000,000 and China with ¥11,000,000. The Straits Settlements and Hong-Kong each took ¥10,000,000.

The list of decreased export of Japan during 1936 was headed by British India which imported ¥17,000,000 less than the preceding year. The share of Egypt in the decreased exports amounted to ¥12,000,000 which was ¥2,000,000 less than the share of the Dutch Indies. All these lands placed Japanese exports under restrictions.

To return to the subject of increased exports, it must be noted that the United States imported more Japanese goods during 1936 because of the increased business activities there which were brought about by various factors including the higher prices of agricultural products, enormous payments of ex-servicemen's pensions, and inflated national expenditure. With reference to Manchoukuo, it may be noted that the demand there for Japanese cotton cloth, iron manufactures and machinery, increased in return for Japanese investments. The exports to the Kwantung Leased Territory increased on account of the boom in that land as an entrepôt to Manchoukuo and China and also as an area of expansion for the chemical industry.

The increase in the imports of Japan during the year under review was the most remarkable in the case of imports from British India which increased by ¥66,00,000, raw cotton accounting for ¥56,000,000. It is interesting to note that the Brazilian share in the increased imports of Japan amounted to as much as ¥43,000,000, which is to be attributed chiefly to the activities displayed by the Japanese mission to Brazil in connection with the recovery of the frozen export credits.

The increased amount of imports from the United States was ¥38,000,000, including ¥22,000,000 in mineral oils, ¥9,000,000 in pulp and ¥4,000,000 each in motor-car parts and timber. The exports of the Dutch Indies to this country increased by ¥35,000,000, including ¥7,000,000 in mineral oils, ¥5,000,000 in unrefined sugar and ¥11,000,000 in raw rubber, which greatly improved the conditions of the trade of the Dutch Indies with Japan in favour of the former.

Detailed figures of the foreign trade of Japan during 1936 compared with the preceding year are tabulated as follows (the figures being in units of ¥1,000) :

Japan's Trade in 1936

	Exports		Imports	
	1936	1935	1936	1935
Asia	1,370,970	1,304,433	1,060,152	869,871
Manchoukuo	150,859	126,045	205,567	191,005
Kwantung Leased Territory	347,165	300,269	33,848	25,517
China	159,690	148,788	154,838	133,818
Russian Asia	22,992	26,181	6,808	3,401

	Exports		Imports	
	1936	1935	1936	1935
Egypt	40,907	53,800	45,736	51,305
Canea, Uganda & Tanganyika	30,602	25,083	29,865	2,955
South Africa	41,534	32,769	22,561	4,761
Oceania	97,727	95,492	210,498	248,916
Australia	68,763	74,793	181,914	235,128

There is a growing demand for "importing in return for exporting," but technically it is rather difficult to maintain a balance in value between the exchangeable merchandise of different nations. Following is a table showing the balance of trade between Japan proper and various countries :

Balance of Trade (In yen)

	1936	1935
Kwantung Leased Territory	313,400,000	274,800,000
England	74,400,000	37,300,000
Hong-Kong	55,100,000	46,900,000
Siam	34,200,000	34,800,000
France	23,600,000	22,700,000
French Morocco	19,600,000	18,200,000
South Africa	18,900,000	28,000,000
Straits Settlements	17,600,000	7,900,000
Russian Asia	16,200,000	22,800,000
Iraq	16,100,000	20,800,000
Dutch Indies	16,000,000	64,800,000
Philippines	15,500,000	24,200,000
United States	*253,200,000	*274,100,000
Australia	*113,100,000	*160,300,000
British India	*112,100,000	*30,000,000
Germany	*80,400,000	*94,000,000
Canada	*58,600,000	*44,500,000
Manchoukuo	*54,700,000	*65,000,000
Brazil	*38,500,000	*1,900,000
British Malaya	*36,700,000	*26,100,000
French Indo-China	*15,500,000	*11,000,000

Note:—All the above figures represent an increase of imports over exports except those marked with* which show an increase of exports over imports.

It is to be noted that the most unfavourable balance has hitherto been recorded in the trade of this country with the United States.

Trade in 1937 With reference to exports, encouraging signs are found in various factors such as the increased purchasing power of the agricultural villages, the activities in the automobile industry, the increase in national expenditure, particularly the increased expenses for national defence, and the resultant activity in business in the United States, the largest crops in 30 years which were recorded in China in 1936, and the increased income promised to farmers by the higher prices of agricultural products. Further, there is an increasing demand for rubber and other products of tropical countries, which, coupled with the upward trend in the prices of materials due to the armament race, also serves to give rise to an expectation of active business. All these combine to promise an increase in the exports of this country.

What deserves more attention than the promised increase in exports, however, is the fact that the imports of this coutry will inevitably increase, not only as a result of the increased exports but also in line with armament expansion.

Practical returns for the first quarter have shown an increase in value in both directions over the corresponding 1936 period. Exports were ¥734 million, or 21% more, and imports ¥1,057 million, or 28.6% more than in the first quarter of 1936. The import balance of trade at ¥323 million was 50.1% larger than for the same quarter a year previous. Much the same trend is discernible in the trade of Japan proper for which, compared with the corresponding period of 1936, the first quarter's exports increased by 20% at ¥701 million and imports gained by 30.3% at ¥1,007 million, leaving an imports surplus of ¥306 million, a rise of 62.4%. The figures show that imports increased for Japan proper at a much faster pace than for the possessions.

A combination of factors was responsible for the increase in foreign trade value. They were a raise in unit values of the commodities of export trade and the fact that the worst in trade obstruction tactics had been reached in many overseas outlets. For imports, as in the case of exports, there was a rise in unit values of numerous industrial raw materials, and in addition there was an accelerated inflow anticipating far distant needs.

VALUE OF EXPORTS AND IMPORTS
(Japan Proper and Karafuto)

Year	Exports	Imports	Total	Excess of Imports over Exports
		(In ¥1,000)		
1897	163,135	219,300	382,435	56,165
1898	165,753	277,502	443,255	111,748
1899	214,929	220,401	435,331	5,472
1900	204,429	287,261	491,691	82,831

RATE OF TRADE EXPANSION OF JAPAN PROPER IN THE PAST 5 YEARS

	Export Amount in ¥1,000	Rate of Increase as compared with the Previous Year	Imports Amount in ¥1,000	Rate of Increase as Compared with the Previous Year	Excess of Imports (−) or Exports (+)

Important Foreign Trade Countries

Great Britian Early in the Meiji Era Great Britain, China, the United States and France were the most important countries for Japan's export trade. In the import trade Great Britain, China, France and the United States were the principal countries, in that order. With a rapid gain in the export of raw silk in 1879, the importance of export countries was changed to the United States, China, France and Great Britain, although no change was noted in their precedence as import countries. A change came over the precedence in import countries in 1893 and India became the largest exporting country to Japan, being followed by Great Britain, the United States and China in that order. This was due to the rapid growth of the Japanese spinning industry, for which Indian cotton was needed. At present Great Britain comes 6th in order of Japan's export trade and 9th in Japan's import trade. When British India is included, however, she stands next to the U.S.A. both in buying Japanese commodities and in selling her goods to Japan.

The U.S.A. America's economic condition and her financial and tariff policy have a direct bearing on Japan's export trade and domestic economy, for Japan's trade with the United States is far in excess of that with any other country. The close Japan-American trade relations trace back to the visit of Commodore Matthew Perry to Japan in the 6th year of Kaéi, 1853. In the early stage the trade volume was less than that Great Britain and France, but

in 1879 Japan's exports to that country gained to more than ¥10,000,000, and America became Japan's largest customer, a position she has since retained. In 1904 Japan's exports to America reached the ¥100,000,000 mark; in 1915 they amounted to ¥204,000,000, in 1919 to ¥828,000,000, and the record amount was ¥1,006,000,000 in 1925. In the following year the amount went off to ¥860,000,000, but this, as compared with the exports of ¥4,000,000 in 1874, was an increase by 215 times and was 40 per cent of Japan's total trade volume. Raw silk, silk textiles, refined tea, straw-braid, fancy mats and porcelain have been the principal exports from the very beginning. Imports from America increased in consonance with exports. In 1874 the value of imports was just over ¥1,000,000, but by 1905 this had advanced to ¥100,000,000, and in 1920 the amount set an all-time record of ¥873,000,000. The 1926 figure of ¥680,000,000 was 680 times the 1874 trade volume and was 26 per cent of Japan's total import value of that year. Imports from America consist of raw cotton, kerosene oil, wheat, machinery and iron. The most unique feature of the Japan-American trade is that the trade balance has been mostly in favour of Japan. In the last 65 years of trade relations the last five only, 1932 1933, 1934, 1935, 1936 have shown a continuous unfavourable balance to Japan, before that only five out of sixty were unfavourable, 1900, 1905, 1918, 1920–1921. In 1936 the total volume of Japan-American trade comprised 26.4 per cent of the total of Japan's foreign trade in that year.

China It is only natural that Japan, with its close proximity to China, should look to that country with its population of 400,000,000 persons and rich in natural resources as a market for its products and manufactures as well as for supplies of materials for its industries. The friction between this uncontrollable demand of Japan and the growing racial consciousness of the Chinese, however, brought about various political differences, and finally led to the Sino-Japanese War of 1894, the Manchurian Incident of 1931 and the Shanghai Affair of 1932. Boycotts of Japanese goods have been frequent.

Notwithstanding these political obstacles, the trade between the two countries steadily progressed and in 1925 the trade total reached the record amount of ¥701,000,000 including ¥486,000,000 in exports and ¥215,000,000 in imports, as viewed from the Japanese side. China thus became the second largest market for Japanese goods, the development of China as an important market for Japanese goods, as achieved by that time, may be illustrated by the following table :

China's Share in Japan's Foreign Trade

	Proportion of Exports to China to Total Exports	Proportion of Imports from China to Total Imports
1894	8.0	9.9
1908	16.0	11.7
1912	21.8	8.9
1916	17.1	14.4
1921	22.9	11.9
1926	20.6	10.1

A strong anti-Japanese sentiment began to sweep China about this time and trade began to fall off until it reached its climax after the northern expedition of the Nationalist armies in 1930. An illustration of these change may be obtained from the following table :

	Exports to China	Imports from China
	(In ¥)	
1926	421,861,000	239,410,000
1927	334,183,000	226,034,000
1928	373,141,000	234,556,000
1929	346,652,000	209,975,000
1930	260,825,000	161,666,000
1931	143,876,000	103,749,000

Even in 1930 when the Northern Expedition ended in success for the Nanking Government and the movement of the Chinese for their racial resuscitation was at its zenith, Asia still held an important position as a market for Japan's principal manufactures, chiefly cotton goods, consuming 42.6 per cent of Japan's total exports of this kind. In this consumption, China and the Kwantung Leased Territory and Hong-Kong shared 24.7 per cent. Furthermore, almost all the remainder consumed in other parts of Asia was handled by Chinese traders.

The Manchurian Incident, 1931, enabled Japan to get the lion's share in the foreign trade of Manchoukuo, about 71 per cent in the imports of the new State during 1935 and 51 per cent in the exports during the same year, but on the other hand, combined with the Shanghai Affair, it intensified the anti-Japanese movement in China. Increases in China's tariffs on Japanese goods were also effected in rapid succession, thus dealing a great blow to Japan's trade with China and at the same time furnishing a chance for the United States, Great Britain and Germany to recover their commercial influence of former years in that country. Details are as follows :

Imports of China

(In units of 1,000 yuan)

Origin	1932	1933	1934	1935	1936 (Jan.-Aug.)
Japan	231,256 (13.95%)	132,349 (9.71%)	126,886 (12.21%)	139,593 (15.03%)	89,753 (14.79%)
Britain	185,702 (11.20%)	154,041 (11.33%)	124,647 (12.00%)	98,232 (10.48%)	72,117 (11.89%)
America	419,375 (25.43%)	297,468 (21.86%)	271,732 (26.16%)	174,930 (18.93%)	119,107 (19.65%)
Germany	13,042 (6.75%)	108,016 (7.95%)	93,389 (8.99%)	103,385 (11.09%)	102,260 (16.86%)

Exports of China

(In units of 1,000 yuan)

Destination	1932	1933	1934	1935	1936 (Jan.-Aug.)
Japan	167,462 (21.80%)	95,807 (15.65%)	81,232 (15.16%)	82,059 (14.24%)	56,292 (12.54%)
Britain	58,556 (7.62%)	48,765 (7.96%)	49,806 (9.30%)	49,463 (8.58%)	41,482 (9.24%)
America	93,469 (12.17%)	113,146 (18.48%)	94,435 (17.63%)	136,410 (23.67%)	126,159 (28.10%)
Germany	46,479 (6.05%)	20,795 (3.40%)	19,159 (3.58%)	28,926 (5.02%)	28,870 (6.43%)

Note: The parenthesized figures indicate the proportion of each item to the total exports.

The Invisible Trade

The invisible foreign trade of Japan for 1935 showed an excess of payments according to the report of the Finance Ministry. For the three previous years an excess of receipts had been shown, but the change was phenomenal, showing excess payments of ¥193,326,000 compared with excess receipts of ¥8,747,000 in 1934. This loss was mainly due to the decrease in receipts from foreign investment in Japan and in collection of capital invested abroad. As compared with the previous year, receipts in total were higher, the only falling off in individual items being in insurance, about ¥10,000,000 and Government receipts from abroad ¥58,500,000. Payments were all larger with the single small exception of others, ¥9,000,000.

INVISIBLE FOREIGN TRADE OF JAPAN

(Compiled by the Ministry of Finance)

(In ¥1,000)

Items	1931	1932	1933	1934	1935
I Assets (Invisible Exports):					
(a) Ordinary receipts:					
Interest and dividends on foreign securities	17,971	19,362	23,806	22,517	26,509

Trade Ports

On June 2 in the sixth year of Ansei, 1859, in the latter part of the Tokugawa Shogunate régime, Yokohama, Nagasaki and Hakodaté were opened to foreign trade. On December 7 in the 3rd year of the Keio Era (1867), Kobé was similarly opened and in the first year of the Meiji Era (1868) Osaka and Niigata were opened to international trade and commerce.

In 1936 the total number of open ports in the Empire was 62, of which 44 were in Japan proper, 4 in Formosa, 11 in Korea, 2 in Karafuto and one in the Kwantung Leased Territory. They are :

IN JAPAN PROPER : Yokohama, Nagasaki and Hakodaté (all opened in 1859), Kobé (1867), Osaka and Niigata (1868), Ebisu (Sado Island) (1869), Misumi (1890), Shimizu, Taketoyo, Yokkaichi, Shimonoseki, Moji, Hakata, Karatsu, Kuchinotsu, Izuhara, Sasuna, Shishimi, Naha, Hamada, Sakai (Tottori prefecture), Miyazu, Tsuruga, Nanao, Fushiki, Otaru, Kushiro and Muroran (all in 1899), Onomichi-Itozaki (1900), Wakamatsu (Fukuoka prefecture) (1902), Suminoé and Aomori (1904), Nagoya (1905), Miike (1906), Nemuro (1910), Kagoshima (1919), Imabari and Tokuyama (1922), Hagi (1928), Uno (1930), Funakawa (1932), and Shiogama and Kamaishi (1934).

IN KARAFUTO : Otomari (1907) and Maoka (1922).

IN FORMOSA : Keelung, Tamsui, Anping and Takao (all in 1895).

IN KOREA : Jinsen, Kunsan, Moppo, Fusan, Chinnampo, Shingishu, Ryugampo, Genzan, Seishin, Joshin and Yuki (all in 1910).

IN KWANTUNG LEASED TERRITORY : Dairen (1906).

In 1873 Yokohama came to the topmost in trade volume, next came Kobé, Nagasaki, Osaka and Hakodaté in the order mentioned. Since 1902 Osaka has outstripped Nagasaki and held the third most important position. Kobé overstepped Yokohama in 1893 and since then has occupied the premier position of all ports.

In 1934 Kobé led all others with 36 per cent of the total exports, Osaka 27 per cent, Yokohama 23 per cent, Nagoya 5 per cent and Moji 2 per cent. Kobé came first in imports too, with 35 per cent, Yokohama 24 per cent, Osaka 23 per cent, Nagoya 4 per cent and Moji 3 per cent.

Customs Duties

It was in 1859, at the time when most of the early commercial treaties with the Western powers had been concluded, that custom-houses were for the first time established and customs duties were levied at a few open ports selected for

the purpose. The customs tariff of that time was entirely determined by treaty; but the term of its operation was exceedingly short and the whole tariff was revised by treaty in 1866. This revised tariff kept our customs duties unchanged until 1899 when the treaties of commerce and navigation with the foreign powers came into operation.

The coming into effect from 1899 of the revised commercial treaties with the foreign powers made it possible to bring into operation the general tariff which, combined with the conventional tariffs newly concluded, formed the customs tariff of our country. At the same time the export duties were entirely abolished.

In 1904 the urgent needs of the extraordinary fund in connection with the war with Russia led to the imposition of a special surtax on the customs duties as well as on the other taxes, and soon after the restoration of peace the entire customs tariff was revised and came into operation on October 1, 1906.

The Tariff Revision The Import Tariff Revision Bill passed the Imperial Diet in 1910 and was promulgated by Law No. 54 in April of the same year. The new tariff came into operation on July 17, 1911, but since then the tariff has been revised several times.

A new tariff convention was also concluded with Italy in June, 1913.

Tariff in Korea In conformity with the Imperial Declaration concerning the Annexation of Chosen in 1910, the tariff system of the former Korean Empire was left in force in the territory for ten years after the event. On expiration of the term of ten years on August 28, 1920, the tariff in force in Japan proper was applied to Chosen.

The Luxury Duties Under Law No. 24, promulgated on July 31, 1924, which regulates import duties on certain luxuries, a hundred per cent ad valorem import duty was imposed for the time being on about one hundred and twenty kinds of goods which were designated as luxuries.

A partial amendment of the import duties on luxuries was made on April 1, 1925, exempting articles imported for industrial use, materials for re-export and certain other materials from the 100% duties.

Kwantung L. T. With the object of encouraging the industries in Kwantung Leased Territory and of promoting exports to the home country, portland cement and twenty-nine other articls produced in the province were exempted from import duties by the Act of June 18, 1925.

The Revision of 1926 Although several amendments in minor details had been made from time to time, the customs tariff of the country remained practically unchanged from 1910 to 1926 when the Government introduced into the Imperial Diet a Bill proposing a general amendment embodying the following principles:

(a) Raw materials which are not produced or are scarce in this country are to be free of duties.

(b) Necessary protection is to be given to staple industries that have bright prospects for the future.

(c) Import duties are to be left untouched or are to be reduced with respect to foreign articles with which home produces is able to compete.

(d) Duties on the necessaries of daily life are to be reduced.

(e) In order to discourage consumption, high duties are to be imposed upon articles other than necessaries of daily life.

(f) The number of specific duties are to be increased and more minute classification of articles is to be made for convenience in the impostion of duties.

The Bill was passed by the both Houses of Imperial Diet without amendment, excepting the proposal concerning wheat, flour and eggs, and was put into effect on March 29, 1926.

Although not the direct object of the amendment, an increase in the customs revenue was expected as a result of the change in the rates of duties and the adjustment of the relation between specific duties and ad valorem duties in accordance with the rise of commodity prices.

Amendments During 1927 (a) Change of duties on sugar, etc.

The duties on sugar were amended on April 1, 1927. The duties on starch, butter, oxidized cobalt, oleine and cassava-root were also altered at the same time.

(b) Revision of the preferential tariff for Kwantung Leased Territory.

An amendment was made as to the articles exempted from import duties under the preference given to Kwantung L. T. by adding soy-bean oil and certain kinds of manufactured cloths to the free list. This amendment was put into effect on April 1, 1927.

Amendments During 1929 (a) Tea and twenty other luxury articles have been exempt from the luxury import duty since March 30, 1929.

(b) Import duties on wool and liquid gold were amended, and this amendment was put into effect on March 30, 1929.

(c) Cotton yarns and other goods

manufactured in Kwantung L. T. have been exempt from import duties since May 1, 1929.

(d) Abolition of exceptions in import duties applicable in Chosen.

Although the import tariff of Chosen is generally the same as that of Japan proper, there existed certain exceptions in the case of import duties on horses and four other articles. The exceptions in the case of import duties on horses and two other articles were, however, abolished on and after March 30, 1929. The exceptions in the case of salt and wood were also amended, the former being abolished on and after April 1, 1930 and the latter on and after April 1, 1932.

Amendments During 1930 A. Millet, "Kao-liang" (Andropogon vulgaris), were exempted from import duties.

B. Of cotton yarns :

(a) Special cotton yarns were exempted from import duties.

(b) The rate of import duties on cotton yarns gray, single or two fold, with the exception of special cotton yarns, was reduced per 100 kin as follows :

Not exceeding No. 24 English	from ¥ 5.80 to ¥ 3.75
Not exceeding No. 42 English	from 6.40 to 4.15
Not exceeding No. 60 English	from 9.50 to 6.15
Not exceeding No. 80 English	from 11.00 to 7.15
Others	from 11.30 to 7.35

C. The rate on cement was reduced to ¥0.15 or 50% per 100 kin.

D. Certain kinds of iron pipes and tubes were exempted from import duties.

The above amendments were effective from May 17, 1930.

Amendments During 1931 A. Of import duties on wood, those on Momi (Abies), Tauhi (Picea), Matsu (Pinus) and Karamatsu (Larix) were amended as follows :

(a) Formerly, the import duty on wood not exceeding 200 millimetres in thickness was ¥1.1 per cubic metre, but it was raised to ¥4.45 per cubic metre.

(b) An import duty was newly imposed at the rate of ¥2.7 per cubic metre on other woods (including logs and cants) which were formerly exempt from the duty.

B. Import duty on rayon was reduced from ¥125 to ¥75 per 100 kin.

The above amendments were effective from April 1, 1931.

Amendments During 1932 (1) An increase in import duties was effected as from June 16, 1932 in respect of 29 articles in the case of which circumstances either at home or in the countries of export demanded it. The principal articles, the rates on which were increased, were as follows :

Agricultural products and foodstuffs	Wheat, millet (Andropogon vulgaris), Indian corn, wheat flour, butter, and condensed milk.
Industrial products	Pig iron, wire, reed wires, barbed twisted wires, parts of watches, parts of automobiles, and internal combustion engines.
Forestry products	Certain kinds of wood.

(2) In view of the decline in exchange rates, it was decided to increase, for the time being, the specific duties as provided in the Import Tariff annexed to the Customs Tariff Law to 135 per cent. This increased rate was put into effect on and after June 16, 1932, but is not applicable to the articles mentioned in (1) above.

Amendments During 1933 A. Ephedra herbs, argol, amorphophallus tubers, and bone ashes were newly provided for in the Import Tariff. These articles, except amorphophallus tubers, had been exempt from import duties. In the case of amorphophallus tubers, the import duty was imposed on those in meal at the rate of ¥16 per 100 kin and on others at the rate of ¥5.5 per 100 kin.

B. The following amendments were made in import duties on wood on which no labour was expended after cutting, sawing or splitting :

(a) With respect to logs and cants of douglas fir, etc. under the head of conifers :

1. Those exceeding 18 metres in length and not exceeding 30 centimetres in diametre at the top end were exempted from import duties ;

2. On those exceeding 10 metres in length and not exceeding 30 centimetres in diameter at the top end duty was imposed at the rate of ¥2 per cubic metre ;

3. On others duty was imposed at the rate of ¥2.5 per cubic metre.

(b) With respect to timber of broad-leafed trees, but not provided for in the Import Tariff.

1. On those not exceeding 200 millimetres in thickness duty was imposed at the rate of ¥5.5 per cubic metre.

2. On others, including logs and cants,

duty was imposed at the rate of ¥2 per cubic metre.

These amendments were made by Law No. 26 of March, 1933, and put into effect as from March 29. It should, however, be noted that the provisions of Law No. 4 of 1932 are not applicable to the above articles on which specific duties are imposed.

Amendments from January to July, 1935 A. Luxuries and similar articles.

(a) The import duty on precious stones was reduced from an ad valorem duty of 100 per cent to 10 per cent.

(b) With the abolition of an ad valorem duty of 100 per cent on "shochu" included in the item of alcoholic liquors, such "shochu" became subject to the General Tariff.

B. Articles in general.

(a) On musk xylol under the heading of artificial musks duty was imposed at the rate of ¥125 per 100 kin, and on others an ad valorem duty of 35 per cent was imposed.

(b) Of bleached plain tissues of flax pure or mixed with cotton, articles which had hitherto been exempt from import duties became subject to the same duties as those on tissues of flax and tissues of flax mixed with cotton.

(c) On magnesium alloys the same duty as that on magnesium was imposed.

(d) Catalyzers contaning vanadium became exempt from import duties.

(e) On vulcanized fibres the duty was imposed at the rate of ¥26 per 100 kin.

These amendments were put into effect as from April 4, 1935.

For the customs tariff law and the customs duties on the principal commodities see Chapter VIII and Appendix.

Commerce Adjustment and Safeguarding Law

This law, intended to protect Japan's foreign trade, particularly against restrictive measures undertaken by other nations to which Japanese goods are exported, was adopted at the 65th session of the Imperial Diet and has been in force since May 1, 1934. According to a Foreign Office statement, the promulgation of this law was made necessary because of a growing tendency in other countries to ignore the fundamental economic principles of ministering to one another's wants and promoting through their cooperative offorts the progress and prosperity of mankind, reflected in their attempts to suppress importation of foreign goods by means of high tariffs, restriction of imports, etc., and particularly because of the increasing number of countries which set up barriers against Japan's export trade. The law is intended to enable Japan to adjust her trade to the above situation, to balance thereby her international payments, and at the same time to take, if necessary, appropriate measures for safeguarding her commerce. It is stipulated in the law that the Government, whenever they consider it specially necessary for the purpose of adjusting trade or safeguarding commerce in answer to the measures that have been, or are to be, taken by foreign countries, may, in accordance with provisions of an Imperial Ordinance and with the approval of the Tariff Investigation Commission, in respect of specified articles, and during a specified period of time, impose on such articles, in addition to the import duties enumerated in the Import Tariff annexed to the Customs Tariff Law, import duties not exceeding in amount their value; or reduce, or exempt them from, import duties; or prohibit or restrict the exportation or importation thereof.

(As to the first application of the Law to Canada and the second application to Australia see Chapter VI.)

CHAPTER XII

INSURANCE

General Survey

Marine Insurance Comes First In Japan, as in most maritime countries, marine insurance preceded life insurance, but the margin of time separating the two was much narrower in Japan, for there was a difference of two years only. Following the Restoration in 1868, the feudal lords or daimyo were dispossessed of their domains, but the Meiji Government undertook to compensate them for the lands confiscated. The condition of Government finance, however, did not permit of the payment of large sums of cash to the daimyo and pension bonds were issued to them instead. Hachisuka, Ikeda, Daté and other powerful and rich lords searched for an outlet for their energies and surplus funds and, deciding on insurance, advanced a plan to form a marine and fire insurance business after the British system. A company was incorporated in Tokyo in January 1879, with Eiichi Shibusawa as the person most intimately concerned with the consummation of the plan, and Yataro Iwasaki, the founder of the Mitsubishi interest, as his able lieutenant. The initial capital was ¥650,000. Marquis Hachisuka was president and Shibusawa and Iwasaki advisers.

Life Insurance Follows The late Taizo Abé was the originator of life insurance in Japan. Two years after the introduction of marine insurance he founded the Meiji Life Insurance Company in September, 1881, with a capital of ¥150,000. The promoters of this company were mostly graduates of the Keio Gijuku (present Keio University). In 1888 the Teikoku Life insurance Company was founded, and the Nippon Life Insurance Company was incorporated in Osaka in the following year. Zenjiro Yasuda was the founder of the Meiji Fire Insurance Company, the first of the kind in Japan.

The Present Status

The home insurance business at present consists of 13 kinds, namely, life, military conscription, accident, marine, fire including forest fire, transportation, autmobile, burglary, glass, fidelity, engine and boiler and re-insurance and from this year air insurance is being undertaken. Conscription insurance is interesting as it cannot be considered as pure insurance. The idea is to provide relief to the parents of young men who are called up to serve their time in the army. The insurance is taken out at any time from birth to 15 years of age, then, when the boy is conscripted at 20 years of age, the sum contracted for is paid to his parents. In case the boy is not called upon to serve his time in the army the premium only is repaid, and the assured persons who are enrolled in the army and participate in the forfeited and accrued interest of those not called up together with that of those who have died before being conscripted. It is 40 years since the business was first commenced and four companies engage in it.

Life Insurance in 1936 Life insurance business during 1936 was satisfactory. Both new contracts and the net increase reached a record high, contracts current at the end of the year amounted to as much as ¥14,50,000,000. Comparatively few contracts were allowed to lapse during the year, while expenditure showed no signs of an increase.

What has been said, however, only concerns the five big insurance companies and a few other leading organizations of the kind. More than 20 small companies continued in a state of depression, because of the tendency of insurance contracts to concentrate in the big companies. It is estimated that the life insurance funds at the end of the year stood at ¥2,800,000,000.

The greater part of the investments was in securities, especially in stocks. The total yield from assets seems to have declined by about 0.1 per cent.

Various plans were worked out during 1936, including those for the imposition of a tax on insurance money, and on premiums, for the enlargement of the scope of government-managed insurance, and for the compulsory possession of public bonds. These were important issues for the interested circles, particularly did the compulsory investment in public bonds plan constitute a subject for much discussion because it

would bring about a remarkable decline in the yields of estates and force a reduction of the estimated percentage of profits and the percentage of dividend. The plan to tax insurance money and premiums disappeared as a result of the change of Cabinet but the projects for enlarging the scope of the government-managed insurance and for a compulsory possession of public bonds are still pending.

It is anticipated that the conditions of insurance contracts during 1937 and the succeeding years will continue to be satisfactory. Needless to say, small insurance companies form an entirely different question because the tendency of insurance contracts toward concentration in big companies is expected to progress further. There is even a possibility of the Ministry of Commerce and Industry strengthening its policy toward life insurance and undertaking an adjustment of small insurance companies.

The amount of new contracts concluded during 1936 exceeded ¥3,000,000,000 and as about 33 per cent of this figure covered lapsed policies the net increase reached the neighbourhood of ¥1,900,000,000, setting the highest record since the inauguration of the life insurance business. The total contracts as they stood at the end of the year amounted to upwards of ¥14,500,000,000, which represents a really marvellous progress of the business.

Along with the increase in contracts, the amount of contracts which lost effectiveness and those which were cancelled also rose. The percentage of the latter, however, was far lower than that of the former. This may be attributed to inflation, the remarkable activities of the large strong insurance companies and the relatively advantageous position of the insurance companies in regard to savings compared with banks and trust companies.

The 1936 receipts in premiums amounted to the record figure of ¥550,000,000, more than double the amount for 1928. The remarkable progress achieved by the insurance business during 1936 is well illustrated by the fact that the receipts in premiums during the year showed an increase of more than ¥100,000,000 over the figures for 1934 when both the amount of contracts and the amount of premiums received made a rapid rise.

After deduting ¥167,000,000 for benefits paid and ¥130,000,000 for business expenditure, the receipts in premiums during 1936 still amounted to more than ¥250,000,000 which represented an increase of that amount in the legal reserves and assets of the companies.

The following is a table showing the business conditions of the insurance companies in regard to contracts during the past 10 years, the figures being given in units of one thousand yen :

LIFE INSURANCE CONTRACTS
During Past 10 Years

	At Beginning of Year	New Contracts	Lapsed or Cancelled Contracts	Percentage of Cancelled and Lapsed Contracts
1927	5,528,527	1,170,065	730,038	62.4
1928	5,969,131	1,330,593	750,278	56.3
1929	6,540,102	1,413,838	784,779	55.5
1930	7,182,427	1,364,860	829,799	60.8
1931	7,694,198	1,558,390	954,628	61.3
1932	8,241,553	1,627,619	1,130,026	69.4
1933	8,743,141	1,980,418	1,021,981	51.6
1934	9,613,182	2,393,696	931,456	38.9
1935	10,984,081	2,676,783	991,893	37.1
1936	12,648,802	3,021,280	1,000,322	33.1

Note: Figures in the table are based on the Insurance Year Book, except those for 1936 which are based on estimation.

Net Increase	Percentage of Increase	At End of Year	Premiums Received	Benefits Paid
440,598	37.7	5,969,125	252,568	69,282
570,972	42.9	6,540,103	274,633	78,290
659,674	46.7	7,199,776	318,658	86,897
511,771	37.1	7,694,198	317,883	94,793
561,527	36.1	8,255,725	331,579	109,110
501,588	44.4	8,743,141	346,761	116,299
870,041	43.9	9,613,182	376,315	126,341
1,370,895	57.3	10,984,077	450,290	139,570
1,551,662	58.0	12,535,743	484,233	146,623
1,877,242	62.1	14,526,044	551,888	167,288

The following table shows the percentage of business expenditure to the premiums received during the 9 years beginning with 1927, the figures being given in units of one thousand yen :

	Business Expenditure	Premiums Received	%
1927	68,434	252,568	27.1
1928	73,100	274,633	26.6
1929	77,065	318,658	24.2
1930	74,881	317,883	23.6
1931	78,894	331,579	23.8
1932	85,893	346,761	24.8
1933	95,554	376,315	25.4
1934	110,519	450,290	24.5
1935	115,837	484,233	23.9

The percentage of expenditure rose in 1931, 1932 and 1933 but declined in 1934 and 1935 until it was about on the 1931 level. For 1936 it is estimated that expenditure will be about ¥130,000,000 in which case it would represent 23.5 per cent of the premiums received. This means that the percentage of expenditure is expected to have dropped in 1936.

Although the total new contracts of all the life insurance companies throughout the country amounted to upwards of ¥3,000,000,000, the share of the more than 20 medium and small-size companies was only about ¥900,000,000, the remainder being taken by the five big life insurance companies and the insurance departments of the three big financial interests. The net increase in the contracts of the medium and small-size companies did not exceed ¥300,000,000 which was only about 30 per sent of the new contracts. The amount of contracts cancelled is estimated at more than ¥500,000,000 or as much as from 53 to 54 per cent of the new contracts.

The business expenditure of many of the medium and small-size companies represented from 40 to 60 per cent of the premiums received. In other words, the business conditions of these companies continued to be in an exceedingly depressed state. The Toyo Life Insurance Company was liquidated toward the end of 1936, with its contracts transferred to the Teikoku (Imperial) Life Insurance Company. The present conditions are such that unless the remaining medium and small-size companies are adjusted, it will be difficult to renovate the life insurance business.

Operation of Funds

The profit-yielding assets of the life insurance companies at the end of 1935 was estimated to total ¥2,500,000,000 and the amount must have increased to about ¥2,800,000,000 by the end of 1936. Some 60 per cent of the assets consists of securities, about 25 per cent consists of loans and the remainder, of deposits and immovable property. It may be said that the investments of the insurance companies during 1936 were centered on securities, particularly stocks which are estimated to have amounted to nearly ¥600,000,000. Details of the descriptions of the stocks selected are still unknown but it may not be amiss to include the gas, spinning, mining, machinery manufacturing and chemical industrial stocks.

The yields of the profit-yielding property in 1935 amounted to 5.48 per cent. In spite of the fact that the investments in stocks have of late increased remarkably under the low-interest tendency of public bonds and debentures as well as loans, it is believed that the yields have not declined by more than 0.1 per cent if at all. Compared with two or three years ago, however, there has been a considerable decline in the yields.

Under these circumstances, it is but natural that much discussion should have taken place regarding rates of interest and the percentage of dividend. Particularly heated discussions arose in regard to measures to be taken to cope with the low yields when the then Finance Minister, Mr. Eiichi Baba, made known his plan for a compulsory possession of public bonds by the life insurance companies. As a result, the Ministry of Commerce and Industry decided to cause new insurance to lower the rates of interest while authorizing a 3 per cent interest for the Meiji Life Insurance Company and a 3.5 per cent interest for other companies.

Plan for Control

The question has been raised as to whether the investments of the life insurance companies should be controlled in order that they absorb a fair quota of the deficit-covering loan bonds. It has also been proposed that the projected control should be enforced jointly by the Ministry of Commerce and Industry and the Ministry of Finance. The interest taken in this plan has been centered on the extent to which the projected control will be enforced because too strong a control is liable to minimize the characteristics of the private insurance business. How this question is to be settled remains to be seen.

Furthermore, the Ministry of Communications planned to enlarge the scope of the government-managed insurance business by raising the maximum limit of the amount of the simple insurance contracts and creating a fixed insurance under Government management. This plan has also created a sensation inasmuch as an enlargement of the scope of the government-managed insurance business will narrow the territory of the private insurance business, thus bringing conditions near to the line of so-called State-managed insurance.

In the meantime, a control of the insurance business has been realized in Manchuria. For the enforcement of this control, a Manchuria Life Insurance Company was organized in October.

1936, under the joint management of Japan and Manchoukuo. This company is capitalized at ¥3,000,000, half of the sum being paid by the Manchoukuo Government and the other half by the interested companies in Japan proper. Being scheduled to commence business in the near future, the company will monopolize all life insurance contracts amounting to less than ¥20,000,000 apiece in Manchuria.

It is not expected that there will arise any evil factors as will oppress the business conditions of the life insurance companies during 1937 now that the plan to impose a tax on insurance money has been dropped and inflation is expected to continue. Nevertheless, it is to be noted that the insurance companies are confronted with the necessity of curtailing their business expenditure. It is estimated that the new contracts in 1937 will total ¥3,300,000,000 or ¥3,400,000,000 against a net increase of around ¥2,100,000,000.

With reference to the assets of the life insurance companies, it is expected that the ¥3,100,000,000 mark will be passed, meaning an increase of approximately ¥300,000,000 in 1937. So far as the operatin of funds is left to the discretion of the insurance companies investment in stocks is expected to continue to increase.

Japan's grand total of insurance business for the last 12 business years, as prepared by the Ministry of Commerce and Industry, follows :

(Compiled by the Ministry of Commerce and Industry)

Business Year	Number of Concerns	Paid-up Capital and Funds	Liability Reserves at End of year	Contracts in Force at End of Year	
				No.	Amount
		(In ¥1,000 and 1,000 contracts)			
1921-22	93	91,176	510,869	8,952	10,670,858
1922-23	95	118,043	591,350	11,121	13,699,379
1923-24	96	119,043	670,003	11,467	13,971,965
1924-25	95	119,043	780,115	13,633	16,704,023
1925-27	95	122,018	890,457	15,876	19,269,426
1926-27	95	124,062	1,016,929	16,029	20,651,623
1927-28	93	123,757	1,130,869	17,517	22,268,970
1928-29	94	123,585	1,253,062	19,086	23,752,130
1929-30	93	124,335	1,408,520	22,199	25,949,943
1930-31	92	123,229	1,519,352	23,097	27,490,657
1931-32	91	122,170	1,637,178	22,693	27,469,633
1932-33	89	122,570	1,831,610	23,123	29,427,346
1933-34	84	150,925	1,985,929	25,443	33,108,786
1934-35	84	151,275	2,350,077	26,480	34,902,161
1935-36	83	160,272	2,442,402	27,065	37,480,859

Post Office Life Insurance

With a view to promoting the welfare of the middle and lower classes of the community, the Post Office Life Insurance Law (Law No. 42) and the Post Office Life Insurance Special Account Law (Law No. 43) were promulgated on July 8th, 1916, the former being put into effect on October 1st and the latter on August 20th of the same year. The main features of the life insurance schemes may be summarized as follows :

1. This insurance is the work of the Government and is to be dealt with at the post offices.

2. The amount of insurance for a person will be from ¥20 up to ¥450.

3. The insured need not be subjected to any physical examination.

4. If the insured die within one and a half years from the conclusion of the insurance contract by some causes other than the calamities or the infectious diseases specified in law, a portion of the amount insured will not be paid.

5. This insurance is divided into Whole Life, Endowment and Infantile. Endowment policies are divided into seven kinds of the terms of 10 years, 15 years, 20 years, 25 years, 30 years, 35 years and 40 years. Infantile policies are, at present, either 15 years or 20 years endowment.

6. The age of a person to be newly insured must be between 3 and 60 years.

7. The Mortality Table constituting a basis for the computation of premium was compiled by adding 20% to the Male Mortality-Rates to the Japanese Population Table No. 2 published in 1912 by the Government Statistics Bureau. The rate of interest assumed is 3½% per annum.

8. The premium are to be paid monthly. Those who have difficulty in monthly payment of the premiums, such as seamen, emigrants and farmers, are allowed to pay the premiums in advance. In such case, the prescribed premiums are reduced.

9. The period within which premiums should be paid is fixed at one month. Two months' grace is allowed.

10. Within one year after the lapse of the policy, it may be revived.

11. When, after the conclusion of the contract, the insured either loses one or both of his limbs or becomes blind of both eyes, future premiums need not be paid.

Whenever a policy has been in force for a period of thirty years and the insured person has reached the age of 70, the policy holder concerned may propose to have his future premiums paid up.

12. When, after the lapse of five years from the conclusion of the contract, the payment of the insured sum or the repayment of the paid-in premium is made, the beneficiary shall receive an additional sum as a divided.

13. A loan may, on the application of the policy-holder, be granted within the limits of the amount which is to be paid back on the cancellation of the insurance contract, provided, however, that such loan shall not exceed 50/100 of the amount of insurance.

14. In order to maintain and promote the health of the insured, 197 Health Consultation Stations have, in pursuance of the Health Consultation Service Regulation, 1922, so far been established in the principal cities.

15. Beneficiaries or policy-holders are required to ask the judgment of the Post Office Life Insurance Committee of Inquiry prior to legal action against the Government for their contracts.

Post Office Life Annuities While the history of the Post Office Life Annuities may be traced to as far back as 1897, the authorities concerned thought it wise to introduce Post Office Life Insurance first and see how this would work. In 1926, changed social conditions and with the maturing of the first Post Office Life Insurance Endowment Policies gave favourable indications that the Annuity business would be successful, and a bill was introduced into and approved by the Diet in March.

The main features of the system which came into operation on October 1st of the same year may be summarized as follows :—

1. The annuity business is to be administered on the same system as that of the Post Office Life Insurance.

2. Annuities that may be purchased are divided into :

(1) Immediate Life Annuities.

(2) Deferred Life Annuities.

(a) Annuities commencing at the age of 50.

(b) Annuities commencing at the age of 55.

(c) Annuities commencing at the age of 60.

(d) Annuities commencing at the age of 65.

3. Post Office Life Annuities may be purchased either with or without provision for the return of the purchase money, and purchasers must select one of these two plans when they make their application.

4. The ages of persons entitled to become annuitants under this system must fall, in the case of Immediate Life Annuities between 40 and 80 inclusive and in the case of Deferred Life Annuities between 12 and 60 inclusive.

5. The premium rates are calculated on the mortality rates by deducting 20 per cent for males and 30 per cent for females from the general mortality rate of the Japanese population.

The rate of interest allowed in the calculation of the value of annuities under the instalment payment plan is 4 per cent. And under the single payment plan, the rate shall be determined, from time to time, by the Minister of Communications upon the basis of the current market price of public bonds. The rate is fixed at 4¼ per cent for the present.

The reserves to be maintained against policies are worked out by the net premium method.

6. The maximum annuity that can be purchased on the life of any one person is ¥2,400, and the minimum is ¥120 under the instalment premium plan or ¥12 under the single premium plan.

7. Premiums are payable either in a single sum or by instalments; in the latter case, the premium payment is divided into four periods, namely, 10 year payment, 15 year payment, 20 year payment and ordinary payment, and the premium may also be paid yearly, half yearly or quarterly. All premiums are payable at any post office designated by the purchaser or at his residence to the collector.

8. In the case of an Immediate Annuity, the payment of annuity will begin on the date of application and continue until the death of the annuitant. In the case of a Deferred Annuity, the payment of annuity will begin on the date the annuitant reaches a specified age and continue until the death of the annuitant.

9. Annuitants are given the right, subject to certain conditions, to claim change in their contracts.

10. Should events stipulated as reasons for the return of purchase money actually occur, such return is to be made according to prescribed conditions.

11. Provided a contract reserves the right for the purchaser or the annuitant to claim refund of premiums paid, such person may avail himself of a cash loan of not more than 50% of the premiums paid, provided that the sum is not less than ¥20 per cotract or, if the proceeds are to be applied to the payment of the premium, a sum equal to one year's premiums.

12. Annuitants or purchasers are requested, before bringing a civil action against the Government in respect of their contracts, to submit their cases to the Post Office Life Insurance Committee of Inquiry.

13. A special account is established for this business.

CHAPTER XIII

AGRICULTURE

General Survey

Shogunate to Meiji Era Under the Tokugawa Shogunate farmers were restricted as to the kinds of crops they might grow while a favoured few were given special licenses for the cultivation of sugar cane and some other products. Not only did the statutory ban come direct from the Shogunate, but feudal clan governments, in their turn, put on their own restrictions and handed out their own favours. The farmers were unable to escape from these restrictions, one feudal government might be less strict than another and the tendency would be for an efflux of farmers from the areas with stringent regulations to the areas more lenient, but the Government prevented such migration by prohibiting the sale of cultivated land. As each feudal clan tried to raise enough food-stuffs for its own needs the majority of the farmers were compelled to centre their energies on the production of rice and barley, the main foods of the Japanese people.

Export Ban Raised Like the Tokugawa régime, the Meiji Government concentrated its energy on agricultural development, but in a more informed manner. The export of rice and barley, which was banned by the Tokugawas, was permitted by the Meiji Government from January, 1872, the fifth year of Meiji, and since then the free export of rice has been allowed in principle, although limits have been imposed occasionally, and for short times, because of the need of regulating the price of rice. The reason for the Government initiating rice exports was that it had decided to break away from the centuries' old custom of having taxes paid in rice, and accept monetary payments only. It possessed a large amount of rice in its warehouses, an amount which was ever increasing, and this fact prompted it to dispose of its stocks abroad to prevent the drop of rice prices and avert the consequent blow to Government finance. Th Government consigned the rice to a British trading concern, Walsh and Hall. The export lasted for two years, to January, 1874, and during this period 1,197,843 koku were shipped to Hongkong, Amoy, Shanghai, Swatow, Fukien, Sydney, Melbourne, London and San Francisco. By this sale, the Government obtained ¥4,925,-905. Trade conditions abroad at the time were very bad and the amount the Government received was about ¥1,420,000 less than might have been realized by selling the rice at home, but it had the desired offect of preventing a fall in domestic prices. After all, the greater part of the rice had been taken over without payment from the Tokugawa Shogunate and feudal clans, so the Government was by no means a loser on the transaction, and the farmers benefited as farm products were emancipated from all restrictions on trading. The Tokugawa ban on the sale of land was removed in part in 1872. By removing the ban the Meiji Government recognized the private ownership of land and, furthermore, made the sale and mortgaging of it easy by adopting a system of land certificates.

Relief of Unemployed Samurai The majority of samurai were naturally thrown out of employment by the Restoration of Meiji, and as they were the warrior class this situation was a great menace to the new Government. In order to give them proper employment the Government decided to encourage them in agricultural pursuits and as Hokkaido, the Ogasawara (Bonin) Islands, Sambongahara (Aomori prefecture) and Koganegahara (Chiba prefecture) required developing, the Government, in concert with former feudal lords, sent batches of samurai immigrants to these districts. A liberal subsidy was given to them, and as the results proved satisfactory the Government was successful in tiding over the possible crisis coming form a sudden increase of jobless samurai.

The Komaba School Toshimichi Okubo, one of the greatest figures of the Restoration, concentrated his energy on agricultural development. The Komaba Agricultural School, Tokyo, predecessor to the College of Agriculture of the Tokyo Imperial University, was founded in 1877 through his efforts. The Government protection for agricultural development was thoroughgoing. The appropriation of funds, establishment of agricultural schools and

experimental stations, importation and application of Western agricultural technique, plantation of beet sugar, sheep-raising, cattle-breeding and sundry other necessary steps for agricultural improvement were adopted.

Government Activities George A. H. Hall, an American agricultural expert, was engaged by the Government in 1871 as an adviser on live-stock breeding and farming. The importation of cotton seeds from the Netherlands, the opening of the Komaba Agricultural Experimental Station, and sundry other enterprises were undertaken. In 1875, the Government sent abroad officials and students to study agriculture. A sheep-raising industry was sanctioned and an eight year plan to bring the industry to an advanced stage of efficiency was devised. Farms were selected in three villages in Chiba prefecture and the enterprise was under the supervision of American experts. Sheep were imported from Australia, America and China. The Senju Woollen Cloth Manufacturing Co., still in existence under Government management, was established in September, 1879. Beet sugar cultivation was started with the creation of a sugar refining mill at Mombetsu, Hokkaido, in 1879, with Government support. The expenses were¥136,460. Work was started in 1881. The plantation area was 120 cho, and this was divided and allotted to 440 farm houses. Due to inexperience only 15,000 kin of sugar were produced and the plan to manufacture 700,000 kin of sugar yearly ended in failure. All these protective steps of the Government came to an end with the death of Okubo and the farming industry was left to look after itself until 1890.

New Ministry Created The Government in April, 1881, established the Ministry of Agriculture and Commerce, against public opinion, but its general policy seemed to be one of laisser faire and, in consequence, various Government enterprises were transferred to private management. For the ten years from the Sino-Japanese War, 1894–95, to the Russo-Japanese War, 1904–5, a policy of protection was resorted to, and various protective measures were adopted, such as enforcement of the Japan Hypothec Bank Law, Agricultural and Industrial Bank Law, Arable Land Readjustment Law, Agricultural Society Law, Co-operative, Society Law, Staple Produce Traders' Association Law, and the Prefecture Agricultural Experimental Station Treasury Subsidization Law.

Purpose of Measurers Taken Not only were these measurers intended to protect the farmers from troubles peculiar to their own industry but also to protect them from difficulties arising from the growth of other industries and competition of foreign farm products. Farm products in Japan were diminishing in quantity and quality for various reasons, such as the climate, labour wages and Japan's changing social and international relations. With the promotion of foreign trade, cheaper-priced farm products from abroad such as raw cotton, indigo and beans began to be imported in large quantities and, when the occupation of Formosa as the result of the Sino-Japanese War resulted in a rapid expansion of sugar cultivation in that region, large-scale enterprises at home were rendered unnecessary. The import tariff on raw cotton was concelled in April, 1896, and domestic plantations ceased to exist.

Subsidies and Tariff After the Sino-Japanese War bankruptcy was very rife among the farmers and relief was given to them by the passing of the Agricultural Society Law in 1899, by which agricultural societies were to be given an annual subsidy of ¥150,000. In 1906, rice and unhulled rice were taken off the free list and a duty of 64 sen per 100 kin was imposed on their importation, the tariff on barley was raised to 57 sen from 10.1 sen per 100 kin and that on wheat raised to 47 sen from 15.3 sen per 100 kin and, in 1911, the tariff on rice and unhulled rice was raised to one yen and that on wheat to 77 sen.

Other Encouragements During the first decade or so of the century the Government also paid much attention to agriculture in other directions, for instance, the Treasury was authorized to subsidize sericultural research and relieve farmers whose silk-worms had suffered from disease. An Increased Mulberry Growth Encouragement Fund, Land Improvement Encouragement Fund, Insect Ravage Prevention Fund and certain other funds and subsidies were paid out of the Treasury. As foreign rice and wheat were heavily imported agricultural interests suffered, a suffering that was not mitigated by the inflow of new capital, for capital was now being centralized in the cities, and farmers, ever in constant financial difficulties, wer compelled to borrow from money lenders at high rates of interest. Educated landlords found it advisable to give up farming and rural communities lost their leadership while urban industry gained.

The World War The World War promptly affected agriculture. Production in foreign countries fell, and as the prices of agricultural products rose

Japanese foodstuffs were exported in large quantities. In 1914 the export value of cereals, flour and starch totalled ¥9,000,000, in the following year it increased to ¥24,000,000, in 1916 it was ¥36,000,000, in 1917 it was ¥79,000,000, and in 1918 passed the ¥100,000,000 mark. There was also an increased home demand, the cities were enjoying unprecedented prosperity and while the prosperity lasted the farmers benefited; but with the termination of the war reaction set in, prices dropped, and agriculture found itself in the well of depression from which it has not yet extricated itself. The largest area under cultivation was 6,162,000 chobu, in 1921, but since then the area has steadily decreased.

Gold Embargo The replacement of the gold embargo enabled Japan to dodge the immediate settlement of its most important domestic problem, that of the farmers. The factors entering the equation were many and complicated, bearing directly not only upon the living standards of the agricultural community, which constitutes 46 per cent of Japan's population, but upon the solvency of the banks. Before the re-imposition of the gold embargo, rice was selling at ¥17 per koku, against a cost of production estimated at about ¥30. The factors in this high cost of production were dear money (the farmer paid 10 or 11 per cent on his borrowings), high taxes (where a profit was shown the farmer paid more than double the amount paid by the merchant, and where there were no profits the disproportion was infinitely greater), the cost of fertilizers, and the cost of living forced upward over a period of years by a rising tariff wall. Inability of the farms to pay taxes and interest had forced down the prices of real estate. Between the financial panic of 1927 and the replacement of the gold ban in December, 1931, such prices had fallen between 30 and 50 per cent, depending on locality. Lenders on rural real estate were carrying paper losses of between ¥500,000,000 and ¥625,000,000 the figure representing the difference between the current market price of the land and the amounts due, including defaults in interest and instalments. The losses represented between 20 and 25 per cent of the value of the total agricultural mortgages outstanding.

Land Value According to the investigation of the Hypothec Bank of Japan in March, 1936, the average value of land, which had kept declining since 1926 became stationary in 1933 and then began to rise in 1934, reached ¥435 per tan with paddy fields, a rise of ¥20 or 4.8 per cent and ¥259 with farms, a rise of ¥12 or 4.8 per cent, as compared with the previous year.

The reasons for this rise in land value may be found in the stability of agricultural industry because of the fixing of the minimum price of rice by the Rice Control Law, high price of rice in the year, the low interest rate which quickened the demand for arable land, gradual effect of the measures taken for the economic improvement of agricultural villages and the increased income of farmers from side-work stimulated by the general boom of industries in cities.

Farm Households and Arable Land

Farm Households Number of farm households totalled 5,610,607 at the end of 1935, which is 42% of the total number of households in Japan proper. Comparison with that of the previous year indicates a decrease of 6,879 (0.12%).

As classified into those engaged wholly or in part in agriculture, the figure consists of 4,164,035 (74%) of the former, and 1,446,572 of the latter.

Farm households cultivating their own lands numbered 1,732,086; the number of tenant-farmers and households cultivating their own lands together with those leased being 1,518,181 and 2,360,340 respectively.

During the past ten years there has been a noticeable increase of those farmers who cultivate their own land only, and also of those cultivating both their own land and some leased land as well: purely tenant-farmers show a tendency to decline in numbers.

Classified by size of area cultivated, farm-households cultivating less than 0.50 ha number 1,908,642, those between 0.50 and 0.99 ha, 1,919,073, between 0.99 and 1.98 ha 1,254,818, and those over 1.98 ha, 530,075.

Farmers operating on a small scale have decreased in numbers, while those on a medium and large scale have increased.

Owners of Arable-lands The number of owners of arable-lands totalled 5,147,412 at the end of 1935 increasing from that of the previous year by 51,217. When classified according to area owned, those who own less than 0.50 ha. number 2,555,398, and those owing from 0.50 ha. to under 0.99 ha. number 1,304,482. In this way the greater the areas, the less number of owners, and so those owning 49.59 ha. and over are only 3,415 (0.1%) in number. In the light of the tendency during the pre-

vious ten years uninterrupted increase is traceable in the total number, while by reference to the tendency of number fluctuation according to area owned, those under 2.98 ha. are pursuing a steady upward course, those owning more than 2.98 ha. showing the reverse trend.

Area of Arable-lands Area of arable-lands at the end of 1935 was computed at 6,008,680.40 ha., occupying 15% of the total area of Japan proper. This figure consists of 3,192,719.88 ha. (54%) of rice-fields and 2,815,960.55 ha. (46%) of upland-farms. Comparison of these figures with those of the previous year indicates increase of 878.26 ha. on the part of the former and increase of 20,054.67 ha. in the latter.

Classified into those cultivated by owners of lands and those by tenant-farmers, area cultivated by the former was 3,172,579.93 ha.(53%), increasing by 13,391.00 ha. (0.4%), the latter being 2,815,167.57 ha. (47%), lower by 4,583.40 ha. (0.2%), both as against the figures of the previous year.

FARM HOUSEHOLDS AND ARABLE LANDS IN JAPAN PROPER

(Compiled by the Ministry of Agriculture and Forestry)

FARM HOUSEHOLDS

Year (At the Year End)	1931	1932	1933	1934	1935
Total	5,633,800	5,642,509	5,621,535	5,617,486	5,610,607
Households principally engaged in agriculture	4,090,585	4,116,678	4,126,052	4,144,218	4,164,035

Value of Production

The total value of production by 5,610,607 farm-households in 1935 amounted to ¥3,265.762,832 (¥582 per household) including farm products, minor industries, live stock, cocoons, raw silk and forestry production. (For details of the last three items see following chapters.)

PRODUCTION BY FARMERS IN 1935

(In yen)

Principal cereals	1,886,616,749
Sweet potatoes	76,556,739
Vegetables	206,541,163
Fruits	77,565,914
Other agricultural products	203,655,853
Live stock production	191,318,928
Cocoons	350,860,428
Wood and bamboo	272,746,058
Total	3,265,762,832

Rice Circles

The production of rice in 1935 amounted to only 57,460,000 koku but the continued poor crops did not cause any unrest because there were stocks carried over from the bumper year 1933. New rice was used to supply the shortage. And the rice stocks of the Government were gradually disposed of until November, 1936, when the remainder amounted to less than 4,000,000 koku.

On the other hand, the rice production in Chosen during the same year amounted to 17,890,000 koku, greater by 4 per cent than usual. The production in Taiwan reached 9,532,000 koku, showing an increase of 626,000 koku over the figures for the preceding year. Both in the peninsula and the island, however, the demand advanced along with the increase in production with the result that in spite of the increased production, the rice exports from Chosen to Japan proper during 1936 amounted to only 8,400,000 koku, about the same as in the preceding year, and the exports from Taiwan even showed a slight decrease, amounting to only 4,500,000.

Under these circumstances, the price of rice continued firm throughout the year, and brought about some improvement in the conditions of the agricultural villages. The highest price of middlings was ¥32.80 and the lowest was ¥28.90. The official quotations for 1937 have been fixed at ¥33.90 at the highest and ¥24.90 at the lowest, in consideration of the rise in price of commodities in general.

The rice crop in 1936 was unusually good, amounting to 67,340,000 koku. Against this, the domestic consumption of rice this year is expected to reach to somewhere about 16,000,000 koku, an increase of 2,000,000 koku over the consumption in the preceding year, in view of the decrease in the quantity of rice purchased by the Government for storing and the decline in the consumption of poorest quality rice, as well as the early use of new rice. With such relations of demand and supply, coupled with the business boom and the rising tendency in the prices of commodities, it is expected that the quotations of rice this year will be at a high level.

Demand and Supply in 1936

The demand and supply of rice during 1936 were, as generally anticipated, fairly well balanced, in spite of the poor crops in 1935 and 1934, because large stocks amounting to nearly 10,000,000 koku were carried over from the bumper year 1933. Besides these large stocks, 8,970,000 koku of Chosen rice and 4,760,000 koku of Taiwan rice were imported as the crops in the peninsula and the island were both larger than usual. The supply under the circumstances reached 8,150,000 koku, with 8,000,000 koku of the rice produced in 1935 being carried over.

With reference to the consumption of rice in 1936, it is to be noted that scarcity

of rice was felt during the year at various places on account of the successive poor crops in the preceding two years. The rice stocks were particularly short during the between-seasons period and there was an increase in the consumption of poorest quality rice which was abundant due to the poor crops. Further, as the rice crop in 1936 was large, new rice arrived on the market earlier than usual. It is estimated that a considerable amount of new rice was thus consumed.

Such being the situation, the rice coconsumption in 1936 as shown by statistics amounted to only 72,000,000 koku despite the improvement in general economic conditions. The consumption per capita was 1.034 koku which represents a decrease of 0.009 koku the figures for the preceding year and shows the lowest figures since 1932.

Rice Production The production of rice in 1935 amounted to 57,460,000 koku. As the area planted in that year covered a total area of 3,204,000 chobu, the production per one tan was 1.793 koku. When compared with the preceding year, which recorded a poor crop, the 1935 production showed an increase of 0.159 koku per one tan. Nevertheless, it was smaller than usual by about 6 per cent against a decrease of 17 per cent for 1934 and of 10 per cent for 1931.

According to a recent announcement, the rice produced in 1936 amounted to 67,340,000 koku, representing an unusually large crop. Though less than the bumper crop of 1933, which reached 70,820,000 koku, it showed a gain over the figures for the good year 1930, when production amounted to 66,000,000 koku. The production per one tan in 1936 was 2.1 koku, compared with 2.23 koku for 1933 and 2.06 koku for 1930. Compared with the average annual production, the quantity produced in 1936 gained 14 per cent.

The area planted and crops since 1925 are shown in the following table :

	Area Planted (Chobu)	Yield (koku)	Yield per One Tan	Average in Preceding Five Years
1925	3,154,000	59,704,000	1.893	58,339,000
1926	3,158,000	55,593,000	1.760	57,639,000
1927	3,174,000	62,103,000	1.957	57,721,000
1928	3,192,000	60,303,000	1.889	58,008,000
1929	3,211,000	59,558,000	1.855	58,975,000
1930	3,239,000	66,876,000	2.064	59,452,000
1931	3,249,000	55,215,000	1.700	60,886,000
1932	3,257,000	60,390,000	1.854	60,811,000
1933	3,173,000	70,829,000	2.232	60,468,000
1934	3,173,000	51,840,000	1.634	62,574,000
1935	3,204,000	57,457,000	1.793	61,030,000
1936	3,205,000	67,343,000	2.101	59,125,000

Movements of Rice Figures prepared by the Ministry of Agriculture and Forestry based on a survey conducted between 1927 and 1931, place the average annual sales of rice at 60,811,000 koku. Of this amount, 34,157,000 koku reach the market while the remaining 26,654,000 koku are consumed by the rice-growers themselves and their landlords. Further, 7,587,000 koku of the rice sold in the market is purchased by rice-growers.

The average annual amount of rice shipped out of the rice-growing prefectures throughout the country during the five years beginning with 1931 is 13,943,000 koku. This means that of the average annual sales of rice as shown by the Agriculture Ministry's figures, 20,200,000 koku are consumed by the rice-growing prefectures in addition to the 26,654,000 koku which are consumed by the rice-growers and landlords without being handled through the market.

During 1936, 13,517,000 koku of the rice produced in 1935 were shipped out of the rice-growing prefectures, which shows an increase of 1,290,000 koku over similar figures for the preceding year. The fact that the shipments were near the average level in spite of the poor crop in 1936 is attributed to the efforts made by the farmers to hold back as much rice as possible for sale at higher prices and to the increased comsumption of poor quality rice.

The rice crop in 1936 increased by 9,890,000 koku but it is not expected that shipments of rice out of the rice-growing prefectures will increase by any considerable extent, for as a result of the early use of the new rice, no large stocks of rice are being held there. The amount of poor quality rice on hand is also small. In view of these facts, coupled with the very slight possibility of the Government selling any considerable amount of rice during the year due to low stocks, it is estimated that the shipments of rice out of the rice-growing prefectures in 1937 will be limited to about 13,400,000 or 13,500,000 koku.

Chosen Rice The production of rice in Chosen during 1935 amounted to 17,890,000 koku, representing an increase of about 4 per cent over the average annual yield and gaining by more than 1,000,000 koku over the figures for the preceding year, when there was a poor crop.

The rice-exporting capacity of Chosen is decided by a combination of various factors including the amount of production in the peninsula, the amount of imports from other parts of Japan and

foreign countries, the amount of domestic consumption and the amount of consumption of such substitutes as millet, kaoliang and maize. While the yields in 1935 increased, the imports showed a slight decrease and the amount of supply increased by approximately 1,000,000 koku.

This increase in the amount of supply, however, did not affect the exporting capacity of the peninsula because the increased amount was alloted to domestic consumption. The exports from the peninsula during that year amounted to only slightly over 8,400,000 koku, about the same as in the preceding year. Further, the imports of millet showed an increase. The principal reason for this is found in the fact that the amount of consumption during 1934 was too small. The average annual consumption during the five years ending in 1934 was less than 9,310,000 koku while the consumption in 1935 merely showed a return to the normal-year level.

Another factor accountable for the increased consumption in Chosen was the improvement in economic conditions in the peninsula which was reflected in the increased receipts of the farmers and the higher prices of rice there.

The production in 1936 reached 19,411,000 koku, which increased production was, according to statistics, recorded in spite of a decrease in the area planted. The fact, however, is that the changed relations between consumption and the area planted were brought about by a change in the method of surveying the rice situation. In actuality, the yields in 1936 were very poor when compared with the preceding year. In other words, the rice produced in Chosen during 1936 would amount to only 15,427,800 koku when based on the old method of investigation, and would represent a decrease of 2,457,000 koku from the figures for the preceding year.

Supposing the consumption of rice in the peninsula during 1936 amounted to as much as in the preceding year, the rice-exporting capacity of Chosen in that year would be only around 5,800,000 koku. In view, however, of the fact that 7,200,000 koku were exported during 1931, when there was a poor crop, it may be more reasonable to estimate the exports of rice from the peninsula during 1936 at some 7,000,000 koku.

The changes in the conditions of rice consumption in Chosen form a puzzling question to us. The consumption of rice by the inhabitants of the peninsula has long been on a downward trend in spite of the development of paddy-fields and the increase in the yields. The per capita consumption which was 0.7 koku at the time of the annexation of the peninsula by Japan declined to 0.6 koku during the early years of Taisho, to 0.5 koku after 1921 and to 0.4 koku in 1934. A further decline was recorded in 1935 when the amount was only 0.385 koku.

Whether this strange phenomenon is a fact or not and if so, how it has been brought about will only be determined by the employ of the new method of investigation into the conditions of the rice situation in the peninsula.

Taiwan Rice The rice production in Taiwan during 1936, that is to say the second crop in 1935 and the first crop in 1936, because there are two crops every year in the island, amounted to 9,532,000 koku. This showed an increase of 626,000 koku over the figurers for the preceding rice year. Both crops in the rice year gained. Production in the island has been increasing every year, that during 1936 represented a gain of as much as 1,110,000 koku over the average annual production during the preceding five years.

The consumption of rice in the island is around 0.7 koku per capita. In other words, the total consumption of rice there amounts to about 4,000,000 koku annually in a normal year and ranges between 4,900,000 and 3,700,000 koku. Consumption in 1936 reached the neighbourhood of 4,950,000 koku, which was an unusually high amount, with the result that the exports of Taiwan rice to Japan Proper and Chosen during the year amounted to 4,460,000 koku and 118,000 koku respectively, showing a decrease in both cases when compared with the preceding year.

The rice exports of Taiwan have been continuing on an upward trend. This fact is reflected in the exports during 1935 which, although showing a slight decrease, were still greater by 520,000 koku or more than 30 per cent as compared with the average annual exports during the preceding five years. The rising tendency of the exports is to be attributed to the increased production of the improved variety known as Horai rice chiefly intended for export to Japan proper.

The share of Horai rice in the rice production of Taiwan is usually greater in the first crop of every year than in the second crop, being at the present time about 66 per cent of the first crop and only about 34 per cent of the second, while some ten years ago it was only 41 per cent of the first crop and as little as 3.4 per cent of the second.

The second crop in 1936 recorded an increase of about 30,000 koku in Horai rice over the figures for the second crop of the preceding year,amounting to 4,820,000 koku. Although it is still premature to estimate the first crop in 1937, an increase over the first crop in 1936 is expected. Thus, the rice exports of the islands to other parts of Japan during 1937 will be between 4,600,000 and 5,000,000 koku.

Rice Stocks According to figures released by the Government, rice stocks at the end of 1936 were smaller, on account of the poor crops in the preceding two years, than the stocks at the end of 1935, which were about the same as the average annual stocks for recent years. To go into details, the stocks at the end of 1935 amounted to 9,900,000 koku showing a decrease of 6,500,000 koku as compared with the stocks at the end of the preceding year. The stocks at the beginning of March, 1936, were lower by 2,800,000 koku than at the same time in 1935, but this difference was reduced to 2,500,000 koku at the beginning of May and to 1,500,000 koku at the beginning of July, compared with same time in the previous year.

The stocks on August 1 amounted to 2,000,000 koku less than the stocks at the end of 1935 but the margin was reduced to 1,800,000 koku on September 1, and remained the same at the beginning of November. This is attributable to the increase in the rice imports during the latter half of the year and the early use of new rice. Details are shown in the following table (in units of one thousand koku) :

	1934	1935	1936	Average in 5 Years
March 1	54,066	46,487	43,686	46,603
May 1	45,676	37,423	34,899	37,402
July 1	35,507	27,131	25,593	27,901
August 1	30,090	22,367	20,421	22,921
September 1	25,171	17,596	15,711	18,150
November 1	16,430	9,936	8,006	10,458

The Government's share in these stocks is shown in the following table :

RICE STOCKS OF THE GOVERNMENT
(In koku)

1936	Produce of Japan Proper	Produce of Overseas Territories
March 1	5,931,000	269,000
May 1	6,375,000	269,000
July 1	5,463,000	269,000
August 1	5,172,000	266,000
September 1	4,844,000	244,000
November 1	4,071,000	223,000
November 1, 1935	5,617,000	305,000
November 1, 1934	10,889,000	1,671,000

The rice stocks of the Government fell to the 4,000,000 koku level by November 1 on account of sales made during the year. The stocks were further reduced to below the level by the end of the same month, amounting to 1,630,000 koku less than the stocks on November 1 of the preceding year and to 8,270,000 koku less than the stocks on November 1,1934. This decrase was caused chiefly by the poor crop in 1935 and the increased stocks brought about by the bumper crop in 1933 were nearly exhausted.

Rice Quotations The rice quotations during 1936 were very firm. The highest quotation of medium-grade rice, ¥32.80, was recorded in August and the lowest price, ¥28.90, was recorded in October. Futures were quoted at ¥34.-56 in June, and the all-year low of ¥28.64 was recorded in October. The average quotations for the year was ¥31.64 for futures and ¥30.69 for middling. The ¥30 level as the average quotation of middling was the highest since 1928. In this respect, it is to be noted that the average quotation in 1931 following the panic was ¥18.46.

The average quotation in 1935, when an unprecedentedly poor crop was reaped, was ¥29.87 and a further rise was recorded in 1936. This is attributable partly to the poor crops in the preceding two years, but the rise in prices of commodities in general during recent years has been no small factor.

According to the Bank of Japan index of commodity prices, the index of rice was the lowest in recent years in October, 1931, when the number was 148 against 146.9 for general commodity every year, in 1935 it reached 252 against 183.6 general commodity prices. In 1936, it further rose to 258.5 as compared with 193.9 for the prices of commodities in general. This high index number showed a gain by 67 per cent over that of 1931,while the advance of the index number of commodity prices was only 25 per cent.

In this connection, mention must be made of the fact that rice quotations during 1931 were particularly low. It is also to be noted that while the prices of commodities in general have not yet reached the pre-panic level, the quotations of rice have already risen above that level. Accountable for this phenomenal gain are the poor crops in the preceding two years and the economic recovery of the agricultural community. Details are shown in the following table :

RICE QUOTATIONS

1933	26.94	22.52	24.10	24.20	19.80	21.46
1932	26.75	21.09	23.86	22.90	18.00	21.17
1931	23.49	15.94	19.61	21.60	17.00	18.46
1930	29,98	14.03	24.25	31.60	17.20	25.55
1929	31.50	25.25	28.98	31.40	27.00	29.12

Official Quotations The official quotations of rice during 1936 were ¥24.80 at the low and ¥33.20 at the high. For 1937, the official quotations have been fixed at ¥24.90 at the low and ¥33.90 at the high. In fixing the official quotations for 1937, the Government estimated the lowest production cost of rice at ¥18.00 and the highest at less than ¥38, averaging ¥24.73, which is the same as in the preceding year. Freightage and other charges were estimated at ¥1.17 and the relations between the prices of commodities in general and the prices of rice were also taken into account.

Prospects in 1937 It is not difficult to judge the prospects of the relations of the demand and supply of rice in 1937 from the relations in the past as already described. The Government has announced its forecast through the press as follows :

	Forecast for 1937 koku	Actual Results in 1936 koku
Supply		
Stocks Brought Over from Previous Year	8,007,000	9,936,000
New Production	67,343,000	57,457,000
Imports of Chosen Rice	8,000,000	8,971,000
Imports of Taiwan Rice	5,000,000	4,761,000
Imports of Foreign Rice	—	412,000
Demand		
Exports to Overseas Territories and Foreign Lands	466,000	559,000
Domestic Consumption	74,000,000	72,971,000

Although there is no question concerning the forecast about the stocks brought over from the previous year and new production, the forecast amount of the imports of Chosen rice at 8,007,000 koku seems to be too high in view of the poor crop of the year. It would be wiser to estimate the imports of Chosen rice at around 7,000,000 koku and the imports of Taiwan rice at around 4,800,000 koku.

As regards domestic consumption, it is expected that an amount of 2,000,000 koku more than the Government estimate will be recorded. The amount of rice that will still be held unused at the end of the year is expected to be about 9,000,000 koku. In view of this fact, it is felt that no remarkable decline in the quotations of rice will be recorded in the course of 1937.

Rice Statistics

Supply and Demand of Rice The supply and demand of rice in Japan proper for the past 10 years were as follows :

SUPPLY

(In koku)

Rice Year	Brought over from the Previous Year	Production of the Year Before	Imports including those from Colonies	Total
1927	5,967,771	55,592,820	12,670,239	74,230,830
1928	5,765,541	62,102,541	11,255,519	79,123,601
1929	7,840,192	60,303,089	8,909,410	77,052,691
1930	7,027,557	59,557,694	8,602,411	75,187,662
1931	5,719,241	66,875,535	11,486,145	84,080,961
1932	9,140,247	55,215,263	11,602,116	75,957,626
1933	8,907,000	60,390,098	12,747,000	82,045,000
1934	9,007,000	70,829,000	13,744,000	93,582,000
1935	16,431,000	51,840,000	13,018,000	81,289,000
1936	9,936,000	57,456,000	14,195,000	81,588,000

DEMAND

	Exports idcluding those to Colonies	Carried forward to Next Year	Consumption	Total Population in Japan Proper	Per capita Consumption
1927	1,284,285	5,765,541	67,181,004	61,190,000	1.098
1928	985,164	7,840,192	70,298,245	62,127,000	1.132
1929	539,307	7,027,557	69,485,827	63,078,000	1,102
1930	539,963	5,717,117	68,930,582	64,450,000	1,076
1931	1,963,389	9,140,247	72,977,325	64,366,000	1,124
1932	631,613	8,907,430	66,418,583	66,296,000	1,007
1933	623,000	9,007,000	72,413,000	67,238,000	1,090
1934	681,000	16,389,000	76,510,000	68,194,000	1,142
1935	790,000	9,936,000	70,538,000	69,251,000	1,042
1936	550,000	8,006,000	73,031,000	70,258,000	1,039

Each rice year begins with November of the previous year and ends with October, and production of the year before in 1927 represents the crop in the autumn of 1926.

RICE CONDITIONS IN KOREA

Year	Production	Foreign Rice Imports	Exports to Japan Proper
	(In 1,000 koku)		
1924	13,219	926	4,428
1925	14,773	804	5,213
1926	15,300	821	5,903

1935	9,122	—	4,511
1936	9,558	—	4,823

1936 Rice Crop The yield of rice in the autumn of 1936 was 67,342,723

koku. When this is compared with the yield of 1935, it shows an increase of 9,885,747 koku (13.9 per cent). The acreage of plantation was 3,206,983.4 cho and the average yield per tan in the whole country was 2.1 koku. The acreage of plantation and the yield in Japan proper in the last 7 years follow :

(The units are cho and koku)

Year	Acreage of Plantation	Yield
1931	3,247,719.5	55,215,263
1932	3,257,009.4	60,390,098
1933	3,173,203.3	70,827,117

Other Farm Productions

Leguminous Plants Area of leguminous plants in 1935 was 629,965 cho and the production was valued at ¥65,114,000. During the past decade the area

planted has been pursuing a slow downward movement, while a sharp reduction experienced by production was more than made good by the increase of 1933. Soya-beans and azuki (red) beans are predominant both in area and production.

Soy-beans	335,345 cho	2,261,000 koku	¥34,333,000
Azuki beans	109,839 cho	5,333,000 koku	¥10,620,000

Tuber and Root Crops Area cultivated with tuber and root crops in 1935 was 623,648 cho and the value realized from their production was ¥194,182,000 and both showed an increase as compared with preceding years. From the standpoint of area and production, sweet potatoes, 'daikon' (giant radish) satoimo and potatoes are predominent.

Sweet potatoes	277,887 cho	952,370,000 kan	¥76,557,000
Daikon	106,965 ,,	672,728,000 ,,	33,818,000
Satoimo (taro)	53,274 ,,	169,901,000 ,,	25,966,000
Potatoes	140,464 ,,	333,346,000 ,,	31,565,000

Industrial Crops Area cultivated with industrial crops in 1935 amounted to 287,064 cho and the production was valued at ¥104,948,000

Chief products are summarized below :

Tobacco	17,209,000 kan	¥40,336,000
Sugar cane	1,737,501,000 kin	9,739,000
Rapeseed	1,012,000 koku	15,434,000
Rushes	19,089,000 kan	7,408,000
Insecticide flowers	3,399,000 kan	7,322,000

Vegetables Area under vegetables in 1935 was 218,374 cho and the value of the production was estimated at ¥102,900,000.

Chief products are given below :

Water-melons	130,100,000 kan	¥19,049,000
Tsukena	207,422,000 ,,	14,748,000
Egg-plants	115,959,000 ,,	15,232,000
Cucumbers	72,574,000 ,,	10,798,000
Negi (onion)	65,127,000 ,,	9,699,000
Pumpkins	71,595,000 ,,	8,982,000

Fruits The production of fruits in 1935 was valued at ¥77,566,000, having increased by ¥7,922,000 (10.2%) as against the figure of the previous year.

Predominant are the following :

	kan	¥
Mandarin oranges	117,844,000	20,166,000
Persimmons	61,607,000	12,463,000
Japanese Pears	43,744,000	10,517,000
Apples	42,406,000	10,220,000
Grapes	18,497,000	5,695,000

Tea Tea grown in 1935 was 12,168,000 kan in quality and ¥23,263,000 in value. Review of the past decade indicates an unbroken rise in production as a whole, while fluctuations in values of production have been brought about by falling-off of prices.

Livestock and Poultry (1) Horses. Horses at the end of 1935 numbered 1,448,481, consisting of 825,482 (57%) female and 622,999 (43%) male. Foals and horses died to the number of 119,672 and 25,186 respectively. The increase in number during the past decade has been very slow, often tending towards decline.

(2) Cattle. Cattle at the end of 1935 numbered 1,684,461 (female, 1,259,218 male, 425,243). Calves and cattle died numbered 278,943 and 15,232 respectively. The tendency of the past ten years was a steadily increasing one.

(3) Swine. Number of swine at the end of 1935 totalled 1,063,000. During the year there were 774,000 litters, and swine died or were killed to the number of 103,000. The rising of swine has been showing a sharp advance during the past decade, the number at the beginning of the decade being nearly doubled by the close of the same priod.

(4) Sheep and Goats. Sheep and goats at the end of 1935 numbered 47,303 and 278,000 respectively, both increasing as compared with the previous year, and the tendency during the past ten years has been towards increase.

Generally speaking, the raising of sheep and goats is still on quite a small scale in spite of this marked progress.

(5) Fowls. The total number of fowls at the end of June, 1935 was 81,698,000 (valued at ¥33,854,000), and in 1936, 50,793,000 (valued, ¥35,478,000). During the past ten years the number has increased by nearly 100 per cent.

Livestock Products (1) Milk. The quantity of milk obtained in 1935 amounted to 1,477,000 koku valued at ¥30,223,000. The number of cows milked

during the same year was 100,326 at the year end.

(2) Meat and Animals Slaughtered. The number of slaughter-houses in 1935 was 701 and number of animals slaughtered and the quantity of meat obtained were as follows :

Number of Animals Slaughtered

Horses	89,000
Cattle	300,000
Calves	31,000
Swine	1,044,000
Sheep	1,000
Goats	48,000
Total	1,514,000

Quantity of Meat Obtained

	kan	¥
Horses	3,337,000	5,571,000
Cattle	14,105,000	45,721,000
Calves	417,000	1,034,000
Swine	13,940,000	29,437,000
Sheep	10,000	33,000
Goats	108,000	177,000
Total	31,916,000	81,971,000

(3) Dairy and Meat Products. Dairy production in 1934 amounted to 47,458,000 kin valued at ¥19,577,000. Meat products in 1935 totalled ¥3,757,000.

(4) Eggs. Number of eggs obtained during the year ending June, 1935 and 1936 was as follows :

	1935 Number (in 1,000)	Value
Fowls'	3,608,676	¥79,125,000
Ducks'	15,887	418,000
	1936	
Fowls'	3,537,310	¥86,760,000
Ducks'	14,485	399,000

During the past decade the production of eggs has shown a substantial increase especially as regards fowls' eggs of which production in 1931 more than doubled the figure of 1922.

Village Societies The co-operative societies of this country have developed from the older credit societies. The business of granting credits still forms the most important of the activities of the co-operative societies. There are at present about 15,000 of these societies throughout the country, which have a total membership of 5,970,000. Of these institutions 13,000 are loan associations which are mostly located in agricultural villages, accomodating their members with industrial and economic funds and accepting deposits from their members and public organizations.

Of the 13,000 loan associations more than 1,300 are engaged only in supplying loans to members ; but their number is gradually decreasing because the Government is, in line with a five-year co-operative expansion programme, encouraging them to function as trading, purchasing and utilization associations as well.

Those which discount bills and accept deposits from non-members are called credit associations in the cities and are placed under the supervision of the Finance Ministry, while those in villages are controlled by the Ministry of Agriculture and Forestry.

The latest statistics show that deposits with these credit associations throughout the whole country total approximately ¥1,400,000,000, and their loans amount in all to about ¥1,000,000,000. They are playing an important part as mutual credit associations for the masses, both in agricultural villages and towns.

As to the credit associations in cities, their number is 270, with a total of 310,000 members, having ¥210,000,000 in deposits and ¥170,000,000 in advances. Some of them have from ¥5,000,000 to ¥3,000,000 each in deposits but the average amount for one institution is ¥790,000 against some ¥630,000 in advances.

There are two central institutions designed to facilitate the activity of these associations. One is called the Shinyo Kumiai Rengokai or Federation of Credit Associations, which represents the oredit associations of each Prefecture, and the other is the Sangyo Kumiai Chuo Kinko, or the Central Chest for Co-operative Associations, which was established for regulating the movement of funds of the Federation above mentioned and the industrial associations all over Japan. (See Chapter IX)

Encouragement of Farm Industries : Results for 1935 and Problems Left to the Future

Aid to Farm Industries Work in this direction was started at the opening of the 1935–1936 fiscal year, and the sum allotted for that year was ¥731,200 in all. Of this total the sum given to 41 prefectures amounted to 300,000, and that specially allotted for the six prefectures in the North-Eastern Districts amounted to ¥431,200. Of this ¥300,000 granted to the 41 prefectures ¥20,000 was spent on office expenses and investigations, ¥8,949 on fees to experts, ¥252,212 for various aids to farm industries, and ¥16,300 as subsidies for national bodies directing these industries and promoting the sale of the products thereof.

Of the ¥431,200 allotted to the six prefectures in the North-Eastern Districts, ¥20,500 went in office expenses, ¥365,569 in employment of experts and aids to the farm industries, ¥44,681 in training farmers in these industries and facilitating the sale of the products.

The proportion of the above-mentioned subsidy granted to the 41 prefectures, which amounted to ¥252,212 was 26% of the ¥981,230 disbursed from their own treasuries for the promotion of farm industries ; while in the 6 prefectures in the North-Eastern Districts it was 65% of the ¥563,419 disbursed by themselves.

There are as many as 189 establishments for farm industries in the country, of which 150 are in the 41 prefectures and 39 in the 6 prefectures in the north-eastern part of the Main Island, and they are under the management of associations or federations thereof as follows : 8 are managed by the unions of prefectural industrial guilds, 17 by the unions of country industrial guilds, 17 by the unions of towns and village industrial guilds, 33 under the joint management of industrial guilds, and 83 by the individual industrial guilds. There are in addition 2, which are under the management of the fishery guilds, 6 under the management of forestry guilds, and so on. Those that belong to the industrial guilds number 158, and others number 31.

Of these 189 various establishments, 15 have the prefecture as their unit, 10 have a group of counties, 28 one county only, 72 a group of towns or villages, 48 one town or village only, (—commune consisted of several smaller villages and makes an administrative unit in Japan.) 12 have groups of hamlets, and 4 one hamlet only.

Farm industries may be roughly divided into : (1) those dealing with fruit and vegetable products, (2) oil production, (3) flour milling, (4) other industries which manufacture goods from various farm products, (5) those dealing with live-stock products, (6) those dealing with fishery products, (7) those dealing with forestry products, and (8) miscellaneous industries. They number 338 in all. Enumerated in detail they are : canned fruits, 32 ; pickles, 15 ; canned or bottled vegetables, 14 ; soy and 'miso' manufacture, 10 ; dried vegetable and gourds, 2 ; vegetable oils, 21 ; flour milling, 26 ; other manufactures of farm products, 17 ; manufactures of live-stock products number 43 ; the last-named include canned rabbits, rabbits' skins and fur, woollen goods, butter and cheese, ham, bacon and sausages, casein, etc. Those industries which use fishery products as their raw materials number 18, forestry products 114, and other miscellaneous industries number 26.

Future Problems The problems left for the future are, in the main, three : to increase the funds, to furnish more rapid training in technique, and to improve the supply of motive power.

There is no question about the necessity of a large fund to enable farming industry to make more rapid development. In future, the industry should enlarge the sphere of its activities, and make the unit of its management at least the size of the association of the industrial guilds of a prefecture, thus strengthening its organization. Furthermore, it must obtain its funds through the utilization of the sums which are offered for industrial development by the Central Chest of the industrial association, or by borrowing money from the Deposits Bureau of the Department of Finance.

In order to produce goods of superior grade it is necessary to have farmers trained in higher technique. In industrial technique, the villagers are far inferior to the workers in city factories. The skill which the city people have in this respect is traditional, and cannot be copied in a short space of time. Therefore, it is not advisable for the farms to try to acquire the technique in the same manner as the cities, as it requires too much time. They must resort to some other and newer scientific method, instead of that which has been handed down from father to son as traditional heritage. An institution for training farmers in modern industrial technique must be established by the Government.

Farming industries cannot develop healthily unless there be cheap power available. In the farm districts they have water, animal and motor power to hand; these cannot be applied always in every sort of place, but there is no question about the universal usefulness of electric power. Yet the supply of electric power in rural districts is not so readily obtainable as in cities, and to supply electric power amply and at cheap rates to farm districts is not only important for their development but also for the recovery of agricultural villages as whole. It is for this reason that there is a loud cry for electrification of farms, for lowering the prices of electric power and the state management of the electric power industry.

According to Professor Seiichi Tohata of the Tokyo Imperial University, whose short essay appeared in the Asahi, the first 5 year programme has now come to a standstill because of the neglect of (1) readjustment of the farm land system, (2) readjustment or control of the relation between agriculture and other industrial and commercial enterprises, and (3) reformation in the administration offices which carry out agricultural policy.

First, the land system and conditions of tenant farming have been left untouched. A wholesale readjustment of farm workers and the highest utilization of arable land for the economic improvement of farm villages have resulted undoubtedly in the increase of production and a greater gain of money. Improvement of farming technique and Government control of price of agricultural products in favour of farmers have been effective in increasing farmers' incomes. But the largest amount of benefit thus obtained has gone primarily to the land, the production per area having risen the land value has risen accordingly, that is to say, the landowners have benefited much more than the tenants. The lion's share has gone more to the upper classes of farmers than to the lowest class who supply the actual labour and need help most. So far as the landownership and tenant system remain as before, all the efforts of Government authorities tend to benefit those who own the rights on farm lands. In Japan there is left no waste land to be cultivated into new farm land, so the area of arable land remains as it was and the increase of production needs always greater labour. The use of machines in farming means encroachment of capital into the income of the working class farmers in a country like Japan where the small farming system prevails. Increase of labour for a limited area of land ends in smaller remuneration for each unit of labour. Under such circumstances labour is worked to the limit while high class farming machinery is rejected in spite of the need for greater production. An excessive encouragement of diligence and economy tends to result in overwork, extreme frugality, poor food and a lower standard of living among tenanted farmers.

Secondly, the complicated relation between agriculture and other industries hinders the free economic expansion of farm villages. Innumerable commercial and industrial laws restrict new trial of sideline work for farmers. Farmers have to enter outside spheres of activity in commencing new lines of business. When, for instance, farmers want to take up butchering, the business laws hardly allow them to do so; when attempting the direct export of farm products by farmers' associations the trade association law stands in their way; an attempt to start medical-benefit clubs for cheaper medical treatment brings them up against the national association of medical practitioners; the establishment of an electric plant by a farming community for cheaper electrification of farming means infringement of the vested rights of big electric companies; and finally the progress of farm industrial associations for trading and purchase threatens a collision with the business of smaller merchants. The sphere of activity of co-operative associations and societies in farm villages is hardly possible without encroaching upon the rights of others. Practically all they can do to further and improve their interests is to pick up bits of work dropped on the wayside by others. The ministry of Agriculture and Forestry has power over farmers and fishermen and it is so specialized that they can do practically nothing with merchants and industrialists. In the progress of economic readjustment of farm villages numerous co-operative societies of farmers have been strengthened beside the old farm industrial association. Prefectures have their own industrial associations, farm associations, trade co-operative societies, official brokers, and live-stock co-operative societies, and all of them supply similar farm products to the same markets They counteract one another in their strife to get as much profit as possible for their own groups, and certain farmers may succeed at the expense of others, but, it is evident that the farm villages as a whole profit very

little from such rivalry among themselves.

Thirdly, as we have seen, under the present system of administration all the farm villages come under the Ministry of Agriculture and Forestry which controls farmers and fishermen. Measures carried out by the Ministry, therefore, cannot extend to other commercial and industrial works which surround and are interwoven with agricultural and fishery works. The regeneration or rehabilitation of farm villages in Japan where a limited area of arable land is over-burdened with ever increasing population cannot be realized by the increase of income by farming and economy of expenses alone, but effective means for the expansion of farmers to other fields of activity must be taken by the co-operation of other Ministries of the Central Government.

For the future plans for assisting farmers these three points have to be thoroughly studied and some fundamental reforms introduced.

Items of Interest on Farm Villages

Debts of Rural Communities The debts of the agricultural, mountain and fishing communities throughout the country, excluding the big landowners and those landowners who live away from the villages, total slightly over ¥4,091,000,000, according to statistics compiled from the latest survey conducted at the end of August, 1935, by the Ministry of Agriculture and Forestry. These figures represent a decrease of ¥32,000,000 as compared with the estimates based on the previous survey conducted at the end of December, 1932.

Of this decrease, about ¥20,000,000 is attributed to the present system of consolidating the debts of those communities, while the advance in the prices of agricultural products is held responsible for the remaining ¥12,000,000.

¥2,500,000,000 of the total debt consists of mortgages while ¥1,500,000,000 was borrowed at interest rates of over 10 per cent.

It should be noted that the latest figures are more accurate than the previous ones as they were obtained from the compilation of prefectural reports based uniformly on the separate official returns of towns and villages, while the older ones were taken from prefectural surveys which had been based on the returns of agricultural associations or cooperative associations according to different prefectures. Details according to prefectures are tabulated as follows :

Hokkaido	¥161,355,000
Aomori	62,689,000
Iwate	68,411,000
Miyagi	95,670,000

Village Cereal Warehouses At the time of the great crop failure which resulted from the unseasonably cold weather in the Tohoku or North-Eastern District in 1934, the Imperial House granted a large sum of money, in November of that same year, for instituting some permanent system of mutual relief and rehabilitation for the farmers in the district.

Accordingly the Government, in order to comply with the Imperial wishes, decided upon establishing and popularizing 'Go-Kura' or village warehouses

for storing cereals against emergencies in those parts. It distributed an aggregate sum of Yen 1,636,800 for the 1934 and 1935 financial years to the prefectures in the district, where 1209 old cereal warehouses were enlarged and renovated and as many as 4,921 new ones established, making a total of 6,130 at the end of March, 1936.

A warehouse association has been formed in each village and each farmer-member of the association is required to store his crop of any particular year by the end of December. The aim is to complete full stocks of cereals in about five years. There are many villages where special community farms for the purpose are cultivated either by members themselves or by tenants.

Figures relating to these 'Go-kura' in 1934 and 1935 are given below :

FUNDS AND GO-KURA

Prefecture	Sums Given			Number of the Go-kura		
	Imperial Gift	From the National Treasury	Total	New	Old	Total
	(In ¥1,000)					
Miyagi	80.5	270.1	350.6	828	118	946

Three Standard Villages The conditions of the agricultural, mountain and fishing communities throughout the country may partly be judged from the returns of an investigation recently conducted by the Ministry of Home Affairs into three standard villages in each prefecture. By the term "standard" is indicated that the villages referred to are neither exceptionally wealthy nor poor. The following is a description, based on these returns, of Kuchiyoshikawa-mura, Tanisoto-mura ("mura" means "village") and Kamide-mura, the three standard villages in Hyogo Prefecture.

It is maintained by some people that the efflux of villagers into cities constitutes one of the principal causes of the improvement of the rural districts, while others hold that the latter is the cause rather than the result of the desertion of their homes by the villagers. In either case, there seems to be no doubt but that the two phenomena are closely related. The movements of population in the three standard villages are tabulated as follows :

	Kuchiyoshikawa-mura		Tanisoto-mura		Kamiide-mura	
	Population	Index Number	Population	Index Number	Population	Index Number
1914	3,370	100	2,718	100	5,313	100
1919	3,113	92	2,475	91	5,202	97
1923	3,150	93	2,424	89	5,500	103
1927	3,052	90	2,522	92	5,723	107
1930	3,019	89	2,542	93	5,615	105
1934	3,023	89	2,529	93	5,794	109

In spite of the fact that Japan is well known for its rapidly growing population, the population of these villages remained almost stationary during the years under review. Kamiide-mura is the only one of the three villages that recorded a slight increase in population, while the other two actually registered a decrease as compared with 1914. This may be taken to indicate that the economic strength of the villages has reached a point where it is unable to sustain a greater population.

Needless to say, in these three villages farming is the principal source of revenue for the people. The number of households classified by occupations and the value of production of the villages are tabulated as follows :

NUMBER OF HOUSEHOLDS BY OCCUPATION
(March, 1935)

	Kuchiyoshikawa-mura		Tanisoto-mura		Kamiide-mura	
	Households	%	Households	%	Households	%
Agriculture	382	67.9	431	95.1	841	89.6
Sericulture	—	—	—	—	—	—
Forestry	—	—	—	—	—	—
Fishery	—	—	—	—	—	—
Industry	8	1.4	—	—	13	1,3
Commerce	34	6.0	17	3.8	60	6.4
Various	138	24.5	5	1.1	24	2.5
Total	562	100.0	453	100.0	938	100.0

PRODUCTION (In Yen)
(1933-1934)

	Kuchiyoshikawa-mura	Tanisoto-mura	Kamiide-mura
Agriculture	327,125	230,144	661,542
Sericulture	5,086	—	—
Stock-raising	65,771	2,457	—
Forestry	23,338	—	80
Fishery	3,141	—	—
Mining	100	—	—
Industry	51,585	—	19,286
Total	476,146	233,601	680,908

The following is a tabulation of the number of households classified according to the amount of their annual income, based on the estimates for the assessment of the household tax during the 1934-35 fiscal year :

NUMBER OF HOUSEHOLDS
Classification By Income
(March 1935)

Income (In Yen)	Kuchiyoshikawa-mura	Tanisoto-mura	Kamiide-mura
Less than 150	265	142	628
,, 300	101	99	160
,, 500	89	82	90
,, 800	46	81	30
,, 1,200	31	25	14
,, 1,500	17	13	8
,, 2,000	4	8	6
Over 2,000	6	6	2
Total	559	456	938

The above table shows that only 1.7 per cent of the households of Kamiide-mura is liable to pay the third class income tax which is imposed on an annual income of ¥1,200 up, against 4.8 per cent for Kuchiyoshikawa-mura and 5.9 per cent for Tanisoto-mura. In other words, the percentage for Kuchiyoshikawa-mura is the same as similar percentage for the entire nation while the percentage for Tanisoto-mura is higher and that for Kamiide-mura is lower. Special mention must be made of the fact that the greater part of the households of these three standard villages belongs to the class with an annual income of less than ¥300.

The expenses of the three villages, not of individuals but as political units, are tabulated as follows :

	Kuchiyoshikawa-mura	Tanisoto-mura	Kamiide-mura
Education	¥16,830	¥12,167	¥23,882
Public works	4,122	1,096	4,831
Sanitation	126	1,033	3,242
Industry encouragement	1,394	625	1,390
Social work	359	21	29
Village Office	5,251	3,976	10,022
Public meetings	218	116	189
Policing	107	211	413
Public bonds	—	273	32,272
Taxes & charges	10	—	2
Reserve & Basic estate	402	558	1,184
Miscellaneous	1,001	515	2,499
Total	29,820	20,591	79,955

Of these expenses, those which are regarded as being required for the conduct of State affairs are tabulated as follows :

	Kuchiyoshikawa-mura	Tanisoto-mura	Kamiide-mura
Education	¥16,710	¥11,657	¥23,404
Public works	4,122	1,096	4,831
Sanitation	126	1,033	3,242
Industry encouragement	36	5	555
Social work	—	21	—
Village Office	4,515	3,356	4,710
Policing	80	211	363
Miscellaneous	—	1	730
Total	25,589	17,379	37,835

The principal sources of revenue to meet these expenses are taxes and government grants for education. According to the survey of the Ministry of Home Affairs, the government grants to Kuchiyoshikawa-mura in 1934 amounted to 49 per cent of the total primary school expenditure of the village, as compared with 43 per cent for Tanisoto-mura and 42 per cent for Kamiide-mura.

The inhabitants of these three villages are liable to pay national, prefectural and village taxes, and of these the burden of village taxation comes the heaviest, as shown in the following table :

National tax	Kuchiyoshikawa-mura	Tanisoto-mura	Kamiide-mura
Land tax	¥6,069	¥3,835	¥4,944
Income tax	439	104	340
Others	245	35	393
Total	6,753	3,974	5,677
Prefectural tax			
Land surtax and special land tax	8,779	5,804	8,138
House tax	706	778	1,476
Misc. taxes	1,797	2,177	3,430
Others	595	206	682
Total	11,877	8,965	13,726

Village tax			
Land surtax and special land surtax	4,443	3,422	4,215
Household tax	7,493	7,613	16,574
House surtax	351	389	717
Misc. surtaxes	1,671	1,653	3,053
Others	333	146	520
Total	14,291	13,223	25,079
Grand Total	32,921	26,162	44,482

CHAPTER XIV

SERICULTURE AND RAW SILK

Sericulture

History

Historical records show that the raising of silkworms has been practised in Japan for more than two thousand years. It is surmised that the industry was first introduced into the country from Chosen or China, but for sometime it made but slow development, as the work was almost exclusively in the hands of the naturalized Koreans and Chinese. Following the introduction of Buddhism, and with the advance of civilization, the demand for silk gradually increased and the industry spread among Japanese farm households. After that, sericulture made steady growth until about 1,100 years ago, when, at the time of the Emperor Kammu, it made a sudden spurt and spread over half the Japan proper of those days, and in less than another century most of the remaining half of the country was engaged in silk production. Recent development made in the industry is outlined in the following table, showing the cocoon output for the past half a century.

Year	(In 1,000 kwan)	Index number
1880–1884	12,223	100
1885–1889	11,147	91
1890–1894	15,436	123
1895–1899	24,608	201
1900–1904	26,484	217
1905–1909	32,622	267
1910–1914	43,184	353
1915–1919	61,561	504
1920–1924	64,877	530
1925–1929	91,668	749
1930	106,469	871
1931	94,072	709
1932	89,550	732
1933	101,247	828
1934	87,199	713
1935	82,067	671
1936	82,903	675

The recent condition in the sericultural industry can roughly be explained as follows :

	1933	1934	1935	1936
Number of agrarian families	5,621,536	5,617,486	5,610,607	—
Number of cocoon raising families	2,092,187	1,995,492	1,894,647	1,857,664
Percentage of cocoon raising families	37.2	35.5	—	—
Mulberry plantation area (chobu)	640,178	622,998	—	—
Egg-cards brushed (gramme)	181,200,931	160,829,333	151,131,371	145,637,860
Quantity of cocoon yield (1,000 kwan)	101,163	87,140	82,066	82,903
Value of cocoon yield (1,000 yen)	500,129	203,871	350,860	386,663

The Cocoon-raising Industry

According to the Ministry of Agriculture and Forestry statistics the raisers of silkworm cocoons numbered 1,857,664 in 1936. The number of these cocoon raising houses decreased by 36,983, or only 2 per cent, from that for the previous year.

The quantity of cocoons produced in 1936 totalled 82,902,996 kwan and the value was estimated at ¥386,607,281 consisting of 41,392,474 kwan of spring cocoons valued at ¥199,967,500 and summer and autumn cocoons of 41,510,522 kwan valued at ¥186,639,781.

Egg-cards brushed during 1936 amounted to 145,637,860 grammes, falling 5,538,860 grammes, or 3.7 per cent, from 1935. Egg-cards for spring cocoons for 1936 represented a droy of 4,336,493 grammes, or 6.2 per cent, from 1935. As regards the cocoon production, the amount and value advanced

by 836,943 kwan, or 1 per cent, but gained ¥38,015,282, or 23.5 per cent, in comparison with the year before; summer-autumn cocoons gained 3,619,995 kwan, or 9.6 per cent, but declined by ¥2,268,429, or 1.2 per cent.

Egg-Cards

Control of Egg-cards Production In view of the severe competition with rayon silk in recent years there is a sheer necessity of improvement in silk industry so as to produce silk of a more superior quality with a lower cost of production, and the question of better egg-cards comes first of all. There was no control of the preparation of egg-cards hitherto all the matter being altogether left to the hands of merchants. For long the request for an effective control on the egg-cards production by the authorities has been raised among the farmers and silk producers. Consequently, the National Original Silkworm Egg-card Control Law was promulgated in 1934. The purpose of the Law is to realize a thorough control of egg-card production by 1938 and cut down the excessive number of different kinds and squeeze out the best ten by a special committe which is to be organized by the Imperial ordinance. The original egg-cards of the best kinds thus selected and sanctioned by the Ministry of Agriculture and Forestry shall be sent to local governments where they are multiplied and distributed among sericulturists. Private establishments may reproduce egg-cards out of the original ones, but the percentage is limited to 30% against the 70% of local governments' production. The price shall be fixed by the Imperial ordinance. The local governments are granted a delay of 10 years for the completion of facilities, but, as a matter of fact the control will be completed without delay because most of local governments can immediately respond while the vacancy left by backward prefectures will be filled up by private concerns for the time being. Encouragement shall be given to an invention of better egg-cards by individuals so as to prevent the abuse of a too-strict governmental control. An annual profit of at least ¥100,000,000 is estimated at as the result of the control.

PRODUCTION OF SILKWORM EGGS

(In kg.)

	1931	1932	1933	1934	1935
Number of producers	6,269	5,616	5,344	4,924	4,346
Total					
Production	294,774	236,903	289,185	288,940	256,522
Qualified by government test	286,197	230,539	280,490	281,613	252,870
Reproductive eggs					
Production	8,871	7,559	9,360	9,369	8,616
Qualified by government test	8,401	7,211	8,901	9,006	8,256
Industrial eggs					
Production	285,902	299,343	279,824	279,570	247,903
Qualified by government test	277,795	223,327	271,589	272,606	244,615

Mulberry Plantation

The success of the silk-worm raising industry depends upon an adequate supply of suitable leaves on which to feed the worms.

In Japan there are as many as 276 varieties of mulberry tree, and from these, 71 are selected by local government authorities as model kinds, each having its own special characteristics.

The total mulberry plantation area at the end of 1936 totaled 566,000 chobu, representing a drop of 116,900 chobu, or 1.7 per cent from the end of 1931, when it was 682,900 chobu. This was due to progress of mulberry plantation readjustment all over the country. The number of mulberry saplings that were raised in 1935 counted 238,179,000 pieces valued at ¥1,625,000.

Cost

According to the investigation made by the Imperial Farmers' Association, cost of spring production in 1937 was as follows :

COST OF COCOON PRODUCTION

(For 1 kwan Cocoon; in yen)

Details	Spring Crop
Cost of mulberry leaves	2.380
Egg-card	0.221
Mulberry leaves	2.380
Labour	1.170
Cocoonery room	0.128
Land and building expenses	0.190
Duties	0.100
Miscellaneous	0.150
Total	4.721

Educational Facilities There are in Japan three special colleges for the silk industry, namely, the Ueda Sanshi Semmon Gakko, Nagano prefecture; Tokyo Sanshi Gakko, Tokyo; and Kyoto Koto Sanshi Gakko, Kyoto; besides which, there are, in different parts of the country, 16 public schools of middle school grade. Some of the agricultural colleges and middle grade schools also have classes dealing with silk industrial enterprises. In addition to these regular seats of learning there is a class for the practical training of silk-raisers at every sericultural experimental station established by the Government in each silk producing district, and a similar training is also given at a score of private institutes created for the purpose of diffusing knowledge on all phases of the silk industry.

The Numazu cocoon market for 1937 opened on May 29 for the first spring cocoon transactions in Japan. The transactions were noteworthy, as they were the first dry cocoon deals enforced by the Government, replacing traditional deals in raw cocoons for many years. Usually at the Numazu market yellow cocoons are dealt in, but at the Hamamatsu market which is opened on the following day, white cocoons are transacted. Prices of cocoons were the highest for the last four years. High, low and average prices of the day, which formed the standard for the year's prices in this country, together with those for the preceding five years, were as follows :

		High	Low	Average
		(In yen per kwan)		
1932	white	2.67	2.29	2.52
	yellow	3.03	2.04	2.73
1933	white	5.41	4.51	5.27
	yellow	5.57	4.68	5.34
1934	white	3.09	2.59	2.92
	yellow	3.26	2.00	2.66
1935	white	4.91	4.36	4.85
	yellow	5.11	4.23	4.85
1936	white	5.30	4.28	4.68
	yellow	5.29	4.51	4.94
1937	white	5.03	5.03	5.03
	yellow	6.28	5.20	5.93

The Statistics Statistics on cocoon production in Japan proper in the past 6 years are given below :

COCOON PRODUCTION IN 1930–1935

(Japan Proper)

		1931	1932	1933	1934	1935	1936
Number of producers		2,119,903	2,064,639	2,092,187	1,995,492	1,894,647	1,857,664
Egg-cards incubated	gr.	170,006,525	166,811,582	181,200,931	160,914,816	151,131,371	145,637,860
Total production

Cocoon Deals

Cocoon Deals The Produced Cocoon Disposal Law was first enforced in 1937. The results were not satisfactory. Out of 67,902 kwan of cocoons transacted, only 120 kwan was delivered as dry cocoons. An expediency by which cocoons will be dried and delivered after purchase contracts are concluded was established. The Government overlooks it, considering the transitory period of the new practise. In Nagano prefecture the dry cocoon transactions were totally ignored and this caused a great trouble among cocoon raisers. Reelers are raising a protest against this system. The greatest dissatisfaction is with cocoon drying technique by a third party. The technique is said to damage the quality of raw silk and interfere with reeling operation. Another complaint is, since the quality of cocoons differs according to places of production, climate and species, a uniform drying method is not ideal.

Cost of drying makes the price higher and this is still another complaint. If the drying method is conducted by themselves, this will not damage the quality of cocoons and the cost also will be cheaper. The distribution by dry cocoon distribution guilds will make the cost of silk reeling higher. Sericulturists, too, are against the system. The reason is cocoon prices fluctuate with a change of silk price, but to keep dry cocoons for a certain period without selling them as raw cocoons will cause sericulturists uneasiness over future cocoon price. Economic condition of sericulturists does not allow them to keep cocoons for a long time. They need ready cash. Dry cocoon expenses are now shifted to sericulturists under the law. The law thus met a severe opposition in the first year of enforcement, but with the lapse of time it is believed to be followed by all.

AVERAGE COCOON PRICE IN JAPAN PROPER PER KWAN

(In yen)

	Spring Cocoon	Summer-Autumn Cocoon	Average
1924	7.37	9.22	8.21
1925	11.25	10.07	10.68

1936	4.80	3.97	4.38

Raw Silk

Soon after the country's entry into foreign trade, the Tokugawa Shogunate put a restraint on the exportation of silk on the ground of its scarcity and of its being a prized national production. Notwithstanding such a restrictive policy raw silk exports from Yokohama increased by leaps and bounds, as enormous profits could be made by the exporters.

With the Restoration came the encouragement of home industries, the first among them to arrest the attention of the Government authorities being the silk industry, and ever since special efforts have been made toward developing this national industry. Unfettered financial help was extended to filatures in 1915, 1920, and again in 1930, and the Government has established facilities for the promotion of all phases of silk activities, schools, silk conditioning houses and various experimental stations.

The silk reeling and sericultural industry is represented by Nagano prefecture. Suwa is located in the central part of the prefecture and Okaya (Hirano Village) in Suwa district is the most thriving and largest silk reeling centre. No other silk reeling district in the world can rival it, since Japan produces two-thirds of the world's entire silk production, and silk production in Nagano takes the foremost rank in Japan. Gumma prefecture is the next largest reeling centre with Fukushima, Aichi, Saitama, Gifu and Kyoto following.

Silk Filatures

Silk Filatures The number of Japanese silk filatures has kept falling for many years, except in 1930. The 1936 number decreased 8.3 per cent to 41,891 from 1935. This was the results of a drop of silk price and an increase of filatures going out of operation for readjustment of surplus basins. The Government was giving subsidy to filatures for encouragement of scrapping of surplus basins in accordance with a silk reeling industry law. Thus, readjustment of medium-sized and small filatures made headway. Division of this number for 1936 according to the number of basins used were as follows :

Those using less than		Drop from 1935
10 basins	39,357	3,544
10–50	1,232	137
50–100	636	38
100–300	512	55
Over 300	154	2

Of the total, filature-using machines were 2,468, re-reeling filatures were 34,445 and dupion filatures 4,978. The total number of basins for 1936 was 280,682, falling 5.7 per cent from the year before.

The number of female operatives totalled 296,566, falling 7.7 per cent from 1935 and that of male operatives 23,921, decreasing 8.6 per cent. Production of raw silk totalled 11,280,000 kwan, falling 3 per cent from 1935, worth ¥517,244,000, gaining 3.5 per cent. Production of silk

waste totalled 3,430,000 kwan, declining 35.6 per cent from 1935, worth ¥21,312,000, declining 1.3 per cent.

NUMBER OF FILATURES, BASINS AND OPERATIVES

Japan's Place in World's Silk Industry

According to the investigation made by the Silk Bureau of the Agriculture and Forestry Ministry the total world production in 1934 was 57,558,000 kilogrammes of which Japan (Korea and Formosa included) produced 47,370,000 kg., 76% of the total. The 1935 world production totalled 59,486,000 kilogrammes of which Japan produced 45,520,000 kilogrammes. China with 9,829,000 kilogrammes produced the largest quantity next to Japan. Then came Italy with 1,700,000 kilogrammes. A noticeable feature is a greatly decreased production in all countries except Japan, where the output, though diminished slightly compared with the 1931 basis, is still on the increase. Compared with 1923, the gain made during the 10 years was 18,189,000 kilogrammes. Detailed figures of the statistics prepared at the Silk Bureau of the Agriculture and Forestry Ministry follow :

RAW SILK PRODUCTION IN THE WORLD

(In 1,000 kirogrammes)

Year	Total	Japan	India & Indo-China	China	Eastern Europe, Near East and Central Asia	Spain	Italy	France

Silk in Japan's Foreign Trade

Exports of raw silk for 1936 totalled 505,000 bales, including dupion, valued at ¥395,973,000. While the amount decreased by 49,000 bales from the 1935 exports, the value advanced by ¥16,000,000. This was the result of higher export price. The United States, as usual, made the bulk of purchases taking 426,624 bales. Europe followed with 59,000 bales, India, Brazil, Egypt and other countries, combined, took 16,000 bales. In the last 10 years the export quantity has not made any great change but the export value fluctuated widely. For instance, the 1927 exports totalled 521,773 bales against the 1936 exports of 505,359 bales, but the 1927 export value amounted to ¥742,265,000 against ¥430,637,000 for 1936.

SILK AND TOTAL EXPORTS COMPARED

(Unit: ¥1,000)

	Value of All Exports (Japan Proper)	Value of Silk Exports (Japan Proper)	Percentage of Silk
1912	526,982	150,321	28.5
1913	632,460	188,917	29.9
1914	591,101	161,797	16.3
1915	708,307	152,031	21.5
1916	1,127,468	267,037	23.7
1917	1,603,005	355,155	22.2
1918	1,962,101	370,337	18.9
1919	2,098,872	623,619	29.7
1920	1,948,395	382,717	19.3
1921	1,252,828	417,124	33.3
1922	1,637,452	670,048	40.9
1923	1,447,751	556,169	39.1
1924	1,807,035	685,366	37.9
1925	2,305,590	879,657	28.2
1926	2,044,728	734,052	35.9
1927	1,992,317	742,266	37.3
1928	1,971,955	733,436	37.2
1929	2,148,619	784,150	36.5
1930	1,469,852	419,107	28.5
1931	1,146,981	355,394	31.0
1932	1,409,992	382,265	27.8
1933	1,861,045	390,901	21.0
1934	2,171,924	286,793	13.2
1935	2,499,073	387,032	15.4
1936	2,797,849	392,809	14.0

As regards the quantity, it is rather on the increase compared with 10 years or so ago. In 1923 the exports were figured at 263,280 piculs and for the following 3 years the quantity of the annual shipment never exceeded 450,000 piculs in contrast to 497,485 piculs for 1933. But this quantity for 1933 was smaller than that for any single year between 1928 and 1932. In 1934 it regained the former level, realizing a quantity next to none other than 1931 figure, and the tendency was continued in 1935. Below is given the quantity of silk exported each year for the 12 years ending 1936 :

Year	Quantity of Silk Exported (picul)
1925	438,449
1926	442,978
1927	521,773
1928	549,256
1929	680,950
1930	477,322
1931	560,577
1932	548,541
1933	497,485
1934	551,308
1935	553,156
1936	505,550

Price of Raw Silk

In January, 1920, raw silk was quoted at ¥4,360 per bale of 16 kan, the highest price in the history of the country's silk business. At that time the volume of production was 360,000 bales, but during the next 10 years production increased to 730,000 bales, but unfortunately the prices did not fall in inverse ratio. Had they done so, Japanese producers would have been happy, for in June, 1932, the price fell below one-tenth that of 1920, whereas the output had only doubled. In 1933 it regained a little, but in 1934 the price fell to its lowest, and it seems to be showing an upward tendency from the following year.

SILK EXPORTS TO THE UNITED STATES

Raw silk passed the year 1936 on a comparatively strong tone. The advance was particularly noteworthy in the autumn with Yokohama raw silk quotations topping the ¥900 mark and New York prices passing the $2 limit. Domestic quotations, apparently based on some speculative elements, failed to maintain the ¥900 mark for a long time, but the New York prices continued strong at the $2 mark into 1937. The 1936 average domestic raw silk quotation was ¥775, which eclipsed the 1935 all-year average by ¥58 and that of 1934 by ¥135.

The 1936 average quotation in New York at $1.77 was 8 cents in advance of the 1935 average and 38 cents over that of 1934. Supply and demand of raw silk was maintained more or less harmoniously. The spring cocoon production last year fell 6 per cent to 41,390,000 kwan from the 1935 production. The production of the summer-autumn cocoons, advancing only 1 per cent, compared to the 1935 output, failed to make up for the loss in the spring cocoons. International raw silk deliveries during the four months, July to October, 1936, also declined 11,000 bales to 233,000 bales as compared to the corresponding four months the year before.

The world raw silk consumption came back last year, with the demand in the United States, the leading consuming country coming back to the 1929 level. Owing to the advance of rayon, however, the American consumption during the first half of last year recorded a decline as compared to the 1935 consumption, resulting in a slight fall in the all-year demand 1936 from the preceding year. It is generally believed that the raw silk price in 1937 will continue to maintain favourably in view of the increasing demand for commodities in the international market arising out of the world-wide military inflation. The rising trend of commodity prices will also serve to help raw silk prices. Domestic raw silk distribution in 1936 progressed favourably throughout the year owing to decreased production in the preceding year, the year-end stocks having dropped by from 11,000 to 21,336 bales. Arrivals fell by 55,000 bales and sales by 50,000 bales.

The American consumption of Japanese raw silk during the first seven months last year, January to July, failed to record any noticeable increase, the June consumption falling to 28,008 bales, the minimum for the whole year. September was the best month, the monthly consumption totalling 44,207. August and October also led other months with 39,828 bales and 29,095 bales, respectively. Because of the rising trend in the American consumption in and after August, the stocks at the beginning of the month showed a corresponding decrease. The stocks at the beginning of November fell to 30,300 bales, including 26,000 bales of the Japanese raw silk, from 64,000 bales stocked at the beginning of March.

The American demand has been well maintained in 1937. April's consumption of raw silk in the United States amounted to 40,561 bales, gaining 627 bales over that of March and 5,997 bales over that of the corresponding month last year. Of this, Japanese silk totalled 37,436 bales, increasing 1,453 bales over the March consumption and 4,614 bales over that of the corresponding month of the year before.

Imports through New York increased to 39,712 bales. This was 7,455 bales more than in March and 12,739 bales over the year before. Stocks in New York at the end of April totalled 40,882 bales, falling 5,849 bales from March this year and 5,216 bales from April, 1936. Details are shown in the following tables :

	Comsumption	Imports (Bales)	Stocks in N.Y. (April 30)
Japanese silk	37,436	27,511	34,291
European silk	833	650	2,397
Cantonese silk	19	—	896
Shanghai silk	2,273	1,551	3,298
Total	40,561	39,712	40,882

Stocks of Japanese silk at home and abroad, as well as that in transit, at the end of April, amounted to 83,157 bales. They gained 514 bales from the month before, but were 5,800 bales less than on April 30, 1936.

Raw silk distribution at home and the distribution in the United States are as follows :

CHAPTER XV

FISHERIES

General

Japan Leads From her natural position, the fishing industry has naturally developed from of old until today Japan occupies the first position in the world in the production of aquatic animals and plants amounting to ¥545,866,000 in 1935 as the following tables show. These products consist mainly of fishes, shell-fishes, seaweeds, which are used as food, fish oils and animal fertilizers.

History Many historical records show that the people in Japan engaged in fishing and served fishes as delicacies at table from very early times. During the time the Ashikaga family ruled the country, fishermen in the western provinces were so bold as to sail not only to the Chinese coast but even as far as Annam and Siam. Fishermen during the time of Toyotomi were equally active and engaged in fishing in the seas round Korea. When, however, the Tokugawa Shogunate came to govern the country, it adopted the seclusion policy and dealt a severe blow to the fishing industry. Fishermen were prohibited from sailing to distant seas and pelagic fishery, which would otherwise have developed, gradually declined.

The international exhibitions held in Vienna and Philadelphia in 1872 and 1876, and the International Exhibitions of Aquatic Products held in Berlin and London in 1880 and 1883, had a great deal to do with the awakening of Japan's fishery industry. Somewhere about that time incubation was first introduced into Japan. In 1885, the Bureau of Aquatic Products was established in the Department of Agriculture and Commerce and at the same time Regulations for Fishermen's Associations were issued; investigations regarding aquatic products were started; indiscriminate catching of fishes, shell-fishes, and seaweeds were prohibited; and various other measures for the protection, cultivation and improvement of the industry were adopted. In 1897, an Act for the Encouragement of Pelagic Fishery was enacted, and from 1902 on the Fishery Act, which was revised in 1910, was enforced.

As regards international relations, the Act for Fishery Associations in Foreign Seas was enacted in 1902. Under this Act the present "Suisankai" (Fishery society) in Russian waters was established in December of 1908. In 1907, the most important treaty on fishery, the Russo-Japanese Treaty was signed between the two countries. In 1924, a further treaty on fishery was concluded between Japan and Soviet Russia.

Another important treaty, important from the standpoint of international relations on fishery, was signed between Japan, Great Britain, the United States of America and Russia in 1911 with regard to the protection of the fur-seal. In 1924, a treaty was concluded in Paris with the purpose of establishing an International Storage Association.

Survey of Recent Years

Catches of fish, shell fish and other marine products in Japan's coastal waters for 1936 were valued at altogether at ¥212,648,020. This figure gained ¥30,846,503, or 17 per cent, over 1935. Fish totalled ¥159,764,000, gaining ¥25,092,000, or 18.6 per cent, shell fish totalled ¥11,202,000, falling ¥494,000, or 4.2 per cent, other marine products ¥29,373,000 increasing ¥4,113,000, or 16.3 per cent, and seaweeds ¥12,308,000, advancing ¥2,135,000, or 21 per cent. Value for the last six years follows: ¥147,806,138 for 1931; ¥145,735,675 for 1932; ¥170,613,874 for 1933; ¥173,137,123 for 1934; ¥181,801,517 for 1935; and ¥212,648,020, for 1936.

Within only a few years, Japan's Antarctic whaling has attained prominence, rivalling that of Britain and Norway, which have built up their position in 10 years. In but a few years more, Japan promises to outstrip these countries. Several large whaling companies have been established by the Sumatra Development Company. Japan did not attend the 1937 whaling conference in London, in spite of persuasion, because it was felt that the country's internal circumstances made that move premature. Now, all preparations for the country to co-operate are reported to have been completed. Pelagic whaling has been a new experience to Japan, although coastal whaling in Japan has a long history, beginning during the Tokugawa period. It was not until 1899 that

Japan's traditional whaling method was replaced by the Norwegian system. Beginning then, the business grew apace and the number of whalers increased. Later, however, the Government reduced the number to 25 to protect the industry. Early in 1920, a plan for Antarctic operations was advanced by enterprising whaling companies here, but it was laid aside because of the depression. The Nissan interests absorbed the Oriental Whaling Company in 1934 and established the Japan Whaling Company. The new company bought the Norwegian canning whaler Antarctic, together with catcher-boats. This whaler is now known as the Tonan Maru, which was the first Japanese canning whaler to work the Antarctic grounds.

In September, 1935, the whaler set sail for the Antarctic and worked there for three months, from early in November until January, 1936. During its first season, the Tonan Maru produced 7,400 tons of whale oil, of which 5,000 tons were exported to Europe direct from the region by British ships. Last fall the Tonan Maru went to the Antarctic accompanied by 13 catcher-boats. The Taiyo Whaling Company's new pelagic whaler Taiyo Maru went along. They returned about the middle of March, after three months' operations. The results were more satisfactory than before. The Tonan Maru, 9,800 tons gross, caught 860 whales and produced 11,000 tons of oil. The Nisshin Maru, 9,800 tons gross, caught 1,116 whales and got 15,000 tons of oil. Whaling results of four prominent whaling countries for 1936 were as follows :

	Whalers	Whale oil in tons
Britain	12	360,000
Norway	13	
Germany	1	30,000
Japan	2	26,000

The contest for supremacy in Antarctic whaling is becoming acute. The Japanese Government is backing the enterprise. It permitted the Japan Marine Product Company and the Sumatra Development Company each to build a modern type of pelagic whaler. By the fall of 1937, two more are expected to be completed. The new vessels, the Tonan Maru No.2 and the Nisshin Maru No. 2 will go to the Antarctic.

In 1938 the Tonan Maru No. 3 and three more new whalers are expected to be added to Japan's fleet of pelagic whalers. The result will be an increase in whale oil production from 26,000 tons to 150,000. The bulk of this oil will be exported to Europe.

New whalers to be built next year are a 17,000-ton whaler with eight 260-ton catcher-boats for the Japan Marine Product Company ; a 15,000-ton whaler with nine 200-ton catcher-boats for the Taiyo Whaling Company ; and a 16,000-ton whaler with a 250-ton catcher-boat for the Sumatra Development Company.

A pelagic whaler of about 13,000 tons and about 10 catcher-boats cost ¥8,000,000 or ¥9,000,000. When incidental expenditures are added, the cost of operating a single whaling fleet mounts to ¥12,000,000 or ¥13,000,000.

In time of national emergency, whalers can be employed for defense, the news agency points out.

Arctic whaling is monopolized by the Soviet Union. A new whaling company has been established jointly by the Japan Marine Product Company and Hayashikane Company under Government protection, but it has not yet stepped into the field. In preparation for entering the field, the company is planning to send out trawlers to make a survey.

The Nichiro Fishery Company which supplies a half of its catches in Kamchatka waters to home and the other half to foreign countries, mostly England, produced 1,146,499 cases of canned fish and crab for 1936 in contrast to 957,750 cases for 1935. Its refined manufactures of salt fish for 1936 totalled 582,242 against 621,949 for 1935. Last year's production was normal, while that for 1935 was exceedingly poor. Its canned production follows :

	1936 (In cases)	1935
Red salmon	338,985	188,484
Silver salmon	106,307	41,655
Trout	638,935	680,296
King salmon	9,256	8,130
Others	5,957	2,545
Crab	47,059	36,640
Total	1,146,499	957,750

The Japan Marine Product Company is the largest fishery company other than the Nichiro Fishery Company. This company was established in September, 1936, as a result of merger of five companies, namely, the Kyodo Fishery Company, Japan Consolidated Floating Cannery Company, Japan Whaling Company, Japan Marine Product Company and Japan Foodstuff Industry Company. It has an absolute influence over marine product circles. It has 61 steam trawlers, which are operating mostly in

China Sea. The number is an absolute majority, as Japan's total trawlers in operation is 70. The company also is engaged in floating crab canning in northern waters. Its whaling is on the most extensive scale.

Japanese fishing operations off Bristol Bay in Alaska has been made a serious discussion among American fishery companies of late. In 1936 the Japanese Ministry of Agriculture and Forestry sent fishing vassels to sea off Alaska to investigate the pelagic conditions of salmon and trout. This gave rise to cries of American fishery companies against the operation of Japanese fishing ships there. Salmon and trout are caught only in the Northern Pacific. Their canned production is about 10,000,000 cases a year and of this 8,000,000 cases are manufactured in the United States and Canada and 2,000,000 cases in Japan and the Soviet Union, both interested in Kamchatka fishery. Production in Bristol Bay alone totals 2,000,000 cases, rivalling the whole production in the Far East. Bristol Bay is a treasure-ground for American fishermen. American fishermen protest, if Japanese canning ships penetrate into the Bristol Bay fishery, this will eventually lead American salmon and trout fishery to ruin. Japanese ships operating there are the Shinko Marine Product Company's fish meal manufacturing ship Daihoku Maru, 10,000-tons, with three trawlers and 10 catcher-boats and the Japan Marine Product Company's crab canning ship Toten Maru, 3,800-tons, with several catcher-boats. This question is still pending between Japan and the United States.

Persons Engaged in Fisheries

The fishery industry in Japan is now run on a modern industrial basis and especially pelagic fishing is developing rapidly. But by far the larger number of fishermen are still engaged in working in the old-fashioned way, generally on a small scale. In 1935, as many as 1,521,477 men and women were engaged in fishery, and of this number about 1,250,000 were males and the others females. Of the total number, 1,098,999 were fishermen, 155,203 were engaged in cultivation and 267,275 in the manufacture of aquatic products.

NUMBER OF PERSONS ENGAGED IN VARIOUS BRANCHES OF THE FISHERY INDUSTRY

Year	Total Number	Fishermen	Those engaged in Cultivation	Those engaged in Manufacture
1928	1,498,258	1,130,430	119,986	247,842
1929	1,490,726	1,112,002	120,933	257,791

1935	633,435	602,656	30,779	888,042	621,956	266,086

Fishing Boats and Vessels

The total number of boats and vessels engaged in fishing at the end of 1935 was over 308,541, of which 308,541 were without engines, while over 57,276 were with engines. The number of smaller boats, having capacity of less than 5 tons, is decreasing, while the number of vessels having engines has steadily increased. This shows an improvement in vessels and in the method of fishing.

Year	Total Number of Boats	Boats without Engines	Boats with Engines	
			Steam	Motor
1919	384,609	380,577	99	3,933

Coastal Fishery

Fish, shell-fish, etc. caught in 1935 amounted to ¥181,802,000 in value, the major classification of which were as follows :

	Quantity	Value
Fish	514,456,000kn.	¥134,672,000
Shell-fish	54,542,000	11,697,700
Crustaceans and Mollusca	36,310,000	25,260,000
Seaweeds	132,141,000	10,173,000

The amount of catches in coastal fishery since 1927 is shown in the following table. In 1930–32 while the value of catches showed a gradual decrease, catches were steadily increasing, showing thereby that the decrease in value was due to decline in price caused by the depression of those years, but for the past two years it is regaining former prosperity.

(Quantities in Metric Tons, Values in ¥1,000)

Year	Total		Fresh Fishes	
	Quantity	Value	Quantity	Value
1927	2,971,779	229,138	1,717,739	166,006
1928	2,123,777	209,264	1,469,120	156,560
1929	2,136,252	204,498	1,489,973	153,424
1930	2,302,036	162,923	1,538,580	121,734

5 Gloiopeltis furcata.

Pelagic Fishery

Large-sized vessels with motors have increased greatly in number of late. There are over 10,000 vessels of over 10 tons, many of which are actively engaged in fishing at distances of up to 700 miles from Formosa and Japan proper. The northern seas have been opened up by floating crab canneries, and mother vessels for the salmon and salmon trout fisheries. But there are still vast undeveloped areas in the Behring Sea, the Sea of Okhotsk, the Maritime province waters, the South Seas, the South China Sea, the Gulf of Siam, and even in the Southern Pacific, so that the future for pelagic fishery for Japan is bright and of great importance to her. The following sections deal with different branches of deep-sea fishing.

In Home Waters In 1935, the number of vessels engaged was 8,984, the number of men 115,689 and the amount of catches 217,226,000 kwan of a value of ¥74,261,000, exclusive of catches in colonial waters. The vessels with engines numbered 8,813, while those without numbered only 171.

Catches of principal fishes are as follows :

	1,000kn	¥
Bonito	16,525	10,888,000
Tunny	9,125	10,245,000
Sea-bream	2,446	5,269,000
Flat-fish	12,697	5,325,000

The number and descriptions of vessels engaged in this fishing with their catches, since 1930, are given below :

NUMBER AND CREWS OF VESSELS ENGAGED IN DEEP-SEA FISHING IN HOME WATERS

Norwegian Whaling Whaling is being carried out according to the Norwegian method. As this method requires quick movements the vessels used are small sized ones of a capacity below 120 tons. In order to allow whales to breed and also to maintain order in the work the Government has made it a rule that whaling can only be carried on under permit. The Government furthermore restricts the number of vessels engaging in this work to 30 in seas other than the Southern or Northern Pacific Ocean. It also orders vessels to operate from headquarters placed in 18 suitable places along the coast of Hokkaido, the North-Eastern Sea, South-Western Sea and the Japan Sea.

Japanese whaling is now extending to the Antarctic Ocean and the Tonan Maru made good catches of whales there in 1935 and 1936.

Trawling Trawling in Japan is modelled after that now being carried on in the North Sea. The steam vessels engaged are from 200–300 tons in size, some being fitted with Diesel engines. A permit must be obtained from the Government before commencing trawl fishing. At present the Government is restricting trawlers in the Inland Sea, the East China Sea, and the Yellow Sea to 70 vessels. 56 vessels make Shimonoséki their headquarters, while 8 work from Nagasaki, and 6 from Hakata. It also prohibits trawlers, by special regulations, from operating in the nearby seas in order to keep the coastal water free from the devastation caused by the destruction of immature fish, etc. During the World War there was a fall in the catches by trawlers owing to the decrease in number of trawlers, but since 1921, the trawling business has again become active though, as mentioned above, the number of trawlers is restricted to 70. Catches by trawling in 1935 amounted to 14,258,000 kwan, value ¥7,044,000.

Fishery in Russian Waters

Fishery in Russian or northern waters is an important right conceded to Japan in the Treaty of Portsmouth, signed at the conclusion of the Russo-Japanese War of 1904–05. In 1928, a new convention (Appendix), under the conditions of the above Treaty was concluded for a period of eight years, after the expiration of which time the pact is to be renewed. The districts to be worked, extending from the Maritime Provinces to Kamchatka, are leased from the Soviet at annual auctions held at Vladivostok.

In 1935 the number of fishing lots actually worked was 376, the number of steamers 196, sailing vessels 2, and the number of fishermen and others engaged in the fishing 19,000. The amount of salmon, trout, and herrings caught in 1935, was 501,000 koku in total, the catches of crab amounted to 5,049,000 pieces. Good catches of salmon and trout are made every other year, while the quantity of crabs has a tendency to become smaller. The amount of salmon, crab, etc. canned was 956,000 cases, valued at 15,686,000 in 1935. In the same year the amount of salmon and trout salted reached 56,607,300 kg. The following table shows the number of fishing districts leased, amount of fish caught, etc.

Floating Crab Canneries Fishing is carried on by vessels equipped with machinery for the purpose of canning the crabs on the vessels themselves. The first enterprise was made in 1921, and, in 1923, rules regulating the work of crab-manufactory vessels were issued by the Government, which also established districts where fishing was forbidden and made permits necessary before a vessel could set out to the fishery. Recently the rule has been revised, the number of vessels on the western side of Kamchatka restricted to 18 and the amount of canned crab to 320,000 cases.

Up to 1927, Japanese only were engaged in this fishing, but in 1928 two Russian vessels came in, in 1929 another two entered and 1930 saw a further increase.

Canned crabs manufactured by this method since 1930 are as follows :

OPERATION OF CRAB MANUFACTORY VESSELS

Aquiculture

The conservation and cultivation of aquatic resources is very important to Japan as fish and other marine products constitute a great part of the staple diet of her people. Great care and study are being given to aquiculture in the

country, the incubation and letting loose of salmon and trout and the cultivation of fishes in shallow waters are being well looked after by the Government. From 1926 on, not only the incubation of salmon and trout, but also the transfer of crawfish, shad, etc., was tried several times with assistance obtained from the U.S.A. The aquicultural production for 1936 amounted to ¥25,551,596. The amount gained ¥17,046, or 1 per cent, over 1935. Of this total, production of carp amounted to ¥4,515,000; that of eels ¥5,014,000; that of oyster ¥1,857,000; that of sea weeds ¥8,565,000; that of pearls ¥983,000; and that of pearl shells ¥905,000. From 1926 to 1929, the Government spent ¥793,560 for these purposes, and let loose 601,940,000 incubated fishes. In addition, aquiculture for both fresh and sea-water fishes is carried out on a business basis by private interests in various ways. Business of this kind is increasing, but there is still room for large development as the area over which aquiculture is being carried on is only 524,102,737 sq. m. in 1932, which is only about 6% of the total available area. The pricipal fishes, shellfishes and seaweeds which are now being cultivated are carp, eel and tortoise in fresh water, and the seaweed laver in sea-water. The breeding is done in rice-fields, breeding ponds, reservoirs, marshes, etc.

The number of aquicultural establishments in 1935 was 161,779, the area covered 157,761,000 tsubo and the amount of products was valued at ¥25,535,000 inceasing by ¥3,217,000 over the previous year. Condition and results of the industry in recent years are given in full in the following tables:

NO. OF ESTABLISHMENTS ENGAGED IN AQUICULTURE, AREA AND PRODUCTS

Year	No. of Establishments	Area sq. metres	Value of Products ¥
1930	144,498	485,235,131	18,509,406

Manufacture of Fishery Products

The supply of fish depends to a considerable extent on seasonal changes but demand is controlled by the tastes and customs of consumers, so that supply and demand are too often not well balanced. In order to adjust these difficulties satisfactorily, careful studies have been made regarding the storing and preserving of these products. Especially, as the problem of food has become a serious one lately, it is often argued that a portion of the fishes which are now being turned into fertilizers and which amount to 40% of the total yields, should be converted into food. Under these conditions Japan is paying very careful consideration to the manufacture of fishery products.

The total manufactured fishery products in 1935 was valued at 175,540,000, of which ¥28,552,000 was in fertilizers, ¥8,793,000 in fish oils, ¥723,000 in Gloiopeltis dried, and the balance of ¥137,472,000 was the value of food products.

MANUFACTURED FISHERY PRODUCTS

(Units: Quantity metric ton, value ¥1,000)

Year	Total Value	Food Products		Fertilizers	
		Quantity	Value	Quantity	Value
1930	146,969	387,324	126,351	233,339	16,572

1935	62,205	8,793	711	728

Note: Production of Japanese isinglass is not included in the table.
*Dried seaweed, Gloiopeltis furcata.

Fish as Food To the present the Japanese people have not paid much attention to the manufacture of fishery products, except "fushi", as articles of food, because fresh fish is available at almost any time and any place. But since there is a large consumption of such products among people of Western nations attention has been turned to the preservation of fish with a view to export. The principal items preserved are "fushi" (fishmeat steamed and dried), fishes dried, salted and dried, boiled and dried, smoked, salt-cured, canned, and Japanese isinglass. Production of each for the last few years is :

FOOD PRODUCTS

(Unit ¥1,000)

Year	Fushi	Dried	Salted and Dried	Boiled and Dried	Smoked	Saltcured	Canned Foods	Miscellaneous
1930	18,707	21,000	7,878	18,914	424	8,484	8,409	50,942
1931	17,506	16,933	7,215	14,940	322	7,690	6,670	47,757
1932	13,711	20,288	6,173	14,090	349	6,140	7,274	45,996
1933	15,628	21,221	8,300	16,794	360	9,773	20,304	47,848
1934	15,823	23,250	8,820	19,781	372	9,704	23,301	51,051

Japanese Isinglass Kantén or Japanese isinglass is a gelatinous substance extracted from seaweeds, especially from Gelidium amansii, used for food and industrial purposes, production of which is shown in the following table :

	1932	1933	1934	1935	1936
No. of establishments	431	435	429	449	463
Total production Quantity kg.	1,529,310	1,573,230	2,081,404	2,320,654	665,000Kwan
Value yen	4,123,893	3,883,464	4,718,521	5,257,378	6,390,000

Fertilizers Details of the production of fish fertilizers are given in the table below. As the table shows most fertilizers are made from herrings, sardines and bonito. Where transportation facilities are not very good or where there is no satisfactory equipment for manufacturing them into food fishes are converted into fertilizers.

FISH FERTILIZERS

(Quantity in metric ton, value in ¥1,000)

Year	Total		Herring	Sardine	Bonito-cake	Sardine dried	Dried Herring	Others
	Quantity	Value	Value	Value	Value	Value	Value	Value

Manufacture of Salt

The salt industry in Japan is carried on under the Salt Monopoly Law. Salt is manufactured by the boiling method. The cost of production, therefore, is high, and the quantity produced is not enough, so that a large quantity of

cheap salt is imported every year. The number of salt producing establishments, production, production areas, etc., in Japan are as follows :

March 31	No. of Establishments	No. of Manufacturers	No. of Employees	Area of Saltbeds in hectare	No. of Boiling Pans	Production
1930	3,449	3,398	37,783	4,531.24	3,906	628,682,100 kg.
1931	3,434	3,390	37,115	4,529.85	3,852	521,261,509
1932	3,393	3,395	36,156	4,533.72	3,816	572,628,551
1933	3,361	3,378	36,672	4,538.48	3,804	630,835,033
1934	3,339	3,347	36,855	4,533.92	3,709	676,300,500
1935	3,308	3,303	36,390	4,612.80	3,693	604,440,328

Protection and Encouragement of Fisheries

Pelagic Fishery Deep-sea fishing must be undertaken by strong built sailing vessels or steamers so in order to encourage the development of this fishing with adequate equipment and trained men the Government as far back as 1897 passed an Act for the Encouragement of Pelagic Fishery. The Act is still in force though it has been many times revised. Subsidies for the encouragement of pelagic fishery are of two kinds :—subsidies for fishery and subsidies for fishing vessels. The subsidies for fishery are granted to those who engage either in pelagic fishing with vessels which are in comformity with the rules for construction of vessels prescribd in the Regulations of Inspection of Vessels Engaged in Pelagic Fishery, or for those who carry on the business of transporting fishes caught in pelagic waters, with certain conditions according to kinds, place, period of time, market, or method of disposition of fishes, etc. The subsidies for fishing vessels are granted to those owners of vessels who either build vessels according to the rules of construction prescribed in the Regulations of Inspection of Vessels Engaged in Pelagic Waters, or who fix new engines, or subsidiary fishing implements, or who have installed in their vessels storage facilities, or wireless telegraphic or telephonic equipment, according to the following rates :

1. For every ton of vessel newly constructed of steel — less than yen 60
2. „ „ „ „ „ „ „ „ „ — „ „ „ 45
3. „ every H.P. of steam engine — „ „ „ 22
4. „ „ „ „ motor engine — „ „ „ 40

The Act provides further that, for vessels over 60 tons, instead of applying the subsidies enumerated above, a subsidy not exceeding 20% of the total cost of construction shall be granted. When, furthermore, designs of construction of certain vessels, or repairs of vessels are considered good and proper, the Government shall grant a subsidy not exceeding 1/3 of the expenses required.

Harbour Construction Formerly fishermen used to draw their boats up to the beach where their homes were, but since deep-sea fishing with large vessels has increased it is no longer possible to do so. For mooring, for taking refuge, for discharging fishes caught, for loading fishing requisites, etc., it became very necessary to carry out harbour construction work at fishing ports which serve as headquarters and refuges of vessels. In 1908, therefore, the Government revised a part of the Act for the Encouragement of Pelagic Fishery, and provisions were made for making investigations on harbours. Accordingly 200 ports were carefully investigated. In the meantime, the construction of fishing ports and ports of refuge was undertaken independently by various local prefectural governments, by towns or villages, or by fishery associations in increasing numbers. Later, it was found that harbour construction was necessary for other reasons, such as hygiene, or the supply of food, etc., and the Government decided to proceed with the work of harbour construction from 1918 on. Ports constructed by the Government since that year are 18 and the amount of subsidies granted reaches ¥14,438,000. On April 1, 1934 the number of ports in Japan was 1,463, of which fishing ports numbered 536.

Encouragement of Aquiculture This matter is dealt with in the foregoing pages.

Encouragement of Construction of Storage for Fishes In an effort to bring about an equilibrium between demand

and supply and with the development of deep-sea fishing and the capturing of fish in places far distant from the place of consumption, the necessity of cold storage and the transportation of fishes by cold storage vessels has arisen. The Government issued Rules for the Encouragement of Cold Storage for Fishery Products in 1923, and since then has been granting subsidies for the construction of cold storage quarters, cold storage vessels and ice storage.

(1) Cold Storage Vessels. Subsidies for construction of cold storage vessels are granted in the following manner :

(a) For construction and repair of vessels and engines, subsidies of less than 20% of the cost will be granted.

(b) For equipment, addition or reconstruction of cold storage, subsidies less than 50% of the required expenses will be granted. Since the Rules were put into effect, cold storage vessels have been built in rapid succession. Up to 1929, 18 vessels were constructed and subsidies amounting to ¥530,000 were granted.

(2) Cold Storage. The amount of subsidy for construction, addition or reconstruction of Cold Storage is less than one- third of the cost. Prior to enforcement of the Rules for Encouragement of Cold Storage, refrigeration by air was introduced from the U.S.A., and as the result of encouragement, cold storage businesses arose in every part of the country.

(3) Ice Storage. The amount of subsidy for construction, addition, or reconstruction of ice storage is less than one-third of the cost. Owing to the rapid development of ice manufacturing since 1919, ice storage has developed in every part of the country, and ice storage plants for fish have been constructed in numerous places along the coast. The Government began to encourage their construction in fishing villages in 1923.

System of Fishing Rights

Any system which makes the capture of fishes or shell fishes in the sea a right is unknown in the West. Japan, however, has had a system of this sort in a rude form from of old, and in 1901, the system was legally established by the Fishery Law, because of the necessity of protecting the cultivation of fishes and the maintenance of fishing villages. There is a similar kind of system for rivers, lakes and marshes, but examples of river and lake fishing rights are also found in foreign countries. The kinds of fishing rights which are given in the Fishery Law are as follows :

(1) Exclusive fishing rights.
(2) Fixed ,, ,,
(3) Divisional ,, ,,
(4) Special ,, ,,

Fishing rights are considered as rights of property. They can be transferred freely, if registered, and money can be borrowed with them as security. The term of fishing rights are fixed by the authorities which issue the licence within twenty years, but they may be renewed on application by the owners of the rights. The term of an exclusive fishing right is fixed at 20 years.

Facilities for Fisheries

In 1925, the Government issued Rules for Encouraging the Establishment of Facilities for Fisheries and ruled that it would grant subsidies for facilities established by Gyogyo-Kumiai, Suisan-kai, Suisan-Kumiai, industrial associations, or local municipalities of cities, towns and villages. The kinds of facilities encouraged are :

1. Facilities for quays and the mooring of vessels.
2. ,, ,, the sale of manufactured fishing products.
3. ,, ,, manufacturing and disposing of fishing products.
4. ,, ,, cold storage.
5. ,, ,, fishing vessels and fishing implements
6. Facilities for transportation.
7. ,, ,, cultivation.
8. ,, ,, rescue work of shipwrecked fishing vessels.

The amounts of subsidy to be granted will be less than 40% of the cost in the case of the first six, less than 50% for the seventh, and less than 60% for the eighth. Subsidies granted since 1925 are as follows :

1.	95 cases of facilities for quay and vessel mooring	¥876,374
2.	81 ,, ,, ,, ,, the sale of fishing products	177,578
3.	22 ,, ,, ,, ,, ,, manufacture and disposal of fishery products	45,884
4.	18 ,, ,, cold storage	77,224
5.	55 ,, ,, facilities for fishing vessels and fishing implements	90,000
6.	16 ,, ,, ,, ,, the transportation of fish	33,208
7.	74 ,, ,, ,, ,, ,, cultivation of fishes	130,000
8.	24 ,, ,, ,, ,, ,, rescue of shipwrecked fishing vessels	107,413
Total 384 cases		1,537,856

Organizations Related with Fisheries

Suisankai (Fishery Societies) Suisankai is a public corporation, recognized by the Suisankai Law of 1921, which has as its purpose the development of fishery. It is an organization covering a particular county or city and includes among its members, in addition to those engaged in fishing, persons having rights to fish and those who manufacture, trade in, or store fishery products. A prefectural suisankai is organized by county and city suisankai of that particular prefecture, and at the head of prefectural suisankai and suisankai located abroad is the Teikoku (Imperial) Suisankai. The functions of suisankai include the encouragement of fishery, the improvement and extension of the manufacture of marine products, the development of fishing districts, protection of aquiculture, etc. It also collects statistics, investigates markets, or engages in brokerage, etc. On the social side, the rescue of shipwrecked vessels, improvement of relations between employers and employees, employment agency work, mediation in labour troubles, etc., are looked after by the societies. And lectures on fishery subjects, exhibitions and fishery shows are held by them. The number of suisankai, their members, etc. during the last few years are as follows :

SUISANKAI (Fishery Societies)

	1930	1931	1932	1933	1934
Fishery Societies:—					
Total	377	380	380	349	345

Imperial fishery society	1	1	1	1	1
Number of members of societies:					
Country and city fishery societies	457,298	430,767	451,182	450,276	450,696
Prefectural „ „	334	340	336	304	296
Imperial „ „	39	42	42	42	42
Expenditure of fishery societies	1,899,844	1,613,700	1,778.277	1,932,159	1,645,000

Suisankumiai (Fishery Guilds) There are two classes of suisankumiai. The first of these is a corporate judicial person, organized by fishermen or those who are engaged in the manufacture or sale of aquatic animals or plants in a particular district for the purpose of the encouragement and improvement of fishery, cultivation and propagation of aquatic products, etc. The number of suisankumiai is decreasing gradually. At one time there were as many as 220 or more of these Kumiai or guilds. In 1934 there were 68, with a membership of 42,513 and an expenditure of ¥1,052,-000. The Act for Suisankumiai in Foreign Waters promulgated in 1902, authorizes any Japanese engaged in fishery or in the manufacture or sale of aquatic products in foreign waters, either by permit or by treaty, to organize suisankumiai. At present Roryo Suisankumiai (Suisankumiai in Russian Waters) is the only one which belong to this class. This guild is formed by fishermen and those engaged in the manufacture and sale of aquatic products in the Maritime Province, Kamchatka, and Saghalien Island. In 1933, its members were 97. Its epecially important task is to encourage amicable relations between the Japanese and Russian fishermen working in the same waters and thus ensure the smooth and effective working of the industry in those parts.

Gyogyo-Kumiai (Fishermen's Societies) Gyogyo-Kumiai is a judicial person recognized by Fishery Law, and is organized by fishermen living in a particular district. It acquires fishery rights, etc., for member fishermen and takes any measures necessary to further or protect the common benefit of its members.

The principal object of gyogyo-Kumiai is the acquisition of fishing rights, etc. This is quite natural in Japan for fishermen work with their village as unit and no fisherman can work independently. Therefore, fishing rights are mostly secured by gyogyo-kumiai, special privileges being given to kumiai for securing them.

Though in the original Act, the object of gyogyo-kumiai was restricted to the acquisition of fishing rights, etc, the Act was revised in 1910, whereby kumiai had the obligation put on them of undertaking any proper measures that would redound to the mutual benefit of fishermen.

Gyogyo-Kumiai Rengokai are corpora-

tions of gyogyo-kumiai. Their principal functions are joint sales of fishery products, cultivation of fishes and rescue of shipwrecked vessels. Their history and numbers are as shown below :

GYOGYO-KUMIAI (Fishermen's Societies)

	1930	1931	1932	1933	1934

Dogyo-Kumiai, etc., Related with Fishery Dogyo means the same trade or profession, hence Dogyo-Kumiai are associations of those connected with the same trade. In relation to the fishery industry they are formed by those dealing in aquatic products, canned foods, salt, cultivation of fishes, etc. In 1935, there were as many as 22 dogyo-kumiai related with the fishing industry. There is also the Dai-Nippon Suisan Kai, which is incorporated for the purpose of the improvement and encouragement of fishery.

CHAPTER XVI

FORESTRY

Introduction

Japan is one of the few countries on earth favoured with extensive forests. The area of forests and fields in Japan including Korea, Formosa and Saghalien Island, was 45,299,105 hectares at the end of 1933 and was about 67% of the whole area of the country, which is 67,538,527 ha. It is about 3.8 times as large as her agricultural land.

Since Japan forms a long narrow chain stretching north and south from the northern extremity of the Kurile Islands to the southernmost point of Formosa, and since her mild climate is very favourable for the growth of plants and trees, it is natural that there should be a thick growth of many varieties. There are as many as 1,500 kinds, of which principal forest trees alone number more than 100. In point of richness in variety, she occupies a high position even among countries which are favoured with larger forest areas. While the amount of timber produced is valued at roughly ¥300,000,000 annually it is still far less than 10% of the value of the total staple products of the country and is not at present enough to fill domestic requirements. Every year it is necessary to import about 10,000,000 koku of lumber, equivalent in value to ¥100,000,000. Furthermore, forestry offers very limited labour opportunities. As compared with agriculture, which gives work to one-half of the total families in Japan, and fishing, which finds employment for 1,500,000 people, the number of persons engaged in forestry is small, being less than 720,000.

Distribution and Character

Forests in Japan stand, roughly speaking, in four different zones : sub-tropical forest zone, evergreen broad leaved forest zone, the deciduous broad-leaved forest zone and coniferous forest zone.

The Sub-tropical Forest Zone This covers the whole of Formosa, the southern half of the Loochoo Islands, including the Yayéyama Islands, annual mean temperature in it being over 21° C. As to the altitude, the zone varies from below 2,000 metres above sea level in the southern part of Formosa to below 1,000 metres above sea level in the northern part of the same island. In this zone, binroji, tsuga, (Arenga saccharifera) basho-banana and bamboo are found.

The Evergreen Broad-leaved Zone This comprises Shikoku, Kyushu, the northern part of the Loochoo Islands and the southern part of Honshu (Main Island) (at 36° N. Lat. and Southwards), the annual mean temperature of this zone being 13°–21° C. As to the altitude, it is 854 metres on an average in Kyushu, 762.5 metres in Shikoku and 610 metres in the southern part of Honshu. Trees which grow in this zone are kusunoki (Cinnamomun camphora, Nees), oak, akamatsu (Pinus densiflora), white fir, tsuga (Tsuga sieboldi, Carr), etc.

The Deciduous Broad-leaved Zone This zone covers the northern part of Honshu, the southern part of Hokkaido and a greater part of Korea, the annual mean temperature in this zone being from 6° C. to 13° C. As regards the altitude, it is from 976 metres to 1,372.5 metres in the northern part of Honshu and 457.5 metres in the southern part of Hokkaido. Trees which grow in this zone are cedar (the Japanese cyress), white fir, todo-matsu (Abies sachalinensis, mast), ezo-matsu (Picea ajanensis, Fisch), beech poplar, white birch, etc.

The Coniferous Zone This zone covers the northern half of Hokkaido, the group of the Kurile Islands and the Saghalien Island, the mean temperature of which is 6° C. to below zero. This zone starts at the height of 1,000 metres in Honshu and ends at the height of 2,592.5 metres in the same island, while it ends at the height of 1,067.5 metres in Hokkaido and 610–762.5 metres in Saghalien Island. Principal trees which grow in this zone are ezo-matsu and todo-matsu.

Forests in Kiso district extend over mountain regions which range from 305 metres to 3,050 metres above the sea level along the course of the upper stream of the River Kiso. It covers 104,055 ha. in area and its growing stock amount to 28 million cu. m. Principal trees are the Japanese cypress, the swamp-cypress, sawara (Chamae cyparies obtusa, S. et Z), nezuko (Thuja japonica, maxim) and parasol-pines.

They are old and are thickly grown. The reason that they are retained so well is due to the fact that during the feudal times, the cutting down of these trees was prohibited. Among these, the most magnificent trees are the Japanese cypresses which are about 190 years old. Most of them are 0.46 metre in diameter and 27.45 metres in height.

Forests of sugi in Akita district are widely distributed along the Yoneshiro and Omono Rivers, and belong to the Government. The forests cover an area of about 43,000 ha. and hold stock of 16 million cu. m. The forests, where they are not mixed with other trees, are beautiful and magnificent to look upon. Most of the sugi in these forests are from 120 to 200 years old, and in a dense part the stands hold as much as 1,400 cu. m. per ha. Some of them are so large that their diameter reaches sometimes to 1.22 metres. The forests are noted for the abundance of timbers of a superior quality. Annual cutting from these forests amounts to 280,000 cu.m.

Area of Forests, etc.

According to the report of the Ministry of Agriculture and Forestry the area of forests in Japan proper was as follows :

(In Japan proper the investigation on the area of forests, bamboo groves and wild lands (productive yet uncultivated) is carried at the year end every third year.)

AREA OF FORESTS, BAMBOO GROVES AND WILD LANDS IN JAPAN PROPER

(In hectares)

Year (At the year end)	1927	1930	1933
Grand total	22,713,451.34	23,011,218.74	23,645,731.85
Forested tracts	19,517,036.23	19,879,240.86	20,575,913.91
Coniferous	4,689,293.16	4,632,827.81	5,420,360.80
Broad-leaved	8,062,476.89	8,470,016.53	9,086,657.13

Bamboo groves	1,896.79	2,169.01	2,258.78
Bare tracts	13,016.73	11,560.97	10,869.32

Year (At the year end)	1927	1930	1933
Private	9,286,070.38	9,612,550.12	10,142,631.07
Forested tracts	7,708,504.85	8,039,480.92	8,473,035.96
Coniferous	2,524,837.29	2,574,704.93	2,711,190.25
Broad-leaved	2,932,237.88	3,241,523.12	3,394,291.04
Mixed	2,130,011.50	2,097,423.06	2,229,769.88
Bamboo groves	121,418.18	125,829.81	137,784.79
Bare tracts	1,577,565.53	1,573,069.20	1,669,595.11

Stock of Growing Timber

Japan Proper To ascertain the amount of growing timber owned by the Imperial Household, Government, and public and private interests careful investigations are made, the investigations in the case of public and private interests being carried out by each prefecture. The following statistics show the growing timber in Japan proper in 1933 classified according to ownership: (Quantities in 1,000 cu. m.)

Kind	Crown	Government	Public and Private			Total	%
			Public	Shrines and Temples	Private		
Coniferous trees	32,452	139,948	71,172	7,333	327,510	578,415	46.0
Broad leaved trees	14,121	323,431	83,503	5,000	252,823	678,878	54.0
Total	46,573	463,379	154,675	12,333	580,333	1,257,293	—
%	3.7%	36.6%	12.4%	0.7%	46.6%	—	—

Thus the total standing timber in Japan proper (Hokkaido excluded) is 1,257,293,000 cu.m., of which coniferous trees account for 578,415,000 cu.m. and broad-leaved trees 678,878,000 cu.m.

Other Parts The following table shows the number, ownership and type of trees in other parts of the country.

STANDING TIMBER IN HOKKAIDO, FORMOSA, KOREA AND SAGHALIEN ISLAND IN 1933

(Quantities 1,000 cu. metres)

Owners	HOKKAIDO			SAGHALIEN ISLAND		
	Coniferous Trees	Broad Leaved Trees	Total	Coniferous Trees	Broad Leaved Trees	Total
Crown	32,911	74,130	107,041	—	—	—
Government	165,705	212,599	378,304	165,951	22,905	188,856
Public	19,829	51,448	71,277	—	—	—
Shrines and temples	2	17	19	—	—	—
Private	2,899	28,994	31,893	—	—	—
Total	221,346	367,188	588,534	165,951	22,905	188,856

Owners	FORMOSA			KOREA		
	Coniferous Trees	Broad Leaved Trees	Total	Coniferous Trees	Broad Leaved Trees	Total
Crown	—	—	—	—	—	—
Government	70,006	127,374	197,380	87,902	72,158	160,060
Public	68	297	365	4,316	2,095	6,411

Total	70,902	136,792	207,694	155,289	91,000	246,289

The total stock of growing timber in the country classified according to ownership is as follows :

TOTAL STAND OF TIMBER IN JAPAN IN 1933

(1,000 cu. m.)

Owners	Coniferous Trees	Broad Leaved Trees	Total Grand Total
Crown	65,363	88,251	153,614
Government	629,512	758,467	1,387,979
Public	95,385	137,343	232,728
Shrines and temples	9,748	6,489	16,237
Private	391,895	306,213	698,108
Total	1,191,903	1,296,763	2,488,665

Afforestation

There is great scope for the practice of afforestation in Japan because of the large wild areas, plains where there is only a thin growth of trees, and forests where there are many undesirable trees. However, since a great deal of timber is being cut, refforestation becomes more urgent every year.

Afforestation is divided into two classes, viz., natural and artificial. Natural afforestation is being carried out in only a small portion of the Crown and Government forests, while in most of the public and private forests, conditions are such that no definite plans for natural afforestation have been made. However, as this is liable to cause forests to go to waste careful studies are being made to improve the situation.

In artificial afforestation Japan has had some good experience and artificial afforestation for the Imperial and Government forests is being carried out on a well-planned basis.

New Plantation Area newly planted in 1935 was 109,728.9 cho, and the number of trees planted was 328,020,522, of which coniferous trees numbered 273,597,718 while broad leaved trees numbered 54,422,804.

In addition to the above there were 61,784,098 trees supplementarily planted in the forests in 1935, and bamboo groves newly cultivated were 428.3 cho in area and 749,404 in the number of bamboos planted.

Naturally Regenerated Area of forests naturally regenerated in 1935 was 240,057.9 cho. No change of noteworthy movement of the area during these past ten years.

ARTIFICIAL AFFORESTATION

(In hectares or cho)

Year	1931	1932	1933	1934	1935
Area newly planted ha.	99,612.79	110,679.27	113,681.76	111,696.49	109,728.9 (cho)
Number of trees newly planted	311,048,353	338,338,447	346,812,821	340,567,028	328,020,522
Coniferous Area ha.	84,404.33	95,140.66	96,311.19	91,775.40	90,319.5 (cho)
Number of trees	265,887,220	293,079,122	297,689,664	283,670,325	273,597,718
Broad-leaved Area ha.	13,054.11	13,356.00	14,890.80	17,115.60	19,409.4 (cho)
Number of trees	39,417,907	39,493,419	43,022.204	49,982,177	54,422,804
Mixed Area ha.	2,154.35	2,182.61	2,479.77	2,805.49	—
Number of trees	5,743,226	5,760,906	6,100,953	6,914,526	—

Production of Wood, Bamboo and Other Forest Products

Area of wood and bamboo lands cleared and the value of wood and bamboo produced in 1935 were as follows.

	1934	1935
Area of wood and bamboo lands cleared	444,429.6 cho	412,012.5 cho
Wood and bamboo produced	167,119,286 yen	168,761,410 yen
Timber	112,749,264 „	113,868,550 „
Fuel wood	51,789,443 „	52,365,708 „
Bamboo	2,580,579 „	2,527,152 „

During the ten preceding years no marked fluctuation has been observed in movements of quantities of timber and fuel wood produced, on the other hand, their value has been showing annually more than moderate decreasing trend until 1934 when it turned to increase.

Value of forest products in 1935 amounted to ¥129,083,727. Details follow :

FOREST PRODUCTS

(In Yen)

Kind	1933	1934	1935
Seeds of trees	44,259	45,826	47,328
Fruits (Chestnuts, Walnuts, etc.)	3,623,573	3,277,001	3,637,943
Barks	1,798,159	2,224,754	2,317,412
Loan grass	15,575,542	15,617,039	17,051,201
Fresh mushrooms	3,518,617	4,207,012	4,547,224
Dried mushrooms	2,897,598	3,602,447	4,282,318
Bamboo sprouts	3,823,981	4,080,081	4,143,188
Horse-radish	1,373,639	1,450,060	1,565,726
Charcoal	76,154,605	89,020,068	90,814,783
Others and total	109,437,960	124,288,810	129,083,727

Protection Forests

Besides having a direct value through the produce they yield, forests have a distinct indirect value through influence on climate, conservation of water supplies, prevention of erosion, etc., and in order that the fullest use may be made of them the Government established a system of "protection" forests. In the following instances, under the Forestry Act, the Government is authorized to decree that certain forests, etc., shall be considered as "protection" forests :

(1) When it is necessary to protect against soil denudation.
(2) When it is necessary to protect against sand shifting.
(3) When it is necessary to protect against flood, wind and tide.
(4) When it is necessary to protect against avalanches and rolling stones.
(5) For conservation of water supply.
(6) For fishery purposes.
(7) For guiding navigators.
(8) For public health.
(9) For scenery.

The area of protection forests in 1931–35 was as follows :

PROTECTION FORESTS

Year (At the year end)		1931	1932	1933	1934	1935

Owners of protection forests, etc., cannot, according to the provisions of the Forestry Act, cut down the trees, take the forest products from them nor utilize them for any purpose, unless with the approval of the authorities concerned. Protection forests are divided into two classes for administrative purpose. In the first class are forests in which limits for cutting and utilization are fixed, while in the second are those, the cutting of which is absolutely prohibited. Any owner who has his forest included in the second class and suffers any loss by this inclusion will have the loss reimbursed by the Government.

Utilization of Government Forests

Forests are classified according to ownership as Crown forests, Government forests, and public and privately owned forests. Public and privately owned forests include those possessed by shrines and temples, public corporations and private individuals. Crown forests are those possessed by the Imperial Household and are divided into the hereditary and ordinary ones. Both are under control of the Minister of the Imperial Household, and are in charge of the Bureau of Imperial Forests and Estates. Government forests in Hokkaido are looked after by the local Government of Hokkaido, while those in Honshu (Main Island) are taken charge of by the Department of Agriculture and Forestry. Growth of forests, their utilization, and work of ensuring the public welfare through them are looked after by these offices, which administer them with rational plans for the public welfare.

The Government makes a contract with people willing to carry on afforestation work whereby they are given not more than 80% of the total profit on condition that they follow the Government's instructions as to planting, supplementary afforestation work, and taking care of the trees planted. "Divisional Forests" may be established for this work. A portion of the Government's forests may be put into the custody of shrines and temples and any profits arising therefrom may be used by the shrines and temples. Such forests constitute "Forests in Custody." Sometimes the Government may appoint a particular city, town, or village to protect Government forests which are situated within the jurisdiction of that city, town or village, payment for the work being made by part of the products of that forest being handed over to the city, town or village (Commission forests). In addition, the Government may lease its forests for the purpose of the development of industry in a particular district, or for the purpose of assisting people living near the forests. In some cases no rent is charged. The ground may be used for grazing, grass, or gathering fuel. The Government may sell some of its forest land if it is suitable for reclamation. Forests which are used for these purposes are of a vast area. Figures for March, 1935 follow :

Protection forests	930,049 ha.
Divisional „	43,863
Forests in the custody of shrines and temples	25,584
Commission forests	55,998
Forests leased for industrial purposes	75,713
„ for grazing	119,409
„ as grass fields	162,338
„ for gathering fuel	1,010,615
„ „ reclamation	23,602

Taxes cannot be imposed on Government forests which come within the area of any city, town, or village. But in view of the fact that it owes a great deal to the city, town or village for controlling and managing these forests, the Government has decided to pay to that particular city, town or village a sum equivalent to the amount of the local tax which those forests would bear if they were owned by private individuals.

Forestry Associations (Shinrin Kumiai)

Forestry associations are those judicial persons recognized by the Forestry Act of 1907, which are formed not for profit but for safety of the country, conservation of water supplies, protection of forests, etc. The nature of their work is to allow members to plant, fell, carry, guard, or sell timber under unified control and rational management. Forestry associations are classified according to their objects into four classes, viz., afforesters' associations, business associations, coolies' associations, and protection associations.

The number of forestry associations in 1935 was 2,083, and the area covered was 1,642,146.0 cho. The growth of forestry associations in recent years is shown in the following table :

FORESTRY CO-OPERATIVE SOCIETIES

(Area in cho)

Year (At the year end)	1931	1932	1933	1934	1935
Total					
Number of societies	1,407	1,602	1,734	1,919	2,083
Area operated by societies	1,001,246	1,172,367	1,259,575	1,441,681	1,642,146
Number of members	190,382	222,831	243,753	278,111	325,172

Forest Damage and Insurance

Forests are subject to damage by fire, wind, snow, etc., damage and loss by fire being especially great. As the forestry business requires an investment which covers a long period of years it is essential to insure, for if a forest is swept by fire, not only the capital invested, but also the care and labour of many years is instantly swept away. The table below shows both the amount of loss and the area damaged by fire, wind, etc., during the last few years. In order to encourage forestry work some means to minimize the loss which arises from fire had to be devised. For many years forest insurance was looked for but it was not until 1920 that the Toho Fire Insurance Co., Ltd., ventured to take on this business. The Teikoku Fire Insurance Co., Ltd., and Tokyo Marine and Fire Insurance Co., Ltd., quickly followed. The first two companies insure only those artificially afforested forests which are older than ten years, while the Tokyo Marine and Fire Insurance Co., Ltd., will insure artificially afforested forests which are not as old as ten years as well as naturally grown forests.

Damages done to forests in 1935 reached 267,362.2 cho with an estimated value of ¥18,612,942.

STATISTICS OF DAMAGES DONE TO FORESTS

Year	Total Damage		Forested Tracts By Fire		By Wind	
	Total Area	Value	Area	Value	Area	Value
	ha.	¥	ha.	¥	ha.	¥
1931	84,188.43	3,464,903	16,393.98	1,970,599	9,227.61	133,677

Forest Administration

The central office of forestry administration in Japan at present is the Forestry Bureau in the Department of Agriculture and Forestry. Under this Bureau, there are six Forestry Administration Offices, 218 Forestry Administration Stations and 1,544 administrative districts.

In the office of the Forestry Bureau there is a Section of General Affairs, a Section of Forestry Business, and for the administration of privately owned forests there is a Public and Private Forests Section. For experimental work there are, under the direct supervision of the Minister of Agriculture and Forestry, Forestry Experimental Stations. Forestry Administration Offices are located in Aomori, Akita, Tokyo, Osaka, Kochi, and Kumamoto cities, and are under supervision of the Minister of Agriculture and Forestry. The work of each office is to plan the afforestation work of Government and public forests, to establish or eliminate Government forests, to start civil engineering work, to sell forests, etc. They also supervise the works of forest administration stations which are placed under them. In each office there is a Section of General Affairs, a Section of Forestry Planning, a Section of Afforestation and a Section of Utilization.

Forest Administration Stations, which number 218 in all, are directly concerned with the management and protection of Government and public afforested forests.

In Hokkaido, the Forestry Section in the Development Bureau is the central administration office, and under it there are 19 forest administration offices. About 3,520,000 ha. of forests which are owned by the Government are administered by these 19 offices, the average area controlled by one office being about 185,000 ha.

The proper policing of various forests is carried out as follows :

FOREST POLICE

Owner	Forest Districts and Number of Police	
Crown	Number of allotted districts; Japan proper	252
	Persons in charge of allotted districts: Japan proper	522 men
Government	Number of districts in Japan proper	1,543

Cwner	Forest Districts and Number of Police	
Government	Number of persons in charge	2,461 men (Dec. 1934)
	„ „ districts in Hokkaido	220
	„ „ persons in charge	496 men (April, 1933)
Public	Ordinarily the police look after these; but in the following 8 prefectures there are forest police facilities: Aomori, Miyagi, Fukushima, Yamaguchi, Yamanashi, Aichi, Saitama, and Oita	
Shrines and temples	For the public forests in Hokkaido, members who take charge of allotted districts look after:	
Private	Number of allotted districts	61
	Number of persons in charge	61 men

Forestry Education

College Education Forestry education in Japan began with the establishment of a forestry school in Nishigahara, Tokyo, in 1882, under supervision of the Forestry Bureau. This school became the Tokyo Forestry School and by the University Ordinance of 1890 was incorporated as a branch of the Department of Agriculture of Tokyo Imperial University. Morioka and Kagoshima Higher Forestry Colleges were established in 1903 and 1904 respectively. The forestry education that was being carried on in Sapporo Agricultural College in Hokkaido, became a laboratory course when the college became a Department of Hokkaido Imperial University. During the World War, facilities for education were greatly extended, and Departments of Forestry were added to Kyoto and Kyushu Imperial Universities, while higher forestry colleges were established in Miyé, Utsunomiya, Gifu, Miyazaki, and Suigen in Korea and Taihoku in Formosa.

Each university and college has its own speciality. Kyushu and Hokkaido Universities give lectures on Forestry in Tropical and Arctic Zones respectively, and graduates of these universities are mostly working in the colonies. Each university has forests for experimental purposes.

Most higher colleges are comparatively new but they each have their speciality. Some of them have two-year post-graduate courses, while others offer some special courses. Miyé Higher Forestry College is noted for its course in civil engineering for forestry, Gifu Higher Forestry College for its technological course on forestry products, and Utsunomiya for courses on agricultural policy and economics. Gifu Higher Forestry College is specialized in its courses on clearing and carrying lumber making on a mechanical basis, chemical technology of forestry products, etc.

Practical Education The first and second class forestry schools established and supervised by various prefectures give practical lessons in forestry. They exist either as independent schools of forestry, or as a part of agricultural schools.

In order to encourage forestry, training of experts who have practical knowledge of forestry is very important. These experts are trained mostly in the forestry schools which give practical lessons, but often other methods, as explained in the next section, are adopted.

Supplementary Education For those who have no opportunities to get regular forestry education in schools supplementary forestry education is given in various places, the principal method being by series of lectures given under the auspices of forestry experimental stations, forestry associations or charcoal associations. These lectures are given regularly each year, but in particular cases, when experts are required for the purpose of management of some special forestry work a special course of lectures will be given. In the case of Government forests, supplementary education is given every year to train men who take charge of the forests.

Forestry Experimentation

Central Experimental Station A plant experimental station was first established in Nishigahara, Tokyo, in 1878, to make investigations into the advantages of the cultivation of various plants, the growth of plants, the relation between the forests and climatic conditions of the country, etc. This station was abolished in 1822, but in 1890, the business of forestry experiments was taken up by the Forestry Administration Station of Tokyo. Later, in 1905, upon a pressing need, plant nursery beds were

established in Meguro, Tokyo. This nursery developed into a Forestry Experimental Station under supervision of the Forestry Bureau. In 1922, the station was detached from the Forestry Bureau and placed under the direct supervision of the Minister of Agriculture and Forestry. A subsidiary station was also established in the Ogasawara (Bonin) Islands for the purpose of experimenting with tropical plants.

In the Central Experimental Station there are departments of, general affairs, afforestation, vegetable pathology, utilization of forestry products, chemistry, forestry work, and weather and climate. Since 1904 it has regularly issued bulletins on experiments and forest weather, besides occasional other reports. The Station will, for payment, make analysis, carry out experiments and give advice and judgements on matters of forestry for the general public, if requested.

Local Experimental Stations Among the various prefectures Hokkaido is the only one which has a forestry experimental station. It was established in 1908 and for twenty-five years has contributed to the development of forestry in that island. The station makes expriments in afforestation, the utilization of forestry products and the protection of forests. In Kagoshima prefecture, a forestry research bureau was established in 1929. This bureau studies plant rearing, afforestation, etc. and is the only bureau which engages in experimental work in prefectures other than Hokkaido.

Forestry experimentation in Formosa is undertaken by a Forestry Bureau under the Central Research Station in the Government-General of Formosa. It has experimental forests of 52,000 cho. In addition to experiments in afforestation, utilization, and nursery work, it studies the classification and distribution of plants grown in the island. It has two branch stations.

The forestry experimental station in Korea was established in 1922. As the climatic conditions in Korea are rather continental the kinds of plants, their distribution, and the nature of forests, etc. differ widely from those in Japan, so the results of the experiments made in the Central Experimental Station in Tokyo cannot be directly applied to the forests in Korea. The station is comparatively new, but as part of a plan which is to be completed in fourteen years beginning 1925, investigations on the classification and distribution of the plants, experiments in rearing and afforestation of the principal trees, experiments in the prevention of damage from noxious insects and fungi on young plants and forests, tests on lumber and methods of storing, etc., have already been made and reports on the results of the investigations and experiments have been published in the bulletins issued by the station. In the experiments on rearing young plants it has already succeeded in showing the way to quicken their growth, its experimental success in rearing the Korean pines being specially noteworthy.

In Saghalien Island an experimental station was established in 1929. Prior to that experiments were made on frigid zone plants by the Temporary Industrial Investigation Bureau in the Government Office of Saghalien Island in experimental forests near the towns of Toyohara and Horo.

Lumber Trade and Industry

Lumber Trade Imports of Saghalien lumber are the heaviest for Japan. American lumber is second. At the time of the Kwanto earthquake and fire of 1923 these lumber was heavily imported for reconstruction of the devastated areas. With the completion of the reconstruction enterprise their imports began to decrease. Imports of Saghalien lumber for 1931 amounted to 7,600,000 koku. Until 1933 imports maintained the level of 7,000,000 koku, but in 1934 they decreased suddenly to 5,200,000 koku and in the following year the amount further dropped to 2,700,000 koku. In 1936 imports dropped as low as 2,500,000 koku. Imports of American lumber too, have kept steadily falling. In 1930 the amount totalled 2,516,212 koku, which sank to 1,390,139 koku in 1932, further to 1,181,787 koku in 1934 and to 1,243,442 koku in 1935 Imports for 1936 picked up to 1,432,916 koku.

Lumber Price A wild soaring in prices at the year-end was the feature of the lumber market in 1936, although, as a whole, the year was a little below average. The all class of North Sea lumber climbed as high as ¥1,000, a record high in years. The prices of the North Sea lumber remained dull in the first nine or ten months of the year, but took a sudden upward turn in the last three months, climbing from ¥740 in January to ¥770 in November, to ¥820 in December, and further to ¥980 in January, 1937. The price advance, coming late in 1936, was not timely enough to affect the profit situation of lumber companies. With a continuous increase in consumption due to activities in the building trade, the 1937 demand for lumber is expected to advance and serve

to strengthen the market tone. The drastic fall in the arrivals of North Sea lumber was principally due to a strict restriction placed on shipments by the Saghalien Government.

Imports of American lumber have shown a slight advance in recent years, arrivals at Yokohama last year amounting to 1,432,916 koku as compared to 1,243,442 koku imported during the preceding year. The increase in the imports of American lumber in spite of the cheaper yen is attributable to the fact that these imports included certain special kinds of lumber for which the North Sea lumber cannot be substituted. The imports of American lumber during the past seven years show that the heaviest amount of 2,516,212 koku was imported during 1930 and the second largest was 2,199,253 koku for 1931, but after that imports were falling yearly. The 1936 imports were the third largest.

IMPORTS OF LUMBER (Unit ¥1,000)

Year	Ebony, Kwarin, etc.	Teak	Cedar for Pencils	Cedar, Pine, Fir from under 60 mm. thick to over 200 mm.	Cedar, Pine and Fir (logs and cants)	Kiri (paulownia)	Aspen	Other Wood

1935	742	689	4,397	5,012	88	282	7,520	5,192
1936	855	699	5,965	4,872	—	—	9,146	3,371

Wood Pulp Industry Demand for pulp in Japan for 1936 gained considerably over the year before, both production and imports increasing heavily over 1935. Actual demand for pulp to be used for paper making advanced 3 per cent for rayon making 39 per cent. Demand for pulp in Japan was sinking in 1931 and 1932, but since 1933 it has been ascending in line with the rapid growth of both the rayon and paper manufacturing industries. Last year's demand represented an increase of 73 per cent over that of 1932, when the demand was lowest in recent years. Domestic production of pulp has failed to increase in proportion to this heavy gain in demand, which has naturally resulted in a yearly increase of imports. Japan's reliance on foreign pulp is becoming more and more pronounced. The 1937 year production of pulp in Japan is estimated at 810,598 tons for paper manufacturing and 57,000 tons for pulp manufacturing. Against this, the year's estimated imports of pulp are about 450,000 tons. Production, imports and exports of pulp for the last two years are as follows :

		Production (In tons)	Imports	Exports
1935:	For paper	724,042	143,572	732
	For rayon	33,435	126,351	—
1936:	For paper	747,356	158,184	531
	For rayon	55,209	169,368	—

Japan's dependence on foreign pulp in 1933 amounted to 26.2 per cent, which increased to 27.4 per cent in 1936. It will increase further for 1937. One of the immediate reasons for this increasing demand is the marked growth of the staple fiber industry. Many staple fiber manufacturing companies have been expanding their equipment to launch upon this industry.

Japan's productive capacity of rayon pulp is expected to total about 170,000 tons for 1937. The North Korea Paper Manufacturing Company, capitalized at ¥20,000,000, started pulp making operations in the fall of 1936. Its

productive capacity will be 20,000 tons and the first products are expected to be placed on the market in the fall of 1937. The Nisso Rayon Pulp Company, capitalized at ¥20,000,000, is expected to market 20,000 tons in April, 1937. Its annual productive capacity is 20,000 tons. The Hokuetsu Paper Manufacturing Company, capitalized at ¥6,000,000, is also making preparations for producing 20,000 tons a year The Japan Pulp Company, capitalized at ¥20,000,000, also will make the same amount of pulp and its first products will appear on the market in June, 1938.

The combined productive capacity of four Japanese pulp making companies in Manchoukuo is 60,000 tons, each being 15,000 tons. They are the East Manchoukuo Pulp Company, the Manchuria Pulp Company, the Nichiman Pulp Company and the Tokyo Pulp Company. The Oji Paper Manufacturing Company already started operation at its allied company, the Dai Nippon Rayon Pulp Company, capitalized at ¥10,000,000. Its annual productive capacity is 30,000 tons. If the total 170,000 tons of productive capacity, including 60,000 tons in Manchoukuo, is operated, this will largely meet annual demand at home, because the 1936 demand totalled nearly 224,000 tons. While last year's imports amounted to 169,000 tons, imports for 1937 are expected to decrease to about 54,000 tons. Production of pulp for paper making for 1931 amounted to 76,081 tons, which gained to 169,036 tons in 1917 ; to 250,027 tons in 1921 ; to 414,706 tons in 1925 ; to 625,537 tons in 1930 ; to 566,709 tons in 1931 ; 551,120 tons in 1932 ; to 620,039 tons in 1933 ; to 691,836 tons in 1934 ; to 724,042 tons in 1935 ; and to 747,356 tons in 1936.

The Oji Paper Manufacturing Company almost monopolizes the production. Its production for 1935 amounted to 686,636 tons out of the total production of 724,042 tons in Japan. Other paper manufacturing companies are of minor scales. Of the 1935 year output, the Karafuto Paper Material Company produced 6,879 tons ; the Tokai Paper Material Company 2,705 tons ; the Naniwa Paper Manufacturing Company 4,113 tons ; the Hokuetsu Paper Manufacturing Company 23,709 tons ; and the Yalu Timber Company 14,474 tons.

Production of classied pulp for 1935 follows : sulphite pulp 358,729 tons ; ground pulp 321,031 tons ; kraft pulp 40,505 tons ; and magnesia 3,777 tons. Imports of wood pulp for 1935 amounted to ¥55,101,181, of which those from the U.S.A. were ¥22,812,040 ; those from Norway ¥13,201,444 ; those from sweden ¥7,734,665 ; those from Canada ¥5,990,632 ; and those from others ¥5,362,400.

CHAPTER XVII

MINING

History of the Industry

During the reign of the Emperor Kotoku (645 A.D.), a mineral deposit was discovered in the province of Iyo and experts came over from Korea and China, to work the minerals extracted. Metals were being used for making coins, so mining received the encouragement of the rulers. During the time of the Emperor Shomu, (724–747 A.D.) mineral deposits were found in many places and the art of working them made considerable advance, a fact witnessed by the construction of the Great Buddha at Nara, a monument of the metal-working art of those days.

Later, during the time of the Ashikagas, mining made further development, especially in the field of gold, copper and sulphur. Influential lords who held sway in their own localities required metals to finance their army, and mines always proved good objects for fights. Mineral deposits obtained in this manner were well worked and the mining industry naturally developed.

In the time of the Tokugawas metallurgy further advanced. The government coined money which circulated all over the country and naturally the industry was well protected and carefully developed under its ægis. At this time Japan was known throughout the world as a country which abounded in gold and silver, and after the country was opened up to foreign trade the quantity of these precious metals exported was considerable, a business which provided a natural stimulus to gold and silver mining. The government also encouraged private enterprisers to engage in the industry, a result of which was the entry of the Sumitomos. The chief mineral deposits discovered during those times were :

Ashio Copper Mine	in Tochigi
Besshi „ „	in Ehimé
Sado Gold Mines	in Sado Island
Miiké Coal „	in Fukuoka
Karatsu „	in Saga

After the Meiji Restoration the industry did not show much progress until after the Sino-Japanese War of 1884–1885, when the Government called in many mining experts from abroad and employed them in government operated mines, not only to improve, organize and work the mines more efficiently but also to teach the operating of them on a modern basis. The mines improved in this manner were sold to private companies, and the experts who were officials of the Government were transferred together with them, a factor which served to bring the mining industry of Japan to its present stage of development.

In all kinds of mineral products, the year 1935 witnessed considerable increases over the preceding yers. This was caused by the enormous increase of overseas trade and the continued boom of munitions industries. The year 1936 far surpassed the productions of the preceding years, setting an all-time record. An upward price trend caused miners to produce more than ever before.

Speaking of gold, the 1936 output totalled 21,114 kilogrammes in contrast to 17,837 kilogrammes for 1935. Silver production, too, increased and amounted to 298,793 kilogrammes against 253,608 kilogrammes for 1935. Copper was not exception to the rule. Its output totalled 78,114 metric tons against 69,829 metric tons for 1935. Coal production totalled 38,067,000 metric tons against 34,904,000 metric tons for 1935. Petroleum products for 1936 totalled 3,820,462 hectolitres contrasted to 34,904,000 hectolitres for 1935. Production of sulphur totalled 175,314 metric tons, gaining over the 1935 figure of 152,019 metric tons. Production of lead was the largest known for recent years with a total of 8,021 metric tons against 7,195 metric tons for 1935. Demand for zinc became heavy with the progress of munitions industry. Last year's production totalled 36,201 metric tons in contrast to 31,300 metric tons for the previous year. This decreased somewhat and totalled 1,859 metric tons for 1936 against 2,059 metric tons in contrast to 1,311,464 metric tons for 1936. Throughout these two years the constant measures of encouragement of the Government and heavy demand for munitions industry provided the background for the large production.

* Brown or soft lignite.

Mining of Metals

Gold The removal of the gold embargo was effected in January, 1930, and the outflow of specie during that year reached ¥300,000,000. There was no sign of the outflow abating in the following year, and in consequence the specie holding of the Bank of Japan dwindled to a very low ratio. All these adverse conditions gave rise to demands for the encouragement of gold producing enterprises among the people and resulted in the establishment of a Central Refinery Station (Chuo Seirensho) and of other means for conducting reseach work. As regards financial assistance extended to the enterprisers, it was so arranged that the Bank of Japan should advance low-interest loans against the mortgaging of the gold produced. The suspension of the gold standard by Britain in September, 1931, greatly influenced the financial atmosphere of this country, the effect of which was to augment the outflow of gold and Intensify the tendency, which had become rampant throughout the country, of cornering and hoarding the metal.

With the installation of the Seiyukai Cabinet in December, 1931, gold exports were prohibited and an unprecedented depreciation of the yen and appreciation of gold in inverse ratio took place.

Stimulated by various measures of encouragement, as has been said elsewhere, the production of gold was increased by 9.9% as compared with 1932, despite the fact that the gold refineries, the construction of which was started on the receipt of bounties, were still but half completed. The production in 1934 was 15,094,094 gm. at ¥44,906,708 against 13,701,200 gm. at ¥33,790,368 in the previous year. Chosen produced 12,427,000 gm. at ¥41,049,000 and Taiwan, 1,046 gm. in the same year.

Gold output in Japan has increased rapidly since 1934. The output in Japan proper for 1936 amounted to 21,-953 kilogrammes, worth ¥73,543,000 setting an all-time record high. If the output in Korea for 1936 is the same as that for 1935, when mined gold totalled ¥38,320,000 and the amount of alluvial gold totalled ¥7,136,000, last year's combined total was ¥110,000,000. The gold output in Japan since 1930 has been as follows : 12,067 kilogrammes worth ¥16,-120,000 for 1930 ; 12,275 kilogrammes worth ¥16,523,000 for 1931 ; 12,495 kilogrammes worth ¥25,973,000 for 1932 ; 13,-728 kilogrammes worth ¥33,846,000 for 1933 ; 15,146 kilogrammes worth ¥45,-042,000 for 1934 ; 18,321 kilogrammes worth ¥56,310,000 for 1935 ; and 21,953 kilogrammes worth ¥73,543,000 for 1936. Gold output in Korea for six years is as follows : ¥9,207,000 for mined gold and ¥411,000 for alluvial gold for 1930 ; ¥9,008,000 for mined gold and ¥575,000 for alluvial gold for 1931 ; ¥17,809,000 for mined gold and ¥1,823,000 for alluvial gold for 1932 ; ¥26,006,000 for mined gold and ¥3,327,000 for alluvial gold for 1933 ; ¥33,214,000 for mined gold and 5,323,000 for 1934 ; and ¥38,320,000 for mined gold and ¥7,136,000 for alluvial gold for 1935.

The Bank of Japan on May 15, 1937, raised its purchase price of gold by 27 sen to ¥3.77 per gram, or ¥14.1375 per momme, for shipment of gold abroad. Since March 9, 1937, the Government started gold shipments to the United States and up to June 25 shipped ¥210,000,000 worth of gold to replenish its gold specie holdings abroad. The gold shipments for 1937 have been the first since 1934. Gold purchased direct by the Government during 1932 amounted to ¥77,762,000 and that during 1933 amounted to ¥49,000,000. Gold purchases up to March, 1934, when the Government promulgated a law concerning the purchase of gold by the Bank of Japan totalled ¥2,217,000. This makes the total ¥128,980,000. Since then the gold purchases have been kept up by the Bank. During the remaining period of 1934 the Bank purchased ¥50,137,000 worth of gold. The 1935 purchases amounted to ¥87,405,000. The 1936 purchases gained as far as ¥112,-592,000. Purchases up to February 13, 1937, about a month prior to the gold shipments on March 9 totalled ¥16,658,-000. The total purchases by the Bank were ¥226,794,000. In addition, gold worth ¥34,651,000 was transferred to the Bank from the Treasury. All these make the total of gold purchases by both the Government and Bank from 1932 to February, 1937, ¥301,445,000. Now, exports of gold from Japan during 1931 amounted to ¥50,000,000, which advanced to ¥112,622,000 for 1932. The 1933 year exports amounted to ¥20,925,000. The total exports were ¥183,548,000. No gold was exported during 1934, 1935 and 1936.

Silver Affected by the bounds and leaps in the silver quotations in foreign markets and o account of the close relationship of silver with gold smeltering the production of silver increased too, the 1935 production amounted to 253,608,300 grammes, which advanced to 298,793,500 grammes for 1936. Last year's figure set an all-time record high.

Tin Only about one-fourth of the to-

tal demand is being met by home products. To be exact 1,218,000 kg. was produced at home in 1934 againt the total home consumption of 5,260,000 kg., leaving a balance of 4,062,000 kg. to be imported and 20,000 kg. for exports.

Osaka Tin Refinery Guild was established in October, 1933. The reproduced tin put out by the members of the guild became such an important factor that its manufacture came to be designated as one of the principal industries by the Government in November, 1934. The sales of the product have been well regulated after the formation of the guild. Before the guild was organized the product contained a good deal of impurities and the production was only two or three hundred tons. As the time went on the technique of refining improved and the production in 1934 went up to five hundred tons. All the product is consumed in the domestic market.

Copper Production of copper, unlike that of tin, lead, zinc, or aluminium, was comparatively large in Japan, occupying an important position among metal industries, especially in arms industry. Copper industry developed rather early in Japan. Its production in 1876 was less than 4,000 tons, but Japan was then known throughout the world as the second largest copper producing country, exporting one half of her product. But with the Great War as the turning point, her position as copper exporting country became less important, for new copper beds were discovered in Chile and Congo. Japan then came to occupy the fourth position in the production of copper, and has been compelled to become an importer, the quantity imported increasing every year.

Demanded as an indispensable requisite in the munition manufacturing industries its brisk tone was maintained in 1934 as it had been in the previous year. The 1936 copper output in Japan established a record high with 79,114 metric tons in contrast to 69,829 metric tons for 1935. The copper market in Japan was long under influences of New York and London markets. But since the second half of 1932, owing to the depression of Yen and the increased tariff, it began to regain an independent position of foreign influences. Copper prices in Japan for 1936 were unusually high affected by New York and London quotations. Last year's low was ¥79.-65 on January 13 and high was ¥107.35 on December 4. The range was ¥27.70. On February 22, 1937, the price rose to ¥137.35, a record high. The exports of copper reached 12,621,600 kg. in 1934 as against 8,512,100 kg. in 1933, while the imports reached 51,368,300 kg. in 1934, a great increase as compared with 17,617,700 kg. in 1933.

To meet the enhanced demand copper mines extended their equipments, the most important being the improvement of the furnace at Naoshima refinery of the Mitsubishi Mine, the extension of Saga refinery of the Nippon Mine, and opening of a new shaft at Ashio Mine of the Furukawa interests.

DEMAND AND SUPPLY OF COPPER (Kilogrammes)

	Production	Imports	Total	Exports	Home Consumption
1931	75,848,181	2,019,900	77,863,081	26,603,200	51,264,881
1932	71,876,557	1,966,600	73,843,157	23,121,600	50,721,557
1933	69,032,756	17,617,700	86,650,456	8,512,100	78,138,356
1934	67,002,270	51,368,300	118,370,570	12,621,600	105,748,970
1935	69,407,000	65,261,000	137,441,000	72,000	134,170,000
1936	78,614,000	47,794,000	129,607,000	7,000	127,524,000

Lead The home production of lead barely satisfies 7% of the aggregate demand. In 1935 the total home production was 7,442,000 kg. and the import was 91,408,000 kg. The home consumption increased from 73,291,187 kg. in 1933 to 100,071,311 kg. in 1934 but it decreased to 96,967,000 kg. in 1935.

Zinc The origin and development of zinc mining in Japan is of comparatively recent date. In 1900, a Swiss clock firm, seeing bright prospects of developing the industry, purchased many zinc mines in the country and began exporting the metal. From this time the industry developed, the number of men engaged in mining increased, and the exportation of zinc grew in proportion.

Along with the development of other industries has been an advance in zinc smelting. With increased demand during the World War, production and exports increased, the quantity produced in 1917 reached 54,700 metric tons, and smelting furnaces numbered 16. From the slump of 1920 and the depression which followed it, the industry receiv-

ed a heavy blow. Most of the furnaces were shut down, and only those in Miiké, Takata, and Hiroshima were able to weather the storm. The last named has been especially successful in manufacturing sulphuric acid with the sulphur separated from zinc ores.

Zinc ores in Japan exist mainly in igneous and aqueous rocks. They seldom exist independently, sometimes being found mixed with lead ores. The principal ore which yields zinc is zinc sulphide, some of the best of which contains about 67% of zinc and 33% sulphur. Ordinary ores contain 40 to 55% of zinc and 24 to 28% of sulphur.

The principal places of production are as follows :

Kamioka	Kozan in	Gifu	Prefecture
Budé	„ „	Niigata	„
Ikuno	„ „	Hyogo	„
Yasuda	„ „	Nagasaki	„
Hosokura	„ „	Miyagi	„
Kanayama	„ „	Wakayama	„
Wanibuchi	„ „	Shimané	„
Sasu	„ „	Nagasaki	„

Ginya and Maden Kozen in Heiando, Korea

Mimuné Kozan in Keiando, Korea.

The production, import, export, and consumption of zinc follow :

Year	Production Quantity produced	Production Value	Imports	Exports	Consumption
	kg.	yen	kg.		kg.
1931	25,407,089	4,471,742	24,633,600	—	50,040,789
1932	27,043,432	6,032,611	26,571,600	—	52,615,032
1933	30,657,632	9,746,995	32,525,600	—	63,183,232
1934	32,145,458	9,516,702	33,208,100	—	65,353,558
1935	32,191,000	—	45,842,000	—	80,034,000
1936 (estimates)	36,201,000	—	61,774,000	—	97,975,000

Iron and Steel Industry

Down to the Meiji Era The art of iron smelting is said to have been known even in prehistoric times in Japan, but no reliable record can be found. The granites found in large quantities in the Chugoku districts, i.e. Okayama, Hiroshima, Tottori, and Shimané prefectures were found to contain a good percentage of magnetite iron from which iron dust was extracted. These places became famous for their iron products and swordsmiths. In the middle of the 19th century, there were as many as 300 smelting works in these districts, but before the Restoration the utility of iron was not well realized and the demand for it was naturally small. Therefore, the iron and steel industry in its modern garb can be said to have begun with the Restoration.

Since the Restoration Early in the Meiji Era, mines were mostly operated by the Government. As the iron and steel industry was considered very important from a military standpoint the Government placed Kamaishi mine in Iwaté prefecture, under its direct management, and established there some smelting works with foreign experts called from abroad. In 1879, two furnaces with capacity of 25 tons each were installed, but, owing to a shortage of raw materials and fuels the enterprise failed.

After the Sino-Japanese War of 1894–1895, the necessity of establishing the iron and steel industry for manufacturing war supplies was very keenly felt, and the Yawata Iron Works was established in 1886. Owing to the increased demand for iron and steel by various expanding industries the Yawata Works were extended in 1906 and again in 1911.

Private iron and steel works have since been established in rapid succession. In 1905, Suzuki Shoten of Kobé established Kobé Seikojo, and in 1907, Nippon Seikojo was established at Muroran with English and Japanese capital. In 1912, Nippon Kokan Kaisha, Ltd., was established, while in Manchuria, Honkeiko Baitetsu Koshi was established in 1910 on joint account of Japan and China.

These iron and steel works expanded tremendously during the World War, and production increased with marvellous rapidity. The 1913 production of pig iron was 240,000 metric tons while the 1918 production had increased to 583,000 tons. During the same period the production of steel increased from 255,000 tons to 537,000 tons. The Mitsubishi Co. established their Iron Works in Kenjiho, Korea, about this time.

Perhaps the iron and steel industry

received a heavier blow than any other from the slump of 1920, a blow that was intensified by the decisions reached at the Disarmament Conference of 1921. The price of pig iron fell from ¥541 per ton, the highest price, in July of 1918 to ¥65 per ton is 1921, steel bars fell from ¥451 to ¥132, and steel sheets from ¥1,285 to 199. Twelve pig iron manufacturing companies, four steel manufacturers and six steel materials manufacturing companies went out of business. Many small companies were amalgamated with or absorbed by bigger ones, until at present the whole iron and steel industry is controlled by a few powerful houses, Mitsui, Mitsubishi, Sumitomo, Okura, Asano and Okawa.

Many new industries were started during the Great War and as they progressed their demand for iron and steel expanded. Production increased to meet this demand and the 1923 output was greater than at any time during the Great War. The industry received blows from the great earthquake of 1923 and the financial panic of 1927, but with the finances of the largest concerns of the country behind it re-adjustments were soon made and as demand increased the industry steadily developed.

Iron and Steel in 1936

During the first half of 1936, there was a strong fear that the iron and steel circles in this country might suffer from an over-supply but the situation changed suddenly during the latter half when a shortage of supply presented itself. Reflecting the supply shortage, the market price of steel materials began to rise in the autumn and a soaring tendency started toward the end of the year. Responsible for the soaring tendency are the pig iron famine, higher prices of scrap iron, decrease in stocks, increase in the demand for iron and steel abroad and speculative buying motivated by the enormous budget estimates.

The increase in consumption and the rise in market prices combined to contribute greatly toward improving the business conditions of iron and steel companies. The quotations of various iron and steel shares also began to mount continuously.

The abnormal rise in the price of iron necessitated the immediate rectification of various defects in the distributing machinery of the iron and steel cirles. On the other hand, the Government exempted iron and steel from the customs duty with a view to smoothing the supply.

The production of iron and steel during 1936 increased remarkably. The production of pig iron increased by 110,000 metric tons and that of steel materials by 55 metric tons.

Rise in Quotations Reflecting the conditions mentioned above, the market prices of steel materials started soaring, as shown in the following table :

QUOTATIONS OF PRINCIPAL STEEL MATERIALS

(In 1936)

	Round Bars (19 mm)	Equals	Plates (medium)	Wires
January	¥ 8.03	¥ 7.93	¥10.17	¥ 84
February	8.27	8.07	10.37	84
March	9.30	9.06	10.93	90
April	9.03	9.33	11.03	92
May	9.07	9.13	10.80	90
June	9.27	9.30	11.23	92
July	9.30	9.27	11.27	94
August	9.23	9.20	11.37	95
September	9.27	9.27	11.87	103
October	9.70	9.63	12.20	102
November	10.43	10.60	13.23	108
December	14.93	15.27	19.83	172

Note: The above figures represent the monthly average of the prices in Tokyo as compiled on the basis of the returns published by the Japan Iron Manufacturing Company, the unit quoted being 100 metric tons for all items except wires which are quoted in units of one metric ton.

Iron and Steel Famine Various factors may be enumerated as responsible for the rapid rise in the prices of steel materials, but the shortage of stocks must be considered as the principal of such factors. Pig iron had long been running short but the shortage of steel materials came to the surprise of the circles concerned which had refrained from purchasing particularly during the first half of 1936 for fear that there might be an over-supply.

In the second place, the rise in the prices of steel materials is attributable to the famine of pig iron. The Japan Iron Manufacturing Company could not satisfy the entire outside demand, partly because of the increase in its own consumption of pig iron. Manchoukuo which had been exporting around 400,000 metric tons of pig iron annually suddenly became unable to continue the usual exports because about half of the exports was demanded by the newly operated Showa Steel Foundry. Dur-

ing 1936, the amount ordered from Manchoukuo was 240,000 tons more than the actual supply.

On the other hand, the imports of scrap iron decreased because the demand in the United States increased due to her business recovery and also because the purchases by European countries increased.

The budget estimates for the 1937–38 fiscal year were reported to rise above the ¥3,000,000,000 level in order to conform to a quasi-war time economic system, and speculative elements presented themselves and the prices of steel materials in this country rose abnormally at the close of 1936 and also during the early part of 1937.

Increased Production The production of iron and steel during 1936 increased although there was a supply shortage which was brought about by the sudden increase in consumption. Accurate figures for the production are as yet unavailable but the production by the principal companies, both in Japan Proper and Chosen, is given by the Ministry of Commerce and Industry as follows :

	1936	1935	Comparison
	(In units of 1,000 metric tons)		
Pig Iron	2,219	2,111	108
Steel Ingots	4,914	4,404	510
Steel Plates	1,366	1,079	287
Tin Plates	138	95	43
Steel Bars	1,604	1,399	205
Rails	290	367	77
Wires	438	408	30
Steel Tubes	184	186	2
Iron Hoops	73	—	—
Others	48	55	7

Note: All figures under the heading of comparison denote increase except those underlined which denote decrease.

The above table shows that almost all items of the iron and steel products increased in 1936 over the output in the preceding year. According to statistics compiled by the Japan Iron Manufacturing Company, the company's production of pig iron during 1936 amounted to 1,330,000 metric tons which represented an increase of 36,000 tons over similar figures for the preceding year, that of steel ingots amounted to 2,210,000 tons representing an increase of 140,000 tons and that of steel materials amounted to 1,777,000 tons representing an increase of 77,000 tons.

Next, it is to be noted that in spite of the increased production of steel materials, the stocks showed a rapid decrease during 1936. Details of the changes in the stocks of steel materials in Tokyo, Osaka and Nagoya are tabulated below :

	December, 1936 (tons)	June, 1936 (tons)	December, 1935 (tons)
Bars	38,768	55,370	62,325
Shapes	40,445	66,979	65,203
Wires	79,213	122,349	127,528
Plates	20,583	24,888	20,001

Particularly noteworthy is the fact that the stocks of steel bars decreased by more than 23,000 tons or 38 per cent in one year. This is attributable to the munitions boom which increased the activities in the building and machinery manufacturing circles that use steel materials in large quantities.

Business Conditions The rapid increase in consumption and the rapid rise in quotations naturally served to improve the business conditions of the iron and steel companies to a great extent during 1936. The satisfactory business conditions may be illustrated by the following figures which cover four leading companies, based on a survey of the Mitsubishi Economics Research Institute.

	Amount	Percentage
For 2nd Term of 1936	¥	
Paid-up Capital	388,321,000	—
Net Profit	30,132,000	15.5
Dividend	13,794,000	7.1
Reserve	16,215,000	54.0
For 2nd Term of 1935		
Paid-up Capital	388,081,000	—
Net Profit	28,278,000	14.6
Dividend	12,018,000	6.2
Reserve	16,192,000	57.0

It is clear from the above table that the net profit of the four companies concerned during the second term of 1936 showed an increase of ¥1,850,000 over similar figures for the corresponding period of the preceding year and the dividend also increased by ¥1,870,000. In this respect, it must be noted that these figures are based on the actual results of the second and third quarters of the year and that in view of the abnormal rise in the quotations of iron and steel which took place afterwards, the results of the fourth quarter must have been still better.

DEMAND AND SUPPLY OF IRON ORES IN JAPAN PROPER

(in metric tons)

Year	Amount produced	Amount imported	Amount imported from Colonies	Amount exported to Colonies	Demand	Percentage of Production to Demand
1928	157,706	1,616,974	225,389	—	2,000,069	8%
1929	177,556	1,944,786	314,134	4,299	2,432,177	7
1930	245,991	1,973,659	278,727	2,466	2,495,911	10
1931	208,181	1,549,919	176,585	5,176	1,929,509	11
1932	226,722	1,482,409	151,603	4,200	1,860,734	12
1933	320,670	1,523,627	255,320	5,600	2,099,617	15
1934 (estimate)	350,000	2,131,916	—	—	—	—
1935	—	3,404.099	—	—	—	—

Pig Iron Pig iron is produced by Nippon Seitetsu Kabushiki Kaisha (Japan Iron Manufacturing Company). Coke is mostly used in its production, the amount produced with charcoal being so small that it is hardly worth mentioning. The amount of production classified according to the mode of production and raw materials from which it is produced is as follows :

Year	From Iron Ore		Reproduced	From Ores	Total
	With Coke	With Charcoal			
1927	884,341	—	10,905	925	896,171
1928	1,077,065	381	14,237	853	1,092,536
1929	1,065,908	2,000	19,138	82	1,087,138
1930	1,136,853	241	24,743	57	1,161,894
1931	896,445	—	20,897	—	917,342
1932	993,447	1,253	15,837	224	1,010,761
1933	1,403,502	—	19,924	463	1,423,889

During the war, Japan had the bitter experience of having her supplies of iron and steel cut off from Great Britain and the United States of America, and in view of this the Nippon (then Yawata) Works has steadily extended its production capacity. The 1930 production was 2.5 times that of 1919.

Japan requires about 1,500,000 tons of pig iron every year. Her own production is not enough to meet this requirement and the shortage is filled by importing from Korea, Manchoukuo and India.

PRODUCTION OF PIG IRON IN JAPAN AND MANCHOUKUO

(in metric tons)

Year	Production in Japan Proper	Production in Korea	Production in Manchoukuo	Total
1928	1,092,536	146,159	284,675	1,523,370
1929	1,087,128	153,627	295,380	1,536,135
1930	1,161,894	349,415	150,524	1,661,833
1931	917,342	147,257	342,270	1,406,869
1932	1,010,761	161,940	368,181	1,540,882
1933	1,423,889	161,163	433,523	2,018,575
1934	1,714,417	175,502	471,715	2,361,634
1935	1,906,787	—	—	2,999,328

DEMAND AND SUPPLY OF PIG IRON IN JAPAN

(in metric tons)

	1931	1932	1933	1934
Production in Japan Proper	917,342	1,010,761	1,423,889	1,714,417
Imports from Ceylon, Manchoukuo and India	494,575	650,380	801,283	786,596
Total supply	1,411,917	1,660,489	2,225,170	2,501,013

Steel and Steel Materials Steel ingots are produced mostly from pig iron, principally by the open-hearth process. The Bessemer process is sometimes employed by small mills, but the number of mills which use either this or the crucible method is small. Recently the electric process of production has been gaining ground. The amount of steel produced by different methods are shown below.

PRODUCTION OF STEEL INGOTS (in metric tons)

Methond of Production	1929	1930	1931	1932	1933	1934	1935
Open hearth	2,238,198	2,225,451	1,828,823	2,325,306	3,456,347	3,633,610	4,459,737
Bessemer	1,210	35	—	940	—	—	—
Electric	52,654	62,140	52,765	69,740	137,600	208,790	241,649
Crucible	1,778	1,711	1,537	2,296	2,192	1,120	1,200
Total	2,293,840	2,289,337	1,883,125	2,398,282	3,596,139	3,843,520	4,702,586

PRODUCTION OF STEEL MATERIALS

CLASSIFIED ACCORDING TO KINDS (in metric tons)

	1927	1929	1930	1931	1932	1933	1934	1935
Round bars	460,837	633,841	483,556	467,333	568,446	846,997	778,451	1,015,744

The annual requirement of steel materials in Japan is about 2,000,000 tons. Though the production in the country has greatly increased of late a quite appreciable quantity is still imported. The following statistics show how the demand is met.

DEMAND AND SUPPLY OF STEEL MATERIALS (in metric tons)

	1929	1930	1931	1932	1933	1934
Production	1,720,489	1,921,066	1,662,858	2,113,637	2,863,155	3,805,184
Amount imported	824,237	437,103	265,548	235,165	409,862	426,658
Total supply	2,545,226	2,358,169	1,928,406	2,348,802	3,273,017	3,731,842
Amount exported	181,944	238,580	203,547	299,867	435,297	254,955

Percentage of production to consumption	73	90	96	103	101	95

Coal Mining

Coal surpasses all other mineral products both in quantity and money value, the 1935 production amounted to 37,726,491 metric tons with an aggregate of ¥270,177,016. Both the output and value for the year were the heaviest for 10 years since 1926. Compared with the 1935 production, the output gained 1,801,502 tons and the value ¥24,321,545.

The year 1935 was the most prosperous year for the coal industry. Details follow :

DEMAND AND SUPPLY OF COAL

(In metric tons)

	1934	1935	1936
Coal actually marketed	35,924,989	37,762,000	41,000,000
Coal imported	3,997,000	4,049,000	4,189,000
Coal stocks at the beginning of	1,226,000	657,000	722,000
Total coal supply	41,147,989	42,468,000	45,911,000
Coal exported	1,070,000	1,019,000	1,112,000
Coal stocks at the end of	678,000	722,000	698,000
Coal demand in Japan Proper	39,399,000	40,727,000	44,101,000

Japan's coal production since 1913 | follows :

(In 1,000 metric tons)

1913	21,315	1921	26,220	1929	34,257
1914	22,293	1922	27,701	1930	31,376
1915	20,490	1923	28,948	1931	27,987
1916	22,910	1924	30,110	1932	28,053
1917	26,361	1925	31,459	1933	32,523
1918	28,029	1926	31,426	1934	35,924
1919	31,271	1927	33,530	1935	37,762
1920	29,245	1928	33,860	1936	41,000

Business results of the coal-mining | companies in recent years were :

	No. of companies	Authorized capital	Reserve fund
1928	105	¥386,413,700	¥26,868,288
1929	100	368,593,200	30,326,664
1930	88	343,913,200	30,975,007
1931	87	365,800,700	30,149,827
1932	88	352,510,700	29,692,489
1933	99	—	31,822,000
1934	113	470,097,200	60,394,926

	Profit	Dividend	Net loss
1928	¥11,711,498	¥ 7,142,008	¥13,011,829
1929	12,706,871	8,568,725	3,093,942
1930	8,351,933	6,449,626	13,212,362
1931	4,424,070	4,183,130	5,654,419
1932	4,674,374	3,826,245	9,514,950
1933	—	—	—
1934	30,716,855	19,847,553	995,199

Coal Deposits No survey of coal resources was undertaken between the years 1911 and 1931, but in the latter year the Mining Bureau of the Department of Commerce and Industry commenced a survey which took 2 years to complete. The results, compared with the 1911 survey, are :

	Investigation in 1932				
	Anthracite Natural Coal	Bituminous Coal	Lignite	Total	%
Amount, already mined	29,888	984,130	6,965	1,020,483	5
Amount, unminable	39,332	991,673	18,859	1,049,864	6
Amount, minable	718,782	15,499,091	473,460	16,671,333	89
Percentage	4%	93%	3%	100%	
Amount minable					
Actual deposits	454,745	5,439,905	65,765	5,960,415	36
Probable deposits	131,944	3,780,975	132,582	4,045,501	24
Possible deposits	132,093	6,278,211	275,113	6,685,417	40

	Investigation in 1911			
	Coal	Lignite	Total	%
Amount, already mined	283,200	—	283,200	3
Amount, unminable	—	—	—	—
Amount, minable	8,792,000	347,570	9,139,450	100
Percentage	86%	4%	100%	
Amount minable				
Actual deposite	822,000	75,770	897,770	10
Probable deposits	2,940,000	205,000	3,145,000	34
Possible deposits	5,030,000	66,700	5,096,700	56

Note: "Amount unminable" indicates the deposits, such as portions between pits, officially prohibited regions and where no pick is allowed.

"Probable deposits" as judged geologically and from conditions of coal seams and which can be presumed as available in future.

"Possible deposits" repressent the deposits imagined to be there and are the most uncertain of all.

Petroleum

Production The home yield of crude oil until about 1916 was approximately 2,600,000 koku, by no means sufficient to satisfy domestic demand. Notwithstanding yearly increase in demand output was unable to keep pace with it so that by 1927 domestic production was only able to satisfy 25% of the home consumption. The percentage has since increased and in 1932 was about 44%.

According to investigations conducted by the Nippon Petroleum Oil Company, the most important producer of crude oil, wells with a daily output of 20 kilolitres (approximately 111 koku) and over numbered no more than the following 7.

Location	Name of Well	Date	Depth	Daily Output during 10 Days after Successful Date
Kashiwazaki	Warimachi Ro Style No. 3	Jan. 6	1,240 metres	24.64 kilolitres
„	Warimachi Ro Style No. 20	Feb. 11	1,246 „	27.13
„	Takamachi Ro Style No. 35	April 2	1,240 „	22.50
„	Takamachi Ro Style No. 36	April 24	1,240 „	34.08
„	Warimachi Ro Style No. 27	May 14	1,255 „	30.45
„	Warimachi Ro Style No. 14	June 11	1,325 „	32.88
„	Warimachi Ro Style No. 36	July 20	1,264 „	60.60

Demand and Supply One of the most conspicuous features in the oil production for the five years, 1931–1935 was the marked increase in the use of foreign crude oil in the manufacture of heavy oil. The amount for 1935 set an all-time record of 11,425,320 hl., far larger than the preceding four years. The supply of the heavy oil manufactured out of home crude oil for 1935 was fairly heavy, second in amount from a previous record of 3,017,310 hl. for 1931. For three years following 1931 the amount was falling, but the 1935 amount gained again, due to a rapid growth of demand at home. The amount of home consumption for 1935 was the heaviest known so far. Below are given detailed figures on the supply and demand of oil:

SUPPLY AND DEMAND OF OIL (in hl.)

Classification	Year	Production		Total	Imports
		From Home Oil	Erom Foreign Oil		
Gasolene Oil	1931	799,680	2,134,930	2,934,610	3,997,620
	1932	628,474	3,105,810	2,734,284	4,401,440
	1933	394,737	3,533,429	3,928,166	4,625,860
	1934	349,470	4,436,050	4,785,520	5,505,290
